The stall holders included the Misses Thorne, Goddard, Manley and Francis Cameron at the central stall, at the others Misses Carl, Sharp, Brockelbank, Poole, Cook, Ackman, Trixy Sharp, A. Moss, Burns, Kuhn, Rosie Cameron, etc. Mrs. and Miss Loomis presided at the tea urn and Misses Wheeler, G. Moss, Thomas and Smith were the custodians of the small hall and the gipsy's grotto. Mrs. Theodore Morris as usual was here, there and every where, seeing that all were enjoying themselves. Mrs. Manley, we believe, gave valuable assistance in providing many of the flowers and in the decorations. During the afternoon the attendance was mostly limited to ladies and little ones, but during the evening the black coats of the sterner sex showed in considerable numbers, and by those who attended the concert the reunion was thoroughly enjoyed. During the entertainment the Ladies' Reading Room was thrown open to visitors.

LADY WALLACE'S GIFT TO ENGLAND.

The *N. C. Daily News*, in the course of a pleasant article on the munificent gift recently made to the British nation by the widow of Sir Richard Wallace—the Hertford collection of pictures—says, that the nonchalance of the Press and public speakers on this occasion is one of the most curious features in the life history of a collection which has been curious all through. We remember some twenty-five years ago going down to the unsavoury purloins of Bethnal Green, and jostling Demos in his starkest condition to see these immortal works. We may add that ever since we have had a hearty liking and respect for Demos; true, he was somewhat partial to the nude, but he reached towards the emotional impulse of the great masters in a manner which would have done credit to the (modern) prophet Joli—we mean Ruskin.

In Leigh Hunt's beautiful little poem, *Abou Ben Adhem*, on hearing that his name was not in God's book, said to the recording angel:—

"I pray thee then
Write me as one who loves his fellow men."

The next night
It came again with a great wakening light
And showed the names whom love of God has
blessed,

And lo! Ben Adhem's name led all the rest,
The Marquis of Hertford, who lived in early
Victorian times, must on contrasted grounds

have been the Devil's very own, if even half of what we hear about him be true. Born to the inheritance of vast estates and an enormous accumulation of money, the "Wicked Marquis," as he was called, openly defied for a whole generation the restrictions of rank, honour and morality. His contemporaries deemed him capable of every baseness, including the neglect of soap; they said that in his case vice prevailed even when the passions and folly of youth had passed away; that he only grew more wicked as temptation abated; that when broken health at last barred the gratification of appetite, he turned aside to nurse a savage misanthropy in retirement. The genius of Thackeray has for ever pilloried the man in English literature: his Lordship unconsciously sat to the great limner for the portrait of Lord Steyne in *Vanity Fair*. The thrashing which in that great work Rawdon Crawley administered to the little beast, gives the reader the most exquisite bit of exaltation to be found in our fiction. It was this interesting and noble rascal who originated the gallery which has now become national property. In his dishonoured age he took up the fad of picture collecting, and in association with the best connoisseurs of Europe hunted down masterpieces like a sleuthhound. For years his agents attended every art-sale in England and the Continent, and by their princely bids routed every rival from the field. The buyers of the Louvre and the National Gallery, though backed by the treasures of France and England, had no chance against the Marquis. The days of Jewish, American and Colonial plutocrats had not yet come, and nothing at that time could withstand the old man's determination. The pictures disappeared into the great lonely barracks in Manchester Square and were believed to be turned face to wall so that no man should enjoy them. At last, in the sixties, he descended into—well we will say his grave, unwept, unhonoured and unsung; and then time brought one of his quaint revenges.

The Marquis left his immense personal and real (unentailed) estate to his natural son Richard Wallace. The titular heir contested the will, and society was promised one of the greatest trials of modern times when a compromise disappointed it. There was ample wealth for both, but Mr. Wallace came off with the lion's share, including the pictures; and indeed he made a noble use of them. We saw time avenged himself; our meaning is that Mr. Wallace was one of the most benevolent, amiable, and public-spirited men of his time. Like Titus he seemed born to be the delight of mankind. He became a great social power in Paris. During the awful time of 1870-1 he poured out his gigantic wealth like water to mitigate the distress caused by the two sieges; and he slaved among the French poor like an East End doctor. If we remember correctly the Versailles government arose and called him blessed and the Municipality of Paris tied gratefully to perpetuate his fame by renaming a great boulevard Rue de Richard Wallace. He had previously married a charming Frenchwoman, Mademoiselle Castelnau. In the seventies he was raised to the Baronetage by Her Majesty's Government as a mark of their appreciation of his splendid social work in two countries. When he died childless in 1890 it was fully anticipated that the National Gallery would be the destination of his great collection; he had more than once generously lent it entirely to the poor, and had modestly spoken of himself merely as a trustee, but as a matter of fact everything was left to Lady Wallace. This meant postponement only, for although an ardent patriot, this lady thoroughly knew her husband's wishes and has acted up to them. At one time it was feared that the Louvre might divide the great spoil with our Gallery, but all anxiety is now allayed.

The present value of the pictures is said to be nearly one million and a half sterling; we quite believe it. We speak as those who enjoy pictures without the acute pleasure of technical knowledge, but we confess that we have never seen any paintings which gave us half the delight of this Hertford Gallery—even the famous collections in Grosvenor House and Dulwich have to yield to it on their own chosen ground—the Dutch and Flemish schools. Every picture in it is a masterpiece, and the greatest masters are represented not by single specimens but by half dozens or dozens. In the English school there are eleven each of Turner and Wilkie, two Gainsboroughs, two Landseers, six Hogarths, thirty-eight Boningtons, and eight Sir Joshuas, including Nelly O'Brien, Perdita, and the Strawberry Girl. The French school is represented by fifteen Meissoniers, by Gerome's "Draught Players" and "Slave Market," by eleven Watteaus, as many Horace Vernet's and fifteen examples of his great pupil, De la Roche. There are twenty-two Greuses, thirty-four examples of Decamps,

and two gems of Claude Lorraine and Rosa Bonheur. The pride of Venice, Canaletto, has seventeen pictures in the collection. Those princes of Spanish art, Murillo and Velasquez, have respectively six and eleven large canvasses, the Murillos being equally divided between the Madonnas which the artist painted to please the priests and the beggars to please himself and posterity. The Dutch and Flemish schools are exemplified by eleven Rembrandts, two Van Dycks, seven Rubens, including the famous rainbow landscape, six Ostades, eleven each of Jan Steen, Teniers and Wouvermanns, besides single copies of Halls, Holbein and many others.

AN INTERESTING MATTER.

The question of the next U.S. Minister to China is causing some comment in the United States. One influential journalist remarks:—Although it may be true that the President promised ex-Secretary Olney that he would send Assistant Secretary Rockhill as minister to China, I understand that he has decided not to do so because of the protests of the missionary associations, which claim that Rockhill is not in sympathy with their work. This is a point of great importance which has been fully explained to the President. In China, more than in any other country, the American minister exercises an influence with the Government that is absolutely essential for the welfare of citizens residing there, whether they be missionaries or merchants. He is looked upon by the Government as the representative of his countrymen in all things. No foreigner can secure a contract with the Chinese Government without the indorsement of his minister, and all matter of business between foreigners and officials have to be transacted through him. It is a common saying that the United States does not send anything to China except coal-oil and missionaries, and the chief business of the legation at Peking is to look after missions and secure their protection. It is natural, therefore, that the missionary boards want a man there who has active sympathy with their work, and they say Mr. Rockhill has not. But the next minister to China ought to be a business man. That empire is awakening to modern ideas and an era of progress has begun. During the next decade China will be the most favourable place for all forms of material enterprise in the whole world, and Americans can have their share of the business if they use proper methods to obtain it and the United States minister is allowed to assist them. Those who have gone from this country to China to seek contracts and concessions complain bitterly of the indifference of Col. Denby, the present minister, which he explains is due to no lack of interest, but to an order he received from Secretary Gresham, and which, it is said, Mr. Rockhill wrote, forbidding him to use his influence in behalf of any commercial enterprise. By this order he is allowed to "introduce and identify" American citizens who wish to do business within China, but he can go no further. Gentlemen who have been seeking railway concessions and contracts to furnish ships for the Chinese navy, and guns for fortifications, and muskets for the troops, and other commercial relations, assert that they might easily have succeeded if the United States minister had used his influence in their behalf, but whenever they asked his assistance he pulled Secretary Gresham's order from his desk and firmly declined to do more than "introduce and identify" them. At the close of the war with Japan, when China had to borrow \$200,000,000 to pay the indemnity, a syndicate of American bankers was formed to loan the money. They believe they might have succeeded in doing so but for this order, which, when the Chinese officials heard of it, made every American in Peking an object of distrust and suspicion. The bankers employed Edward S. Phelps, ex-minister to England, to secure a modification of Secretary Gresham's instructions, but he failed to do so, and for that reason our people have had no standing with the government at Peking. The officials of the Taung-li-Yamen say:—"If your Government wanted you to have this contract it would instruct your minister to say so, and until it does it will be useless for you to apply." It is said that Mr. Rockhill has been tendered the consulate-generals at Havana and at Cairo, but has declined both of them, and insists upon going to either China or Spain.

AMERICAN MAIL NEWS.

THE EMPEROR WILLIAM AND THE PARIS DISASTER.

Paris, May 11th. Emperor William of Germany has instructed the German Ambassador to remit 10,000 francs to the committee of the charity bazaar, whose work was crippled by the terrible fire. It is expected that this sum, in addition to the 937,500 francs previously received by the committee from an anonymous donor, will enable the work of charity to be carried on as usual.

It is stated that certain Orleanists tried to persuade the Duke of Orleans to make the funeral of the Duke d'Aumale the occasion for another sensational return to France, but the Duke declined to ask the Government for permission to attend the funeral.

London, May 11.

The English court will go into mourning for the late Duchess d'Alencon from May 12th to May 23rd.

COLLAPSE OF THE HONDURAS REVOLUTION.

Washington, May 11.

The State Department to-day received a dispatch from United States Consul Little at Tegucigalpa, the capital of Honduras, stating that the revolution has come to an end.

New York, May 12.

A special to the *Sun* from New Orleans says:—Passengers on the steamer *Clearwater*, from Honduras, report that the revolution which began there some weeks ago, and was followed by the capture of Puerto Cortez by the party under General Juan Drummond, collapsed, owing to the failure or weakness of some of those in command. General Drummond made a gallant fight and carried Puerto Cortez by storm, and held the port from April 15th until last Saturday. An army of 500 Government troops sent against him met with speedy defeat. The Government then retired and called for aid from Nicaragua, which came in the shape of a vessel of war, armed with two guns, and a force under the command of General Reyes. This vessel, the *Lucy B.*, reached Puerto Cortez last Thursday and gave notice, under a flag of truce, for the women and children to leave, as it was intended to bombard the city. On Friday, during the engagement, when the revolutionists tried to use their Krupp gun, they found that some traitor had removed part of the breech, and it was useless, and when it was attempted to use the old cannon captured from the Honduras troops there was a premature discharge and General Drummond was injured.

Reports coming in from the interior that their friends had deserted them caused the revolutionists in Puerto Cortez to lay down their arms and seek safety by going to Guatemala, so when the Honduran troops arrived during the evening and joined the Nicaraguans in an assault upon Puerto Cortez they found no one to resist them. General Drummond was made prisoner and was taken on board the vessel of the Nicaraguans.

A PARNELL APPEAL.

London, May 12.

An appeal signed by the Lord Mayor of Dublin, John Redmond, M.P., and other influential friends of the late Charles Stewart Parnell has been issued in behalf of donations to a fund to assist Mrs. Della Parnell, mother of the great Irish leader, and other needy members of the family, by freeing the Parnell estates at Avondale from debt and other obligations.

RAIDING A GAMBLERS' DEN.

Brussels, May 13th.

The police have made a big raid on the Casino at Thuin, near the French frontier, nine miles southwest of Charleroi, during which twelve female and 117 male players and thirty croupiers were arrested, and 90,000 francs were seized.

All the dozen fair gamblers were women of rank and fashion, and they assumed the names of notorious cocottes to avoid publicity, and it is also learned that many of them were members of the best families of Europe.

The raid was made by a large force of police sent secretly to Thuin from this city. The officers entered the town in plain clothes and arrived at the popular gambling-house without attracting the attention of the proprietor or his agents.

Lieutenant Leblais and fifty officers were posted at various points around the Casino. The remainder of the police then broke down the doors of the main entrance and rushed into the big salon.

Business was in full blast. Fashionable gamb-

lers surrounded all the tables. Two girls, who said, when captured, that they were Americans, sat at a poker table in a remote corner with a party of Frenchmen.

When the police appeared all the women began screaming. Several fainted. Most of the men made a mad rush for the windows, only to fall into the hands of Leblais and his men outside. Such of the women as had their own carriages were permitted to ride in them, guarded by policemen. The others were obliged to walk to the station.

All the prisoners were allowed to give fictitious names, under which they were arraigned and fined 100 francs (\$20) each. Since then the real names of the women have been bruited about Brussels, to the deep disgust of their husbands and male relatives, and furious threats of wholesale suit for divorce and slander have been made.

NEW OCEAN RECORD.

Queensdown, May 14.

The Cunard Line steamship *Lucania*, Captain McKay, which left New York May 8th, arrived here at 7.24 a.m. to-day, after a passage of five days, fourteen hours and fifty-four minutes, during which she steamed 2,939 knots and made the best time on record, 21.80 knots an hour.

ILLUSTRIOUS DEAD.

Dublin, May 15th.

The Right Hon. Charles Robert Barry, Lord Justice of Appeal for Ireland since 1883, who, as Solicitor-General for Ireland, conducted the Fenian prosecution of 1868, is dead. He was born in 1825.

St. Petersburg, May 15th.

The Marquis Maffi di Boglio, the Italian Ambassador to Russia is dead.

London, May 18th.

Lord Henry Edward Somerset, fourth son of the Duke of Beaufort, is dead. He was born in 1853, and married, 1880, the youngest daughter of Sir Alexander Dixie, Bart. One son and his wife survive him. He was a brother-in-law of Lady Henry Somerset, the president of the British Women's Christian Temperance Union.

London, May 18th.

Anne, Dowager Duchess of Athol, widow of the sixth Duke, is dead. She was a daughter of the late Henry Home Drummond of Blair Drummond.

London, May 18th.

Charles Philip Yorke, fifth Earl of Hardwicke, is dead. The Earl of Hardwicke was born in 1836, and succeeded to the title in 1873. He was formerly controller of the Queen's household and Master of the Buckhounds. He married the younger daughter of Earl Cowley, the result of the union being a son, for whom the Prince of Wales stood sponsor, and two daughters.

THE PROGRAMME FOR THE JUBILEE.

London, May 15th.

The festivities mapped out for the Jubilee have now received the Queen's sanction. They will begin on June 20th, the date of her Majesty's accession to the throne sixty years ago, with a religious service at Frogmore, Windsor, the site of the mausoleum erected to the memory of the Prince Consort and the Queen's mother, the late Duchess of Kent. The Queen and the royal family will be present. On the day following, the 21st, the court will move in semi-state to London, and that evening there will be a banquet at Buckingham Palace in honour of the royal guests. It will be followed by a reception for the members of the diplomatic corps and the special envoys. On Tuesday, June 22nd, the royal procession through the streets of London will be the great feature of the day, and it will be followed by illuminations at night. On Wednesday there will be a garden party at Buckingham Palace, to which thousands have been invited. The court on Thursday, June 24th, will move in semi-state to Windsor. Troops will line the route to Paddington station. Her Majesty will leave the train at Slough, and will drive with an escort of the Life Guards by way of Eton to Windsor, taking this route in order to enable the Eton boys to receive her Majesty. On Friday there will be another banquet at Windsor, and on Saturday will take place the naval review at Spithead, which the Queen will not attend. The Sultan of Turkey has proposed to send his son, Mehmed-Selim Effendi, to represent him at the jubilee. If his Majesty carries out his intention it is more than likely that there will be some exciting scenes during the procession through the streets of London. The Liberal newspapers are furious at the suggestion, and the *Daily Chronicle* protests against the "desecration of the Queen's peaceful festival by the presence of the representative of murder."

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

TURKEY AND THE POWERS.

London, May 28.

It is stated that the Porte has decided to prolong the armistice for an indefinite period.

With regard to the Turkish demand for the annexation of Thessaly, which the Powers had unanimously declared impossible, the Porte maintains its demand and refuses even to discuss the subject. All other points, however, are left to the Powers to adjudicate.

CRETE.

The Cretan insurgents are showing renewed activity.

THE TRANSVAAL.

Dr. W. J. Leyds has been re-elected Secretary of State of the Transvaal Republic.

THE GIBRALTAR GARRISON.

The First Battalion of the Grenadier Guards will leave for Gibraltar in the autumn.

BRITAIN AND ABYSSINIA.

The British Mission to Abyssinia has been accorded a splendid reception by King Menelek.

THE DERBY.

Sir F. Johnstone's horse Vesuvian has been scratched for the Derby.

TURKEY AND GREECE.

London, May 30.

The Porte, in replying to the Note from the Powers as to the terms of peace with Greece, does not enter into any discussion of the conditions mentioned therein, but indicates a readiness to open negotiations with the Embassies when the formalities in connection with the armistice are completed. Turkey desires that the eventual Treaty of Peace be signed at Pharsala.

A Greek Memorandum to the Powers objects to the proposed rectification of the frontier on the ground that it will involve the necessity of fortifying a new line of defence and so will mean fresh financial burdens on the already overburdened nation. Greece also objects to any modification of the Capitulations, which give certain rights to Greek residents in Turkey. It is also urged that Greece cannot pay anything beyond a very small indemnity, and even then she cannot simultaneously continue payments to her present bond-holders.

The Times says that hopes are entertained by Greece that she may be able to raise a loan under the guarantee of Great Britain, France, and Russia, to enable her to pay the indemnity.

LATEST BETTING ON THE DERBY.

Mr. J. Gubbins' Galtee More 100 to 30 on
Lord Rosebery's Velasquez 7 to 1 agst.
Mr. Lorillard's Berzak 25 to 1 do
Mr. J. C. Joicey's Silver Fox 33 to 1 do
Novitiate's colt has been scratched.

THE GRECO-TURKISH WAR.

London, May 31.

The mediation on the part of the Powers between Greece and Turkey is very unpromising, difficulties being raised both at Stamboul and Athens.

The Ambassadors of the Powers at Constantinople have replied to a Note from the Porte, that they do not object to the conclusion of the armistice, and will take steps at Athens with that object

in view. Meanwhile, they add, they suppose the discussion of the conditions of peace will begin forthwith.

THE SOUDAN.

Reuter is informed that all Anglo-Egyptian officers on furlough in England have been ordered to return to their posts by the end of June, to be in readiness for an advance in the Soudan.

The Kalifa is effecting a great concentration of his forces, and will, it is believed, fight to the death.

THE IRISH PARTY AND THE JUBILEE.

The Irish party have decided not to take part in the Diamond Jubilee Celebrations.

GREECE AND TURKEY.

London, June 1.

It is reported at Athens that the Turks have more than once violated the neutral zone (arranged under the terms of armistice) and the Greeks express great fears that a sudden surprise is meditated.

The Greeks are preparing to attempt the defence of Thermopylae.

CRETE.

The Cretan insurgents still continue to act on the aggressive.

Bashi-Bazouks have killed fifteen Christians near Candia.

THE DERBY.

Berzak has been scratched for the Derby.

HAWAII UNYIELDING.

London, June 2.

A dispatch from Honolulu to New York states that the Hawaiian Government has notified the Japanese Minister-Resident that it will not recede from the position it has taken up with regard to the question of admitting Japanese immigrants.

THE JAPANESE LOAN IN LONDON.

The Japanese Loan placed on the London market was covered several times over within an hour of issue at a premium of 1½.

THE DERBY.

London, June 3.

The result of the Derby (run on Wednesday) was:—

Galtee More.....	1
Velasquez.....	2
History.....	3
Oakdene.....	4

Betting at the start:—

Galtee More.....	4 to 1 on
Velasquez.....	10 to 1 against
History.....	25 to 1 do
Oakdene.....	26 to 1 do

Fair weather prevailed, although it was somewhat overcast.

OBITUARY.

Mr. Ney Elias, C.I.E., is dead.

THE SOUDAN EXPEDITION.

Major-General Sir H. Kitchener considers everything ready for an advance on Ab Hamed in August.

THE HAWAIIAN TROUBLE.

Honolulu (via San Francisco June 3).

The Japanese Government's claims in regard to the immigrant question have been entirely rejected by the Hawaiian Government. Considerable difficulty seems to have been experienced in the negotiation.

THE AMERICAN TARIFF.

In reply to an inquiry from Tokyo as to the proposed tariff rate about matting, the messages previously received having contradicted each other, the Japanese Minister in Washington replied as follows under date of the 3rd inst.:—For matting

valued at or over 10 cents per square yard, the rate is to be 8 cents, but in case hemp, cotton, or other vegetable fibres are used as warp, an additional 25 per cent. *ad valorem* duty is to be imposed. The foregoing clause will apply to all Japanese matting.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

SEALING RETURNS.

Hakodate, June 5, 7.40 a.m.

The *Silver Fleece* has arrived with 530 skins on board.

(FROM JAPANESE PAPERS.)

KOBE TEA SALES.

Kobe, June 3.

82,000 cattie of new tea changed hands yesterday. Prices ranged from yen 45 to yen 20.

KOREAN SUSPECTS.

Osaka, June 3.

The two Korean suspects, Chhoi Pong-hwa and Chhoi Yong-kyong, arrived here on the 31st ult. and are lodging at a hotel in Kaminocho, Enokojima. They state that their object is to purchase tanning and match-making machines. Another Korean, named Kin Sei-Kaku, is also staying here.

FOREIGN GUESTS AT HAKONE.

Miyanoshita, June 3.

The Governor of Singapore and Admiral Buller, Commander-in-Chief of the British Squadron, arrived here last evening and put up at the Fujiya Hotel.

THE TRADE TAX TROUBLE.

Matsuyama, June 3.

On account of the arbitrary action of the Trade Tax Collection Bureau a grand meeting of business men was held at the Matsuyama Public Hall to-day to protest against the system of collection.

SUICIDE OF A POLICEMAN.

Kyoto, June 3.

Police-constable Yoshimoto Tsunekichi of the Matsubara Police, having misappropriated over yen 100 of police funds, committed suicide last night.

RESIGNATION OF NAGOYA OFFICIALS.

Nagoya, June 3.

The mayor and other officers of this town have presented their resignations.

THE SOUL-GENSAN TELEGRAPH.

Soul, June 3.

The telegraph line between Soul and Gensan has been repaired and the service re-opened.

THE AUSTRIAN MINISTER.

Kyoto, June 4.

Count Wydenbruck, the Austrian Representative, arrived here to-day and at once proceeded to the Palace to bid farewell to the Emperor, leaving for Tokyo immediately afterwards.

KOBE TEA SALES.

Kobe, June 4.

131,500 cattie of new season's tea changed hands yesterday. Prices ranged from yen 36 to yen 20.

5 *kwamme* of new cocoons were sold here to-day at yen 15.

MURDER BY A SCHOOL TEACHER.

Akita, June 4.

Kitajima Bunzo, a teacher of the Primary School at Noshiro-minatocho, Ugo Province, has been arrested on a charge of having murdered the wife of Mr. Segawa Utsuchi, of the same town, on account of her having incessantly pressed him for repayment of a debt due to her. The accused was brought here yesterday.

DYSENTERY IN YAMAGUCHI PREFECTURE.

Yamaguchi, June 4.

Dysentery has broken out in Yoshishiki-mura, Yoshishiki-gun.

ATROCITY AT TSU.

Tsu, June 4.

Four persons were massacred in cold blood at Kameyama last evening.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season: and reopens on Monday, 4th October.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

12 P KR4(h)	BxKt		

NOTES.
(a) The object of this move is to follow with Q to K Kt 3. Though said to have been invented by Mr. Wilfried Paulsen, and played by him, and

afterwards by several others in the Berlin tournament of 1881, it is at least as old as the date of Stamma's second edition (1745), who gives the following continuation:—

4—Q to K 3	P to K Kt 3
5—B to B 4	B to Kt 2
6—Kt to K 2	K Kt to K 2
7—Castles	Castles
8—P to B 4	P to Q 4
9—P takes P	Kt takes P
10—B takes Kt	Q takes B
11—Kt to B 3	Q to K B 4
12—Q to Q 3	Q takes Q
13—P takes Q	B to B 4

Stamma adds—"Black will ultimately gain the Q P, and consequently will have the best of the game." The same continuation is given in the 6th edition of the German Handbuch. Since then the opening has been extensively analysed and practised by experts. A game between Tchigorin and Mackenzie at the Vienna tournament, 1882, was continued as follows:—

4—.....	P to K Kt 3
5—B to Q 2 (best)	B to Kt 2
6—Kt to Q B 3	P to Q 3
7—P to B 4	K Kt to K 2
8—Castles	B to K 3
9—Kt to B 3	Q to Q 2
10—Kt to Q 5	Castles (Q)
11—B to B 3, with a well developed game.	

The main object in this opening is the rapid development of the Queen's pieces and to castle on that side, which is consistently carried out here by Tchigorin.

(b) There is diversity of opinion as to the best continuation. 4 P to K Kt 5, indicated in note (a) is often played, as well as 4 B to Kt 5 ch, which is continued as follows:—

5—P to Q B 3	B to R 4
6—Q to Kt 3	Q to B 3
7—P to B 4	P to Q 3
8—B to Q 3	B to Kt 3
9—Kt to B 3	P to Kt 2
10—Q Kt to Q 2	B to Q 2
11—Kt to B 4, with a well developed game.	

(c) When the above game was played 3 Kt to K Kt 5 was considered to give Black a strong attack at the sacrifice of a Piece. Since then the following continuation has been discovered safe for Black:—

5—.....	Kt to Kt 5
6—Q to K 4	P to Q 4
7—P takes P (e. p.) ch.	B to K 3

and though Black loses a Pawn, he has compensation in position.

(d) A good move, preventing the development of Black's game.

(e) Black cannot free their game by 7 P to Q 3 or 4, because of 8—P takes P, Q takes P 9—B to K B 4.

(f) 10—..... P to B 3 would break White's strong centre, and would otherwise be a vast improvement on the text move.

(g) If 11—P takes P (e. p.)	R takes P
12—Kt to Q 5	B takes B ch
13—R takes B	R to K 3
14—Q to B 4	R to K 8 ch
15—R to Q sq	R takes R ch
16—K takes R	K to R sq
17—B to Q 3	Kt to K B sq

and White has no great superiority.

(h) A strong move. The Pawn obviously cannot safely be taken.

(i) Black's 12th move was bad and this was the best answer. If 13—B takes B, P to Q Kt 4; followed by Kt takes K B P, giving Black as good, if not a better game than White.

(j) Afraid of the advance of the R P.

(k) Too slow. Black should relieve their position by 14 P to Q 4. A counter attack by 14 P to Q Kt 4 might also relieve them.

(l) 15 P to Q Kt 4 is now the proper move. There was time for the text move after White's Kt to Kt 5.

(m) In order to preserve the Bishop on its present diagonal.

(n) The winning move. It is dangerous for Black either to take or to leave this Pawn.

(o) Q to Q 3 was threatened, and at this point Black had probably no better reply than the move in the text. Had they played 19 Kt to B 4, 20—P to R 6 would have won.

(p) This capture hastens the catastrophe. 20 Kt to Q sq and 21 Kt to K 3, giving up a Pawn would have prolonged the game.

(q) If 22—	Q takes R
23—Q to B 4	R to B sq
24—Q to Kt 8 ch	R takes Q
25—Kt to B 7 mate	

(r) If Q to B 3, P to K 7 wins, for Kt must take P, and then White Q takes B P winning.
(s) Because of 25—P to B 5 or 25—P to K 7 according to Black King's move.

GAME No. 720.

CHESS AT THE CITY OF LONDON.

The following game was played in the Championship Tournament of the City of London Chess Club:—

(FRENCH DEFENCE.)

White—N. W. Van Lennep.		Black—E. O. Jones.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K3	23 RxR ch	KxR
2 P Q4	P Q4	24 Q B4ch	K K2
3 Kt QB3	Kt KB3	25 Q Kt4ch	
4 P K5	KKt Q2	(1)	K Ksq
5 P B4	P QB4	26 QxP	QxKtP
6 PxP	Kt QB3	27 Q K8ch	K K2
7 P QR3	BxP	28 QxP	Q B5ch
8 Q K14	Castles	29 K Kt5q	QxP
9 Kt B3	P B3(a)	30 P K4	Q Q3
10 B Q3(b)	Q K2	31 P K5	P Q5
11 Q R3	P KKt13(c)	32 Kt K4	Q Q4
12 PxP	Kt xP	33 Kt B5	P R4
13 Kt xK5	Kt xKt (d)	34 P R4	P R5
14 PxKt	Kt Q2	35 Kt Q3	P R6
15 B R6	R B2	36 P K6	P R7
16 Castles,		37 Kt B2	Q QB4
QR	Kt xP	38 Q K8	P Q6
17 KR Bsq	Kt xBch	39 Q B4(e)	QxBPch
18 QxKt	RxR	40 K R2	Q B6 ch (h)
19 RxR	B Q2	41 K R2	Q B7ch
20 P KKt4		42 K R3	QxKt
(e)	Q R5	43 QxQ	P R8=Q
21 Q Q2	KB Bsq		Resigns.
22 BxB	RxB		

NOTES.

(a) Sacrificing a pawn, perhaps two, for a counter attack, seems somewhat risky. 9 Q to K 2 is preferable.

(b) White might have captured the pawns, followed by B to Q 2, giving back one of the pawns, and Castle Q R.

(c) 11 P to B 4 would be followed by 12—P to K Kt 4, opening the K Kt file.

(d) 13 B to Q 5, compelling White to exchange knights or to withdraw seems preferable.

Position after Black's 19th move.

(e) 20 Q to Q 2 would have prevented 20 Q to R 5, as White threatened to win right off with 21—Kt takes P, &c.

(f) White has now the inferior game, and the text-move does not improve it. The alternative would have been 25—Q to K 3, or K to Kt sq.

(g) 39—Q takes P would not have saved the game either.

(h) Or, 40 Q takes Kt at once.

GAME No. 721.

(RUY LOPEZ.)

White—Edinburgh.		Black—Glasgow.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	16 P B3	P R4(j)

12 Kt Kt3	P QKt3(g)	24 RxR	RxR
13 QKt Q2	Kt R3	25 P KKt3	
14 BxKt(h)	BxB	(q)	B R6(r)
15 KR Ksq			Resigns.
(i)	KR Ksq		

NOTES.

(a) This move, which does not seem to have been much practised in recent years, was brought into prominent notice by Steinitz in the London Tournament of 1883. A note, however, to the sixth edition of the German "Handbuch," refers to this move as introduced by From at the Paris Tournament of 1867, and gives the following continuation:—

4—P to Q 4 P takes P
5—Kt takes P B to Kt 2
6—Kt to K 2 K Kt to K 2
7—Kt to Q B 3

The move was played in the recent cable match Britain v. United States.

(b) Reference may be made to Note (a); but, probably, in the light of the London Tournament, the most approved continuation here would have been:—

5—Kt takes P B to Kt 2
6—B to K 3 Kt to B 3
7—Q Kt to B 3 Castles
8—Castles

As a rule it is bad to exchange B for Kt if the Q P can retake. The text move leads to an early exchange of Queens, depriving the first player of his chief weapon of attack. Properly played on both sides the game ought to result in a draw.

(c) The Glasgow committee came to the conclusion that this was better than Kt P takes B. White seems forced to recapture the Pawn, leading the exchange of Queens, which appears to dissipate the attack.

(d) After a good deal of consideration the committee were of opinion that it was better to make this move before B to Kt 2.

(e) Curiously enough, in both games the Glasgow players castled on the Q side, which in the general case is regarded as not so safe as castling on the K side.

(f) This appeared to the Glasgow players a waste of time, and this seems to be demonstrated so far as the play of White is concerned, when at the 14th move the Bishop, now driven back, exchanged itself for a Kt.

(g) The Black Pawns on the Queen's side now become exceedingly strong, and the doubled Pawn on the Bishop's file becomes actually an advantage.

(h) The object of this move is somewhat obscure. Theoretically it is bad to allow two Bishops to be retained against two Knights. In the end game one Knight is preferable to one Bishop, but two Bishops are preferable to two Knights. 14—P to B 3 playing for a draw would have been advisable.

(i) If 15—Q R to K sq., B to Q Kt 4; 16—P to Q B 4, B takes Kt; 17—Kt takes B, R takes Kt, winning two Pawns.

(j) The advance of this Pawn really decided the game in favour of Black. 16—B to Q Kt 4 was also good.

(k) White's position is now very cramped. Kt to B square would have been better.

(l) 18—B to Q Kt 4 is at first glance the most likely move; but after consideration the Glasgow players preferred the text move.

(m) Apparently a mistake. The only alternative seems to be 19—Kt to Kt square followed by 20—Kt to R 3.

(n) To be followed by P to R 6 if not guarded against.

(o) The game is now lost. Had this move been made instead of K to B 2, perhaps White might have escaped with the loss of a Pawn. This, however, would in the position equally have lost the game.

(p) Forced.

(q) If 25—K to K 2, P takes P and wins, K, of course, cannot take R on account of P to Kt 7. At the same time, the move in the text appears to be immediately fatal.

(r) Black sent the following moves hypothetically:—

If 26—Kt to K 3 B takes Kt ch
If 27—K takes B P to R 6

YOKOHAMA-SHIMBASHI RAILWAY.

PASSENGERS.

ARRIVED.

Per American steamer *City of Rio de Janeiro*, from Hongkong and ports:—Messrs. J. R. Beirington, J. Sanbelle, J. K. Gwyer, W. Ferguson, F. G. Riggs, W. M. Trigoun, E. A. Sargent, F. B. S. Jacob, F. Knobel, Miss Neville, Mrs. V. Clayton, Rev. T. L. Murray, Mr. S. W. Schumacher, Mr. C. V. Carroll, Mr. H. G. Riggs, Mr. and Mrs. David Lawrie, Miss S. P. Bernie, Miss Bernie, Miss Pierce, Mr. Justus Briggs, Mr. F. M. Knobel, Mrs. Knobel and maid, and Miss Mary Knobel in cabin. For San Francisco:—Mr. W. B. Montgomery, Mrs. Millex and child, Mr. and Mrs. T. W. Noyes, and Lieut. J. M. Robinson in cabin.

Per British steamer *Borneo*, from London via ports:—Mrs. Norris, Mrs. Ray, Mrs. Nurcross and child, Mr. E. L. S. Gordon, Mr. P. C. Birch, Mr. Clemesha, Mr. Brown, Mr. Watkins, Mrs. Watkins, Messrs. A. Watkins, J. Taylor, H. Petersen, T. Mathison, J. Young, W. Ball, J. Burston, E. Crawford, Mr. and Mrs. Fuller, Master Fuller, Mr. Rives, and Mr. Mackenzie in cabin.

Per British steamer *China*, from San Francisco:—Mrs. E. A. Sargent, Miss Sargent, Mr. J. K. Kori, Mr. P. E. Jenks, Mr. A. L. Koch, Mr. Wm. Roth, Mr. E. J. Dyer, Mr. Geo. Sturges, Mr. F. J. Price, Mr. and Mrs. D. E. Simon, Baron Grubbsick, Dr. and Mrs. W. E. Taylor, Dr. H. Kemple, Mr. J. B. Miller, Mr. H. B. Kendrick, Mr. K. Watanabe, Miss Ruth Smith, Mr. and Mrs. C. Von Voorham, and Prof. and Mrs. Barnard Moses in cabin. For Nagasaki:—Mr. Adolph Geison, and Mr. Stephens Offenberg in cabin. For Shanghai:—Rev. J. A. Eakin and family, Miss Eakin, Miss Mary E. Stanley, and Mr. Loo Li Fong in cabin. For Hongkong:—Hon. and Mrs. A. B. Johnson and 2 children, Mr. H. Rumcke, Mr. Wm. Doherty, Mr. W. B. Seabury, Jr., Mr. Robert Herzog, Mr. Said Pack Sing and family, Mrs. A. A. Fulton and family in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Rev. and Mrs. Ashmore, Mr. and Mrs. G. Ballas, Rev. and Mrs. Van Pepe, Mr.

and Mrs. C. A. Pass, Miss G. Willard, Mrs. Gates, Mr. Geo. Woolsey, Mr. S. Takikaso, Dr. J. Poppen, Mr. W. H. Peck, Mr. Geo. L. Peterson, Mr. L. Muroaur, Mr. N. F. Messerve, Mr. R. Hucckert, and Mr. E. Freyvogel in cabin; Mr. T. Sone, and Mr. T. Mucki in 2nd class; 33 in steerage.

DEPARTED.

Per French steamer *Natal*, for Shanghai via Kobe:—Mr. T. Hirai, Mr. and Mrs. Delacamp, Mr. and Mrs. Grösser, Mr. H. Fritz, Mr. Leon Kai Sum, Mr. A. Levy, Mr. C. Eymard, Mr. W. E. Venning, Mr. A. Joseph, Mr. and Mrs. de Samou and infant, Mr. T. Yabé, Mr. S. B. Kada, and Mr. Van Olden in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco via Honolulu:—Mr. A. E. Kaeser, Mr. and Mrs. J. Beale and infant, Mr. H. M. Bennett, Mrs. H. M. Bennett, Mr. M. A. Mitanga, and Mr. Alfred James in cabin.

Per Japanese steamer *Satsuma Maru*, for Shanghai via ports:—Messrs. G. Mudge, F. Gil, S. Kinoshita, Governor of Hozan Ken, K. Kuroya, O. Wegener, T. Kuroi, A. H. Butler, C. Tamari, Lieut. T. Atsumi, Commander K. Ujiku, Captain J. D. Ross, and Mr. Wong in cabin; Messrs. W. Go, K. Torii, Lieut. and Mrs. G. Kato and child, and Mr. W. Krell in 2nd class; 79 Japanese, 2 Chinese and, 3 European in steerage.

CARGOES.

Per French steamer *Natal*, for Shanghai via Kobe:—Raw Silk for Europe, 317 bales; Waste Silk for Europe, 77 bales.

Per British steamer *City of Rio de Janeiro*, for San Francisco via Honolulu:—

GREY OR FADED HAIR

GEO. COURTICE'S CALIMIANTHIST

Has been thoroughly tested and approved in all parts of the world for over a quarter of a Century.

It is NOT A DYE, but simply the colouring principle of the Persimmon and Walnut in a concentrated form.

Acknowledged by the faculty to be perfectly harmless, and will permanently restore the colour true to nature in SIX DAYS.

It is a fine Tonic for the Hair and Skin, and has a very refreshing Fragrance.

NOTE—Thirty years Professor of Hair Specifics to the Honourable Benchers of the Inner Temple.

PRICES: 2s. 6d., 3s. 6d., 5s., 10s. 6d. and £1 1s.

GEO. COURTICE & CO.,

Laboratory, 8, Bishop's Court, Chancery Lane, London
(Late 234, STRAND).

June 5th, 1897.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

'SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coffey, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude. In consequence, milk, fowls, and horse food poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 29, 1897.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, JUNE-12TH, 1897.

DEATH.

At No. 15, Nakayamate-dori, Kobe, DONALD FRASER, of Ashton, Inverness, Scotland, aged 46 years.

SUMMARY OF NEWS.

A **MARKET** has been found in China for Japanese lace.

THE **TURKS** are preparing to settle down in Thessaly.

COUNT **MUTSU**, former Minister for Foreign Affairs, is seriously ill.

A **VEIN** of gold has been discovered at Iwasakamura, near Matsue.

NINE **KEN** cases of plague were reported in Formosa on the 5th instant.

THE **WEST RIVER** in Kwangtung was officially opened on the 2nd instant.

DISEASE has broken out among the silkworms in one of the silk districts of France.

MR **DONALD FRASER**, an old resident of Kobe and Yokohama, died on Thursday at Kobe.

PRACTISING is steadily proceeding for the Jubilee music in Christ Church on June 22nd.

BARON **ROSEN**, the new Russian Minister, is expected at Yokohama on the 2nd of August.

RAIN on Saturday and Monday caused the abandonment of two cricket matches in Yokohama.

It is reported that more Japanese Loan Bonds are being treated for by foreigners in Yokohama.

THE crew of a Japanese junk, found in a sinking condition off Rock Island, were picked up

on the 8th inst. by the D.D.R. steamer *Bellona* and brought to Yokohama.

It is reported that the Nippon Yusen Kaisha propose raising their passenger rates 10 per cent.

THE Council of Local Governors sitting at the Home Department was dissolved on Monday last.

THE export of coal from Moji during the month of May amounted to 98,558 tons, valued at yen 616,741.

COUNT **MATSUKATA** has resumed his post of Minister President, his health being much improved.

THE Bank of Japan intends henceforth to add to its business the advancing of money to private individuals.

THE Greeks complain of Turkish atrocities in Thessaly and Epirus, and urge the Powers to intervene.

THE yacht races on Saturday were not very exciting owing to the absence of wind and heavy downpours of rain.

THE question of the purchase of the Formosa-Amoy cable is again being considered by the Japanese Government.

GREAT BRITAIN, France and Italy have definitely declared themselves against the cession of Thessaly to Turkey.

THE Nippon Kangyo Ginko (Japan Industrial Bank) was granted a charter by the Minister of Finance on the 7th inst.

ELECTIONS to the House of Peers of representatives of the highest tax-payers took place throughout the country on Thursday.

THE Japan Red Cross Society proposes to build two transports, for the conveyance of the wounded in time of war, at a cost of a million yen.

MARQUIS **S-IGO**, Minister of the Navy, gave an entertainment to Admiral Sir Alexander Buller and his officers at Meguro on the 5th instant.

THE Porte has memorialized the ambassadors of the Powers in justification of its claims for the cession of Thessaly, the amount of indemnity, etc.

A **HUNDRED** carpenters employed by the Yokohama Dock Co. struck for a rise of wages on the 6th inst. They receive .0 to 50 sen a day, but want 70 sen.

It has been found impossible to raise the proposed capital for the Yokohama Insurance Co.—ten million yen—so the company will start business with a smaller capital.

A **CARPENTER** at Ise, a few days ago, actuated by jealousy, attacked his former wife and her second husband, and two other persons with a knife. One of those attacked, a woman, has since died.

It is proposed to establish a large Japanese Bank in Korea, the Government lending the establishment the money repaid by the Korean Government on the Japanese loan, viz. 1,000,000 yen.

ON Tuesday afternoon all the Ministers of State assembled at the official residence of Count Matsukata, the Premier, at Nagatacho, Kojimachi, and held a discussion on the Budget for the next fiscal year.

Two baseball matches have been played during the week at Tokyo between the U.S.S. *Forktown* and the Tokyo High School. In the first,

which was unfinished, the *Forktown* team had the better of the game when play was stopped. In the second game, played on the 8th, the School won by 17 runs to 7.

MEDICAL Inspection has been enforced at Yokohama and all the other open ports, on all vessels arriving direct or indirectly from Formosa and China ports south of Shanghai, owing to the prevalence of the plague in Formosa and Amoy.

MR. **HASHIGUCHI BUNZO**, Governor of Taipeh Prefecture, Formosa, has been censured by the Authorities for neglect of duty in not having been prepared for the attack of the insurgents upon Twatutia on the morning of the 8th of May.

ON the 17th of June, the third anniversary of the commencement of Japanese administration in Formosa, there will be a grand review of troops in celebration of the occasion. It is feared that the rebels in the Island may again attack the Japanese on that day.

THE following were the receipts of the Railway Companies mentioned from the 21st to the 31st ult.:—Harima Railway:—passengers, yen 2,430; freight, yen 1,898; or yen 12 per mile per day. Sanyo Railway:—passengers, yen 43,218; freight, yen 12,241; or yen 25 per mile per day. Chikugo Railway:—passengers, yen 4,108; freight, yen 23,739; or yen 50 per mile per day. Sangu Railway:—passengers, yen 5,180; freight, yen 318; or yen 90 per mile per day. Koku Railway:—passengers, yen 7,083; freight, yen 2,525; or yen 32 per mile per day. Kansai Railway:—passengers, yen 14,513; freight, yen 3,635; or yen 19 per mile per day. Hoshu Railway:—passengers, yen 1,437; freight, yen 5,998; or yen 35 per mile per day. Osaka Railway:—passengers, yen 16,062; freight, yen 4,373; or yen 41 per mile per day. Kyushu Railway:—passengers, yen 35,333; freight, yen 19,807; or yen 26 per mile per day.

THE Import market generally has shown a little more life than of late, except in the lines of piece goods, yarns and woollens, in which transactions have been few and small. What business has been done in cottons has been for the most part at reduced prices, grey shirtings having fallen some 10 cents per piece. American raw cotton has risen slightly while the Indian and China staples have receded from 50 cents to \$1 per picul. Metals have shown a firmer tone and good business has been done in iron, at slightly improved prices for pig and bars, while nails have dropped a little. In sugar, a fair business has been done at former quotations, both in Brown and White. The kerosene market continues dull, sales only being enough to fill immediate requirements, at weak prices. In exports the recent rush in the tea market is over for the present and prices have found their ordinary level. It appears doubtful from late American news, whether the increased duty on tea in the United States will be imposed so early as had been expected, namely the 1st July. At all events shippers can now afford to wait a while until dealers are disposed to come down in prices. The latter are keeping back stocks in the hope of raising quotations, but this move comes rather late in the day, considering that exports up to date are ten million pounds against three millions at same date last year. Holders of old crop silk have come down in prices, in view of the near approach of the new crop, and some business has been done. The crop prospects are bright. In waste silk nothing has been done. Exchange has again weakened.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Budget for the year 1898-9 has of late become the object of some discussion in the columns of the vernacular press. Of course the Budget has not yet been actually compiled, and the figures that will ultimately appear in it are unknown. But rumour alleges that the various Departments have submitted estimates pointing to a large increase of expenditure, and that the Minister of Finance finds himself considerably embarrassed. More than one vernacular journal has ventured to announce that if the programmes of the various Departments were adopted, the Treasury's outlays would exceed its income by 30 million *yen*. But that is probably a great exaggeration, and the journals responsible for the statement must be considered rash rather than well-informed. The *Nichi Nichi Shimbun* does not commit any such blunder. It confines itself to a much cleverer rôle. Without attempting to predict the exact nature of the financial drama, it makes astute preparations to ensure that the performance shall possess a maximum of tragic effect for the Cabinet. It reminds the public that the chief plank in the platform of the Matsukata Ministry was financial reform. The difficulty of balancing the public accounts without injuriously reducing the expenditures, or unduly increasing the revenue, was the generally accepted cause of the Ito Cabinet's retirement from power. Count Matsukata himself indirectly confirmed that view when he apologised to the Diet for following the economical lines mapped out by his predecessors, and pleaded that his tenure of power had been too brief to permit any radical plan of reform. It is by the Budget for next year, therefore, that the Matsukata Ministry must be judged. They will no longer be able to take refuge in the excuse of recent assumption of office. Unless they can show some substantial improvement on the policy of their predecessors, they will stand self-convicted of failure. As yet no indications of reform are visible. When the Cabinet came into power, its first act was to appoint an Administrative Investigation Committee; a committee comprising the best talent that the ranks of the Government could supply. The Committee has sat ever since and is still sitting. But no one knows what it has achieved. There has surely been time enough for it to do something, if anything is to be done. Doubtless the fruits of its labours will be seen when the new Budget is compiled. By such and similar writing the *Nichi Nichi* astutely enhances the effect of the Cabinet's financial failure, should a failure be discernible when the estimates are published.

Three leading articles are devoted to the same subject by the *Hochi Shimbun*. They are marred by the defect so common in the writings of Japanese journals, a profusion of negative generalities but little positive counsel. It is admitted that the Cabinet must stand or fall by the new Budget. Count Matsukata made that choice himself when he informed the Diet that his tenure of office had not sufficed for making any reform in the financial policy of the year 1897-8, but that he promised to show a satisfactory result in the following year. How, then, is a satisfactory result to be attained? The *post-bellum* programme of the empire is founded upon two bases—increased national armaments and encouragement of industrial development. It is generally admitted that there can be no departure from the former part of the project. The Navy and the Army must be raised to the contemplated standards. But it does not follow that no economies are possible in the process. Among a mass of undertakings connected with the scheme, some surely admit of retrenchment without impairing the general plan. Commander Sakamoto, who was killed in the battle of the Yalu, told his wife before he set out for the scene of the fighting that military and naval expansion would certainly be a consequence of the struggle in which the country had embarked, and that a reduction in the pay of officers would probably be essential. She was, there-

fore, to order their household with a view to that contingency. The public does not suggest that Commander Sakamoto's prediction should be fulfilled, but it does expect that the spirit displayed by him should animate the Executive, and that wherever economy is possible, economy should be practised. As to the encouragement of industries, it becomes an important question to consider whether the system of bounties now adopted does not threaten to prove a mischief rather than a benefit. The practical effect of the bounties in effecting the purposed end is evidently small, whereas, on the other hand, they incite foreign Powers to adopt retaliatory measures, as has already been shown by the conduct of the United States and France. Besides, when the Revised Treaties go into operation, foreigners will be entitled to claim the bounties on an equal footing with Japanese; and there is, further, the general objection that State aid has the effect of educating a spirit of dependence. In this realm, therefore, the Cabinet is urged to put down its foot, but what particular bounties or aids should be discontinued, the *Hochi* does not say. In the third place, the taxes devised by the last Cabinet for revenue purposes are not turning out well. The Trades Tax especially is causing universal complaint, and the Ministry should endeavour to substitute some less irksome source of income. Formosa, again, ought to contribute something more to its own support. The policy of imposing taxes on a new colony is faulty; but Formosa is not in any sense a new colony, and there should not be any hesitation in requiring its inhabitants to pay taxes at the same rate as that applied to the rest of the empire into which the island has been incorporated. The *Hochi* speaks, in the same general way, about reducing the Administrative machinery, but that is a very old cry, echoes of which have almost lost their power to arrest public attention.

The *Yorodsu Choho* undertakes to prove that the public are egregiously mistaken in imagining the newly Revised Treaties to be instruments drafted on a basis of equality. It alleges that the space at its disposal would not suffice to enumerate all the points of inequality. One, however, is specially worth adducing; namely, the fact that whereas the British Colonies and the Dominion of Canada are explicitly exempted from the purview of the Anglo-Japanese Treaty, unless they choose to come under it, no corresponding power of selection is reserved to Japan. Even the Liberals, who, four years ago, stood forward as the parliamentary champions of Mixed Residence, did not advocate indiscriminate granting of that privilege. In their Address to the Throne they urged that Mixed Residence in Hokkaido and Rukiu should be subjected to limitations, and that in the other out-lying islands of the empire it should be forbidden altogether. Apparently the negotiators of the Treaty paid no attention to that recommendation. The British plenipotentiaries were careful to consider the interest and convenience of their country's colonies, but the Japanese plenipotentiaries took no corresponding thought for Japan's benefit. Then again, when the Anglo-Japanese Treaty was revised, war had not broken out between China and Japan, and the negotiators had not the remotest idea that the Treaty would become applicable to Formosa. Why, then, should its provisions be held to apply to the new dominion? The administration of Formosa and the state of its affairs are most unsatisfactory. It is wholly unfit to be thrown open to Mixed Residence. Yet, in 25 months, foreigners will be able to trade, travel and domicile themselves wherever they please in the island. The *Yorodsu* elaborates its criticism to considerable length, but the gist is here set forth.

A State must adapt its expenditure to its income. That is a self-evident proposition. But the habit in Japan is to think overmuch of reducing expenditures, and to pay comparatively little attention to the fact that the sources of possible income have very largely increased

of late years. In other words, the prosperity of the nation has been so greatly developed that its capacity to pay augmented taxes is unquestionable. Innumerable indications of the fact present themselves in the conduct of the middle and lower classes. Their consumption of imported articles shows a very marked increase, and their mode of life generally is far more luxurious than it used to be. Even in travelling, where economy has always been a traditional habit of the Japanese, people that formerly never dreamed of riding in any carriage save a third class, now purchase second, and even first class tickets without compunction. Of course such evidences of extravagant tendencies are not a subject for unmitigated rejoicing, but they certainly indicate a decided change in the circumstances of the people. Another indication is furnished by the fact that the old complaint about official emoluments is no longer heard. A few years ago, a Minister of State with a salary of six thousand *yen* annually seemed too enviable a person to be tolerated, and folks cried out that his salary should be reduced. But, now-a-days, many a merchant makes an income of six thousand *yen* a month, and the Minister's stipend has ceased to be startling. Such evidences of changed conditions may not seem absolutely conclusive. Arithmetic is a safer guide, and arithmetic is most emphatic in this instance. Take, for example, a few figures relating to the years 1879 and 1885, the former year being chosen because it was the second after the Satsuma Rebellion, and the country may be supposed to have then recovered its normal condition:—

COMPARATIVE TABLE, SHOWING THE NATION'S TAX-PAYING CAPACITIES.

	1879.	1895.
Area of land under Rice.....	cho 23,003,436	29,044,689
Quantity of Rice produced.....	koku 29,044,689	39,921,882
Area of land under Barley.....	cho 977,661	1,771,623
Quantity of Barley produced.....	kghu 6,878,315	19,526,123
Production of Gold.....	momme 69,688	211,578
Production of Silver.....	2,423,278	19,360,536
Production of Copper.....	kwau 1,134,809	5,308,840
Production of Iron.....	3,474,975	5,182,462
Production of Lead.....	69,110	289,943
Production of Coal.....	tons 857,949	4,261,218
Mileage of Railways in operation.....	miles 76	3,658.96
Number of foreign-style ships.....	373	1,529
Tonnage of above.....	tons 70,314	254,692
Value of Exports.....	yen 24,334,416	136,186,328
Value of Imports.....	29,174,744	129,260,578

With regard to the effect of the above development on the amount of the taxes actually collected, the following table is instructive:—

	1894. Yen.	1895. Yen.
Customs Duties.....	2,492,000	4,539,000
Saké Tax.....	13,912,005	14,686,000
Tobacco Tax.....	1,814,000	1,798,000
Customs Duties.....	4,991,000	5,125,000
Saké Tax.....	15,812,000	16,637,000
Tobacco Tax.....	2,161,000	2,640,000
	1894. Yen.	1895. Yen.
	5,755,000	6,785,000
	16,130,000	17,747,000
	2,680,000	2,740,000
		6,166,000
		18,407,000
		2,950,000

No one looking at the above figures can pretend to think that the nation is not now able to contribute for purposes of State expenditure a very much larger sum than it contributed seven years ago. The financiers of the country should recognise the fact, and should proceed boldly to levy whatever taxes will bring to the Treasury an income large enough to meet the requirements of the empire. The *Yiji Shimpō*, from which we are quoting, then proceeds to discuss what taxes should be imposed. It condemns the Registration Tax and the Trades Tax as vexatious imposts, difficult to collect and not productive in proportion to the annoyance they cause and the trouble they entail. It is unfavourable to the Income Tax also, chiefly on the ground that it falls heavily upon honest folks and lightly upon dishonest, and is inevitably a demoralizing kind of tax. Still, while advocat-

ing the complete abolition of the Registration Tax, our contemporary does not go so far in the case of the Income Tax. It thinks that the latter should be amended, and that its proceeds instead of being counted a part of the regular ordinary revenue, should be set apart as a fund to meet outlays on account of calamities, such as earthquakes and inundations. Finally, it falls back upon its old and constantly urged contention that the tax on *saké* should be looked to as a chief source of increasing the revenue. The present tax of 7 *yen* a *koku* might be raised to 14 *yen* without the slightest inconvenience. That would mean an increase of 28 million *yen* to the income of the Treasury. The manufacture of *saké* for domestic use should then be abolished altogether, and every protection should be afforded to *saké* brewers. It is altogether a mistake to suppose that the tax would fall on the brewers. The consumers would have to pay it, and that the consumers are well able to pay it, is proved by the above tables.

The *Mainichi Shimbun* takes up the cause of the persons engaged in a particular kind of embroidery; namely, embroidery in which the spaces within the outlines of the pattern are filled with net-work. According to our contemporary's information, this species of embroidery has been produced for several years in Japan, and can not possibly be regarded as the invention of any one person. Nevertheless, Mr. Narita Kumajiro, of Motomachi in Yokohama, applied, last September, for a patent and received it in March. Ignorant that anything of the kind had occurred, all the people previously engaged in the work—which has now become an important industry—continued producing the embroidery as before, when suddenly they were visited by agents of Narita's, and warned to desist, under penalty of legal prosecution. Many of them had entered into contracts with foreign exporters, and to be thus interdicted from implementing their agreements meant ruin. It is quite unreasonable to allege that this kind of fancy work is Narita's invention. Pictures of it may be seen in foreign treatises on decoration, published long before Narita put his hand to the enterprise. In Yokohama alone there are 84 manufacturers, employing over 1,300 work-people. To restrict the production to one factory would be not only unfair, but also a great public hardship, for as such work requires no machinery and is eminently adapted for domestic manufacture, it constitutes a resource that ought to be left freely to private persons. The various manufacturers have petitioned the Patents Bureau on the subject, and the *Mainichi* points out that, if Narita's patent be not annulled, there will be nothing to prevent foreigners from carrying on the industry within their own compounds under the ægis of extra-territorial jurisdiction.

A strong article appears in the *Yomiuri Shimbun*, condemning the bounty on the direct export of silk. The hostile arguments used by our contemporary and by other vernacular journals at the time of the objectionable Law's enactment, are recapitulated, and it is further pointed out that the only effect of the measure up to the present has been to induce France to threaten the imposition of a corresponding duty on Japanese silk for the protection of the French product, and the United States to provide similar retaliatory mechanism. The issue is practically defunct, but the *Yomiuri* threshes the dead horse lustily, and calls upon the Government to take steps for having the Law repealed in the next session of the Diet.

A telegram was received in Hongkong on June 3rd, from Sir Claude MacDonald, H. B. M. Minister to China, notifying the opening of the West River on that day. At 4 o'clock in the afternoon, Messrs. Butterfield and Swire dispatched the first steamer for Wuchow. An arrangement has been made by Messrs. Jardine, Matheson, Messrs. Butterfield and Swire, and another shipping company to despatch steamers every day.

THE MONEY MARKET.

The *Nichi Nichi Shimbun* states that the repayments of security deposits by the Industrial Bank and the payments of interest on Public Loan Bonds have had, as was expected, the effect of restoring the money market to a fairly settled condition. A remarkable reduction in the rates of daily interest on loans is noticeable in Osaka and Kyoto. Even cautious bankers, considering it inexpedient to keep deposits lying idle in their vaults, begin to issue loans at a much lower rate of interest than before. Yet financial affairs in the interior are far from being in a state of tranquillity. The following points may be worthy of consideration:—

1. Currency has increased, but capital is still wanting. The amount of money in circulation, which, but two years ago, did not exceed 180,000,000 *yen*, having increased to two hundred millions, it would seem that in the ordinary course of things capital should have increased in proportion. But a portion of this sum having been spent on unproductive enterprises (such as the construction of forts and barracks), only an insignificant amount of the increased currency is available as productive capital.

2. The increase of currency has enhanced the prices of commodities. Prices have lately risen from ten to fifty per cent. This anomaly may be partly due to the depreciation of silver, but the chief factor in the rise in prices is no doubt the augmentation of currency.

3. The rise of prices has necessitated the use of increased capital. A hundred bales of cotton, for instance, which could formerly be bought for ten thousand *yen*, now requires twenty thousand. In short, every enterprise necessitates the use of double the amount of capital required in former times.

4. The means of supply of capital have decreased. War bonds have been issued to the amount of one hundred and twenty-five million *yen* since the late war with China, and as the funds which ought to have been spent in industrial enterprises were appropriated to unproductive investments, the amount of capital has necessarily decreased.

5. When the supply of capital diminishes with an accompanying increased demand for it, pressure on the circulation of money is the inevitable result. Capital having decreased after the War, as remarked above, demand has inversely increased on account of the organization of various companies and of the rise in prices of commodities. Thus it was quite natural that the money market should have been tight. This was the condition of affairs at the beginning of Spring, but the general feeling of the people seems to have since undergone a little change, in view of the possibility of the introduction of foreign capital, consequent upon the alteration of the Coinage System. Everybody grew sanguine and looked forward to an improvement of prospects in the Spring. Facts, however, conspired to prove that the difficulties grew more formidable than before. The value of land and of commodities has rapidly risen, while plans for reviving once-relinquished schemes steadily sprang up again, creating a necessity for funds. In regard to these circumstances the following few points may be noted:—

A. The excess of imports tends to grow more serious and the Bank of Japan has no means of supplying capital to meet the exigency.

To whatever extent the demand may increase in Tokyo, no anxiety need be entertained so long as there is a means of supply. Nevertheless, should there be no means by which the capital once paid out may be drawn back or absorbed, the Bank of Japan will have no alternative but to issue convertible notes beyond the amount authorised, or to devise some means for obtaining the indemnity for deposit. But the latter scheme is hardly practicable, as the indemnity now belongs to settled account.

B. The excess of imports since the early Spring has reached twenty million *yen*, and it may reasonably be supposed that if this be added to the value of goods now contracted for the amount will be not less than forty millions.

As the payment of this sum has to be made from the funds of the people, the supply of capital must decrease day by day.

Bonds have been sold to the amount of forty millions of *yen* in value, but were sold below their face value, and the amount was less than that of the loans to be issued in accordance with the estimates for this year. There may be prospect of further sales, but the greater the sales the more will the prices of commodities rise. There is then little probability of a fall in the rates of interest, while the interest to be paid on bonds is virtually a loss to the State.

C. The Government at this conjuncture is receiving portions of the indemnity from time to time, and there may be no exodus of gold and silver in the import and export trade. Yet the indemnity belongs exclusively to Government and is not to be thrown into circulation among the people. Months and years will elapse before it comes to be circulated in the money market by being appropriated to the expenditures of the Government. Not a little embarrassment is therefore likely to be experienced by men of business in the interim.

D. Even when the indemnity is appropriated to industrial enterprises, the rate of increase of capital and currency will be far greater in the case of the latter, and prices of commodities will continue to rise. The circulation of money must be seriously influenced under such circumstances. That the actual condition shows a want of capital may be clearly perceived from the following particulars:—

1. Repayment of securities by the Industrial Bank.

If the fact that the return of only twenty millions of *yen* has influenced the rates of interest throughout the country, be compared with the actual conditions at the time the War Bonds were issued, the true state of affairs may easily be imagined.

2. The rise in the rates of interests on deposits. This measure may have been taken as a precautionary warning to the market, but it proves the lack of funds in the various banks.

3. The relations between immediate and time bargains in rice.

Despite the circumstance that purchasers are hardly able to take delivery of purchases from weak sellers, who are without means of delivering owing to immediate want of money, the much higher prices secured for cash transactions proves the scarcity of capital.

4. The rise in the rates of daily interest on loans. A comparison of the rates of interest for the past three years shows that, in spite of the augmentation of currency, they have risen year by year.

5. Local demands. The price of rice having risen, people became excited, and sales of land were largely effected, in order to employ the funds in commercial enterprises.

6. Enormous outlays. There will be a further outlay of forty or fifty million *yen* to be made by the various companies, such as the Japan Railway Company, the Steam Navigation Company (Yusen Kaisha), and Oriental Steamship Company. Of this amount about twenty millions are to be spent abroad for the purchase of machinery, and ships, and will never be restored to Japan.

7. Demand in connection with raw silk, which alone requires thirty millions of *yen*, and the amount necessary for cotton, cotton threads, foreign woven goods, and other merchandises, may be still more considerable. Is there any prospect of supplying the above demands? The sale of public bonds has been effected from time to time, but it does not suffice to supply the general demand for capital. The power now possessed by the Bank of Japan for a further issue of convertible notes is limited to six million *yen*. The banks in Tokyo have, in spite of warnings, reduced the rates of interest on deposits, and have even allowed themselves to issue risky loans. Such being the actual condition of the economic world in Japan, so long as it remains unchanged considerable pressure on the circulation of money must reasonably be anticipated, and the present apparent tranquillity can by no means be expected to last.

RUDE CONDUCT OF JAPANESE TOWARDS FOREIGNERS.

We are sorry to have to report another instance of extreme rudeness on the part of Japanese *jinrikisha*-men towards a foreigner. It happened at the Yokohama railway station. A gentleman having overpaid the drawers of his *jinrikisha*, was dunned by them for more money, an almost invariable experience when foreigners yield to a generous impulse. The wholesome course adopted in this case was to take back the excess and leave the men in possession of their proper fare only. Thereupon they not only remonstrated vehemently, but actually laid hands on the gentleman. He nevertheless refrained from striking them, as he would certainly have been justified in doing, and appealed to the station-master, no policeman being at hand. We are assured that the station-master did not attempt to render any assistance, and that the men were allowed to cling to the foreigner as he passed through the ticket gate, and even as he entered the carriage. He was obliged to shake them off not only when about to step into the carriage but also after he had entered it. There can be no question that the railway officials are to blame for suffering such a scene to occur within the precincts of the station. They are responsible for the preservation of good order there, and for the protection of the passengers, a responsibility which they failed to recognise in this instance. As for the *jinrikisha*-men, it seems advisable that special directions for their restraint should be issued to the police. Many of the men are hard-working, obliging, and courteous, but not a few are exacting, rude, and truculent, as we ourselves can testify. Indeed, there is no disguising the fact that a very bad spirit pervades a portion of the *jinrikisha*-drawers and *sendos* of Yokohama. It is alleged that a worse state of affairs exists in Kobe, but of that we can not speak with certainty. Yokohama, however, is bad enough. Of course the Japanese Authorities would be only too glad to apply a remedy if they saw any effective method of doing so. We appreciate their difficulty, but are disposed to think that the police might accomplish a great deal were they duly instructed. They might be informed of the disposition that exists among the *jinrikisha*-men and *sendos*, and directed to lose no opportunity of conveying to both classes an assurance that any display of roughness or extortion will be punished. The lower orders in Japan are usually quite amenable to reason, and we can not but think that if the *jinrikisha*-men and boat-men were taught to expect official displeasure in the event of such misconduct as that described above, they would mend their manners. A Japanese *jinrikisha*-drawer or a Japanese *sendo* would never dream of laying hands on one of his own countrymen to emphasise a claim for extra-pay. He resorts to such extremities in the case of a foreigner partly because he believes that his verbal remonstrances are not understood, and partly because in the presence of foreigners he dispenses with forms of etiquette which, he thinks, are not appreciated and will not be missed. If he knew that to lay hands on another person is a technical assault punishable by law, he would be more careful, and that is a knowledge that the police could easily convey.

Would it not be advisable, also, to require the constables on duty in Yokohama to inform themselves about the proper fares for *jinrikisha*, baggage-carts, and boats? A schedule of fares might be posted at each station for the purpose alike of instruction and reference. The police are civil and disposed to be helpful when appealed to, but they seldom seem to know what should be paid in case of a dispute, and it is a little too much to expect them to render intuitively correct judgments.

Apropos the general subject of the attitude of the Japanese lower orders, as well as of Japanese students and children, towards foreigners, we can not but express astonishment that no measures are taken to correct the abuses now unquestionably on the increase. The matter concerns the Japanese themselves much more than it concerns foreigners. To be called "*Tofin Baka*," or "*Neko Papa*" by a group of *gamin*, or even to be scowled at by a student, does not hurt a sensible man any more than he is hurt by the barking of a dog or the grimaces of a monkey. But these things hurt Japan seriously. For, if continued, they will deprive the nation of its good name and destroy the admirable reputation for courtesy that its people have acquired. We must assume that intelligent and educated Japanese are perfectly well aware of the fact, yet they appear quite indifferent. Is it to be supposed for an instant that little children would address rude expletives to the passing stranger if their parents chid them for doing so? Twice only can we recall instances of a parent adopting that course, and never once have we seen the matter alluded to in a Japanese newspaper. Yet there can be no doubt that a few plain words from the press would work great good. Chauvinist journals like the *Nippon* and the *Yorodzu Choho* are very fond of talking about the masterful foreigner and his rude ways, but we venture to affirm that the rudeness experienced by the foreigner in Japan at present is incomparably greater than the rudeness he displays. And the trouble is that the men against whom street cries and students' ejaculations are uttered, are, in the vast majority of cases, thoroughly polite and considerate persons, who have never been guilty, and would never though they lived fifty years in Japan be guilty, of any act warranting such discourtesy.

The case of the students at the recent base-ball match in Yokohama is one of the worst hitherto recorded. A *jinrikisha*-drawer, a *sendo*, or a street *gamin*, these are folks whose ignorance constitutes some excuse for misbehaviour. But a student knows perfectly well what obligations are imposed by the ordinary canons of politeness, and is altogether inexcusable if he violates them. The students present as spectators at the baseball match were virtually the guests of the Yokohama players, and, under such circumstances, that they should address to the latter terms like *bakka-yaro*, *akahige-me*, and so forth, was a veritable outrage. If they imagine that by such conduct they asserted their manhood or exhibited their patriotism, they are sadly mistaken. They merely brought contempt upon themselves and opprobrium on their country. The students' case is plainly remediable. They are within constant reach of instruction, and if they were taught that a gentleman's

first duty is to be a gentleman, it is inconceivable that they should not soon come to understand the utter, hopeless boorishness of scowling and jeering at strangers in the streets, or calling a man ugly names when they imagine that he does not understand them. "Unlicked cubs" is the term applied to students that behave after that fashion in Europe. We imagine that Japanese students would be horribly chagrined and vastly exasperated if they were called "unlicked cubs." Yet they often merit the epithet. What would the lads of the Higher Middle School think if some foreign residents of Yokohama, watching a game of base-ball within the precincts of the School, were to shout out, from time to time, "Yah! Japanese donkey!" "Bah! Japanese yellow skin!"? Will the Principal of the School—a man of high attainments and perfect courtesy—will he kindly put that question to the students, with the compliments of the editor of the *Japan Mail*, if he pleases. We can hardly persuade ourselves that any student of the School behaved in such a manner. Probably some low boys from a charity institution were the culprits. At any rate the thing is utterly un-Japanese.

FINANCIAL AND ECONOMICAL NOTES.

The telegraph says that the Japanese War Bonds placed upon the London market by the Yokohama Syndicate were subscribed seven times over—in other words, the subscriptions for four million pounds sterling worth of Bonds, in round numbers, aggregated twenty-eight millions. The Bonds were sold for £103 12s. per £100 face value, and as they were bought for £102, it would appear that the profit was £64,000, supposing the coupons to have been attached. If the June coupons were not attached, the profit aggregated £164,000. The Bonds are now re-selling readily for £104.

It is contended by some persons that Japan has done a foolish thing in this matter, since she could easily have floated a foreign 4-per-cent. loan at par, thus retaining to herself all the advantages now obtained by the foreign syndicate, as well as getting the money at a lower rate; and since the sale of her Bonds in London is the same thing, to all intents and purposes, as floating a foreign loan. We are unable to see the matter in that light. In the first place, there is the question of amount. Japan does not want any large sum of money at present. Even if she has to float the Public Undertakings Loan and the Railway Loan this year, the total will be only 68 million *yen*, in round figures, or, say 6½ million pounds sterling. She would not like—nor, indeed, would it be wise—to pledge her credit for so small a sum. If she must go abroad for money, her best plan will be to ask at once for all that she wants, or is likely to want. Appealing to European capitalists for a dribble now and a dribble by and by, would be bad policy. Then, again, it is by no means certain that she will require any loan, either domestic or foreign, this year. Certainly she will not, if China puts up the remainder of the Indemnity, since it would be extremely foolish to pay interest on a loan while other available funds were lying unemployed. Another consideration is that domestic holders of Bonds claim some consideration. The people of Japan have a right to profit by

their national credit. It is they that have built the credit, and it is they that have hitherto furnished money for purposes of State expenditure. If the securities they hold can be made to sell in foreign markets at a higher price than the original cost at home, they are entitled to a part, at any rate, of the benefit. The course pursued by the Treasury meets that view of the case. The whole volume of public securities ought now to appreciate in Japan, and Japanese holders are in a position to dispose of their Bonds at a good premium, obtaining hard cash in payment. If, on the other hand, the Treasury, instead of negotiating to introduce these domestic securities to European markets, were to take steps for raising a direct foreign loan, it might, and probably would, prove difficult to place the ordinary domestic bonds abroad.

Of course there is something to be said about the fact that for every million *yen* worth of Bonds sold abroad, the Treasury will have to pay gold to the extent of fifty thousand *yen* annually, on account of interest, instead of being able to discharge its indebtedness with paper. If, for example, Europe and America took four hundred million *yen* worth of Bonds, Japan's gold reserves would soon be exhausted by yearly drafts of twenty million *yen*. But that danger is reduced to a minimum by the course now adopted. If a direct foreign loan were raised, provision would inevitably have to be made for payment of the interest and sinking fund in London, say at the agencies of the Bank of Japan and of the Specie Bank. Such will also be the case, we presume, with the forty million *yen* worth of Bonds sold *en bloc* to the Yokohama Syndicate. But the interest on Bonds sold privately will be payable in Japan, and instead of being collected in gold in Japan for shipment to London, the greater part of it will doubtless be transformed into staples of export. Englishmen hold an immense quantity of American State securities, but they do not transport any considerable portion of the interest in gold bars to London. The money crosses the Atlantic in the shape of American wheat, cotton, live stock, or what not. At present Japan's imports largely exceed her exports, and there is consequently no avenue for transactions of the kind here alluded to. But that is not a permanent state of affairs, nor would the sale of Japanese public securities in Europe tend to perpetuate it.

It is alleged that the sources from which a revenue was expected to accrue in Formosa are proving less prolific than the Government's estimate. Opium, for example, will not yield much under the new system, and other taxes must suffer more or less owing to the unsettled state of the island, while, for the same reason, the administrative expenditures have increased. Under the circumstances it is probable that a new system of regulating the island's finances will be introduced next year.

The temptations offered by the stock market have established quite a record, lately, as the *Keisai Zasshi* justly observes. First, there was the case of Mr. Yoshikawa, accountant of the Japan Railway Company, who, having made away with sixty thousand *yen* of the Company's money, committed suicide on the 6th of May. Then followed Mr. Shimana, of the Fifth Bank, who lies in prison, charged with appropriating fifty thousand *yen*, and finally there was Mr. Tokushima, of the

Osaka Nishiroku Bank, who, having robbed to the extent of 9,500 *yen*, drowned himself in the Uji-gawa. It is to be hoped that the epidemic, having claimed three victims, will now stay its hand.

Things seem to be tending towards the opening of a big market for Japanese lace, an industry started in recent years but not hitherto attended by much promise, owing to the want of a market. Mr. Tratman, H.B.M.'s Consul at Chungking, writes:—

"The fashion of trimming native female costume with lace, which is so prevalent in Shanghai, has not yet shown itself to any great extent in these far-off regions, but signs are not wanting that a change in this respect may be looked for. Hitherto the import has been so insignificant that it has been thrown into the 'Sundries unenumerated' and statistics are not forthcoming, but this year (1896) a separate heading has been opened for it, and up to date the import has amounted to some 4,500 taels (declared value at Shanghai, say £700). This, however, will probably represent the import for the whole year, as the article is only brought in in the spring for summer wear. No official note of origin is obtainable here, but I am informed by the native merchants that all the lace imported into Chungking is made in Japan."

Almost all the lace imported is made of silk, a small quantity coming in being of cotton. About three-fourths of the total import is black in colour. The average price of silk lace as sold in retail in the shops is 60 'cash' a Chinese foot, which works out to about 14d. an English foot, some reduction being made on large quantities. Cotton lace fetches half this price. As to the labels, I should judge from their appearance that they are more or less exact reproductions of the wrappers of English manufacturers, the name of the firm being omitted. This is a common practice in Japan."

Mr. Holland, Consul at Ichang, also says:—

"With regard to lace and hosiery, the former is much used by well-to-do Chinese ladies, though the fashion is quite a new one, dating not more than two or three years back. As with piece goods, the local demand, which is small, is entirely met from Shanghai. The favourite style of lace is black, of about 1 to 2 inches in width, and it must be borne in mind that the question of colour is very important in China. After black, which is a long way first in favour, violet, and perhaps some shades of grey, would be saleable. I need hardly add that the lace used is all cotton lace, silk being beyond the means of all except the few very rich natives, and it is doubtful if even they would buy silk."

More than two months have passed since the celebrated, or notorious, Law for Encouraging the Direct Export of Silk was promulgated by Imperial Ordinance, and we have not heard that so much as a *yen* has been paid under its provisions. Nothing could have been paid, indeed, seeing that the regulations required for giving effect to the Law have not yet been issued. Had the Bill emerged from the hands of the Diet in its original form, there would not have been any obstacle to its going into force at once after promulgation. But the Lower House—as our readers probably remember—modified it in the sense that the quality &c., of silk eligible for bounty must be determined by the Department of Agriculture and Commerce, instead of being laid down on hard and fast lines in the text of the Law. That change evoked unfavourable comment from foreign critics at the time, but it now appears to have been a judicious change, for it practically gave the Department power to reduce the law to a dead letter, and that is what the Department seems to have done. Count Okuma is said to have been totally opposed to the measure from the outset, and Count Okuma is now acting-Minister of State for Agriculture and Commerce. It looks as if the direct export of silk was not destined to receive any aid from the Treasury.

JAPANESE NOTES.

Judging from the excited comments of the vernacular press, one would suppose that Hawaii had categorically rejected Japan's demands for satisfaction, and that an unpleasantly complicated situation had arisen. That is by no means the case. Japan was not in a position originally to prefer any detailed accusations, inasmuch as she lacked knowledge of the grounds upon which the acts of the Hawaiian Authorities were based. All that she could do was to formulate a general protest, and to signify her expectation that Hawaii would recognise the principle of indemnification. All that Hawaii could do, on the other hand, was to deny the justice of the protest. No Government assents to a general proposition that it is in the wrong. To put the matter in a very simple form, Hawaii has been asked to plead to certain broad counts, and has pleaded "not guilty." She could scarcely have done otherwise. These preliminaries arranged Japan's indictment has now to be heard. It could not be framed until Hawaii's version of her proceedings had been received, and, in point of fact, we believe that it has only just been framed, and that it went to Honolulu by Thursday's steamer. Quite a considerable interval must therefore elapse before the negotiation approaches its final stages. Our readers will perceive, from all this, that the rumours about a contumelious and defiant attitude on Hawaii's part are baseless. The public must possess its soul in patience for another month or six weeks.

It has been stated that Mr. Buck, the recently appointed Representative of the United States in Japan, is acting as mediator between Japan and Hawaii. There appears to be no truth whatever in the statement. Mr. Buck left San Francisco on May 29th—so far as can be ascertained—in company with the new American Minister to Hawaii, and broke his journey by a brief sojourn in Honolulu, where he now is. He will probably take the steamer which started from San Francisco on the 8th instant, and which calls at Hawaii *en route*, leaving the latter place on the 15th. Thus his arrival in Japan may be expected about the 26th instant. He is not taking any mediatory part between Japan and Hawaii. No occasion for mediation has arisen. It seems not improbable that his own Government, desiring him to become familiar with the Hawaiian view of the questions pending between the republic and this empire, instructed him to regulate his journey as he is now regulating it, but that is merely a conjecture.

Rumour in Berlin says that Baron Gutschmid is not likely to become back to Tokyo. We question the correctness of the forecast. It appears to us that the German Government will shrink from incurring the risk of a supposition that the childish and disgraceful clamour about the carriage-whip incident can have influenced the movements of its Representative. If only for a brief stay, Baron Gutschmid's return to his post in Japan will probably be deemed advisable, by way of protest against the undignified and hysterical outcry of which he was the victim shortly before his departure from Tokyo.

An Imperial Ordinance has been issued providing that hard-money payments to

Legations and Consulates shall, from the 1st of next October, be made with the coins of the new monetary system, under which two of the new gold units become equivalent to one of the old, and one of the silver *yen* now in circulation becomes equivalent to one of the new gold *yen*.

The charter for the establishment of the Bank for the Promotion of Industries (*Nippon Kwangyo Ginko*) having been issued on the 7th instant, it is expected that the President and Vice-President will be appointed in two or three days. We read in the vernacular press that there are 36 shareholders possessing over a hundred shares each. The largest holder is Mr. Kaizuka Uhei, of Miye Prefecture, who has 391 shares, and who paid in more than 143,600 *yen* by way of security; and the smallest is Marquis Mayeda, who has 102, and who had to forward 37,000 *yen* with his application.

Now that the Bank for the Promotion of Industries has been started, the authorities are turning their attention to the organization of the Agriculture and Manufactures Bank. Baron Tajiri offered to the Local Governors, on the 8th instant, an explanation with reference to the latter institution. He said that the first business was to choose a committee of establishment, which should consist, according to the Government's view, of one member from each district throughout the empire. The idea was to have a large number of small shareholders instead of a small number of large, and it was consequently proposed to make the face value of the shares only 20 *yen*. With regard to the main purpose of the Bank, it was to furnish capital for the development of manufacturing industries, and its business would consequently differ from the business of an ordinary banking institution. There would be no speculative operations, but everything would be conducted on the soundest possible basis.

The news that the Bank of Japan intends henceforth to make advances to individuals, has induced some Tokyo journalists to institute inquiries, the result of which is very simple. One of the original and principal objects in establishing the Bank of Japan was to cheapen money. With that end in view, the Bank has been making advances to other banks at a rate considerably below that ruling in the open market. It does not seem, however, that much benefit has thus been conferred upon the people at large, for the various banks, while obtaining advances from the Bank of Japan at 2.1 *sen* daily per 100 *yen*, or 7.665 per cent. annually, have been re-lending the money at 2.7, or 2.8, *sen* daily; that is to say, 9.855 annually. They have thus occupied the position of middle-men pure and simple, earning over 2 per cent. for their pains. The Directors of the Bank of Japan do not see why that state of affairs should continue. On the other hand, they have no desire to enter into direct competition with other banks. Hence their idea is to make advances to individuals at daily rates cheaper by 2 *rin* or 3 *rin* than the rate charged for accommodation to a bank. Unimpeachable security must also be furnished, and not only will it be closely scrutinized, but also a considerable margin will be left. Nothing is definitely decided yet, however.

TRANSMISSION OF MAIL MATTER.

The Tokyo Post Office has issued a useful Table, which we print below, showing the comparative times occupied in the transmission of mail matter from Japan to the important places in the world. It is sad to see how hopelessly the English mail comes in at the tail of the hunt. Letters are put down as reaching London in 29 days *via* San Francisco, whereas 42 days are required by the English mail. Twenty-nine days is exceptionally rapid work. The compilers of the Table have certainly not been unkind in their estimate of the American line's performance, but, on the other hand, they are equally optimistic about the English route. For example—they give the time of transmission from Tokyo to Singapore as 14 days. Now the mails that left Yokohama by the P. & O. steamer *Ancona* on the 25th of April at daylight were delivered in Singapore on the 12th of May; that is to say, on the 17th day after leaving Yokohama, and the 18th day after posting in Tokyo. Of course, if the letters were sent overland to catch the steamer at Kobe, there would be a clear saving of 2 days, and possibly the estimate of the Post Office is based on that supposition. But the calculation beyond Singapore is equally perplexing. For instance, whereas the German and French mails reach London and Brindisi in the same time, viz., 37 days, the English mail gets to Brindisi in 41 days and to London in 42. It is quite plain that the French and German mails can not possibly be delivered in London on the very day of their arrival at Brindisi. Turning to the Vancouver mail, we find that the time by it from Tokyo to London is shown as 4 days longer than the time by San Francisco. Yet, in the third section of the Table, letters are put down as reaching New York *via* Vancouver in 17 days, whereas they take 19 days by San Francisco. If, then they were sent to London *via* New York, they would be delivered 2 days earlier than letters travelling by San Francisco, whereas they lose six days by being sent across the Atlantic from Quebec by slow steamer. That is the subject to which attention was recently drawn in these columns by Mr. J. P. Mollison. Several British firms in Yokohama are obliged to post their letters *via* Vancouver to an agent in New York by whom they are re-posted to London. It is a strange state of affairs.

Table showing the approximate Time in the transmission of mails from Tokyo to some of the more important places in the world by the various routes:—

Several Chinese of Hongkong who lately went to Tacoma by the steamer *Olympia*, having been prevented from landing there, in spite of being in possession of licences and money, returned to Yokohama on the 8th inst.

On the 1st ult. a farmer named Kimura Seisuke of Odaki-mura, Nishi-Chikuma-gun, Nagano Prefecture, while ploughing his field, unearthed some 182 old gold coins.

JAPANESE POST-BELLUM FINANCE.

After the country had emerged successfully from the War with China, the Government set before itself two objects as bases of national policy. They were Expansion of Armaments (*Gumbikwakuchō*) and Encouragement of Enterprise (*Kigyo-shōrei*). Nearly all the expenditures shown in the above tables (Y. and Z.) belong to the latter category. Several are "continuing expenditures:" that is to say, the whole outlay on account of any particular object is spread over a fixed number of years. We proceed to set down these items:—

aa.
EXPENDITURES SPREAD OVER A TERM OF YEARS ON ACCOUNT OF SPECIAL PROJECTS.

ESTABLISHMENT OF KYOTO UNIVERSITY.

	YEN.
1897-8	80,000
1898-9	190,000
1899-1900	180,000
1900-1901	180,000
1901-2	99,355

Total 729,355

bb.
ESTABLISHMENT OF AN IMPERIAL LIBRARY.

	YEN.
1897-8	40,000
1898-9	40,000
1899-1900	40,000
1900-1901	40,000
1901-2	40,000
1902-3	40,000
1903-4	40,000
1904-5	40,000

Total 320,000

cc.
LAYING OF LINES OF TELEGRAPH, CABLES, &c., AND CONSTRUCTION OF LIGHTHOUSES.

Cables to the islands of Oki, Kunajiri and Eturup; Telegraphs, new or additional, namely, Tokyo-Hakodate, Sapporo-Nemuro, Tokyo-Sapporo, Tokyo-Kagoshima, and Tokyo-Aomori. Lighthouses, &c., at Capes Kyogami, Jizo, Atoe, Muroto and Shōya.

	YEN.
1897-8	1,388,033
1898-9	146,096
1899-1900	25,000

Total 1,559,129

(N.B.—The figures for 1898-9, and 1899-1900 do not represent the whole expenditures likely to be incurred under this heading in those years. They refer only to works commenced in 1897-8 and to be finished in 1900.)

dd.
EXTENSION OF TELEPHONE SYSTEM.

	YEN.
1896-7	1,677,964
1897-8	2,026,298
1898-9	1,971,915
1899-1900	1,915,032
1900-1	2,019,043
1901-2	1,677,269
1902-3	1,514,581

Total 12,802,102

ee.
IMPROVEMENT OF STATE RAILWAYS.
(i.e. Doubling Lines, &c.)

	YEN.
1896-7	4,500,000
1897-8	3,600,000
1898-9	3,600,000
1899-1900	3,600,000
1900-1	3,600,000
1901-2	3,800,000
1902-3	3,253,000
1903-4	600,000

Total 26,553,000

N.B.—The Improvements here referred to consist in doubling the track of the Tokaido Railway throughout its entire length; extending and repairing various stations; increasing the rolling stock, &c.

ff.
EXTENSION OF STATE RAILWAYS.

	YEN.
1893-4	3,040,000
1894-5	1,520,000
1895-6	2,520,000
1896-7	4,500,000
1897-8	6,227,333
1898-9	8,364,813
1899-1900	8,712,874
1900-1901	8,326,792
1901-2	6,000,000
1902-3	8,743,747
1903-4	8,050,000
1904-5	2,019,485

Total 68,025,044

N.B.—The railways provided for in the above are the Fukuoka-Aomori line (to be finished in 1900); the Tsuruga-Toyama line (to be finished in 1898); the Hachioji-Nagoya line (to be finished in 1904); the Shinonoi-Shiojiri line (to be finished in 1899); the Yatsushiro-Kagoshima line (to be finished in 1902); and the Himeji-Sakai line (to be finished in 1904). The total mileage is 649 miles.

gg.
HOKKAIDO RAILWAYS.

	YEN.
1897-8	1,275,130
1898-9	1,000,000
1899-1900	1,000,000
1901-1902	1,000,000
1902-3	1,000,000
1903-4	1,937,000
1904-5	1,937,000
1905-6	1,937,000
1906-7	1,937,000
1907-8	1,937,000
1908-9	1,937,000
1909-10	1,940,000

Total 18,837,180

N.B.—The railways provided for in the above are the Asahigawa-Tokachifuto; the Tokachifuto-Kushiro; the Kushiro-Akkeshi; the Akkeshi-Nemuro; the Akkeshi-Hyōcha; Hyōcha-Jōyama; Jōyama-Abashiri; Ashigawa-Sōya; and the Sorachifuto-Ashigawa. This last line was commenced in the fiscal year 1896-7, when an expenditure of 903,200 yen was incurred on account of it. Thus the total outlay on account of the Hokkaido system is 19,740,380 yen. The total mileage is 572 miles.

hh.
CONSTRUCTION OF OTARU HARBOUR.

	YEN.
1897-8	250,000
1898-9	215,500
1899-1900	215,500
1900-1	215,500
1901-2	215,500
1902-3	215,500
1903-4	215,500
1904-5	215,500

ii.
RIPARIAN WORKS.

Owing to the enormous losses caused every year in Japan by inundations, the Government, in 1887, commenced an extensive scheme of riparian work, of which the following are the outlines:—

River Tone—Upon this river it was decided to spend a sum of 4,070,215 yen, and to finish the work by the year 1905. The amount expended from 1887 up to the end of the fiscal year 1896-7 was 1,007,990 yen, and the amount remaining to be spent during the next 9 years is 3,062,225 yen, the appropriation for 1897-8 being...

YEN.
294,576

River Kitakami—Upon this river the total outlay is to be 827,581 yen, and the work will be finished in the year 1900. The sum expended from 1887 up to the end of the fiscal year 1896-7 was 53,752 yen, leaving 773,829 yen to be disbursed in the next four years. The appropriation for the present year is..... 75,000

River Mogami—Upon this river the outlay is to be 688,303 yen, and the work is to be finished by the year 1903. The sum paid out from 1887 up to the end of the fiscal year 1896-7 was 127,839 yen, leaving 560,464 yen to be spent in the next six years. The appropriation for the current year is..... 60,000

River Shinano—Upon this river the aggregate expenditure is to be 1,656,037 yen, and the work is to be finished in 1904. The sum expended from 1887 up to the end of the fiscal year 1896-7 being 1,313,106 yen, the sum remaining to be spent is 342,931 yen. The appropriation for the current fiscal year is..... 80,000

River Oi—The total outlay estimated for this river is 325,078 yen. The work commenced in 1896-7 and is to be finished in 1900. The outlay in 1896-7 having been 70,000 yen, the sum remaining to be spent is 255,078 yen. The appropriation for the current year is..... 70,000

River Kiso—The total outlay in connexion with this river is estimated at 6,115,118 yen, and the sum expended from 1887 to the end of the fiscal year 1896-7 having been 3,145,917 yen, the amount remaining to be defrayed is 2,969,201 yen. The work is to be completed in the year 1904, and the appropriation for the current year is..... 509,701

River Abukuma—The total outlay on this river is estimated at 320,905 yen. The work commenced in 1896-7 and is to be finished in 1901. The sum expended in 1896-7 having been 55,000 yen, the sum remaining to be expended is 265,905 yen, and the appropriation for the current year is... 55,000

River Shinano—The total outlay on this river is 936,454 yen, and the work, commencing in 1896-7, is to be completed in 1900. The sum spent in 1896-7 having been 300,000 yen, the sum remaining to be spent is 636,454 yen, and the appropriation for the current year is 200,000

River Fuji—The total outlay on this river is 84,854 yen, and the work, commencing in 1896-7, is to be finished in 1897-8. The sum paid in 1896-7 having been 50,000, the appropriation for the current year is..... 34,854

River Tenryū—The total outlay on this river is 118,681 yen, and the work, commencing in 1896-7, is to be completed in 1897-8. The sum paid out in 1896-7 having been 60,000 yen, the appropriation for the current year is..... 58,681

River Yodo—The total outlay on this river is estimated at 9,094,000 yen, and the work, commencing in 1896-7, is to be finished in 1905. The sum expended in 1896-7 was 1,001,300 yen, the sum remaining is 8,092,700 yen. The appropriation for this year is 3,891,300

River Chikugo—The total outlay on this river is estimated at 1,484,000 yen, and the work, commencing in 1896-7, is to be finished in

1902. The sum expended in 1896-7 was 150,000 *yen* and the sum remaining to be spent is 1,334,006 *yen*. The appropriation for the current year is 330,000

The above figures show that the total outlay on account of Riparian Works between 1887 and 1905 is to be 25,721,226 *yen*; that the sum expended up to the end of the year 1896-7 was 7,334,904 *yen*; that the sum remaining to be expended is 18,386,322 *yen*, and that the appropriations for the current year aggregate 5,659,112 *yen*. The last amount represents expenditures on actual works. Various additions have to be made on account of office expenses, salaries, travelling expenses and so forth, the result being that the total disbursement from the Treasury becomes 5,934,067 *yen*, as shown in Table Y.

tt.

uu. AID FOR EXTENDING THE SALE OF TEA.

From 1897-8 to 1902-3 (inclusive) 70,000 *yen* annually.

The total sum under this heading is 420,000 *yen*.

With regard to Aids and Subsidies, it is almost impossible to determine the exact amount of the expenditure likely to be incurred within the next ten years, several of the sums now granted being subject to variation according to the progress of the enterprises on account of which they are given. For example, the general principle of the aid granted to the Formosa Railway Company corresponds with that adopted in the case of the Japan Railway Company, namely, a per centage on the paid up capital for a term of years (12 for Formosa), and as the capital (12 million *yen*) is called in only when needed for the building of the various sections of the line, the liability of the Treasury becomes uncertain, the minimum and maximum annual limits being 176,250 *yen* (the sum given in 1897-8) and 900,000 *yen* (i.e. six per cent. on 15 millions). But, in truth, it is practically certain that the demands upon the Treasury under the heading of Aids and Subsidies will increase, rather than diminish, as years go by. Very soon a grant of some 3½ millions, over and above the sums shown in Table Y, will have to be made to the Nippon Yusen Kaisha on account of its European and American services, and a grant of at least a million to the Toyo Kisen Kaisha. We may therefore conclude that in any sound estimate of future finance, the State's total yearly payments on account of Navigation and Railways must be set down at seven million *yen*, approximately.

Turning, now, to the programme of Expansion of National Armaments, and taking the Navy first, we find that, at the conclusion of the war with China, Japan possessed a fighting fleet of forty-three serviceable vessels—independent of twenty-six torpedo-boats—their aggregate displacement being 78,774 tons. Of these, ten, with an aggregate displacement of 15,055 tons, had been captured from China—namely, an armour-clad turret-ship of 7,335 tons, two steel cruisers, six steel gunboats, and one wooden gunboat. Prior to the capture of the *Chen-yuen* (now called the *Chin-yen*), Japan did not possess a line-of-battle ship. Her fleet consisted entirely of comparatively small vessels. She had already determined, however, to acquire two first-class battleships, and orders for them had been placed. These vessels, the *Fuji* and the *Yashima*, are now completed, and will shortly arrive in Japan. Further, there were on the stocks two steel cruisers (2,700 and 2,800 tons), and a

steel despatch-vessel (1,800 tons). It may be said, therefore, that her fleet consisted, or would very soon consist, of forty-eight ships, having an aggregate displacement of 111,240 tons, and twenty-six torpedo-boats. In the scheme of expansion mapped out by the Government after the war, it was decided to make an addition of about 100 per cent. to the strength of the fleet. The increment was to comprise the following principal vessels:—

	TONS.
4 line-of-battle ships of 15,140 tons each=	60,560
3 first-class cruisers of 9,200 tons each=	27,600
2 second-class cruisers of 4,850 tons each=	9,700
3 third-class cruisers of 3,200 tons each=	9,600
1 torpedo-gunboat of 1,200 tons each=	3,600
6 torpedo depot-ship of 6,750 tons each=	40,500

The programme further included 11 torpedo-destroyers and 89 torpedo-boats. Hence the Japanese navy will consist in 1906 of 67 ships, with an aggregate displacement of 258,300 tons, 11 torpedo-catchers, and 115 torpedo-boats. The cost of carrying out this scheme was estimated at 213½ million yen, approximately, and the details of the expenditures are shown in the following table:—

Grand Total for Constructions, &c., Superintendence, &c.: 21,901,930 yen.

[N.B.—The above figures aggregate 212,804,902 yen, which total differs by 296,057 yen from the Government's grand total, namely, 213,100,959 yen. It is impossible to ascertain, from the published items, exactly how this difference arises, but it appears to be connected with appropriations on account of constructions. The point is of trifling importance.]

The Government's estimated expenditures on account of the Naval Expansion programme in each year of the decennial period allotted for the work stand as follows:—

CC. YEARLY OUTLAYS ON ACCOUNT OF NAVAL EXPANSION.

	YEN.

Total 213,100,959

With regard to the Army, it is not possible to set down with accuracy the details as to actual and contemplated strength, the information required for that purpose not being accessible to the general public. Speaking approximately, however, it may be said that, at the close of the war, the Army consisted of six divisions and the Imperial Guards, with a peace-footing strength of 70,000 in round numbers, and a war footing of 268,000 (exclusive of the gendarmerie and the Yezo Militia). It was decided that this force should be increased in the same ratio as that adopted for the Navy; namely, that it should be doubled. The programme fixed was to raise the number of divisions to 12, exclusive of the Guards, so that the peace footing should be 145,000, and the war footing 520,000. Moreover, even greater expedition was planned than in the case of the Navy, for the work of expansion was to be concluded in eight years, the total expenditure involved being 79 million yen, in round figures. The details of the proposed expenditures are shown in the following tables:—

DD. ARMY EXPANSION PROGRAMME.

Grand Total of Army Expansion Expenditures=78,983,204

The above expenditures distributed over the eight-year period within which the programme is to be completed, stand as follows:—

EE. ANNUAL EXPENDITURES ON ACCOUNT OF ARMY EXPANSION.

	YEN.
1896-7	17,257,331
1897-8	11,978,756
1898-9	13,111,391
1899-0	10,632,214
1900-1	7,923,862
1901-2	6,883,436

1902-3	2,618,205
1903-4	3,578,009

Total 78,983,204

To those who desire more detailed information it may be interesting to note that, under the heading of Barracks, Stables, Clothing, &c., the following items are included:—

	FF.	YEN.
Local strongholds (extension)	1,850,421
Clothing	4,550,855
Offices	5,040,750
Horses	1,035,665
Barracks, stables, appliances, &c.	18,075,643

Total 30,553,334

The systems of forts included in the above programme are eight, their localities being Naruto, Kure, Geiyo, Saseho, Tsushima, Nagasaki, Maizuru and Hakodate. It may be noted here that the fortifications of Tokyo Bay, Shimonoseki, and the Kitan Straits have been in progress for some time. The figures relating to them are these:—

GG. Tokyo Bay Fortifications—commenced in 1887 and to be completed in 1911. Total		YEN.
Outlay	8,265,000
Expended up to the close of the year 1896-7	2,111,218
To be still expended	6,153,782
Shimonoseki Fortifications—commenced in 1888, and to be completed in 1901. Total		...
Outlay	1,603,160
Expended up to the close of the year 1896-7	1,116,624
To be still expended	485,536
Kitan Fortifications—commenced in 1894, and to be completed in 1903. Total Outlay
Expended up to the close of 1896-7	1,510,300
To be still expended	856,000
Total already expended	4,083,842
Total to be still expended	7,294,618

Grand Total 11,378,460

It will be seen from the above tables that the country's total expenditure on account of coast fortification is estimated at 31,910,868 yen, of which total a sum of 5,106,407 yen had been defrayed up to the close of the year 1896-7, and a sum of 26,804,461 yen remains to be spent.

Table V. shows that the Extraordinary Expenditures of the War Department in 1897-8 aggregate 31,484,591 yen, and since only 19,978,756 yen of that total is due to the programme of military expansion, a sum of 11,505,835 yen remains to be accounted for. It is essential to examine this additional outlay, in order to determine whether any portion of it is likely to be of a permanent character. The analysis stands thus:—

HH. EXTRAORDINARY MILITARY EXPENDITURES FOR 1897-8 OVER & ABOVE THE OUTLAYS ON ACCOUNT OF THE MILITARY EXPANSION PROGRAMME.

1.—Building and Armament of Forts in Tokyo Bay, the Kitan Straits and Shimonoseki Straits	YEN.
2.—Barracks connected with the above Forts and for Colonial Troops	452,793
3.—Surveying Expenses	183,910
4.—Military Bureau of Special Transportation	1,371,507
5.—Gendarmerie Barracks in Formosa	212,439
6.—Extraordinary Military Expenses	6,802,074
7.—Supplementary Funds for Work-shops	1,395,792
Total	11,505,835

With regard to the nature of the above expenditures, the 1st, 2nd, 5th and 7th explain themselves. They are exceptional outlays of a temporary character. The 6th item, namely 6,802,073 *yen*, under the heading of Extraordinary Military Expenses, is almost entirely made up of rewards granted to officers and soldiers in the sequel of the war with China. The 4th item, namely, 1,371,509 *yen*, on account of the Military Bureau of Special Transportation, is the expense involved in carrying stores and munitions to, and preserving communications with, Kelung in Formosa and Weihaiwei in Shantung. Finally, the 3rd item, Surveying Expenses, belongs to a scheme for drafting military maps, on account of which a grant was made by the Diet in 1895. The details stand thus:—

II.

MILITARY TOPOGRAPHICAL MAPS.

Total Expenditures, from 1895-6 to 1899-1900	YEN.
Amount spent up to close of YEN.	919,551
year 1896-7	367,890
Amount remaining to be spent...	551,731

Table V. shows also that the total Extraordinary Expenditures for the Navy in 1897-8 aggregate 66,936,882 *yen*, of which the portion representing outlays on account of the Naval Expansion Programme is 60,660,965 *yen*. Thus a sum of 6,275,917 remains to be accounted for. It is made up of the following items:—

JJ.

EXTRAORDINARY NAVAL EXPENDITURES FOR 1897-8 OVER AND ABOVE THE OUTLAYS ON ACCOUNT OF THE NAVAL EXPANSION PROGRAMME.

1. Payments on account of men-of-war ordered in 1893, viz., iron-clads and cruisers.....	YEN.
2. Buildings at Saseho Admiralty ..	4,973,400
3. Various Constructions and Repairs	316,753
4. Expenses of Mechanics sent abroad	146,100
5. Hydrographic Surveys	31,075
6. Ship-building Materials at Admiralties	37,744
7. Shimose Gunpowder Factory (establishment)	345,000
8. Renewing Armament of ships taken from China	179,071
9. Reconstruction of the Dockyard No. 1 at Kure	126,792
	120,000
	6,275,917

Taking the above items in order, we find that the first relates to a programme, adopted in 1893, for the construction of two line-of-battle ships (the *Fuji* and the *Yashima*, which will arrive in Japan in a few months) at a total cost of 21,895,941 *yen*, and of one cruiser (the *Akashi*) and one despatch boat (the *Miyako*), at a total cost of 2,654,780 *yen*. The last payment on account of the iron-clads, namely, 4,884,588 *yen*, is included in the Budget for 1897-8. The cruiser and the despatch boat are to be finished next year, and the two last payments on account of them are

	YEN.
1897-8	88,812
1898-9	2,430

In other words, the total outlay contemplated under this programme was 24,550,-

721 *yen*, of which 19,574,891 *yen* had been paid out by the close of the year 1896-7 and 4,975,830 *yen* remained to be paid out.

The second item, "Buildings at Saseho Admiralty," is the last installment of an appropriation of 1,622,402 *yen* sanctioned in 1890, when the establishment of a naval station at Saseho was commenced.

The third item explains itself. It is an exceptional outlay.

The fourth item is part of an appropriation of 95,052 *yen*, made in 1895-6 to meet the cost of sending mechanics abroad to learn ship-building and the manufacture of arms. The term of instruction was three years, ending in 1897-8.

The fifth item, "Hydrographic Surveys," relates to the survey of the coasts of Formosa and the Pescadores. This work, commenced in the year 1896-7, is to be concluded in 1904-5. The total outlay is estimated at 273,809 *yen*, and the appropriation in 1896-7 having been 46,675 *yen*, the sum remaining to be spent is 227,134 *yen*.

The sixth item, "Ship-building materials at Admiralties," is part of an appropriation of 1,455,534 *yen*, of which 345,534 *yen* was paid out in 1896-7, leaving 1,110,000 *yen* to be expended from 1897-8.

The seventh item, "Shimose Gunpowder Factory," is part of a sum of 225,062 *yen*, voted in 1897-8 for building a gunpowder mill at Shimose. The money is to be divided thus:—

	YEN.
1897-8	179,071
1898-9	45,721
1899-1900	270

Total 225,062

The eighth item explains itself.

The ninth item, "Reconstruction of Dockyard No. 1 at Kure," is the first installment of a sum of 168,614 *yen*, to be expended in the years 1897-8 and 1898-9.

Having thus analysed the various expenditures, and distinguished those that are productive and those that are unproductive, we are in a position to form a tolerably clear idea of the problem by which the Government found itself confronted when, after the conclusion of the war with China, it resolved to embark upon a large scheme of naval and military expansion, on the one hand, and of industrial and commercial development, on the other. To grasp the full import of that scheme, it is necessary to consider it from its inception at the commencement of the fiscal year 1896-7, not as it stands at present, when a portion of the contemplated outlays have already been incurred and provided for. We proceed, then, to exhibit two tables giving a comprehensive survey of the post-bellum programme:—

KK.

Table showing Total Outlays on account of Productive Enterprises to which the State was already pledged at the commencement of the fiscal year 1896-7, as well as the Outlays to which it pledged itself as *post-*

bellum measures, either in 1896-7 or 1897-8.

	YEN.
Grants to Waterworks	3,431,176
Aids to Banks	20,000,000
Aid for Extending the Sale of Tea	420,000
Aid for Yangtze Navigation	1,181,589
Construction of Consulates in China	80,430
Leaf Tobacco Monopoly	8,213,550
Inspection of Weights & Measures	121,102
Paris International Exhibition ...	881,474
Educational Laboratories, Class-rooms, &c.	560,180
Establishment of Iron Foundry ...	4,095,793
Riparian Works	19,735,874

Extraordinary Military Expenditures, consisting chiefly of rewards to officers and men of the Army and Navy after the War.	6,802,073
Fortification of Tokyo Bay, Shimono-seki and Kitan Straits	9,408,186
Barracks at the above forts for Colonial Troops, &c.	862,791
Supplementary Funds for Workshops	1,395,792
Barracks for Gendarmes in Formosa	212,439
Army Expansion Programme	78,983,204

Total 324,956,706

N.B.—With reference to the total grant on account of rewards to officers and men of the Army, Navy and others, after the War, it is not possible to speak with certainty, pending the publication of the detailed War Accounts. A sum of 5,952,500 *yen* appears in the Budget for 1896-7 under that heading, but being covered by an issue of War Bonds to the same amount, the outlay forms part of the total issue of War Bonds—225 million *yen*—and consequently has no connexion with the purpose of the above table.

Before, proceeding to explain the sources from which the above outlays are to be defrayed, it is necessary to consider whether the Treasury can count on any income over and above the Ordinary Revenue shown in Table D. To speak of "extraordinary revenue" as permanent income is, of course, a contradiction of terms. But the Budget includes, every year, a list of extraordinary receipts which, though their totals vary within large limits, are nevertheless of a more or less constant character. A brief analysis of these receipts for the six years ended in 1896 will furnish a basis of estimate:—

M.M.

TABLE SHOWING THE EXTRAORDINARY REVENUE DURING THE SIX YEARS ENDED 1895-6.

	1890-1. yen.	1891-2. yen.	1892-3. yen.
Voluntary Contributions	151,503	87,839	47,586
Sales of State Property	790,187	610,455	687,835
Appropriation for manufacture and issue of Public Loan Bonds	87,608	50,071	100,072
Central Relief Fund	414,551	1,136,980	139,598
Official Contributions to ship building	—	—	—
Appropriation from Surplus	3,431,087	—	—
Miscellaneous	282,598	336,351	143,172
Totals	6,871,236	2,638,684	1,058,295
	1893-4. yen.	1894-5. yen.	1895-6. yen.
Voluntary Contributions	19,115	250	28,803
Sales of State Property	679,968	656,099	634,339
Appropriation for manufacture and issue of Public Loan Bonds	18,050	—	—
Central Relief Fund	390,464	1,451,859	151,068
Official Contributions to ship building	—	—	—
Appropriation from Surplus	—	1,691,472	1,784,090
Miscellaneous	146,032	186,728	291,058
Totals	3,159,129	2,651,680	2,897,337

The item "Miscellaneous" in the above Table is made up as follows:—

DETAILS OF MISCELLANEOUS RECEIPTS.

	1890-1. yen.	1891-2. yen.	1892-3. yen.
Repairs of Vessels	65,003	106,339	64,669
Receipts from Electric Light Company	—	—	—
Interest on Loans to Korea	—	—	55
Government Enterprises Funds	95,431	—	—
Private Enterprises Funds	29,480	86,865	69,082
Repayments of Loans	2,961	3,147	1,808
Other Receipts	39,916	200,000	14,553
Int. rest on Loans	—	—	—
Exhibition Tickets	—	—	—
Totals	289,596	336,351	143,172
	1893-4. yen.	1894-5. yen.	1895-6. yen.
Repairs of Vessels	78,990	117,089	106,284
Receipts from Electric Light Company	—	8,234	—
Interest on Loans to Korea	—	—	—
Government Enterprises Funds	283,707	—	—
Private Enterprises Funds	53,732	15,830	28,540
Repayments of Loans	3,197	9,310	945
Other Receipts	5,996	3,043	1,063
Int. rest on Loans	—	—	100,823
Exhibition Tickets	—	—	51,931
Totals	316,032	186,728	291,058

It will be seen that the totals for the above six years—excluding 1890-1, when a large appropriation was made from the surplus of previous years to meet outlays on account of the great earthquake—range between one and three million yen, approximately, and that not more than from 1½ to 2 millions can be regarded as having any character of permanency. It became necessary, therefore, to provide special sources of revenue against the special expenditures appearing in the *post bellum* programme. The only asset immediately available was the indemnity to be received from China, namely, a sum of 200 million taels constituting the indemnity itself, and 30 million taels paid by China in consideration of the retrocession of the Liaotung Peninsula. An element of uncertainty was connected with this asset. According to the provisions of the Shimoda-Tokyo Treaty the Chinese Government was left free to choose between paying off the whole indemnity by May 8th, 1898, or discharging it by installments spread over a term of years, ending May 8th, 1902. If the former method were adopted by China, she would escape any payment of interest, and her disbursements would be 230 million taels; if the latter, her payments of interest would aggregate 21½ million taels, and her total disbursements would be 251½ millions. It was not possible, of course, to foresee which course China would adopt, but inasmuch as she stood to save about 11 million taels by discharging her debt before May 9th 1898, the strong probability was that she would select that method, and Japan's financiers

had to shape their plans accordingly. In other words, they could not reckon on receiving more than 230 million taels, or 341 million yen, approximately, from the indemnity source. Had the whole of that sum been available to meet the unproductive outlays shown in Table LL, the situation would have been simple. But another question presented itself, which will be readily understood by examining the following table:—

NN.

METHOD OF PAYING THE INDEMNITY.

	Million taels.
First payment, due on Nov. 8th, 1895, and already paid	50
Second payment, due on May 8th, 1896	51½
Third payment, due on Nov. 8th, 1896, being one year's interest at the rate of 5 per cent. on the portion of the Indemnity remaining due (i.e. 100 million taels) ..	5
Fourth payment, due on May 8th, 1897, being one-sixth of 100 million taels, together with six months' interest on that sum	17½
Fifth payment, due on Nov. 8th, 1897, being one year's interest on 83½ million taels ..	4½
Sixth payment, due on May 8th, 1898, being one-sixth of 100 million taels, together with six months' interest on the same	17½
Seventh payment, due on Nov. 8th, 1898, being one year's interest on 66½ million taels	3½
Eighth payment, due on May 8th, 1899, being one-sixth of 100 million taels with six months' interest on same	17½
Ninth payment, due on Nov. 8th, 1899, being one year's interest on 50 million taels	2½
Tenth payment, due on May 8th, 1900	17½
Eleventh payment, due on Nov. 8th, 1900, being one year's interest on 33½ million taels	1½
Twelfth payment, due on May 8th, 1901 ..	17½
Thirteenth payment, due on Nov. 8th, 1901, being one year's interest on 16½ million taels	½
Fourteenth payment, due on May 8th, 1902 ..	17½
Total	221½

It will be seen from the above that the Treasury received 50 million taels in 1895, on account of the indemnity, and to that amount must be added 30 million taels of compensation for the retrocession of Liaotung; that is to say 80 million taels in all, or 118½ million yen, approximately. How was the money to be employed? The Treasury owed, at the time, 71 million yen to the Bank of Japan and other sources in connexion with war expenditures. When the war broke out, and subsequently during its progress, the Government had sought and obtained from the Diet permission to raise a domestic loan of 200 million yen. At the conclusion of the war—May 1895—81,800,000 yen of that total had been floated, and, on the other hand, the disbursements on account of the war were expected to aggregate some 230 millions. Instead of floating another installment of the loan, on which interest must have been paid, the Government resolved to draft into the war account 80 millions from the indemnity. It may be interesting here to set down the sources from which the war expenditures have been met:—

	yen.
War Loan	125,000,000
Appropriations of Surplus from previous years	23,430,000
Appropriation from Indemnity	80,000,000

Voluntary Contributions 3,880,000

Total 232,310,000

The final accounts of War expenditures have not yet been published or submitted to the Diet, but the above figures are understood to be tolerably close approximations. They show that the total addition to the national debt on account of the War was 125 million yen—12½ million pounds sterling—and that the portion of the indemnity available for expenditures in connexion with the expansion of the national armaments was 261 millions. But as the cost of the latter—*vide* Table LL.—aggregated 325 millions in round numbers, there was here a deficit of 64 millions. It has already been shown, however, that the accumulations of surplus revenue in the Treasury at the beginning of the fiscal year 1896-7, when the *post-bellum* programme was inaugurated, amounted to 39,103,249 yen—that is to say, 62,533,249 yen, less 23,430,000 yen transferred to the war expenditures account. Hence the assets actually available to cover the armament, expansion scheme, totalled 300 millions (i.e. indemnity 261 millions, and surplus funds, 39 millions), so that the further sum to be provided was only 25 million yen. Turning, now, to the productive expenditures, which may be regarded as a profitable investment of State funds, we find from Table KK., that a total of 190,054,063 yen had to be provided for. Out of that aggregate, the sum of 79,782,224 yen, on account of the extension of State Railways, may be left out of the immediate account, since it forms part of a total sum of 86,862,224 yen (*vide* Table ff. and gg.) voted by the Diet for that purpose in 1893, and to be covered by gradual issues of a domestic Railway Loan. Hence, in the category of Productive Expenditures, the total sum to be provided was 110,271,839 yen, and if to that be added the uncovered excess of expenditures—namely 25 millions—on account of the national armaments scheme, the final result was that 135½ million yen had to be obtained. The Government resolved to obtain it by means of a Public Undertakings Loan of 135 million yen, to be issued in installments as the need for funds presented itself. That was very close financing, but it has been shown—*vide* Table MM.—that a sum of about 2 millions annually may be estimated as a regular asset under the heading of "Extraordinary Revenue," and the accumulations from that source, during the period for completing the productive and unproductive programme, would aggregate some 20 million yen, thus leaving a fair working margin.

Such appears to have been the Government's financial scheme in outline. We may note here, for the sake of convenience and lucidity, that the total addition made to the national debts owing to the War, the Industrial Undertakings Loan, and the Railway Loan stand thus:—

OO.
Additions made to the National Debts from the fiscal year 1896-7 and onwards on account of the *post-bellum* programmes of Armament Expansion and Productive Enterprises, and addition made on account of the War.

	Yen.
Industrial Undertakings Loan.....	135,000,000
Railway Extension Loan.....	79,782,224
War Loan	125,000,000

Total 339,782,224

This involves an annual payment of 16,989,111 *yen* on account of interest alone.

Having analysed the nature of the financial programme mapped out by the Government after the War, and the general plan devised for meeting expenditures, we now proceed to examine how the plan was carried out in the two opening fiscal years of the *post-bellum* period, namely 1896-7 and 1897-8 :—

EXTRAORDINARY EXPENDITURES, AS SHOWN IN THE BUDGETS (*vide* Table V.)

	Yen.
1896-7	103,300,001
1897-8	142,179,733

PP.
EXTRAORDINARY REVENUE AS PROVIDED BY THE BUDGET AND THE SUPPLEMENTARY BUDGETS FOR THE TWO OPENING YEARS OF THE POST-BELLUM PERIOD.

	1896-7. Yen.	1897-8. Yen.
Contributions	19,676	—
Sales of Government Property	577,973	567,072
Miscellaneous Receipts ...	3,353,905	1,482,034
Receipts from manufacture of Public Bonds	15,000	8,358
Central Relief Fund	1,124,410	—
Contributions to building of War-ships, namely, 10 per cent. of official salaries	1,850,908	2,282,769
Received from China on account of cost of occupation of Weihaiwei ...	750,000	750,000
Drafted from the Indemnity	40,093,389	51,146,652
Public Undertakings Bonds issued	8,374,500	61,329,500
Surplus from Special War Funds	10,650,359	—
Issue of War Bonds (for purposes of rewards) ...	5,952,500	—
Refunds from Local Grants	361,300	361,300
Railway Loan	4,500,000	7,502,467
Drafted from Surplus of previous year	25,726,026	16,749,667

Totals.....103,349,946 142,179,733

According to the above Table, the amounts drafted into the Budget from accumulations of surplus revenue aggregate 42,475,623 *yen* for the two fiscal years 1896-7 and 1897-8. It has been shown, however, (*vide* Table B.) that the surplus revenue in the Treasury at the commencement of the fiscal year 1896-7 totalled only 39,103,249 *yen*. From a comparison of these figures it appears that the drafts made upon the surplus revenue have exceeded the sum actually available by 3,372,444 *yen*. But that statement does not include the results of the final accounts for the year 1896-7. Those accounts—though not yet published—are understood to show that the revenue collected and the expenditures incurred were greater and less respectively than the estimates by a total sum of some 6 million *yen*, and if that surplus be included, it will be seen that the drafts made upon the accumulations of surplus were from 1 to 2 million *yen* less than the available total.

Another point deserving notice is that the total appropriations from the Indemnity during the first two years of the *post-bellum* period were 91,240,041 *yen*, out of which 6,420,330 *yen* were on account of Formosa. Hence the sum actually taken from the Indemnity to meet the extraordinary expenditures on account of the expansion of the national armaments, and other non-productive military and naval schemes during those two years, was only 84,819,711 *yen*. On the other hand, the total unproductive expenditures incurred were 164,428,795 *yen*. It follows, therefore, that the financing of the armament-expansion programme is proceeding very favourably. The matter will, perhaps, be understood more clearly from the following statement :—

Liabilities—Total sums to be defrayed between 1896 and 1904 on account of *post-bellum* armaments-expansion, and other military and naval extraordinary projects inaugurated before the War (Table L.L.) 324,956,706
Total sums defrayed under the above headings in 1896-7 and 1897-8.....164,428,795

Total sum remaining to be defrayed 160,527,911
Assets—Indemnity (i.e. 341 million *yen* less 80 million drafted into the war account) 261,000,000
Expended from the Indemnity in 1896-7 and 1897-8 91,240,041

Portion of Indemnity remaining available 169,759,959

If these figures covered the whole situation, the future would present no perplexity. But Formosa has greatly complicated the programme. It has been decided that the new dominion can not be self-supporting for several years, and that, in the meanwhile, a grant of about six millions annually will have to be made on its account by the Central Government. Probably a total outlay of from 30 to 40 millions must be anticipated under that heading, and, if so, the final accounts would stand thus :—

Liabilities.	Total <i>post-bellum</i> unproductive Expenditures ...	324,956,706
	Total <i>post-bellum</i> productive Expenditures	190,054,063
	Grants to Formosan administration	40,000,000
	Grand Total of Liabilities	555,010,769
Assets.	Indemnity	261,000,000
	Public Undertakings Loan	135,000,000
	Railway Loan	79,782,224
	Surplus Revenue (including estimated surplus during 1896-7)	44,000,000
	Extraordinary Revenue during the period ending 1904	18,000,000
	Total	537,782,224

We see here a clear deficit of 27½ millions on the side of the available assets, and the question is, whence can funds be obtained to balance the account. Apart from new taxes or an additional public loan, no resource suggests itself except the possibility that surpluses may continue to accrue in the future, as they have done in the past, on the side of the Ordinary Revenue and Expenditure. That is not an unreasonable expectation. It has indeed

been calculated by financiers of repute that surpluses of that nature will aggregate 38 million *yen* at least during the nine-year period ending in 1905. But we are unable to endorse that forecast. On the contrary, we shall presently see that other uses offer for more than the assets available from the regular income of the State, and it consequently becomes necessary to conclude that the extraordinary liabilities, productive and unproductive, contemplated in connexion with the *post-bellum* programme, exceed, by 27½ million *yen*, the extraordinary funds provided for their discharge, and that supplementary income will be available to cover the deficiency. Apparently this disturbance of the Treasury's calculations is to be attributed to Formosa: it was not originally supposed that the new dominion would constitute such a severe drain upon the revenue of the Central Government. We have to note here, however, that a large part of the money granted for Formosan purposes will be productively employed, and that the island, so far from being a tax upon the Treasury, ought, in the course of a few years, to become a source of income.

Having examined the extraordinary outlays planned in the sequel of the War, we have now to consider whether the growth of the ordinary expenditures will be covered by a corresponding increase of ordinary revenue when the *post-bellum* programme has been completed.

It has been shown (*vide* Table L.) that, without taking account of productive extraordinary investments made by the State according to the *post-bellum* programme, the Ordinary Revenue in 1902 may be estimated at 153½ million *yen*, approximately. Now the total sum to be expended within the next ten years upon the extension and improvement of State railways, and development of the system of telephones and telegraphs, is 123 million *yen*, in round numbers. It is a reasonable assumption, based on experience, that a net income of 5 per cent., or, say 6 million *yen*, will accrue from these investments. We have further to add the Formosan receipts, or 8½ million *yen*—a minimum figure. Thus the final aggregate of Ordinary Revenue becomes 168 millions.

Now the total Ordinary Expenditures for the fiscal year 1897-8 are 123 million *yen*, in round numbers, including the Formosan outlays, and including, also, 3 millions drafted into the First and Second Reserves. What additions must be made to that aggregate in order to determine the outlays in 1905?

In the first place, the increased expenditures on account of maintaining the Army and Navy on their expanded footings have to be considered. The Government's estimates are that the Army will require an annual appropriation of 26,167,043 *yen*, and the Navy an appropriation of 14,516,846 *yen*. Now the outlays of the

War Department in the Budget for the fiscal year 1897-8 are put at 29,136,722 *yen*, and those for the Naval Department at 9,885,890 *yen*. It would appear, therefore, at first sight, that the military outlays have already exceeded the official fore-cast. But that is not the case. The appropriation for the service of the War Department includes four items which are considered independent of the actual cost of maintaining the Army. They are, the expenditures of the Department itself, the expenditures on account of the Gendarmerie, the expenditures on account of Colonial troops, and the yearly grant to the Yasukuni shrine, where services are performed in memory of officers and soldiers that died in the discharge of their duties. The sum allotted for the actual maintenance of the Army is only 25,686,891 *yen*, being therefore, 480,152 *yen* less than the Government's ultimate estimate. Similarly, in the appropriation for the Naval Department, the actual cost of maintaining the Navy stands at 9,715,204 *yen*, being, therefore, 4,801,642 *yen* less than the Government's ultimate estimate. Hence a sum of 5,281,721 *yen* has to be added, on account of the two services, to the Ordinary Expenditures for the current fiscal year in order to obtain the total for 1905.

The next point to be considered is the annual cost of maintaining the Navy at the standard to which it is to be raised according to the programme of *post-bellum* expansion. It need scarcely be said that to raise the fleet to the dimensions now contemplated would be of little use unless the nation is prepared to set aside annually a sum sufficient for replacing the vessels as they become obsolete or worn out. Now the total value of the ships to be added to the Navy under the programmes of 1893 and 1896 is 200 million *yen*, in round figures, of which 30 million *yen* represents torpedo boats. It is calculated by naval experts that the annual depreciation upon battle-ships and cruisers is about 4 per cent, and upon comparatively fragile torpedo-boats, 9 per cent. We must assume the value of the fleet to be at least two hundred million *yen* for the purposes of this calculation, and it then appears, on the above basis of wastage, that a sum of 9½ millions must be appropriated yearly. The question of repair also has to be taken into account. It may be taken to involve a further cost of 2 per cent., so that the total charge for keeping the Navy up to its standard will be 13½ millions.

Some allowance must also be made on account of a probable increase in the sums to be granted by way of State aid to Navigation. The Government asked the Diet last session to vote an appropriation of 2,918,975 *yen*, under that heading, for the Nippon Yusen Kaisha's newly opened steam-ship services to America and Europe, the grant to be for ten consecutive years, commencing from April 1st 1898. The Bill was not passed by the

Lower House, but there can be no question that these services, as well as the Yokohama-San Francisco line on which the vessels of the Toyo Kisen Kaisha are to run in conjunction with those of the Pacific Mail and Occidental and Oriental Companies, will ultimately be subsidized. Account must also be taken of grants under the ship-building encouragement law. An outlay of some £240,000 in that category will soon be necessitated in connexion with the new vessels of the Nippon Yusen Kaisha alone. Taking everything into consideration, six million *yen* annually seems a reasonable estimate of the increased outlays that will have to be incurred on account of the encouragement of navigation and ship-building.

We must, also, of necessity, make some allowance for a natural growth of administrative expenditures. For such a calculation, however, we have no trustworthy data. Between the fiscal years 1887-8 and 1895-6 the ordinary expenditures grew from 79½ million *yen* to 85½ millions, or 7½ per cent. in 9 years. They then leaped suddenly to 98½ millions—omitting the Formosan outlays—in 1896-7, and to 109½ millions in 1897-8—omitting not only the Formosan outlays but also the sums set apart as Reserves. It is impossible to base any forecast on such experiences. The Cabinet, however, is certainly competent to prevent any rapid increase in the ordinary expenditures. We shall, perhaps, be justified in assuming that every effort will be made in that direction, and that the Ordinary Expenditures in 1904-5 will not exceed 117 or 118 million *yen*; that is to say, will not show an increase of more than 7½ or 8½ million as compared with the figure for 1897-8. On that account, then, we apply a correction of 8 millions.

Further, in Table L. we have assumed an increase of gross revenue from Posts, Telegraphs and Railways, amounting to 15,750,000 *yen*. From that figure we must deduct 53 per cent. for working expenses, or 8½ millions, approximately.

There remains, finally, the additional outlay required for the service of the National Debt, interest and amortization, owing to the floating of the Railway Loan and the Public Undertakings Loan. These two loans aggregate 221,862,224 *yen*, of which 15,454,500 *yen* having been already issued, the interest on it appears in the accounts for 1897-8. The sum to be still issued is, consequently, 206,407,724 *yen*, the interest on which at 5 per cent. is 10,320,386 *yen*. Further, according to the amortization scheme, the sum required for sinking fund in 1904 will be 10,671,250 *yen*, against 5,719,732 appropriated for the same purpose in 1897-8. On the other hand, the amount of public indebtedness redeemed between 1897 and 1904 will be 57,947,307 *yen*, and the payment an account of interest will be proportionately decreased. Compounding

these various items, we find that the total addition to the appropriation for the service of the National Debt will be 12,374,539 *yen*. Hence the corrected Ordinary Expenditures on the completion of the *post-bellum* programme stand thus:—

Ordinary Expenditures in 1897-8	Yen.
(deducting 3 millions drafted into the Reserves.....)	119,983,561
Add increased outlays for maintaining the Army and the Navy.	5,281,791
Add cost of maintaining the Fleet at the new standard	9,500,000
Add cost of keeping Navy in repair	4,000,000
Add grants in aid of Navigation.	6,000,000
Add increased outlay on account of the service of the National Debt	12,374,539
Add Working Expenses of Railways, Posts, Telegraphs, &c. ...	8,225,000
Add Increase of Ordinary Expenditures	8,000,000
Total.....	173,364,891

Against this expenditure we have seen that an income of 168 million *yen* is within sight. Hence, unless some new sources of income be found, our inference is that the State's Ordinary Expenditures after the conclusion of the *post-bellum* non-productive programme will exceed its Ordinary Revenue by some 5 million *yen*. At the same time, it must be noted that no actual outlay on account of maintaining the new fleet will be required, probably, until eight or ten years have elapsed from the building of the last ship on the list. Nevertheless, funds for that purpose, if not fully as large as those set down in our table, at any rate nearly as large, ought to be appropriated every year, if the finances are to be kept on a sound basis. Thus, according to her present programme, Japan is living somewhat beyond the limits of her visible income. She can easily increase her income, if she pleases, but that is another question.

Another disquieting element is the necessity, as already noted, of making an annual, though doubtless temporary, grant of six million *yen* to Formosa. We can perceive no source for obtaining funds to meet that outlay, unless increased taxation, or an additional loan, be resorted to.

We have, finally to examine the present condition of the National Debt. All Japan's public loans are contracted on the same principle, namely, that they run for a period of five years without redemption, and that redemption must be completed within 50 years from the time of commencing the process. It does not follow that fifty years should be devoted to the purpose: that is the maximum. The Treasury has competence to expedite the operation according to financial convenience, but the sum expended on amortization each year must receive the previous consent of the Diet. Within the limit of that sum redemption is effected either by purchasing the stock of the loans in the open market, should the rates be favourable, or by drawing lots to determine the bonds to be paid off. The interest on

all public securities has now been brought to a uniform rate of 5 per cent. In the following table the particulars of the State's indebtedness as it will stand at the close of the present fiscal year, March 31st, 1898, are shown:—

PUBLIC DEBT.		
	Sum to be re- deemed this year.	Amount at close of 1897-8.
Seven per-cent Foreign Loan; issued in 1873; to be paid by 1897.....	433,811	—
Five per-cent Pension Bonds; issued in 1876; to be paid off by 1906.....	3,904,470	26,306,650
Five per-cent Naval Bonds; issued in 1886; to be paid off by 1923.....	400,000	16,550,000
Five per-cent Consols; first issue in 1886, last in 1897....	500,000	175,000,000
Old Pension Bonds, not bearing interest; issued in 1873; to be paid off by 1921.....	219,455	5,486,362
Railway Bonds; first issue in 1893.....	—	19,082,467
War Bonds; first issue in 1894, last in 1896.....	—	125,000,000
Public Undertakings Loan; first issue in 1896.....	—	69,704,000
Seven-and-a-half per-cent. Satsuma Insurance Loan; made in 1877.....	1,505,808	—
Totals.....	6,963,544	437,129,479

It appears from the following figures that the National Debt will stand at its maximum—namely, 497,617,273 yen—in the year 1902:—

GROWTH AND AMORTIZATION OF PUBLIC DEBT.			
	Amount to be floated.	Amount to be redeemed.	Increase or Diminution.
1898-9.....	44,946,720	7,272,267	×37,674,453
1899-0.....	19,343,804	7,182,408	×12,161,396
1900-1.....	14,912,790	7,115,868	×7,796,922
1901-2.....	12,627,269	9,772,246	×2,855,023
1902-3.....	8,831,372	10,173,536	—1,342,164
1903-4.....	3,985,924	10,671,250	—6,685,326

A semi-official statement has been made that the Debt will attain its maximum in 1901, and that its amount will then be 499,340,000 yen; but we are unable to reconcile either that figure or that date with our own calculations.

It is interesting to compare the financial condition of Japan with that of some of the leading European countries:—

	Direct Taxes per head.	State Revenue per head.	Service per head.	Military and Naval Expenditure per head.	Public Debt per head.
Japan.....	2.30	2.95	0.71	0.93	10.46
Great Britain.....	20.00	25.00	6.50	7.00	169.00
Belgium.....	9.50	23.00	6.00	4.25	150.00
Germany.....	7.50	13.50	4.00	4.85	126.00
France.....	22.50	36.00	13.00	9.50	323.00

SUMMARY OF THE RELIGIOUS PRESS.

The *Taiyō* publishes an account of an interview between Bishop Nicolai and Mr. Hayakawa Gyorō, during which the subject of religion was discussed. Asked by Bishop Nicolai whether he believed in a God, Mr. Hayakawa replied that he was not prepared either to affirm or to deny the existence of a God. Whereupon the Bishop entered into a definition of the God of Christians, the Gods of non-Christians, and the impersonal all-pervading principle to which some writers apply the term God. To these definitions Mr. Hayakawa replied that, while acquainted with the different theories, he did not see that there was any ground for such knowledge as the Bishop claimed to possess. God was a spirit and could not be known nor defined in terms intelligible to man. The Bishop admitted that there was some truth in that, but still held to the opinion that, while religious belief is by no means solely based on intellectual knowledge, to a large extent we are obliged to depend on reason for distinguishing between truth

and error. He further added that in his opinion Christianity rested on a rational basis. Some people seemed to be of opinion that religion was only designed for women and uneducated people. This he could not admit. It was also meant for the intellectual, but one condition necessary to its acceptance was humility in the inquirer.

Subsequently the conversation turned on the difference between the Greek Church and Protestants. Going as far as to admit that the Protestants are sons of the same father, the Bishop proceeded to explain that, in his opinion, the one cause of the errors of that body lay in the fact that, instead of consulting mother church as to the meaning of the Heavenly Father's letters to his children, they had assumed the right to place their own interpretation on his words, the result being the creation of a number of sects which dispute with each other as to the meaning of certain Biblical statements. Now all children ought to be aware that the most likely person in the world to know what a father means by certain words used by him is the mother. In this capacity the Church has always been consulted and obeyed by members of the Greek Church. Hence its unity and consistency. But the Protestants either interpret by abstract reasoning or adapt the meaning to the practical needs of life. Those who follow the former method become philosophers, those who pursue the latter blind fanatics. What is there that is sacred in all that?

Asked what difference there was between the Greek-Church evangelistic methods and those of the Protestants, Bishop Nicolai at first replied none, but afterwards admitted that the 15 Greek Churches of Tōkyō do not create so much stir as those of the Protestants, and are not so well attended, but qualified that by adding that the persons who do attend these Churches, albeit few in number, are not seeking the "loaves and fishes" after the manner of many of the so-called inquirers of the Protestants. With the Greek-Church inquirers there was no expectation of being taught English on the part of the men or of learning how to knit on the part of the women; as far as human eyes could see they were *bond fide* inquirers. Mr. Hayakawa subsequently observed that he had had considerable experience of Christian Churches and that he had found that in not a few cases the Christianity was mere outward show; that the members among themselves were quarrelsome, and petty, and behaved in a manner that Japanese who made no profession would be utterly ashamed of; hence in his opinion there were very few real Christians and among them not many having a thorough knowledge of the religion they professed. To that the Bishop replied that frailty is attached to all things human, and that Japanese Christians no doubt have their imperfections, but that he still believed their faith to be genuine.

Mr. Hayakawa took leave of the learned prelate, full of admiration of his command of the Japanese language, of his conciliatory manner and respect for the opinions of an opponent, and pronounced him to be altogether a most remarkable man.

The 29th and 30th of Dr. Katō's Hundred Essays, published by the *Taiyō*, deal with religion, which the learned essayist regards as a narcotic designed to make men forget their troubles, a deadener of the pains of earthly existence. The Christian doctrine of the atonement, final judgment, rewards and punishments, and the Buddhist teaching concerning the 三世因果 *Sansu-ingwa* (Cause and Effect as displayed in the three ages, past, present, and future), and the oft repeated terms 安心立命 *Anshin-ritsumei* (the attainment in life of peace of mind), and 拔苦與樂 *Bakku yoraku* (removal of pain and bestowal of pleasure), are all based on man's desire to lighten the ills to which he is subject. Taken occasionally by certain classes of people, these narcotics may act beneficially, but on the whole they are to be considered in the light of inefficient remedies. The enlightened man knows that while there are ills in life for which there is no cure, there

are also evils for which it is our duty to find a remedy. To me, concludes Dr. Katō in his 29th Essay, there is all the difference in the world between the man of knowledge who fortifies his mind to bear the burdens of life by a study of things as they actually exist, and the man who draws his comfort from an imaginary world of rewards and punishments.

In the 30th Essay Dr. Katō maintains that the limitation of the meaning of the word faith to religious belief only is founded on a misconception. The scientific man places the same kind of confidence in certain proved principles as the religious devotee places in certain doctrines. In the attitude of mind there is no difference. The difference lies in the nature and amount of evidence required to produce religious belief on the one hand and scientific belief on the other. The former is frequently produced without the employment of anything worthy of the name of evidence, the latter rests on logical demonstration. It is often said that relying on the experience of others, or, in other words, on authorities, the religious man and the scientific man differ nothing, but to this I reply that these are subjects on which no man that has ever lived has any experience. On these subjects Christ and Shaka expressed fixed opinions, delivered testimony. Their testimony cannot be regarded in the same light as that which is concerned with things and laws familiar to mankind and which is capable of being tested in a hundred different ways. The religions of Christ and Shaka profess to be, but are not really, founded on experience.

We read in the magazine we have just quoted that the Buddhists are preparing a map designed to show the districts occupied and worked by the various sects. There is a movement on foot to localise the efforts of the different bodies so as to cover more ground and not involve the interference with each other's spheres of labour in the way that has hitherto been done. There is a talk too of studying the mental characteristics of the inhabitants of different provinces with a view to discovering, if possible, some of the causes of failure in proselytism in the past. A certain class of Buddhists seem anxious not to be outdone by Christian evangelists.

We are somewhat astonished to find that the Roman Catholic Mission has entrusted the work of making a new translation of the Four Gospels to Mr. Takahashi Gorō, who is, we believe, a Protestant. Whatever may be the case with other sacred books, it is a fact that from the days of the famous Septuagint translation down to the present time the religious public has usually entrusted the translation of the Bible to Committees rather than individuals. The reason is obvious. With the greatest desire to be faithful to the original, few translators avoid the imparting of a certain personal or doctrinal tinge of thought to their rendering, which is regarded by those for whom the translation is designed as an imperfection. The Roman Catholics in Japan have departed from what we may designate the rule of Christendom, with what result we are not in a position to say. It would be interesting to know what limitations were placed on Mr. Takahashi Gorō as to interpretation and so on; but on such subjects we have no information. We can only state the fact that Mr. Takahashi Gorō's translation of the Four Gospels may be bought at the Fujiya for 1 yen 10 sen, and that the translation as a literary work is spoken highly of by the *Fukui Shimpō*. Mr. Takahashi is somewhat of a linguist and hence we infer that he translated from the Douay version (A.D. 1609), which is founded on the Vulgate, as was Wycliffe's English Bible.

In an address delivered to the students of the Tōkyō Shinshū Middle School, a report of which is published in the *Tōyōtetsugaku*, Dr. Inouye Yenyō draws a comparison between religion in Japan and religion in Europe in the following manner:—A few years ago, when I visited Europe and America, I was very much surprised by the

difference between the feelings of Europeans in reference to religion and those of the crowds who frequent our Japanese temples. I went to Canterbury, in England, and knowing that the great Cathedral there was of world-wide fame, expected to see its aisles crowded with worshippers and the doors of the building besieged by people anxious to enter, but to my astonishment the building contained only a few solitary worshippers.* I afterwards visited Rome and went to St. Peter's, only to find a slight improvement on Canterbury, as regards attendance at this great shrine. The question which suggested itself to me was, how are these places kept up? In Japan the coffers of the various religious bodies are replenished by the contributions of those who visit the temples, and it is a case of many worshippers much money. Is it otherwise in Europe? After inquiry I reached the following conclusion. In Japan religion is regarded by a very large class of people as essential to worldly success and as a preventative against calamities of various kinds. Men and women go to the temples to pray against sickness, earthquakes, and other visitations by which they feel they may be overwhelmed at any moment. The gods or divinities to whom they pray are supposed to be located in the temples and capable of being approached there only. With foreigners it is different. They believe that God is everywhere and that they may pray to Him wherever and whenever the spirit of devotion prompts them. To them the Universe is God's temple. But it would be wrong to infer that because they do not continually frequent their churches they are backward in subscribing towards the latter's support. The contrary is the case. Money is forthcoming, as the magnificent order in which the great sacred edifices of Europe are kept abundantly testifies. It is important to observe that one reason for the readiness with which Occidentals subscribe money for religious purposes is the fact that ecclesiastical accounts, like all other public accounts, are in the West open to inspection. The persons who receive the money are bound to show the subscribers how it was spent. In Japan the case is different. Few people know what becomes of the money entrusted to priests. The methods of collecting money adopted by the priests are in the main two—flattery of the rich and working on the feelings of the middle classes and the poor by the erection of grand temples, by services, house visitation and the like. The worshippers in no sense feel themselves responsible for the keeping up of a temple as Occidentals do with their churches. Their contributions depend largely on the amount of pressure brought to bear on them by the priests. Once having got the money, priests use it pretty much as they please, and by their misappropriation of money entrusted to them cause no end of trouble and strife. In all these matters I am an advocate of reform. In fact, unless Buddhists change their tactics, it is impossible for them to retain their hold on the masses. There is no doubt that the prevailing tendency of the age is towards Western methods and modes of life. The day has past for loitering about in each others houses, smoking tobacco and talking at leisure. The day has past for spending three months, of the year over a pilgrimage to the various shrines of the country. We live in an age of work and bustle. The wages even of women have doubled themselves within the last few years, showing how great is the demand for labour. Under all this pressure worshippers at temples and pilgrims will fall off, and unless priests adopt other methods of exercising an influence over men's minds and purses, ruin will stare them in the face. The sooner this fact is realised the better.

The magazine quoted above has an article entitled *Gendai no Nihon-jinshin*, "The Mental State of modern Japanese," in which it is maintained that the Japanese intellect has been developed at the expense of the moral nature, that the age is essentially materialistic in ten-

* If Dr. Inouye visited the cathedral on an ordinary week-day, this might well be the case. He does not tell us whether he went on a Sunday or not.

dency, and that the majority of young men have lost faith in the old ethical standard of the country and only very imperfectly understand the moral standard of learned men in the West. Things mental are in a state of chaos, and there is discord and unrest everywhere.

We referred in a former summary to the Shintō movement in favour of soliciting Government aid for the due observance of Jingū rites and ceremonies. On this subject several organs have something to say. The *Taiyō* observes that the talk of restoring to life the 教部省 Kyōbushō* shows how little is the value attached to the liberty of conscience which the Constitution granted. Though the professed reason for the proposed change is regard for the worship of the Imperial Ancestors, it is very evident, says the *Taiyō*, that what is known as Jingū-kyō is in a very poor way, and that the present movement is a last effort to save from extinction the shrine worship that used to be so popular. The *Yoroku Chōhō* is of opinion that the agitators in this affair are not worthy of public confidence and that the Government should be on its guard against becoming the tool of such a party. The *Tōyōetsugaku* affirms that the contention that Daijingu worship is not religious will not hold water. In connection with this, amulets are sold, and the possession of them is said to be a protection against certain evils, owing to the power of the gods in whose memory they are issued. The whole thing is religious. Should the petition of the Jingūkyō-ha find favour with the Government, other Shintō sects may well ask for the same consideration. Public opinion is pretty unanimous in recommending the Government to reject the petition.

The *Fukuin Shimpō* discusses the "Connection of Religion and Principle." The following is the gist of what it says on this subject. Though no doubt there are religious people who have no principles, and *vice versa*, yet in the case of all earnest minds religion and principle are closely related to each other. The religious man and the man of principle are alike superior to the mass of people who have no fixed standard in life, who are swayed to and fro by a thousand influences. It may be said that the principles of a man who has an earnest purpose in life are his religion. Looking back over the history of the Meiji era, we are struck by the fact that the ups and downs which Christianity has met with have in each case corresponded to fluctuations in the great world outside the church. To cite only one case. The period when hundreds of earnest men resolved to work, plan and agitate for the recognition of popular rights was a time of great prosperity among Christians. The earnestness of men's minds in one direction helped them to be earnest in others. To men who have resolved to act in a decided manner for the furtherance of a special cause, it is no difficult task to take decided action in reference to other matters. With the decline of interest in religion which characterises the stage we have now reached, there is manifest a general want of fixed principles in all quarters. Principles are at a discount and mere cleverness is in demand everywhere. Riches, power, skill, these are thy gods, Japan. And what will ye do in the end thereof?

The *Kirisutokyo Shimbun* reverts to the much discussed question of union among Protestant Christians. There is doubtless a very widespread desire among Japanese Christians of various sects for greater union. The obstacles that stand in the way are fourfold (1) Obstacles connected with finances. (2) Want of liberality of sentiment among certain Christians. (3) Differences in standards of faith and in the religious ceremonies observed. (4) Differences in ecclesiastical government. Of these the first are by far the most formidable. As things now stand churches are for the most part governed by the missionaries; for the simple reason that they are the channels through which foreign money is conveyed to Japanese

* A Department, abolished some years ago which had the control of all ecclesiastical matters.

Christians. As the missionaries belong to different bodies, it is not to be expected that they should favour a change which would involve the loss of their identity as representatives of the Societies by whom they have been sent to this country. As long as they hold the purse-strings of the church, they must always have the chief voice in the settlement of its affairs. Financial independence is absolutely essential to the union we Japanese desire to see effected. No union worthy of the name is possible without compromise. Each missionary prefers his own sect and has as a rule no inclination, even if he had the power,* to agree to radical changes in church Government, discipline and formula. There is only one way, continues the *Kirisutokyo Shimbun*, of getting over this difficulty. Those who wish for union among the churches must begin by subscribing to a fund to be used for Church work. A new Society must be formed whose special work it shall be to collect funds and take other steps for creating a new and independent body of workers. The attempts of small Churches to get along without foreign aid have too often ended in failure to make it desirable to try the experiment again. What we cannot do separately can be done by combination. The discussion of the subject is to be continued in the next issue of the paper.

The *Kirisutokyo Shimbun* reports that the Young Men's Christian Association connected with the Imperial University is in a prosperous condition, the number of members having increased from time to time. A Bible Class is held every Saturday superintended by Dr. Christlieb, and once a month a meeting is held at which addresses are delivered by well known Christians.

Other scraps of news which we glean from the above named organ are (1) that the President of the Dōshisha, Mr. Ozaki Hiromichi, has resigned his post and purposes devoting himself to evangelistic work in Tōkyō. It will be remembered that Mr. Ozaki succeeded the late Mr. Nijima as head of the Dōshisha seven years ago. Mr. Yokoi Tokiwo has been chosen to succeed to Mr. Ozaki. (2) The editor of the *Kirisutokyo Shimbun*, Mr. Watarase Tsunekichi, has resigned his connection with the paper and will move to Kyōto. Mr. Tomeoka Kōsuke is to be the new editor.

The *Shūkyō* has an article entitled *Risō no Kyōkai* (the Ideal Church) by Mr. J. P. Hopps, in which under seven heads the writer sketches the kind of Church he would like to see established on earth. Buddhist subjects figure largely in the number before us. Mr. Kishimoto Nobuta contributes an Essay on Comparative Religion, showing how essential to the understanding of religion as a whole is a knowledge of the various creeds that have influenced the world's history. Among scholarly Japanese these seems to be a growing interest in this subject. The title of one of the Editorials is *Shūkyō wa chōka subeshi; jōho subekarazu*. "Religion should be harmonised, and not compromised," in which it is maintained that it would be wiser to base union on the numerous points of agreement between the different systems, and not waste time over irreconcilable principles and opinions. Another deals with a subject which, though seldom discussed, demands consideration, namely, the evils of youthful smoking. It is suggested that the practice of the Waseda Chūgakkō be followed by all elementary and Middle Schools, namely, that smoking be strictly forbidden. There is no doubt that smoking commenced at an early age is injurious in many ways. Expense is not now a consideration, but in ten years time it is likely to become so, as the Japanese are beginning to understand that the taxation of luxuries proves in most countries to be one of the chief sources of revenue.

The *Taiyō* publishes an article on comparative religion in which the writer refers to a number of instances in Japan, India, Ceylon, China

* By power, permission from his employers is meant

and elsewhere where gods or divinities have been worshipped under new names, and argues as though this practice were possible in the case of Christianity, overlooking the fact that its very essence consists of monotheism pure and simple. The writer goes on to show that such terms as "without beginning and without end," "the true and false way," "orthodoxy and heresy," are common to all religions, and that such epithets as "outsider," "gentile," "heathen," "barbarian," "savage" and even "beast" have been applied in ages of prejudice and bigotry to persons of alien creed, but thinks that the use of any language of this kind at the present day by religious believers is something of which they should be ashamed. Such terms as 正統 *Seitō*, correct, orthodox, and 異端 *Iryū*, heretical, have no significance in these days of liberality and breadth of thought.

In the number of the *Shakai Zasshi* (Society) appears an article from the pen of Dr. Katō Hiroyuki, entitled *Shakai Seison* (生存) *no ni hōmen* "Two aspects of the survival of society," in which Dr. Katō propounds his favourite theory, the survival of the strongest. Two forces, says Dr. Katō, hold society together, one being the assertion of the rights of individuals and communities, the other the universal sense of duty. After elaborating this subject, Dr. Katō discusses the rôle played by religion and morality in the preservation of this sense of duty. As regards days gone by, he admits that religion has done good service in deepening men's sense of duty, but he thinks that, unless in the case of poorly educated persons, this is no longer true. The morality that is wedded to religion is decidedly not progressive, and a non-progressive morality is at a discount in modern times. Whatever progress in morality there may have been hundreds of years ago in countries where the great religions of the world were taught, at the present time the ethical notions of the professors of these creeds are the same from generation to generation. As regards the moral teaching of Shaka, Mahomet and Confucius, while suitable to the state of society 2,000 years ago, when men had not learned to assert their rights and combine against despotism, it is out of harmony altogether with the spirit of modern times. Christianity doubtless differs widely from these creeds in adapting itself to altered circumstances. Its elasticity has to a large extent been its salvation. It has kept itself in touch with the spirit of the age. There are those who claim that all the progress in moral thought that has been made is to be placed to the credit of Christianity. But such persons are blind to facts. They do not see that strong influences have been at work which have no connection with Christianity; among them the growing regard for personal rights, the feeling that at all costs these must be asserted and defended figures conspicuously. The strong are always apt to oppress the weak. Speaking generally, the progress of morality consists of an improvement in the conduct of certain classes to other classes of persons, of the governing classes to the governed. In some countries men's sense of what is right and just has so grown that no heinous oppression is any longer possible. Now this assertion of popular rights did not originate with Christianity and goes on quite independent of religion, and yet it is one of the strongest factors of progress in morality that it is possible to name. In this world of ours physical strength reigns supreme only as long as widespread notions of right are not outrageously violated. So strong has the feeling become that the maintenance of their rights is dearer to men than their lives, that there is no power existing which can afford to ignore these rights. §

The *Shakai Zasshi* purposes devoting special attention to benevolent institutions of all kinds.

* Used by the Brahmans of persons not of their caste.

§ The case of Napoleon is not referred to by Kato here, but well illustrates the truth of his contention. That very unholy combination called the "Holy Alliance" is another instance that occurs to us. Strong as that alliance seemed at one time it proved

It will collect and publish statistics on this subject. In the issue before us it states one very significant fact, namely, that among the charitable institutions of Tokyo, not including Reformatories, that have come under its notice 2 are Buddhist, 1 Shintō, 5 Municipal, 28 Christian and 4 nondescript. There are 14 Buddhist Reformatories and 4 Christian.

In a recent number of the *Bukkyō*, in an article entitled 生死 *Sei-shi* (Life and Death), the writer points out that one of the reasons of the want of success complained of among Buddhists is the prominence that is given to death in their teaching. Of the three worlds of which Buddhists discourse, the present, the past, and the future, the present is by far the most important. The questions whence do we come and whither do we go? are alike incapable of being satisfactorily answered. The facts on which it is all important to dwell are that we find ourselves here and that it behoves us to make the best of our existence. To teach men how to live is more important than teaching them how to die. But on that subject Buddhism has little to say.

It has been argued in several religious organs that the Buddhist doctrine termed 無我説 *Muga-setsu*, "Self-annihilation," is absolutely injurious to morals, in that its effect on the minds of the masses is to make them think that all things are indifferent. The very term used by Buddhists to express the desirable state of existence 無心 *Mushin*, is in common use as an equivalent for indifference. Though it is plain that with high-class minds, fortified by other considerations, a state of indifference to the things of the world may prove to be very philosophic and even sublime, with low class minds this doctrine of indifference may play the rôle of an abettor of evil. Nothing matters whatever we do, argue such minds. Buddhists reply that that is a perversion of the true doctrine. No doubt it is, rejoin their opponents, but is there not a defect in the original doctrine, which renders it liable to such a perversion? Is self-effacement the *summum bonum* to reach which we must all strive. Does not the loss of individualism involve the removal of the most trustworthy of all the bases of morality? For the views of Buddhists on this subject we refer our readers to No. 125 of the *Bukkyō*.

The following items are culled from a variety of sources.

It is asserted that the magazines of the *Shingon-shū*, with the exception of the *Kōya-no-hikari*, have all deteriorated of late. The *Dentō* is no longer a "transmitter of light," as its name implies. The *Mitsugon* is in its dotage. The *Narita-Shirin* (志林) is spiritless.

No sect can compare with the Sōtō-shū in the matter of issuing and suppressing magazines. The *Nyōse* and the *Sōtō Kyōhō* have been discontinued and the *Wayū-shi* has appeared in their place.

Attention is called to the carelessness of the editor of the English *Hansei Zasshi*, the pronoun "she" being used to apply to Tsukiyomi no Mikoto, the word Emperor to Suiko-tennō (an Empress), and Buddhist divinities are sometimes referred to under their Sanscrit names, at other times under their Japanese or Chinese names, thereby causing obscurity.

The principal subjects discussed in Christian periodicals during the past few months are evangelistic work, reformatories, the improvement of prisons and the like. Buddhist organs have dealt more with theoretical subjects connected with religion.

Some surprise has been expressed at the silence preserved by Christian organs on the Carew case. Connected as it was with both morality and religion, why was it not discussed? Was it because the persons concerned were professing Christians, asks one journal.

Mr. Kishimoto Nobuta, a Christian, who is to be no match for the spirit of freedom, the assertion of national rights and love of self-government with which it was confronted in various parts of Europe. Despotism with superior physical force at the back was unable to cope with the champions of liberty.

engaged in studying Shintō, is reminded by one writer that the colour of the spectacles worn is very frequently seen in the objects examined.

No religious body in Japan has done so much for orphans as the Roman Catholics. What do Japanese Buddhists say to that, asks the *Taiyō*.

According to the *Kyōrin*, Shintoists have been convinced by the comparative success of Christianity that the following three methods of propagandism must be at once adopted:—(1) They must establish a great school where, combined with instruction on general subjects, Shintō must be taught. (2) Their preaching must aim at reaching the hearts of the people and at producing practical effects. (3) They must no longer neglect literature. Books and periodicals must be issued freely.

We have received a very well written monograph entitled *Shinkyō-Tetsugaku* (Shintō Philosophy), which is of considerable interest from various points of view, stating as it does in the language of philosophy the doctrines of Japan's national religion. The writer is Mr. Sakamoto Seitoku, and it bears evidences of being an authoritative statement of the views of the most intellectual of modern Shintoists. The treatise will be more fully noticed in our next summary.

PERSONAL.

We are glad to be able to say that Captain Bougouin has mended considerably, though he still lies very ill. There has been no hemorrhage of a serious character from the affected lung since Saturday, and if the present favourable conditions continue, all cause for anxiety will soon be past.

The death of Mr. Donald Fraser is exceedingly sad. We can all remember his arrival in Japan, not twenty years ago, a splendid specimen of a stalwart, handsome young Scotchman, with every promise of a long life; yet he has been carried off at an age when most men have only just reached their prime. He was a staunch friend, a genial comrade, and an enterprising man of business. Strong as his constitution was, he seems to have over-taxed it, a too common tendency among foreign residents in the East.

THE HONGKONG COURT MARTIAL.

Sergeant Fretter, of the West Yorkshire Regiment, now stationed in Hongkong, has been found guilty of accepting a fee of \$75 in his capacity of Canteen Sergeant, and sentenced to be reduced to the rank of Corporal—that is to say, he loses one step. The punishment seems to us distinctly lenient, and we are surprised to observe not only that it is considered excessive, by the *Hongkong Daily Press*, but also that our colonial contemporary writes in this strain:

Under a recent order, which had not previously been made in the Hongkong garrison or in any way brought to Sergeant Fretter's knowledge, the receiving of gratuities under any conditions is rendered illegal, and under this order the unfortunate Sergeant has been sentenced to reduction in rank. Of the spirit of the order in question every one must approve, but it strikes one as an outrage on justice that a humble sergeant should be made a victim to its letter when it is notorious that its spirit is daily violated in much higher ranks. In commercial life the acceptance of private gratuities by persons in a position of trust is a canker that it seems impossible to eradicate, and in the Navy and Army it is probably as virulent as in commerce, if not more so. The system is abominable and must be reprobated by all honest men, but if it is sincerely desired to reduce the evil it must be grappled with by some more drastic means than the simple "breaking" of a "non com."

We venture to deny that any Sergeant in the British Army is ignorant of the impropriety of such an act as Sergeant Fretter committed, order or no order, and as for the allegation that return commissions are daily accepted by officers wearing the Queen's uniform, it is a strange slander, such as we should never have expected to find in the columns of the *Hongkong Daily Press*. If an officer were known to have accepted a sum of money under conditions such as our contemporary contemplates, he would have to send in his papers without delay.

SERIOUS EXPLOSION OF GUNPOWDER.

On the afternoon of the 4th inst. an explosion of gunpowder took place in a house occupied by Mr. Sugitate Tōtarō, No. 18, Creek Side, Yanagiwara, Kanda, Tokyo, by which Mr. Sugitate, Mr. Otani Yoshitarō, Mr. Yamazaki Takichi and three boys—one of 9 years and the other two 7 years of age—were severely wounded or burnt. The house was also set on fire, but the flames were extinguished by the efforts of the neighbours. In the meantime, some police hastened to the house to render all possible help to the injured. Mr. Sugitate, master of the house, Mr. Otani, and Mr. Yamazaki were found to have been severely burnt all over their bodies, while the three boys had suffered most in their faces and arms. Mr. Sugitate, who is the most dangerously hurt, was at once taken to the Tashiro Hospital in Neribei-cho, Shitaya, and the other five were conveyed to the Second University Hospital for treatment. The cause of this disastrous accident is given by the *Asahi* as follows:—Mr. Sugitate and his friends had been engaged taking to pieces some 3,500 cartridges, separating the lead and copper, and depositing the powder in a tin box. They were engaged in this work when a cartridge that Mr. Otani was treating suddenly exploded and set fire to the powder contained in the tin box. It is stated that three of the injured persons are likely to succumb to their wounds.

ELECTION TO THE HOUSE OF PEERS.

From telegrams appears in the *Japan Times* and other papers on Friday, we learn that the following gentlemen have been elected to the House of Peers as the representatives of the highest tax-payers, in the various Prefectures and Cities:—Kyoto, Tanaka Gentarō; Miye, Amakasu Fumiye; Tottori, Sakaguchi Heibei; Gifu, Hayakawa Shuzō; Fukui, Yamada Takusuke; Nagano, Iroba Gidaru; Iwate, Ito Gihei; Osaka, Sumitomo Kichiyemon; Kochi, Yamamoto Tadahide; Kagoshima, Kaiyeda Heisaku; Aomori, Abe Kenkichi; Kumamoto, Shimada Kozaburo; Yamagata, Hyuga Sanyemon Saitama, Noguchi Kei; Gumma, Homma Chiyo-kichi; Saga, Yanaka Jinpachi; Chiba, Takahashi Kisoji; Akita, Mogami Hirohaze; Wakayama, Nakanishi Kozaburo; Shizuoka, Matsunaga Yasuhiko; Toyama, Suyeno Denzaburo; Fukushima, Sumita Rinbei; Ehime, Kume Tadatsugu; Tokushima, Miki Yokichihiro; Shimane, Sato Kihachiro; Ibaraki, Matsumura Shuhei; Tochigi, Tamura Kohei; Yamaguchi, Nomura Tsunezo; Hyogo, Shin-nami Yohichiro; Miyazaki, Akuzawa Iitarō; Kanagawa, Hara Zenzaburo; Niigata, Igarashi Jinzo; Yamaguchi, Hirose Chiku; Miyagi, Atsumi Magojuro; and Ishikawa, Okabe Yasaku.

MISCELLANEOUS NOTES.

A fatal accident occurred at the Shimbashi Railway Station early on the morning of the 4th instant. At about 7 a.m. a loud noise reverberated through the place, and a number of workmen hastening to the spot whence the sound proceeded, found that a large crane and its frame had been overturned. Masses of iron were scattered around, and under a portion of the debris lay the body of a man, dead and dreadfully mangled. Four others were lying here and there, insensible. Police constables and a medical practitioner were quickly on the spot, when it was found that two of the four were fatally injured. The cause of the accident is not clear, but it appears to have been due to carelessness on the part of the workmen.

According to the *Mainichi Shimbun*, Count Kuroda, on the occasion of his audience at Kyoto, reported the affair of the Board of Audit to the Emperor, and informed His Majesty that, in the opinion of the Cabinet, Viscount Wata-

nabe ought to resign, adding that the Minister of State for Justice had also advised the Viscount to take that step as the most peaceful method of solving the problem. The Emperor approved of the recommendation, but it is alleged that Viscount Watanabe adheres to his resolution, and will not go out of office unless he is deprived of the Imperial commission, which he now holds. With reference to this, we may explain that the trouble had its origin in Viscount Watanabe's making a report to the Throne on the subject of the War Expenditures without previously consulting his colleagues of the Audit Board. A majority of the Auditors supported his action, their view being that the accounts in question were of a special character. Some of the Auditors, however, maintained the opposite opinion, and being out-voted, absented themselves from the subsequent meetings of the Board, the upshot being that Viscount Watanabe, in his capacity of President, brought about the retirement of the recalcitrant members. Such is the case, so far as we know, and if that statement be exhaustive, we can not but sympathise with Viscount Watanabe. If a minority of the members of an official board or bureau were at liberty to absent themselves from their posts and leave their functions undischarged because they differed from the verdict of the majority, discipline would be at an end.

It is stated by the vernacular press that the Irises will be in full bloom at about the middle of the present month, but we learn from persons who have been to Hori-kiri that a visit may be made at once. The *Hochi Shimbun* says that there are 400 varieties in the Yoshino-yen, which is about 3 miles beyond Azuma Bridge along the road called Hikifune-dori. Our contemporary gives the names of several varieties already in bloom in the Hori-kiri garden, but we do not imagine that our readers would be much edified by reading a list of terms like "*Homare no Ariwara, Goshō-asobi-ufi gawa, Shiga-no uranami*" and so forth.

It is reported that, on the 3rd instant, the Mitsu Bank contracted a loan from a foreign bank on the security of four hundred thousand yen worth of Japanese Public Bonds. If that be so, it is probably the first transaction of the kind. Another wealthy Japanese is said to be negotiating a loan of a million yen on similar security.

We read in the *Tokyo Shimbun* that a Korean-Japanese Bank—*Nihkan ginko*—is about to be opened in Korea, at Kyanchyon and Inchyon; that its capital will be 3 million yen, and that Mr. Mayeshima Mitsu has accepted the post of president. According to the same authority, all other Japanese banks doing business in the peninsula, will amalgamate at Fusan.

The delay shown by Austria-Hungary in revising her Treaty with Japan is referred to by the *Seikai-no-Nippon*, which declares that the singular procrastination of a Power having almost no commercial interests in Japan, prevents this country from obtaining an increment of revenue to the extent of 5 or 6 million yen, since the new Tariff cannot be put into operation until the Austro-Hungarian Treaty is revised. Our contemporary recommends the various political parties to cease agitating about insignificant questions like the affair of the Board of Audit or the appointment of a new Vice-Minister of Education, and to apply their strength to the really serious problem of Austria-Hungary's action.

The conclusion arrived at by people outside Japan is that the recent rise in the price of Japanese coal and the difficulty of procuring supplies for shipment abroad, are due to the formation of a ring by owners of mines, for the purpose of restricting the output. That is a not unnatural suspicion, but there are no grounds for it. Japanese mine-owners used to talk about a combination, but their talk never came to anything, and their competition is now just as keen as ever.

The editor of the *Straits Times* stands credited with a good and useful deed. Two China-

men were rescued by Malay fishermen from a wrecked tongkang. The cast-aways bargained to be carried to Singapore for twenty dollars, but, on arrival, refused to pay the money. Action at law was brought by the Malays, but the Court decided that it had no jurisdiction, the rescue having taken place within Dutch territory. Thereupon the editor of the *Straits Times* stepped in, and paid the Malays, trusting to get the money back from Chinese residents in Singapore.

A work recently issued by Messrs. Gow, Wilson, and Stanton, entitled, "Tea-producing Companies of India and Ceylon," shows that about £35,000,000 of British capital is invested in tea-growing in India and Ceylon; that the land under tea in those countries amounted in 1895 to 755,000 acres, the acres in bearing to 637,000, the crop produced to 233,500,000 lb., and the labour, or "hands" employed, to 890,000. An instructive table is also given in the preface, showing how what may be termed British-grown tea has during the last thirty years displaced former sources of supply. For 1896 the home consumption of British-grown tea was 89 per cent., and that of China and other teas only 11 per cent.; in contrast with a consumption in 1868 of but 7 per cent. of British-grown tea and 93 per cent. of China and other teas.

CHINESE NOTES.

The *Peking and Tientsin Times* says:—"Japan makes no secret of her intention to annex the Hawaiian Islands as soon as she is ready to do so. There is, however, a great deal in the 'as soon as.' Now where, we wonder, did the Tientsin paper discover that extraordinary canard. If there is one thing more than another that Japan has always emphatically disavowed, it is an intention of annexing Hawaii, or meddling with the islands in any way. Of course the *Peking and Tientsin Times* has some authority that it considers trustworthy, but it is very egregiously mistaken. The *Shanghai Mercury* writes in a similar but more imaginative style. It constructs a fable about Japan's sending soldiers to Hawaii in the disguise of labourers, and represents her as engaging in a kind of Roland-for-Oliver game with the United States in the matter of despatching men-of-war. Some Münchhausen has been visiting the editors of these journals.

The railway between Peking and Tientsin has been sufficiently completed to allow of the passage of light rolling stock. It would be more correct to say the line between Tientsin and Tong-tai, which is 5 miles from Peking. Great credit is given to the rapid, business-like methods pursued in the construction of this line, as compared with the dilatoriness that characterizes the progress of the road over which His Excellency Shêng has control. Of course, being in China, the Peking line is not to escape without some vicissitudes. A rumour has been circulated that a child is wanted to bury under each sleeper, and if any children happen to be missed, the ignorant people will not be slow to divine their fate.

We take the following from the *N.-C. Daily News*:—

Our correspondent at Hankow writes under date of the 22nd instant that during the week now closing business has been considerably more active and on the whole with a tendency to firmness for such teas as are fancied. Arrivals continue very slow, and thus offerings command full attention. Quality of later teas has been very inferior. In Keemun kinds the balance of the second and third packs are very poor as compared with last season, and while the teas appear very strong they are mostly wanting in flavour and carry dull infusions. Of Ningchows little can be said, as almost all arrivals seem out of condition, the few sound parcels thus appearing more attractive, are promptly snapped up. In Hankow teas, Oanfas continue to show fair quality and the Towyens seem thoroughly good of their kind, though they are perhaps, like the rest of the crop, lacking in firmness. The few sound Oopacks and Oanfas have almost the worst leaf on record, consequently business in these teas re-

mains very restricted. The only exception being Cheong-sowkai, which seem good useful teas and having a comparatively attractive appearance have been eagerly taken for the Russian markets. Settlements for London still continue on a very moderate scale and apparently consist almost entirely of the lower grades of Keemuns. The *Oanfa* is circulated at 47/6. Date of departure about 5th prox.

Arrivals to date are:—

Kiukiang Teas—
Keemuns 62,580 ½-chests.
Ningchows, etc., 88,206 do

Hankow Teas 151,056 do
..... 206,000 do

Total 357,056 do

Settlements to date are:—

Keemuns 37,720 do
Ningchows, etc., 36,846 do
Hankow 78,378 do

Total 152,944 do

There is in the Chinese capital a "Pekin Field Force," numbering some 25,000 men. It is the crack corps of the empire; has two Imperial Princes for commanders, and is officered chiefly by members of the Imperial Clan, Dukes, Marquises, and Earls of the Manchu nobility. Since the war these troops have been re-armed with Martinis and Mausers, but there is also a jingal brigade, the jingals being fired by two men, of whom one offers his shoulders as a rest. The force is said to have recently received an extensive course of training in German tactics, its instructors being graduates of the Tientsin Military Academy.

The Pekin-Hankow line, or the Great Western Railway as some call it, seems likely to become a bone of diplomatic contention. An English syndicate—represented by Mr. E. Hooley, Major J. E. Jameson, M.P., and Mr. E. H. Bayley, M.P., offered the best terms, but the Viceroy Chang Chih-ung insisted that Director-General Sheng must accept the Belgian proposal, the great man's naïve idea being that it was better for China to deal with a small and virtually helpless Power like Belgium. His Excellency fails to see that Belgium simply means Russia and France in this instance. The British and German Ministers in Pekin have protested, and there will probably be some friction, but Chang will get his way, we expect.

According to native advices from Newchwang says the *N.-C. Daily News*, that town is at present excited by a report that a strong band of *Hutse-tse*, or Bearded Brigands, assisted by some 300 disbanded soldiers and deserters from the Kirin camps, have recently been seen not many miles distant at a place called Tungying, whence it is conjectured the bandits are meditating a raid on the surrounding towns, Newchwang amongst the number. In consequence of this report all the shops have recently been closing before sundown and the various trade guilds have moreover hired a lot of extra watchmen and armed *braves* to defend the members from attack. The Newchwang Taotai issued a proclamation informing the citizens that he had already made arrangements with General Chang, commanding the troops in Newchwang, to have his men under arms and on the alert to arrest any suspicious characters in the town, while the Taotai's own special battalion of guards were also to co-operate with General Chang in the duty of patrolling the town day and night. A scale of rewards was also offered for the capture of the bandits, namely, Tls. 10 for an ordinary bandit; Tls. 20 for a petty officer of the brigands; and Tls. 30 for the capture of any of the chiefs or those who have had the audacity to afford the brigands living quarters.

Copper cash have become so scarce in Soo chow that the Provincial Treasurer has authorized the local banks and pawn-shops to revert to the old-time custom of issuing rectangular bamboo tickets, having their nominal value—100 and 200 cash together with the name and seal of the issuer, burnt into the wood. These

tokens are promises to pay at sight the sum inscribed on them.

Despite the urgent necessity of sending food supplies with the utmost despatch to the starving folks in the north of Szechuan, the Chinese local authorities have not been able to persuade themselves to use steamers on the river. Conservatism is strongly rooted in China.

Land-owners at the ports to be newly opened to trade on the West River must be congratulating themselves. It is said that the market value of their land has risen from 5 to 15 times the price commanded a few years ago.

Mr. Gilbert Reid's project of an international institute in Pekin—, on behalf of which he is seeking to raise a sum of a hundred thousand taels, will be understood from the following account given by himself:—

The institute, as it had been projected and sanctioned by the Chinese authorities, consists of: (1) an auditorium, where lectures might be delivered to the educated classes as far as possible, and in connection with which there would be small class rooms for the propagation of certain schemes and certain branches of learning somewhat similar to the university extension course. A large number of officials—of the younger class—were interested in western education, but they were utterly unable to go through a course of three years, or nine years' study; therefore, these classrooms would be of immense benefit to them. (2) There would be a museum in which all the apparatus, machinery, models, etc., of western skill and civilization would be included so that the Chinese might be afforded an opportunity of seeing what was being done in foreign lands. (3) There would be a library and a small book store. (4) Then there would be reception rooms for social meetings. Anyone who lived in China knew that the Chinese were not accustomed to public lectures; but they were accustomed to social meetings.

The Japanese gunboat *Oshima* has earned some *kudos* in Shanghai for the smartness that her people showed in launching a boat and pulling off to the assistance of a gentleman whose skiff had been upset by the wash of a steamer. A sampan reached the scene first, but the men of the *Oshima* seem to have lost no time.

Mr. de Rijke has arrived in Shanghai and is busily making a survey of the river.

NAGASAKI HARBOUR.

Approval was given in the tenth session of the Diet, says the *Yiji*, to the granting of a subsidy of 800,000 yen from the Treasury for the improvement of Nagasaki harbour, the money to be spread over a period of six years. It has since been found necessary to revise the original estimates, a new scheme having been drawn up by the City Assembly of Nagasaki, and steps are being taken to obtain official sanction for the same. The proposed expenditures are now:—

	Yen.
30th year of Meiji (1897)	300,000
31st " " (1898)	200,000
32nd " " (1899)	650,000
33rd " " (1900)	500,000
34th " " (1901)	500,000
35th " " (1902)	400,000

Total 3,100,000

The estimates of receipts from 1897 to 1902 are as follow:—

	Yen.
1. Miscellaneous receipts—sale of 28,600 <i>tsubo</i> of reclaimed land..	400,000
2. Aid from Treasury	800,000
3. Aid from Local Taxes	250,000
4. Public loans, to be raised in six years from 30th to 31st year of Meiji	1,530,000
5. Expenses to be borne by Municipality	120,000

Total 3,100,000

The Pollard Lilliputian Opera Company arrived in Kobe by the *Saikyo Maru* from Shanghai. They opened with a performance of "La Mascotte."

NEWS OF THE WEEK.

The other day, the gunners of H.M.S. *Iphigenia* made very satisfactory practice when shooting near Singapore. Firing at a small rock from frequently-altering ranges, while the vessel was steaming 14 knots an hour, five hits were made, on an average, out of every six rounds.

On June 8th, at 1 p.m. at 34° 6' N. and 137° 55' E. (about 60 miles S. W. by W. of Rock Island), the D.D.R. steamer *Bellona*, Capt. von Binzer, picked up the crew of a Japanese junk which was in a sinking condition, and landed them safely at Yokohama.

The vernacular press on the Opposition's side are reviling the Government about the ill-feeling occasioned throughout the country by the enforcement of the Trades Tax Law. These newspapers declare that the Government itself is acknowledging that the measure was too faultily drawn-up to ensure smooth working; but nevertheless it must enforce the Law's provisions. Some 7,000,000 yen was expected to be obtained by the tax, but present indications seem to show that there will be a difficulty in raising more than 4½ millions.

The recent experiments in telephonic communication between Tokyo and Osaka having proved successful, steps are now being taken to purchase wire, posts, and other necessary materials for the practical establishment of a telephone between the two places. The distance is 150 *ri* (37½ miles), and requires twelve thousand posts—eighty posts being required per *ri*. The work is to be divided into several sections, which will start at the same time. The line is expected to be completed by the end of this year at latest.

The *Shogyo Shimpō* states that a Promissory Notes Exchange has been organised in Kobe through the combined efforts of the local branches of the Yokohama Specie Bank, the First National Bank, the Mitsu Bank, the Mitsubishi Bank, the Sumitomo Bank, the 38th and 65th National Banks, the Japan Foreign Trade Bank and the Japan Commercial Bank, and that business will commence from the 1st of July. The second storey of the Yokohama Specie Bank is to be used for the transaction of business for the time being.

"It should not be lost sight of," says the *Singapore Free Press*, "that Mr. E. de Bunsen, lately British *Chargé d'Affaires* at Bangkok, who was recently transferred to Washington, was intercepted on his way thither and sent by Lord Salisbury to Constantinople as Secretary of Legation. That is no small step, seeing that Constantinople is at present the actual political focus of Europe, and it means that upon Mr. de Bunsen is falling much of the actual work of forwarding the joint negotiations of the Ambassadors, which at this moment must be so exceptionally important."

The *Tokyo Shimbun* avers that the demands made by the various Departments this year will increase the estimates by more than one half, the Budget totalling nearly 500,000,000 yen. Under the circumstances it thinks that Count Matsumura will find the next few Cabinet Councils anything but pleasant, for all his colleagues are "stalwart heroes of equal influence" who will refuse to abate the demands of their Departments by a single *rin*. The Finance Minister utterly lacks the power of controlling the other Ministers, and the result will be, according to our doleful contemporary, speedy bankruptcy for Japan.

The proposed expansion of Japan's military and naval armament, remarks the *Asahi*, has attracted the attention of European nations. One, in particular, is taking unusual pains in the matter and under various pretexts has despatched military and naval officers to Japan to privately ascertain her actual position. These gentlemen, eager to find out what will pass at the proceedings of the Council of Chiefs of General Staff shortly to be held, are arduously engaged in secret investigations. At the same time they are ascertaining the general condition of Japan's finances as well as her national resources. The main questions receiving their consideration are (1) Whether Japan has the

financial ability to carry out her armament expansion schemes; (2) how long the national strength will allow of the expanded armaments being maintained; and (3) how many years Japan will be able to support herself by her own resources should she close all her ports and shut out foreign commerce.

The question of establishing a bourse in Japan is for the moment in abeyance owing to the antagonism of two parties, one of which desires to see the institution established in Tokyo, while the other wishes Yokohama to have the privilege of starting the Bourse of Japan. The Government is said to be in favour of the scheme, but will withhold its consent, according to the *Seikai-no-Nippon*, until the factions have arranged their dispute. A compromise, of course, will be the outcome, but what form it will take is the question now agitating the business men of Yokohama and Tokyo.

In December 1895, a Japanese junk named the *Sumisha Maru*, owned by Mr. Kajitani Jubel, of Hyogo, was sunk by collision with the French cruiser *Isly* off the coast of Kiushu, and her cargo of coal was lost with her. A claim was put in against the French Government for 10,000 yen damages, and negotiations, entrusted to the Japanese Minister in Paris, have been going on ever since. At last, we learn from the *Fiji*, through the efforts of the French Consul at Kobe, a compromise has been effected, the French Government paying 3,000 yen to the owner of the junk.

The remarkable abuses now attending the development of various manufacturing industries, remarks the *Mainichi Shimbun*, are a complication frequently attending disputes between employers and employed. Strikes, though comparatively insignificant at present, have occurred in various parts of the Empire during the past few years, and plans are mooted for the combination of labourers or artisans with a view to organising opposition against employers. Under these circumstances it is absolutely necessary that steps be taken to restrain labourers from such actions. Investigations on the subject are being made by responsible authorities so that suitable measures may be presented to the Diet next session.

Continuous purchases of public bonds, says the *Nichi Nichi Shimbun*, are being made by the Chartered Bank in Yokohama—bonds purchased by it from the Insurance Bank and the Specie Bank on the 28th and 29th ultimo amounting to 150,000 yen and 100,000 yen respectively. Negotiations are also being carried on with Mr. Yenomoto Keizaburo for 300,000 yen worth of other bonds. It is said that as Mr. Yenomoto, in combination with the stock brokers of the capital, is taking steps to have his bonds cashed in Yokohama to the amount of thirty or fifty thousand yen per day, facilities are being afforded for the better circulation of money. The Hongkong and Shanghai Bank is reported to have entered into negotiations with Mr. Amemoriya for the purchase of War Bonds and Consols.

The recent despatch of a man-of-war, the *Naniwa Kan*, to Hawaii, remarks the *Tokyo Shimbun*, seems to have been effected under a misapprehension of the nature of the crisis. Had the vessel been sent earlier it might have had the effect of intimidating the Hawaiian Government and thus done some good. Unfortunately, however, it was not till after the third rejection of Japanese emigrants that the Foreign Department despatched the war vessel to Hawaii. Such dilatory action may be compared to the "brandishing of a club after the strife is over." Had the Government been sensible of the opportunity so lost, it ought to have sent the *Naniwa* at the time of the first refusal, with a view to the speedy settlement of the complication. This sort of writing is curiously unreflecting.

A slight accident befell one of the launches belonging to H.M.S. *Centurion* on Tuesday morning, the 8th. The handsome craft in question, which is, we believe, the Admiral's steam barge, was approaching the newly erected

jetty at the steps of the English hatoba, when, in endeavouring to avoid collision with another steam launch, she ran into the jetty with considerable force. A hole over a foot in diameter, about two feet above the water line, was made in the bows of the launch, and the upper coping of the jetty received some damage. The injury to the launch did not prevent her from steaming back to the *Centurion*. There was quite a gathering of police on the jetty, note book in hand, after the accident, to obtain all necessary details, in order, doubtless, to lodge a claim for the damage done.

Here is a welcome reform:—

For the Albert Hall Jubilee Concert held on the 6th of May, Dean Hole revised the second verse of "our illiterate National Anthem," in order to avoid the uncouth rhyme of "politics" with "knavish tricks." It ran as follows, and was sung by Madame Albani:

O Lord our God arise,
Scatter her enemies,
Make war to cease;
Keep us from plague and dearth,
Turn Thou our woes to mirth,
And over all the earth,
Let there be peace.

The musical arrangement by Sir Michael Costa was abandoned in favour of a new one by Professor Bridge.

According to the *Shogyo Shimpō*, the outlays during May, over and above the budgetary allowances, which were taken from the Second Reserve, were as follow:—

Expenses of despatching a Military At-	Yen.
taché to Crete.....	6,000
Investigations at, and repairs, of the 1st	
Dock, Sasebo.....	117,638
Prevention of epidemics.....	35,339
Expenses at the International Council of	
Education in the Orient.....	17,849
Expenses incurred through epidemics	
among cattle.....	25,000
Expenses at the International Medical	
Council.....	6,817
Special measures relating to districts af-	
fected by natural calamities.....	13,972
Total.....	224,615

The Second Reserve being two million yen, there now remains about 1,683,698 yen to its credit.

Fairplay says that in a recent discussion at Cardiff on a paper by Mr. Aisbitt on "Ship-building, Ancient and Modern," it was pointed out that Mr. Aisbitt had not mentioned the various useful and efficient types of boats and ships built by the Eastern nations, which were among the first in the field. Mr. J. Chellev observed that since reading Mr. Aisbitt's paper he had been searching the Scriptures for interesting notes on ancient naval architecture, and he came across the description of a boat built in the time of Paul—about the year, A.D. 62. He believed she was one of a fleet trading between Alexandria and Italy, which carried one fifth of the corn produce of Egypt. The passage took about 12 days. One of these vessels was 180 feet by 45 feet, with a tonnage of 1,575 tons; and she was stated to have yielded her owners nearly £3,000 annually. One of these old-time boats was said to have carried 1,200 passengers, besides a general cargo of paper, nitre, pepper, linen, and a large quantity of wheat. The puzzle was, he said, why, when such ships as these were built in ancient days, William the Conqueror should have come to England in a boat of about 60 tons. There must have been a retrogression. Mr. W. Simpson said he would have been glad if Mr. Aisbitt could have given them the midship section of the Ark.

A scheme is in contemplation, says the *Chuo Shimbun*, to establish a large Bank by the appropriation of the loan of three million yen issued to Korea some time ago. The object of the proposed Bank is to afford financial facilities to Korea under special contracts, to promote the circulation of money between Korea and Japan, and to conduct exchange business for Korea, China, and other countries. To grant subsidies for enterprises to be undertaken by the

Japanese in Korea in future is also to be among the principal transactions of the bank. The Government, in view of the present scheme, proposes to lend to the Bank one million yen, which has been already received from Korea, and the remaining two millions, without interest. Mr. Mayejima Mitsu is nominated President of the institution. On the establishment of this bank the branch of the First National Bank in Sōul is to be closed. The scheme seems to have been contemplated early in the 27th or 28th year of *Meiji*, when Japan was at war with China. The proposed construction of a railway between Sōul and Fusan largely contributed to the furtherance of the enterprise now under notice. The Japanese in Korea have rapidly increased, and it became absolutely indispensable to organise some source for the supply of capital to them. The project, however, failed to materialise at the time. Fortunately a portion of the Korean loan having lately been repaid, the problem has again been brought upon the *tapis*, and its promoters have been enabled to inaugurate their scheme under the auspices of Count Okuma.

Rudyard Kipling has written some verses to illustrate a picture painted for this year's Royal Institute by his cousin, Mr. Philip Burne Jones. The picture is called "the Vampire." In a room flooded with moonlight lies a sleeping—perhaps a dying—man, with a pale wound in his breast, and brooding over him there glows a beautiful, malign, vampire woman. Four of Kipling's verses are given in the *Saturday Review*:—

A fool there was and he made his prayer
(Even as you and I!)
To a rag and a bone and a hank of hair
(We called her the woman who did not care)—
But the fool he called her his lady fair:
(Even as you and I!)
Oh the years we waste and the tears we waste
And the work of our head and hand,
Belong to the woman who did not know
(And now we know that she never could know)
And did not understand.
A fool there was and his goods he spent
(Even as you and I!)
Honour and faith and a sure intent!
(And it wasn't the least what the lady meant)—
But a fool must follow his natural bent:
(Even as you and I!)
Oh the toil we lost and the spoil we lost
And the excellent things we planned,
Belong to the woman who didn't know why,
(And now we know that she never knew why)—
And did not understand.

The amalgamation scheme of the Tokyo and the Japan Marine Insurance Companies—theo two largest corporations of the kind in Japan—has made steady progress, says the *Shogyo Shimpō*. The conditions decided upon by the two companies are as follow:—

1. The Tokyo Marine Insurance Company, which has a capital of 1,200,000 yen (of which 300,000 yen is paid up), will set apart 300,000 yen to meet losses in business, and increase the remaining 900,000 yen by a further subscription of 2,100,000 yen, of which 450,000 yen will at once be paid up, thus augmenting the capital to 3,000,000 yen. The amount of paid-up capital will then be 750,000 yen, so that it will correspond with the paid-up capital of the Japan Marine Insurance Company.
2. Shares in the Tokyo Marine Insurance Company of the face value of two hundred yen, will be reduced to fifty yen.
3. The name of the Tokyo Marine Insurance Company will be continued.
4. Officers will be appointed by the two Companies.
5. The Head Office will be in Tokyo with a branch in Osaka.
6. The special privileges of the Tokyo Marine Insurance Company, by which Government aids may be obtained, or which may serve as security with the Bank of Japan, will be maintained as before.

There was a large gathering of police and officials at the Kanagawa Kencho at about 10 o'clock on Thursday morning, on the occasion of the election of a member for the House of Peers from among the highest tax-payers of this Ken. The balloting, however, went off very quietly. The candidates were Messrs. Hara Zenzaburo, Otani Kahei, and eight others. Mr. Hara—in whose favour Mr. Otani Kahei re-

tired—was returned by 8 votes out of 15. Mr. Ishikawa Toranosuke, a wealthy farmer, being next, with 6 votes. Mr. Hara is at present a member of the House of Representatives.

The twelfth number of the *Rattle*, completing the first volume, has appeared at last, and we (*North China Daily News*) learn with great regret that hereafter this dispeller of gloom will only appear spasmodically, "as an unexpected meteor, flashing from the gloomy void!"

A Reuter's telegram appearing in Shanghai papers says that the amount of the Chinese Loan from Belgium is £4,500,000 sterling, and the Syndicate receives the exclusive privilege of furnishing railway material, supplying engineers, and building future important lines of railway.

The custom of indiscriminate presentation of addresses and memorials to the King of Korea—a custom established in that country in days before history emerged beyond the shadows of fable—has been suddenly abolished by Royal Edict. Now memorialists must approach the Departments of State concerned through the Secretariat.

Of the fifteen mechanics, who, misled by wild stories of high wages in Japan, left the Transvaal, and arrived in Yokohama a week or two since, a portion left here the other day for Hongkong, en route to South Africa, by the *Tokyo Maru*. The remainder of the party, with some assistance from the Charity Organization and generous members of the community, are leaving this morning by the N.D.L. mail steamer.

Just before the E. & A. steamer *Menmuir* left Port Darwin for Hongkong the ship's surgeon, Dr. France, fell off a plank leading from the shore to the ship. His body struck against a girder with great force before reaching the water, and on being got to shore again he was found to be unconscious, having fractured his skull. He died at midnight and was buried at Port Darwin shortly afterwards. This was the deceased's first trip in the *Menmuir*, but he had previously been to the East in the *Australian*.

The reading room of the Seamen's Mission was well filled on Monday, almost entirely by men from H.M.S. *Centurion*, *Rainbow* and *Alacrity*, on the occasion of the annual concert given at the Mission to seamen in port. Mr. Wilkin presided and at the opening of the proceedings announced that Admiral Buller had expressed his regret at being unable to be present on the occasion, owing to a previous engagement. The concert opened with a pianoforte solo by Mrs. Doering, who also played again at the commencement of the second part, and accompanied some of the vocalists with her well-known taste and ability. Mrs. Irwine, in the first part, gave a charming rendering of "The Children's Home," by Cowen, and later on "Kathleen Mavourneen," the latter song, which was very sweetly sung, being kindly given to fill a number down on the programme for Miss Lloyd Thomas, who was unable to be present through indisposition. Mrs. Irwine also took part with Mr. Sydney H. Morse in the delightful duet, "Oh that we two were Maying," which proved the gem of the evening. Mrs. Mollison, who was in splendid voice, sang "A May Morning" (L. Deura) and a very charming Irish ballad "Ashore," by H. Trotter. Mr. Morse took the audience by storm by his expressive and finished rendering of Dibdin's well known sea song, "Tom Bowling," and Braham's "Death of Nelson," which suited his pure tenor voice to perfection. Two numbers were down on the programme for Miss Rice, who was unfortunately unable to be present, but Mr. Mollison kindly filled the breach by singing, without music or accompaniment, a couple of ditties of the olden time, "a Farmer's Boy," and "Ten thousand miles away," which were thoroughly enjoyed by the audience. *Encores* were the order of the evening, but time would not allow of their being responded to. A vote of thanks and three cheers for the ladies and gentlemen who had so kindly given their services, and to Mr. and Mrs. Austen, brought a pleasant evening's entertainment to an end.

YOKOHAMA FIRE INSURANCE COMPANY.

The inaugural general meeting of the Yokohama Fire Insurance Company, which has been organised with a proposed capital of ten million yen for the purpose of insuring silk, will be held in a few days. The *Tokyo Asahi* gives the following particulars of the Company's prospectus:—

RECEIPTS.	
Premiums on raw silk and silk textiles insured for 3,000,000 yen	yen. 15,000
Premiums on merchandise and buildings in Yokohama and other districts, insured for 17,000,000 yen	204,000
Interest, 6 per cent. per annum, on 2,485,000 yen, balance obtained by deducting initiatory expenses, 15,000 yen, from one-fourth of the capital, viz., 2,500,000 yen	149,100
Half-yearly interest at 6 per cent. on premiums amounting to 219,000 yen	6,670
Total	374,670
EXPENDITURES.	
Reserve for policies issued (half the premiums)	yen. 109,500
Fees for Agency (five per cent. of premiums)	10,200
Various expenses	36,000
Total	155,700
Balance of net profit	218,970

CORRESPONDENCE.

PRINCE SIDDARTHA AND HIS TEACHINGS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Buddha is not the name of the founder of the religion commonly known as Buddhism, but is a term indicating "a state or condition of the mind." The founder of Buddhism was a prince in India with the royal name of Siddartha, and the family name of Gautama or Gotama. He was born in the north of India in the year 623 B.C., so he was a young man when the Jews were carried captives to Babylon. To-day fully one-fourth of the people on the earth worship him in one way or another. Gautama never claimed to be the true God, or even a god. At the age of sixteen he was married to a beautiful Indian princess and to them one son was born. Afterwards he left his palace, his wife and son, and retired alone into the jungle "to discover the cause of our sufferings and the way to escape from them." In the jungle he met some hermit Brahmins—Brahmanism being much older than Buddhism—who told him that "by severe penances and torture of the body a man may acquire perfect wisdom." But Gautama did not believe this, so he went away alone and "spent several years in deep meditation and fasting" by means of which he entered into Buddhahood, that is, he became Buddha—"the Enlightened, the All-knowing." He is now spoken of as Lord Buddha, or the Buddha, while those of his followers who have since attained to Buddhahood are called simply Buddhas.

As Prince Siddartha entered into this all-knowing state in the jungle, it is said that he discovered the secret of human misery—Ignorance; also the light that can dispel this ignorance of ours and remove all sorrows. This light he called the "Four Noble Truths." They are, "1. The miseries of ignorance; 2. The cause productive of misery, which is the desire ever renewed of satisfying one's self without being ever able to secure that end; 3. The destruction of that desire, or the estranging of one's self from it; 4. The means of obtaining this destruction of desire." Gautama taught that by knowing these four principles a man literally works out his own salvation without any outside help, and thus by a process of re-births reaches Nirvana, which is an Indian name for the Paradise of Buddhists. Nirvana is defined as a "condition of total cessation of changes, of perfect rest; of the absence of desire, and illusion, and sorrow; of the total obliteration of everything that goes to make up the physical man. Before reaching Nirvana a man is continually being reborn; when he reaches Nirvana he is reborn no more." Gautama taught that man should not acknowledge or expect anything from a Divine source, that the doctrine of a personal God is only a "gigantic shadow," that the highest goodness is attained without the assistance of God, that man may secure a continued existence without a soul, that there is a method of salvation without a saviour, that a redemption may be obtained by one's self as the redeemer, that nothing should be accepted on faith.

These facts about Buddha's teachings I obtained from a Buddhist Catechism that is recommended by a High Priest of Ceylon as "in agreement with the Canon of the Southern Buddhist Church."

Now contrast these teachings with those of Christ concerning God the Father, the Holy Spirit, the Son, the new birth, love, hope, eternal life, redemption, justice, faith, and so on, and you can see what a chasm there is between the two systems. One breathes the air of God, and heaven, and power and wisdom; the other, of man, and earth, and weakness and doubt. Christianity teaches that man is to be saved from the power of sin by faith in an all-wise, loving Heavenly Father and in Jesus Christ his son; all other religious systems teach that man must save himself by some work or effort of his own. Any scheme that proposes to amalgamate Christianity with any other religion is "profane and vain babbling" and that only. One is Divine, the others are human.

WILL PATTILLO.

May 15th, 1897.

JAPANESE RUDENESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Many will note with satisfaction your article in to-day's issue concerning the unreasonable demands of the *jirikisha* men, and the many technical assaults made by them on foreigners. I use the word technical as an all-inclusive term, but many assaults are more serious. On one occasion, some guests arrived at a hotel in Yokohama while I was there, and asked me the proper charge from the station. Inquired of the *jirikisha* men usually employed by the hotel guests, and they informed me. I paid the men, but they not only demurred but one of them doubled up his fists in a very suggestive manner and finally struck at me. Another man seized me behind and pinioned my arms and for a few minutes things looked lively. They assaulted not only me, but the house-keeper and even my little girl of seven. Finally a policeman arrived, and instead of ordering the men off the premises, began holding a *sodan* and collecting a crowd, and it was a hard matter to get them outside. My little girl was sick for a long time afterwards.

Another incident occurred to a lady acquaintance on the Bluff. She engaged one of these same men (near the Railway Station) and as she could speak Japanese, she arranged the price beforehand. On reaching the house, however, he discovered and recognised that it was occupied only by ladies, and probably thought he had an opportunity to impose on his fare. He demanded more. It was refused. He pushed through the door, followed the lady upstairs, and struck her a blow in the face. The lady, possessing a well knit frame and great presence of mind, promptly returned the blow with her compliments and in the same place, and the man departed without being desired.

Numerous instances might be mentioned, but let one more suffice. A man followed his passenger for several yards, and shaking his clenched fist in the face of his fare the whole distance, exclaimed, "Do you want any of this?" There was a rigidity about the gentlemen's lips which indicated the great self-control he was exercising. A policeman near took no apparent notice.

Why cannot fares be so fixed as to render this kind of thing impossible? Fancy a London cabman grabbing his fare and demanding twice his proper amount? The comparison perhaps is not fair, as here we have Japanese dealing with foreigners; but surely some satisfactory arrangement could be made by the police and licensing authorities.

Meanwhile, the advice I can offer is, never take *jirikisha* men from the stand at the Railway Station, nor the English Hatoba. Walk a little way further and you'll do better; and make your bargains as far as possible beforehand.

Yours very truly,

S. F.

Yokohama, June 8th.

• He probably had learned this from seamen.

[It is the greatest pity that some of these men are not vigorously prosecuted. Such things are wholly intolerable, and the police, as well as the courts of law, could not fail to assist in adopting deterrent measures.—Ed. J.M.]

"NOTES ON THE KURIL ISLANDS."

The transaction concluded twenty-two years ago, when Japan exchanged her possessions in Saghalin for the northern islands of the Kuril group, looks unpleasantly one-sided by the light that Mr. H. J. Snow throws upon it. Mr. Snow is one of the best known men in the Far East. It has often been asserted of him that he ought to have been born a hundred years ago; which is another way

of saying that opportunities for the full exercise of such a physique, such energies, and such a spirit of daring enterprise as nature has bestowed upon him, do not exist at the close of this nineteenth century. But the book that he has just published shows that these fine qualities have borne good fruit, and that they are supplemented by a keen power of observation, by considerable scientific training, and by much aptitude in collecting and marshalling information. Just a hundred years after the landing of Mendez Pinto on the shores of Japan; Martin Gerritszoon Von Vries sailed northwards from Batavia in the *Castricum* and *Boesken*, and wrote a perennial record of his voyage at Vries Island and Vries Strait between Eturup and Urup. Fifty-three years later (1796), the Kurils were again visited by that most intrepid and persevering of explorers, Captain Broughton of the Royal Navy. Broughton left the bones of the *Providence* on a coral reef near the Riukiu Islands, and broke the bone of his own arm also, but he transferred himself to a little schooner when he had lost his corvette, and sailing north by Yezo and the Kurils, returned by the east coast of Korea and Tsurushima, bringing with him the first correct map of Yezo and the Sea of Japan. Mr. Snow may be called a modern Broughton. He has visited the Kurils time and again in pursuit of his business as a hunter of fur seals and sea-otters, and if anyone imagines that a business of that kind is pleasant and easy, let him read this record:—"Since 1873, fifty-two vessels, usually schooners of from 35 to 100 tons, carrying crews of twenty to twenty-five, have been engaged in hunting the sea-otters on this side of the Pacific. Of these fifty-two, thirteen have been lost with all hands; seventeen have been wrecked, with loss of twelve lives; five have been seized and confiscated by Russian cruisers; fourteen have left the business through want of success, and only three remain." Mr. Snow, too, has left the business, but happily he "remains," and it now appears that while he hunted seals and otters in that region of fogs and storms, he managed to visit and examine every one of the seven-and-twenty islands stretching from Yezo to Saghalin, a distance of 650 miles. Nature has not yet donned any civilized garments in those wild regions. She is still toiling in all her naked vigour, building up islands, rending open volcanoes, lashing the ocean into roaring tide-rips that swirl and boil and suck in luckless ships and make teetotums of them, and brewing storms that flog the sea and carry its spume away at electric speed. Typhoons, fogs, tide-rips, and even vomiting volcanoes, these are things that many of us have seen, but to whose lot has it fallen to witness the actual building up of a mountain with materials piping hot from the kiln of the Titans? Mr. Snow saw that sight. It went on "under his very eyes" at one of the islands ominously named "the Black Brothers." The southern slope of the mountain was slowly and gradually upheaved; masses of volcanic rock were pushed up from below, and falling back at short intervals, rolled crashing and splashing into the sea; smoke and steam from the building laboratory rolled up through the interstices of the new erection, and, as if to show that there was nothing unusual in this process of mountain manufacture, thousands of sea-birds sat placidly regarding it from the ledges of adjacent cliffs. "Watching an opportunity," says Mr. Snow, in the most matter-of-fact manner conceivable, "I pulled my boat alongside this recently erupted rock and found it quite hot." A hot performance altogether, we should imagine, though perhaps not better than those "several occasions" when he "had the greatest difficulty in avoiding being drawn into a tide-rip, after having approached nearer than was prudent, in a fast hunting boat pulling five oars and a paddle." But there were compensations, if such unique experiences needed any compensation other than the delight that dangers surmounted and novelties surveyed bring to a brave, adventurous man. There was the compensation, for example, of finding that one of the strangest incidents in the "Marooned" was not a creation of Clarke Russell's imagination but a description of a genuine phenomenon. "At half-past nine on the night of September the 4th, 1885, within a few miles of the south-west end of Yezo, on the Pacific side, the sky being clouded over and the night very dark, with a light south-west wind and somewhat rough sea, a bright glare was seen to the southward, and appeared to be approaching the vessel. At first, in the distance, it looked like moonlight shining through a rift in the clouds, but the time being still within four days of the new moon, that could not be. As it approached, which it did at a considerable rate, in a fitful, darting manner, it appeared to be in the form of a luminous cloud, about 100 yards or so in extent, a sort of gigantic *ignis fatuus*. This remarkable cloud of light was anxiously watched by those on deck, who, with a certain

amount of disquietude, speculated as to what effect such an uncanny-looking thing would have on themselves or the vessel, for which it seemed to be directly making. On it came and suddenly enveloped the ship, the light being sufficiently bright as it passed to show the time by a watch. The wind was very light. The phenomenon appeared to move independently of the wind, for, some eight minutes later, it returned, passing the vessel a short distance off in the opposite direction." Then and above all there was the compensation of hunting the sea-otter. We confess that our sympathies are all with the otter. The mother otter holding her baby in her mouth when she is hunted, and never dropping it until she is killed or badly wounded, or until the little animal has been drowned by her constant diving to save its life and her own—that is an incident that does not add to the zest of the pastime. However, the sport must be emphatically exciting:—

The sea-otter has usually been hunted on this side the Pacific from schooners carrying three boats. Each boat is manned by five or six men, including the hunter, who stands in the bow on the look-out armed with a rifle. In fine weather the boats leave the vessel before daylight, and spread out in line. When an otter is seen a signal is given, and the boats take up positions some 600 or 800 yards apart in the form of a triangle, the otter being inside. Each time the otter comes to the surface to breathe he is fired at by the nearest boat, the others following if the otter does not dive immediately. As soon as he disappears, the boats are shifted so as to again have the animal within the triangle when he once more rises to breathe. As the otter tires and his dives become shorter, the boats reduce their distance, when sooner or later the otter is killed.

The weather must be calm and the sea quite smooth, or the "run" of the otter cannot be kept. When being hunted, the otter lies so low in the water, only just exposing its muzzle, that it is difficult to see, and offers but a very small mark for a rifle. Occasionally an otter is killed the first shot, but now and then a strong and cunning fellow will take one or two hours to get. On one occasion the writer saw an otter "run" for four hours, during which time nearly four hundred shots were fired. An otter will often get outside the boats; he will then generally go straight away, breaching every few seconds like a salmon. The nearest boat then takes up the chase, following right in his wake, and firing every time the otter breaks water. The other two boats follow, one on each quarter of the leading boat, and about 600 yards astern. The otter will eventually make a "back dive" and come up between the boats again. To a sportsman, sea-otter hunting offers one of the most exciting and fascinating of pursuits. To be a successful hunter it is necessary to be a good shot. It also requires considerable judgment, a good eye, smartness, patience, a cool head, a knowledge of the habits of the otter, and a strong constitution. An element that tends to give extra zest to the pursuit of otter-hunting is the rivalry between the boats. Each one naturally likes to secure the otter, but no one must go out of the proper position, and no hunter is supposed to spoil the chance of another in a more favourable position by firing first. The hunters are paid by a "lay," that is, a proportion of the whole, not according to what each individual hunter kills himself.

There are not many sea-otters left to be hunted now, and that brings us back to our starting point, namely, that the exchange of Japan's possessions in Saghalin for the northern part of the Kurils has proved a bad bargain, though it might have been profitable had a little wisdom and enterprise been shown. In Saghalin there were valuable fisheries, herring, salmon and sea-weed, and minerals, timber and peltries. In the Kurils practically the only source of immediate money-earning was the sea-otter and seal fishery. Eleven years ago, there were three rookeries of fur seals, two of them frequented by from twelve to fifteen thousand seals, and the third by from two to three thousand. It is doubtful if altogether a hundred "haul up" at these places now. They have been exterminated by the indiscriminate slaughter of old and young on the rookeries at the hands of both Japanese and foreign hunters. As for the sea-otter, "it has become so scarce that not more than 70 or 80 are now taken a year along the whole chain of the Kurils." Considering that the skin of a sea-otter fetches from £15 to £210 in London, the animals should have been worth a little protection. But they have had none, and what Mr. Snow says on the subject is very emphatic:—

The state of affairs to which the Kuril Islands are now reduced in regard to fur seals and sea-otters might have been very different, and the

seal rookeries preserved and made a lasting source of revenue, had the Japanese Government taken proper means to exploit them. The Government have no one to blame but themselves and their own officials. Time after time their attention was called to the importance of the matter, but apparently, owing to their reluctance to employ any foreigners to manage the business or give advice upon it, or to allow them to lease the right of taking seals, etc., or to be interested in the business with Japanese, the opportunity to secure the only benefit the Government were ever likely to obtain from their unfortunate bargain with Russia has probably been lost for ever. Without foreign assistance and advice the Japanese cannot manage this industry. They have tried it over and over again, but their experiments have always ended in disastrous failure and loss.

Mr. Snow is a Fellow of the Royal Geographical Society, but we have not heard that the Admiralty has ever recognised the valuable work done by him in completing and correcting the surveys of the Kurils and their coasts. Now that he has published the results of his intrepid industry and arduous researches, he will probably be relegated to the unrewarded rank of all unselfish explorers, but he will at least have the hearty thanks of all readers of his book. We could fain follow him in his account of the Kuril Ainu, but our space has limits. They are rapidly disappearing off the face of the earth, these strange people; and no wonder, seeing that an Ainu mother will give neat rum to her baby in arms, and seeing that the baby likes it. "But the survivors now living in the Kurils are broad-shouldered, thick-set, stalwart fellows; the women comely, attractive, and brimful of fun and merriment, notwithstanding the hard life that they lead." Mr. Snow contradicts the common supposition that the Ainu are abnormally hairy. He declares that the men are not hairier than many Europeans, and that he has "never seen on an Ainu woman any approach to the hirsute crop observable on the faces of many women of southern Europe." Doenitz, Hilgendorf, and Scheube claim to have proved that the Ainu are Mongolians, Rittich groups them with the Hyerboreans, but Snow finds nothing to suggest a northern origin for them. He concludes that they were driven northward by the Japanese, and that, in their turn, they drove out an arctic tribe, the *Koro-pok-guru*, inhabiting Yezo and the Kurils in remote ages.

RAILWAYS OF JAPAN.

CONSOLIDATED CAPITAL.

The amount brought over from the previous year was 40,391,454 yen. When to this sum is added 027.851 yen representing an amount settled this year to adjust Railway Property, 2,126,170 yen for Railway Bonds, and 157,000 yen representing the price of stores purchased last year but paid for this year, 85,228 yen representing price of materials, and 926 yen as additional Construction expenses in connexion with right of way on the Takasaki-Naoyetsu line, there accrues a sum of 43,781,701 yen. When from this sum be deducted mispayments amounting to 148 yen made last year in connexion with right of way and included in the general Revenue of the year, and also the price of materials amounting to 78,507 yen, which though included last year in the account of materials sold and paid for and incorporated into the consolidated capital, was discovered not to have been settled, there remains a sum of 43,703,046 yen approximately, as actual consolidated capital at the end of this year, as shown below:—

TOKAIDO LINE.

In computing the ratio which the average construction expense per mile bears to the gross consolidated capital and comparing it with the ratio last year, it ought to be remembered that as the two lines of Omi and Hokuriku are now in course of construction they do not admit of comparison with lines already completed. Consequently, a sum of 37,779,439 yen, obtained by deducting 5,923,611 yen representing the expenses spent on the two lines, from the gross consolidated capital of 43,703,046 yen, will be distributed over various items, and the amount per mile and the ratio which it bears toward the gross consolidated capital will be computed :—

As shown above, the average construction cost per mile at the end of the present year was 67,705 yen, which, compared with the corresponding figures for the preceding year, show an increase of 1,844 yen per mile. This increase in the average expenses was due to a sum spent in adjusting Railway property having been included. In computing the construction cost of various lines open to traffic (Aomori-Ikaiigasaki section excepted) with reference to mileage of respective lines, the following is obtained:—

The foregoing lines have all been completed and are open to traffic. The increase in the cost of construction of the Takasaki-Naoyetsu line was due to supplementary expenses in connection with the right of way having been paid out of Extraordinary Expenditure. Disbursements to adjust the consolidated capital were settled up to the preceding year by distributing them over the eight sections above enumerated, but from the present year this method has been altered and the charge was distributed over the main sections and subdivisions of the Tokaido and the Shinyetsu lines. The settled account for this year is shown separately in items 6 and 10.

Fixed Working Fund	200,000.00
	<u>41,254,481.80</u>

1. Traffic Receipts and Disbursements.—Traffic receipts during the year were 8,004,233 yen and traffic expenses 2,951,561 yen, a balance of 5,052,672 yen representing net profit, as shown below in detail. Compared with the result of the previous year, traffic receipts show an increase of 2,184,820 yen, traffic expenses 769,865 yen, and profits 1,414,955 yen.

Statement of Profit and Loss Account,

41,254,481.842

The ratio that traffic expenses bear towards traffic receipts is 36.9 per cent. this year, a diminution of 5 per cent. compared with the previous year. That such a good result was obtained this year despite large outlays on repairs was due to the development of communications and transportation in general, coupled with the extraordinary movement of troops and military stores, all of which tended to increase the receipts.

2. **TRAFFIC RECEIPTS AND DISBURSEMENTS.**—The average daily traffic receipts and disbursements and the average traffic receipts and disbursements per mile on the respective lines during the year under review, as compared with the corresponding figures in the previous year, was as follows:—

Section.	Average traffic receipts and disbursements per mile.		Traffic Disbursements.	
	Traffic Receipts.	1895.	1894.	1894.
	Yen.	Yen.	Yen.	Yen.
Tokaido	19,534	13,979	6,780	5,063
Shinyetsu	2,102	1,927	1,059	863
O-u	272	115	280	157
Total	21,869	15,944	8,064	5,977
Section.	Average traffic receipts and disbursements per mile.		Traffic Disbursements.	
	Traffic Receipts.	1895.	1894.	1894.
	Yen.	Yen.	Yen.	Yen.
Tokaido	16,249	11,570	5,640	4,190
Shinyetsu	6,575	6,011	3,315	2,691
O-u	2,950	1,740	2,832	2,379
Total	13,659	10,282	5,037	3,855

The O-U line, that is to say, the Aomori-Hirosaki section, measuring 23 miles, was opened for traffic last year, but as the Hirosaki-Ikarigasaki section, extending 12 miles, was only opened for traffic from Oct. 21st, 1895, the average traffic mileage of this latter section was calculated at 6 miles, and this was added to the mileage of the Aomori-Hirosaki section. The average traffic mileage of the O-U line was obtained in that way. Owing to the same reasons, the average traffic days of the line were put at 293. The lines opened for traffic totalled 593 miles at the end of the year, but the average traffic mileage was 586 miles. The traffic receipts and disbursements of these lines show a large increase this year. This was generally due to the development of enterprises in the country, accompanied, especially on the Tokaido line, by large transportation of troops and stores. Going a step further and the gross receipts being subdivided into the three items of passengers, goods, and miscellaneous receipts, and the ratio which each portion bears to the gross receipts being calculated, the following comparative table is obtained.

ITEMS.	28TH YEAR.	27TH YEAR.	RELATIVE INCREASE.
	Yen.	Yen.	Yen.
Passengers	5,925,583	4,295,838	1,656,745

General12	.24	— .12

Total

In the ratio columns the upper of the two shows the ratio of gross disbursements and the lower that of gross receipts. According to the above the three items of maintenance, locomotives, and traffic considerably increased. The cause of the increase in the item of maintenance, was due to the Mayebara-Tsuruga and the Ogaki-Tarui sections having suffered from an extraordinary inundation on July 28th, 1895, and the consequent necessity arising for disbursing a large amount on repairs, as will be explained further on. The gross working mileage of locomotives reached 5,415,055 miles during the year, an increase of 492,397 miles as compared with the previous year. The increase in locomotive expenses was quite natural. That of traffic expenses was due to the additions to railway staff, occasioned by the brisk state of traffic. A diminution is shown in the item of general expenses, due to the fact that ordinary repairs thus far included in this item have been transferred to maintenance. By subdividing traffic receipts and traffic expenses into their respective items, and finding the respective units by dividing them by their proper divisors, and comparing the result with that of the last two years, the following table is obtained:—

TRAFFIC RECEIPTS.				
Receipts per average traffic mile.				
Year.	Average traffic mileage.	Passengers receipts.	Goods receipts.	Miscellaneous receipts.
28th year	586	10,158	3,279	222
27th year	566	7,590	2,528	164
26th year	558	7,128	2,341	181
Average	—	8,292	2,716	189

WORKING EXPENSES.				
Maintenance.				
Year.	Divisors.	Per cent.	Divisors.	Per cent.
28th year	586	1.435	5,415,055	.250
27th year	566	1.188	4,926,585	.215
26th year	558	1.148	4,125,138	.188

Expenses incurred in repair works in connexion with damages wrought by floods in the Mayebara-Tsuruga and the Ogaki-Tarui section were as follows:—

Section.	Maintenance.		Adjustment.		Total.
	Dis- bursed.	Yet to be Dis- bursed.	Dis- bursed.	Yet to be Dis- bursed.	
Mayebashi-Tsu- ruga.....	250,108	25,183	40,203	4,433	300,727
Ogaki-Tarui ...	16,015	—	—	—	15,015

Total

3. **PROFIT.**—By adding 5,052,672 yen, representing the traffic profits of the year and 29,294 yen, representing the profit accruing from the Government Railway Stores Fund, and the ratio that combined they bear to the gross capital of 45,815,967 yen and the producing capital of 41,254,481 yen, and by comparing the result thus obtained with that of the preceding five years, the following table is obtained:—

Year.	28th year.	27th year.	26th year.	25th year.	24th year.	23rd year.
Ratio of increase of gross capital.	1.11	.85	.87	.64	.46	.63
Ratio of increase of gross receipts.	1.23	.91	.95	.72	.51	.68

Again, in order to compare the extent of the yearly increment of gross capital and that of gross receipts, and to show the relation that capital bears to profit during the preceding five years, the mileage and increase from the previous year and the ratio thereof are shown as follow:—

Year.	Traffic mileage.	Ratio of increase of gross capital.	Ratio of increase of gross receipts.
28th	13	3,154,789	.74
27th	23	3,093,437	.72
26th	7	2,013,256	.54
25th	—	973,357	.24
24th	—	1,611,476	.46
23rd	9	524,069	.15

The amount of profit given here being 5,052,672 yen, there is a difference of 1,450,078 yen as compared with the amount of net profit of 3,602,593 yen given in the section of receipts and disbursements account. This is due to a difference in the mode of computations as explained below:

Items that, though included in assets and receipts in the Traffic Account, are not treated as

such in the Receipts and Disbursement account, and items which though regarded as loss in the Traffic Account are not treated as such in the other. Adjustment Expenses

Amount of receipts not credited last year (work shop receipts excepted)

Amount of expenditures not disbursed this year (work-shop expenses expected)

Total

Items which, though not regarded as loss in the Receipts and Disbursement Account, are regarded as such in the Traffic Account, and items which though not included in the Receipts and Disbursement are not treated as such in the Traffic Account.

Amount not paid last year (work-shop expensed excluded)

Amount of receipts not credited this year (work-shop receipts excluded)

Total

Balance, showing the increment of profit on Traffic Account

PRIVATE RAILWAYS.

GRANT OF CHARTERS.—Charters were granted this year to the Sanuki Railway Company and 16 others, their aggregate mileage reaching 476 miles 14 chains, and their capitals 19,558,784 yen. Of the above charters six were issued to existing companies, their mileage aggregating 93 miles 29 chains in length and their capital 3,263,784 yen; 11 were issued to new companies, their railway lines aggregating 382 miles 65 chains and aggregate capital 16,295,000 yen. Provisional charters were issued to the Iyo Railway Company and 15 others, of 285 miles 32 chains in length and 11,010,000 yen aggregate capital. Of provisional charters four were issued to companies already existing and 11 to new companies, the aggregate mileage and aggregate capital of the former amounting to 32 miles 50 chains and 1,490,000 yen, and those of the latter amounting to 252 miles 62 chains and 9,520,000 yen, respectively, as shown in the following detailed statement. Compared with the previous year the companies that secured permanent charters show an increase of 15, with a total mileage of 218 miles 30 chains and total capitals of 8,931,225 yen.

At the end of the year under review the number of companies that applied for the issue of permanent charters totalled 14, with an aggregate mileage of 440 miles 54 chains and an aggregate capital 20,075,000 yen; the number of companies that applied for the issue of provisional charters totalled 93, with aggregate mileage of 3,250 miles 57 chains, and aggregate capital of 162,535,045 yen. Compared with the corresponding figures during the previous year the applications for permanent charters show an increase of 10, representing 293 miles 8 chains and 17,866,488 yen in capital, and applications for provisional charters show an increase of 48, representing 1,254 miles and a capital of 59,443,215 yen.

EXISTING CONDITIONS.—Existing companies at the end of the present year totalled 40, with an aggregate capital of 121,138,000 yen (of which 76,346,309 yen have been paid up), and an aggregate mileage of 2,681 miles 11 chains, of which 1,697 miles 19 chains have been opened for traffic. Compared with the corresponding figures in the previous year the number of companies shows an increase of 11, representing an investment of 24,444,800 yen (of which 12,417,600 yen have been paid up), and a total mileage of 470 miles 27 chains, of which 159 miles 66 chains were open for traffic. The foregoing description relates to those companies to which charters have either been issued this year, or additional capital has been sanctioned, or which, after undergoing inspection by the Authorities, have been opened for traffic. The following companies have received permission to increase their capitals.

CONDITION OF TRAFFIC:—The volume of passenger and goods traffic dealt with by private railway companies during the current fiscal year, or in 1895, was, subject to more or less alteration upon subsequent investigations:—30,167,313 passengers, fares aggregating 5,844,070 yen, and 4,159,618 tons (inclusive of parcels) of goods, freights aggregating 3,899,158 yen. Compared with the previous fiscal year, the item of passengers shows an increase of 8,410,186 or 38.7 per cent., fares 1,505,193 yen, an increase of 34.7 per cent., goods 906,481 tons, an increase of 27.2 per cent. The foregoing, however, being a generalized comparison, when examined in detail, will show that, owing to the opening of new sections for traffic during the year, the traffic mileage was different compared to that of the preceding year. Therefore, when such points are taken into consideration and the average daily volume of traffic per mile is calculated and compared, the rate of increase in passenger traffic was 27.4 per cent., fares 2.43 per cent., goods traffic 18. per cent., and freights 17.3 per cent.

In order to give some idea of the general condition of traffic on private railways the following condensed accounts based on the report of the Nippon and two other companies are given below.

NIPPON RAILWAY COMPANY.

During the first half of the year (January-June, 1895), owing to the unusual number of military trains, suspension of trains, or alterations of the time table, were constantly occurring and, in consequence, the railway suffered frequent inconvenience. The delay in arrival of freight trains was also very serious. Consequently, apprehending a possible deficiency in rolling stock, efforts were made to prevent the accumulation of freight at

stations. From April the downward waggon service was restored to its original order. Yet such was the accumulation of goods that though no discount was made in the rate of freight, goods were always in excess of rolling stock, and a remarkable phenomenon was occasioned, namely, an abundance of goods in June, ordinarily the most quiet month in the year for goods traffic. In short, though the exchange of goods between Tokyo and the provinces was somewhat dull during the first half of the year, and though the consignment of costly and general goods was less than that of last year, table salt and fertilizers exported from Tokyo reached an enormous amount. This extraordinary business in fertilizers was caused by the total stoppage of the import of Chinese beans. The most significant increase was shown this half year in the quantity of cattle and horses transported from the O U districts, the rate of increase for horses being 2½ times that of the corresponding period of last year and that of cattle more than 6 times. At Suigama, Aomori, etc., the interruption of marine transportation obliged owners of goods to have recourse to railway service for conveyance of general goods, while the quantity of rice consigned by railway was particularly large. Owing to these circumstances, though the volume of certain goods as compared with last year showed a considerable diminution, the decrease was made good by the extraordinary transit of other goods, and the brisk traffic consequent on the interruption of marine transportation. In short, though the greater portion of the half year fell in a time of war, the volume of goods traffic may be said to have suffered no particular change.

During the second half of the previous year,

deficiency of rolling stock caused by the extraordinary frequency of military transport trains resulted in the accumulation of goods and obstruction to the free operation of the goods service. The general drop in the market also operated more or less toward the same result. Quite the reverse state of affairs was witnessed during the second half of the year (July-Dec., 1895). The sudden activity brought about by the sequel of the war, the satisfactory result of the sericultural industry, the appreciation in the silk market, and the restoration of normal weather in August and September; all these things encouraged the laying in of stocks by local merchants, and while the quantity of goods exchanged between different localities was very large, the number of travellers by train was also excessive. Between October and November goods poured in for transportation in unusual quantity, and this brisk state of affairs was kept up till the end of the year. Of the goods transported this half year the most remarkable increase was shown in the volume of timber, fuel, cereals, iron (in various forms), sugar, and coal, as also fertilizers, and horses and cattle. Other substances showed more or less increase. What may be called special transportation service undertaken during this half year was the transportation of supplementary troops from Aomori and Sendai to Ujina, a service that required no less than 462 cars, and also the sending back of invalid soldiers and returned coolies to Sendai and Aomori; this service required 742 cars. The transportation was effected by ordinary trains, or sometimes by substituting luggage trains, or by fitting out express trains. In short, by having recourse to every suitable expedient this special service was satisfactorily undertaken.

The figures marked by the asterisk (*) are Government subsidies, while figures in the last column represent sums redeemed, interest, and so forth.

The main points in the financial affairs of the year under review were as shown in the preceding tables. To show further the progress of Government Railway affairs, the receipts and profit account and the mileage open for traffic at the end of each year from the commencement of railway traffic to the present year are shown below in tabulated form.

28th fiscal year ...	593 22	8,004,233.576	2,951,561.156	5,052,672.420	13,445	4,958	8,487

The reason why the average receipts per traffic mile given in this table do not always coincide with the corresponding figures already given is due to the fact that the mode of calculating the traffic mileage used as divisors has been changed.

RAILWAY STAFF.

At the end of the present year there were 42 higher officials, beside another who in conjunction with his proper duties had to undertake railway business, 1,020 officials of *hannin* rank, besides another who in conjunction with his proper duties had to undertake railway business, 5 foreign employés, 1,030 Japanese employés, in all 2,097, their gross monthly stipends amounting to 39,198 *yen*. There were also 8,872 men whose monthly stipends aggregated 70,848 *yen*. Compared with the previous year, one higher official and 152 lower officials were added, one foreign employé was dispensed with and 157 employés were added, causing altogether an increase of 3,837 *men* in monthly stipends. The number of men were increased by 761, representing an addition of 383 *men* in monthly wages. By classifying the staff and duties, according to official rank and duties and comparing them with the corresponding figures at the end of the previous year the following comparative table is obtained.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE AMERICAN TARIFF.

The American Senate commenced the discussion of the Tariff Bill on May 25th, and has been engaged since the 3rd inst., in discussing section C, consisting of metals and metal wares.

DISEASE IN SILKWORMS IN FRANCE.

Lyons, June 5.
In one of silk districts of France, disease has appeared just as the worms were beginning to spin. The disease is likely to grow serious, and nobody can tell how much loss it will inflict upon the silk crop of France.

London, June 6.

The Cretans have established a Provisional Government, under the Chief Michaelis.

THE PEACE NEGOTIATIONS.

The Foreign Representatives at Constantinople have commenced peace negotiations with Tewfik Pasha, the Turkish Minister for Foreign Affairs.

It has been decided that the memorandum on behalf of the Great Powers respecting the rectification of the Greco-Turkish frontier shall be framed by M. Nelidoff, the Russian Ambassador; the memorandum respecting the Capitulations [extra-territoriality of Greeks (and others) in Turkey] shall be framed by M. Cambon, the French Ambassador; and the memorandum respecting the indemnity shall be framed by Sir Philip Currie, the British Ambassador.

THE JUBILEE CELEBRATION.

The British War Office is arranging for the detachments of Indian and Colonial troops, escorted by the Life Guards, to traverse the East End of London in the course of Queen Victoria's "record reign" celebrations.

TURKEY AND THE POWERS.

Loddon, June 7.

There are indications that the Turks are preparing for a prolonged occupation of Thessaly; governors, judges, and school-masters are being appointed, and the Turks' harems are arriving in Thessaly and settling down there.

PRESIDENT FAURE.

President Faure will leave Paris for St. Petersburg on the 25th July. M. Hanotaux (Foreign Minister) will accompany him.

THE SOUDAN.

An Egyptian patrol has had an encounter with a party of Dervishes sixty miles north of Dongola. The Dervishes were repulsed and pursued. In the course of the engagement, twelve of the Egyptians were killed or wounded. Captain Peyton, of the 15th (King's) Hussars, was severely wounded, but is now doing well.

THE INDIAN FAMINE.

It is feared in Bombay that, judging by present indications, the rains brought by the S. W. Monsoon will this year be less than usual. Prospects in the Punjab, however, are slightly more hopeful.

TURKEY AND THE POWERS.

London, June 8.

The Porte has sent a Memorandum to the Embassies, justifying its own claims—the cession of Thessaly, the abolition of Greek extraterritoriality in Turkey, and the amount demanded as indemnity.

CRETE AND THE GREEKS.

Fifteen of the Greek Volunteers (lately

withdrawn from Crete) returned to the island with the object of encouraging the Cretan insurgents to continue hostilities, but were arrested before they could land.

RUSSIA AND CHINA.

On the 10th June, the St. Petersburg and Moscow Banks will open subscription lists for 4 per cent. Bonds to the amount of fifteen million roubles for the East China Railway Loan to be issued at 97.

THE SPANISH MINISTERIAL CRISIS.

At the request of the Queen Regent of Spain, the Ministry of Don Antonio Canovas del Castillo, which resigned a few days ago, has resumed office.

DISASTROUS FLOOD IN FRANCE.

London, June 9.

A destructive flood has taken place at the town of the Voiron, in the department of Isere, France. The damage is estimated at £500,000 sterling, whilst a thousand people have been rendered destitute.

JAPAN AND HAWAII.

The Hawaiian Government has rejected the Japanese claims in connection with the exclusion of emigrants. It is said that Japan is expected to break off diplomatic relations with Hawaii.

ALLEGED ATROCITIES.

A Greek Memorandum has been sent to the Powers, complaining of Turkish atrocities in Thessaly and Epirus, and urging the Powers to intervene.

THE HAWAIIAN TROUBLE.

San Francisco, June 10.

As the Hawaiian Government has returned an unreasonable answer in reply to the Japanese claims in connection with the rejection of emigrants, Minister Shimamura has made a vigorous representation to that Government.

ANGLO-CHINESE CONVENTION.

London, June 10.

A Protocol modifying the Anglo-Chinese (Burmah) Convention of 1894 has been signed at Peking. It cedes to Great Britain the State of Kokang, and agrees to the opening of new trade routes. Further, it allows British subjects and protégés to settle at Sze-mao and Momein, or at Shuning-fu (in South-west Yunnan, on the road from Bhamo into Central China), for the purpose of establishing trade. Great Britain is also granted a perpetual lease of a large tract of land South of Mamwan (also on the road from Bhamo) to be under the control and administration of the British.

TURKEY AND THE POWERS.

The negotiations between Turkey and the Powers for settlement of the terms of peace are making slow progress, and are likely to be protracted. Meanwhile, Greece is pressing the Powers to accelerate matters, on the plea that she has to keep her army in the field until peace is concluded and that this is a serious drain on her resources.

BIRTH OF A RUSSIAN PRINCE.

St. Petersburg, June 10.

(Received in Tokyo, June 11.)

The Russian Empress gave birth to a daughter to-day.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

SEALING RETURNS.

Hakodate, June 9.

The sealing schooner *Pointer* has reached this port with 274 skins on board.

H.M.S. "LINNET."

Hakodate, June 11.

H.M.S. *Linnet* left here for Petropaulovsky this morning.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season: and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season: and reopens on Friday, 1st October.

Correct answers from W.H.S., and Omega.

SOLUTION OF PROBLEM No. 318.

WHITE.

1—Q to R5q

2—Kt to B5 mate

2—Q to Kt sq mate

2—Q to R8 mate

other variations obvious.

Correct answers from W.H.S., and Omicron.

PROBLEM No. 321.

By A. F. MACKENZIE.

White to play, and mate in three moves.

PROBLEM No. 322.

By J. BARTSCH.

White to play and mate in two moves.

GAME No. 722.

Below is given the full score of the sixteenth game of the Showalter-Pillsbury match. The notes are by Kemy of the Philadelphia Ledger:—

(RUY LOPEZ.)

White—Showalter.	Black—Pillsbury.
WHITE.	BLACK.
1 P K4	16 B Q2(c) Kt K4
2 Kt KB3	17 R R4 P KR3
3 B Kt5	18 P KB4(d) Kt K3
4 Castles	19 R K4 Kt Q5
5 P Q4	20 P B5(e) Kt KBP
6 B R4	21 R KBsq P QB3(e)
7 R Ksq	22 Kt B3 Q Kt3ch
8 Kt K5	23 K Rq Q B4(g)
9 Kt QB3	24 Q R3(h) Kt(B4) K2
10 B B4	25 Kt K4 BxR
11 R xP(b)	26 QxB P B4(i)
12 Kt K4	27 B Kt3ch K Rsq
13 Kt xBch	28 QxKt PxKt(k)
14 Kt Q5	29 Resigns.
15 Q R5	

NOTES.

(a) The sixth game of the match shows the same opening moves. On his ninth turn, however, Black played Kt to B 4. The move adopted in the present game seems to be an improvement. White, at least, is prevented from B to K 3 play, guarding the Q P. Black, with his B to B 3 move, threatens Kt takes Kt, followed by B takes P. If White answers B to B 4, as is the case in the present game, Black continues with better advantage, Kt to B 4, for there seems no proper way to guard the Q P. The position is a highly complicated one, and in all probability Mr. Pillsbury has analyzed pretty carefully the opening moves prior to adopting this line of play of this game.

(b) This move hardly seems satisfactory, for Black captures the Q P, relieving to some extent his position. Of course Black's only reply is Kt (B 4) takes P. Had he played P to Q 4, White would have answered Kt takes Kt, followed by B takes P and B takes R, coming out a pawn ahead. Since R takes P does not guard the Q P, it would seem that Kt takes P, followed eventually by Kt takes Kt, Kt takes B ch and B takes P, was a preferable continuation. Another play White had at his disposal was Kt to Q 5, threatening Kt takes Kt, followed by Kt takes B P. The move selected leads also to powerful attack, yet is hardly as satisfactory as Kt takes P or Kt to Q 5. Probably White overlooked the Kt (B 4) takes P reply.

(c) B to Kt 3 could not be played on account of Q to Kt 4 forcing exchange of queens. White might have played R to Q sq but it is doubtful whether it was any better than the move selected.

(d) B takes P looked quite promising, but it would have caused immediate loss for White. Black, by answering P to Kt 3 forces away the queen, winning the rook. The move selected has the disadvantage of closing in the rook. It seems R to K sq was a more conservative play, and probably better.

(e) The sacrifice of an additional pawn was hardly sound. White, it seems, tried to force the attack at all hazards. Had he played R to Kt 3, Black might have answered P to Q B 3, followed by Q to R 5, exchanging queens and remaining a pawn ahead. Probably White gave up the pawn to avoid this continuation.

(f) A powerful move, which forces back the White Kt, and also opens the Q Kt 3 square for the Black queen, enabling him to start a counter attack.

(g) Threatening Kt to Kt 6 ch, winning the queen.

(h) Kt to K 4 looks powerful, but it would have lost the exchange. Black would have continued as follows:—24—Kt to K 4, Kt to Kt 6 ch; 25—Kt takes Kt, Q takes Q; 26—Kt takes Q, B takes R. The move selected, however, was not any better, nor had White a satisfactory defence at this stage of the game.

(i) Splendid play, which secures a quick win for Black. He not only forces the exchange of queens, but also wins a piece, no matter what continuation White selects.

(k) The final stroke, which causes White to surrender. His queen is attacked, and Black also threatens R takes R mate. Even should White play R takes R ch, Black answers R takes R, still threatening R to B sq mate, which White cannot stop without losing the queen. Had Black played Kt takes Q instead of P takes Kt, he would have remained an exchange ahead, but it would not have won as quickly as the next move.

GAME No. 723.
ONE OF SIX CONSULTATION GAMES PLAYED
SIMULTANEOUSLY BY MR. LASKER AT
BIRMINGHAM.

(QUEEN'S GAMBIT.)			
White—E. Lasker.		Black—Birm. C.C.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P Q 4	P Q 4	14 P Q R 3	R B q
2 P Q B 4	Kt KB 3 (a)	15 Q K 2	Q K sq
3 P x P	Q x P	16 P Q Kt 4	B K 2
4 Kt QB 3	Q Q ch	17 P K 5	Kt Q 2
5 P K 4	P K 3 (b)	18 Q K 4	P KB 4 (d)
6 Kt B 3	B K 2	19 P x P (ep)	R x P (e)
7 B Q 3	P Q Kt 3	20 Q R 7 ch	K B sq
8 B KB 4	B Kt 2 (c)	21 P Kt 5	Kt Q sq
9 Castles	Castles	22 Kt K 5 (f)	Kt x Kt
10 R B sq	P B 4	23 B x Kt	Q R 4
11 P x P	B x P	24 B x R	B x B
12 Q B 2	P KR 3	25 B Kt 6	Resigns
13 KR Q q	Kt B 3		

NOTES.

(a) Black loses time by defending with king's knight; for after 3—P takes P, whether Kt or Q retake, White develops his game by attacking the piece.

(b) P to K 4 could be played here; for if 6—P takes P, Q takes Q ch, and Black will recover his pawn in the case of 7—K takes Q by Kt to Kt 5, or in the case of 7—Kt takes Q by Kt takes P.

(c) If castles K R, 9—P to K R 4 with a posi-

tion analogous to a certain variation in the French defence, of which the leading idea is P to K 5, followed by B takes R P ch, &c.

(d) Black might have foreseen this danger, and should have taken steps to prevent P to K 5. He had no better move at his disposal now.

(e) In trying to preserve his king's pawn Black incurred far greater danger than the pawn was worth. Kt takes P was the only possible move.

(f) Threatening 23—Q to R 8, mate.

It is possible that Max Judd, who is now acting as Consul-General at Vienna, may try conclusions with Pillsbury for the United States championship the latter end of the year. Mr. Judd is a very strong player, and has held high rank in Caissa's realm for many years. He conducted a game against Steinitz recently at Vienna, the score and notes of which, taken from the American Chess Magazine, are appended:

GAME No. 724.

(RUY LOPEZ.)

White—Max Judd.		Black—W. Steinitz.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K 4	P K 4	10 B x B	P x B
2 Kt KB 3	Kt to QB 3	20 B Kt 5	Q QB 2
3 B Kt 5	P Q 3 (a)	21 Q R Q sq	Q KB 2 (g)
4 P Q 4	B Q 2 (b)	22 P KB 3	Kt R 3
5 Kt B 3	Kt K 2	23 R Q 2	Q QB 2
6 B QB 4 (c)	P x P	24 Kt B 4	Q KB 2
7 Kt x P	Kt x Kt	25 Q R Q sq	Kt Kt sq (h)
8 Q x Kt	Kt B 3	26 R x P (i)	B x R
9 Q K 3	B K 3	27 R x B	Kt B 3
10 Kt Q 5	Kt K 4	28 Kt x KP	R Kt sq
11 B Kt 3	P QB 3 (d)	29 Kt B ch	Q x Kt
12 Kt B 4	B Q 2 (e)	30 Q K 5 ch	Q K 2 (j)
13 Q Kt 3 (f)	P Q R 4	31 R K 6	Q x R
14 P Q R 3	Q Kt 3	32 Q x Q ch	R B sq
15 Castles	P R 5	33 B x Kt (k)	P x B
16 B R 4	P KR 4	34 Q x BP ch	(l)
17 P R 2	Kt Kt 5		
18 Kt Q 3	B K 3		

NOTES.

(a) Mr. Steinitz' singular aversion against the recognized defence of the Ruy Lopez has caused him no end of worry and trouble. In the Vienna tournament he defended with 3 K Kt to K 2, and thereby nearly ruined his chances for first prize. He discarded it after losing to Blackburne and drawing with Dr. Fleissig. In the Vienna tournament of 1882 he somewhat improved upon this defence by combining 3—P to Q R 3 with K Kt to K 2, and he cast his lot with it until 1888, when he experimented with the move above. In his "Modern Chess Instructor" he proclaimed this as the best defence, but his experiences with Lasker and at Hastings compelled him to look for something better, which he, however, has failed to find. In the present game he reverts to his pet defence, with the upshot that he gets a wholly lost game, although his opponent is certainly not in his class.

(b) Mr. Steinitz' original thesis of the defence inclined 4..... P takes P, followed by 5 Q takes P, B to Q 2, forming a variation of the Philidor's defence, which, in his opinion, is not unfavourable for the second player. Later on he adopted the above line of play on account of the reply, 5—Kt takes P. We, however, are of the opinion that his first plan is the better one if black continues with 5..... B to Q 2; 6—Kt to Q B 3, Kt takes Kt; 7—Q takes Kt, B takes B; 8—Kt takes B, Kt to K 2, followed by Kt to B 3, as Blackburne did at Hastings against Lasker.

(c) First played by Makovetz against Blackburne at Dresden, 1892, and adopted by Lasker in the first part of their match in this city. Later on he played 6—B to K 3. Tarrasch and Tschigorin first play 6—B to Kt 5, forcing black to still further weaken his position by 6..... P to B 3, and then retreat 7—B to K 3.

(d) With a slight transposition of moves the same position is arrived at as in the fifth game of the championship match. Steinitz, at this juncture, played 11—B to K 2, castles; 12—Castles, K R, B Kt; 14—B takes B, whereupon white not only retained two B's vs. B and Kt, but also forced black to weaken his Q P by 14..... P to Q B 3.

(e) This retrocession does not look well, but is, in fact, his only good move.

(f) An excellent response, which effectually prevents black's intended B to K 2, for all time, as it proves.

(g) B to K 2 instead, though tempting, would not answer, white replying with 22—Kt to K B 4, followed by 23—Kt takes K P if 22..... B takes B.

(h) Evidently Black did not take into consideration the master stroke which white has in store, but his position is precarious. If 25—Kt to Q 2, the likely continuation would be: 26—Kt takes R P, Q takes Kt; 27—R takes P ch, R takes R; 28—Q takes B ch, and mates next move.

(i) This fine sacrifice, in conjunction with his

pretty twenty-ninth move, should have insured a speedy win.

(j) If instead 30..... K to B sq, white wins by 31—R takes Kt ch, B takes R; 32—B to R 6 ch, K to B 2 (if Q to Kt 2, then 33—Q takes P ch, if R to Kt 2, then 33—Q takes Q); 33—Q takes Q ch.

(k) Overlooking an easy win by 33—B to K 3, R to R 4; 34—B to R 8 ch, R takes B; 35—Q to Q 6 ch.

(l) While gaining a second pawn, white has freed the adverse rook, and has to fight it out with queen against two rooks. Still he ought to have won by careful play, or at least done no worse than draw, but he eventually committed a blunder which lost.

GAME No. 725.

KIRSCHITZKY GAMBIT.

White—Dr. Tarrasch.		Black—H. Hirschler.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K 4	P K 4	17 Kt Q 5	B B 4 ch
2 P KB 4	P x P	18 K K sq	B Kt 3
3 Kt KB 3	P KKt 4	19 P K 6	Kt (Q 2) K 4
4 P KR 4	P Kt 5	20 Kt B 6 ch	K K 2
5 Kt K 5	P to Q 3	21 B Kt 5	(e)
6 Kt x BP		22 Kt P ch	Kt x B
		23 Kt B 6 ch	K K 2
		24 Kt Q 5 ch	K K 2
		25 Kt B 6 ch	K K 2
		26 Kt Q 7 ch	K K 2
		27 Kt B 6 ch	K K 2
		28 Kt K 8 ch	K K 2 (f)
		29 R Q 8 ch	Kt x R
		30 R B 8 ch	K x R
		31 P K 7 ch	Resigns.

NOTES.

(a) A bold if not risky sacrifice.

(b) K to K sq seems better.

(c) If Kt takes P, then White would play R takes Kt.

(d) White courageously offers the exchange of Queens, and as will be seen, his judgment in so doing proved correct.

(e) Giving Black another piece. White liquidates the position in a beautiful manner.

(f) Black could not take the K P on any of the other checks without losing, but now it would have been his best move. Dr. Tarrasch explains that he gave these checks on purpose to mislead Black—not to take the Pawn at this, the decisive moment. He succeeded in his object, and wound up the game by a very quaint and remarkable sacrifice of both Rooks.

GREY OR FADED HAIR

GEO. COURTICE'S CALIMIANTHIST

Has been thoroughly tested and approved in all parts of the world for over a quarter of a Century.

It is NOT A DYE, but simply the colouring principle of the Persimmon and Walnut in a concentrated form.

Acknowledged by the faculty to be perfectly harmless, and will permanently restore the colour true to nature in Six Days.

It is a fine Tonic for the Hair and Skin, and has a very refreshing Fragrance.

NOTE—Thirty years Professor of Hair Specifics to the Honourable Benchers of the Inner Temple.

PRICES: 2s. 6d., 3s. 6d., 6s., 10s. 6d. and £1 1s.

GEO. COURTICE & CO.,

Laboratory, 8, Bishop's Court, Chancery Lane, London (Late 234, STRAND).

It's a Far Cry

FROM FOREIGN
LANDS TO

Chicago, U. S. A.

But no matter where you live, we are anxious to do business with you in Clothing, Shoes, Dry Goods, Watches, Jewelry, Sewing Machines, Harness, Saddles, Hardware, Tools, Guns, Revolvers, Ammunition, Bicycles, Agricultural Implements, Vehicles of all kinds, Furniture, Books on every subject. We handle only dependable goods—no trash.

We believe we can send in any climate, goods of any kind, perfect in quality, at lower prices, laid down, than the residents thereof can obtain them anywhere else. Our belief is founded on a quarter century's experience. To acquaint you with our facilities we will send you, or any other foreign resident, free of all charges, our "BUYERS' GUIDE," a 2½ pound book, 700 pages, 13,000 illustrations, 40,000 descriptions—It is unique, useful, valuable—and also our "HAND BOOK FOR FOREIGN BUYERS," which contains all necessary information to put you in close touch with our marvelous methods. WILL YOU ASK US TO DO SO?

Montgomery Ward & Co.

111 to 118 Michigan Ave. Chicago, U. S. A.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAULUS BASSI, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Nahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COHEN, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1897.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, JUNE 19TH, 1897.

SUMMARY OF NEWS.

JUDGE MOWAT left Japan on sick leave on Friday.

A SILVER bullion exchange is to be established at Osaka.

FOUR shipping casualties on the shores of Japan are reported this week.

A SUBMARINE telegraph cable is to be laid along the Kurile Islands.

THE Hongkong Jubilee Celebration Fund amounted to \$52,158.77 on the 8th inst.

ALL the small dairies in the city of Tokyo have been ordered to remove to the suburbs.

COUNT MATSUOKA, Minister President has visited Osaka to inspect the new coins at the Mint.

ACCORDING to latest telegraphic advices, President McKinley has signed a bill for the annexation of Hawaii.

IT is reported that the Russian Authorities have resolved to spend 600,000 roubles on extending the defence works at Vladivostok, and 700,000

roubles on further armaments of the fortresses there.

A VERY disastrous earthquake occurred at Calcutta on the 12th instant, the damage done being enormous.

THE Anglo-American treaty regarding the Venezuela boundary has been ratified and exchanged at Washington.

A FIRE occurred in the Minechi coal mine, Fukuoka Prefecture, and the mine had to be flooded to extinguish the flames.

THE Japanese battle-ship *Miyako*, building at Kure Port Admiralty, having been completed, will be launched early in July.

THE Pollard Liliupituan Opera Company arrived in Yokohama on the 18th and open at the Public Hall on Monday the 21st instant.

THE Department of Communications will ask for an appropriation of 17,000,000 next session for the development of telegraphs.

ON the 11th inst. the steamer *Houn Maru*, conveying a cargo of ammunition, stranded near Kure but was floated off at high tide.

RAIN has interfered with several out-door affairs this week; but the *Grafton's* athletic meeting came off on Friday in splendid weather.

DURING May, the Kanagawa Kencho issued 263 passports for travel in the interior to 300 foreigners, most of whom were Americans.

THE Toyo Kisen Kaisha, or Oriental Steamship Company, have decided to reduce their proposed capital from 7,500,000 yen to 6,500,000.

THE crew appointed to bring home the Japanese battle-ship *Takasago* from England, will leave Japan at the end of June or early next month.

"BARNEY" Barnato, the South African millionaire, has committed suicide by jumping overboard from a steamer while en route to England.

MARQUIS ITO arrived in Paris on the 9th instant, and Prince Arisugawa at Marseilles on the 11th. They were to leave France for London to-day.

AN abortive attempt was made upon the life of the President of the French Republic on the 13th instant. Fortunately M. Faure sustained no injury.

THE new Treaty between Japan and France has been rejected by the Committee of the French Senate by five votes to four. It is expected however, to pass the Senate.

SEVERE thunderstorms occurred in the south-central districts of Japan on the night of the 16th. Several buildings were struck by lightning and three persons killed.

THE report of the Japan Railway Company for the first half of this year shows an increase of 40 per cent. in receipts as compared with the corresponding season of last year.

THE excess of imports at Yokohama and Kobe from January to May amounted to yen 12,603,112, an increase of yen 1,275,549 as compared with corresponding months of last year.

MR. H. S. WILKINSON, Crown Advocate at Shanghai, and for many years Law Secretary at the British Consulate, Yokohama, relieves His Honour Judge Mowat, as Judge in H.B.M.'s Court for Japan.

THE N.Y.K. steamer *Tokio Maru* went ashore off Suma, near Kobe, on the 14th inst., after starting on her voyage to Australia, but was

got off on the night of the 15th, with the loss of three of her propeller blades and some dents in her plates, and towed back to Kobe.

A COMMITTEE of the Yokohama Japanese Chamber of Commerce, is now investigating matters concerning the relations between foreigners and Japanese when the treaties come into operation.

LIEUT.-GENERAL NOGI, Governor-General of Formosa, has been summoned to Tokyo to discuss matters concerning the administration of the Island, and will leave Formosa for Japan on the 25th inst.

A YOUNG man of 19, named Suzuki Tokujiro, of Yokohama, attacked his step-mother with a sword on the 14th inst., and inflicted wounds from which the woman is not expected to recover. Suzuki is in custody.

THREE cases of plague were found on board the steamer *Fukuoka Maru*, on her arrival at Nagasaki from Formosa. All necessary precautions were taken at the quarantine station and the other passengers landed on the 16th instant.

THE Yokohama Jubilee programme includes a service in Christ Church; "God save the Queen" and a royal salute at noon; a bicycle parade in costume; sports, yacht races, illumination of the Bund and shipping, and a fête at the British Naval Yard.

INFORMATION from Hokkaido is to be the effect that Lieutenant Gunji, of the Navy, now on leave, and his followers have successfully passed the winter in the islands. Only two of the party suffered from illness and they are all now busily engaged in the fishery.

KOBE is laying itself out for a whole week of "Jubilising." Here is the programme:—

Monday, June 21st.—Ball and Variety Entertainment (at the Gymnasium) at 9 p.m. [The National Anthem at midnight.]

Tuesday, June 22nd.—Salute by Warships in harbour at noon. Children's Dance and Entertainment 3.30 to 7. Fireworks and Illuminations on the Bund 9 to 10.30.

Wednesday, June 23rd.—Sailor's sports during the afternoon on the Recreation Ground.

Friday and Saturday, June 25th and 26th.—Theatrical Entertainment at 9 p.m. [Guests are invited alphabetically—A to M on Friday and N to Z on Saturday.]

A CONSIDERABLE amount of business has been passing this week in Yarns, though mostly "to arrive," and although prices are low, importers do not grumble more than would be normal and decent under the circumstances, as they are hoping for a rising exchange to help them out. Let us hope that their expectations may be realised. There has been but a small market for metals, owing mainly to holders trying for an advance, which will not come so long as dealers have access to large supplies of cheaper iron. A rather better state of affairs prevails in the kerosene market, prices tending in favour of sellers in most of the transactions put through. Fair sales are also reported in brown sugars, and in some cases an advance of one cent has been paid. In white sorts a moderate business has been done at unchanged prices. We are now 'tween seasons for silk and naturally there is not much doing, European orders alone coming into the market for low priced filatures. The waste silk trade is dormant. After a week's rest Tea-men are busy again, the principal demand now being for teas of lower grade, and as there is a large stock of them prices are easy. Exchange has looked up a bit during the end of the week.

SPIRIT OF THE VERNACULAR PRESS
DURING THE WEEK.

When the Sakai outrage occurred, resulting in the death of fourteen French marines, it was decided, on the demand of the French Representative, that the men who had committed the act should be executed. Accordingly, Minoura, Nishimura, and eighteen others were condemned to commit *seppuku*. One after another they died by their own hands in the presence of Foreign and Japanese witnesses, showing unflinching coolness throughout. But when eleven had committed *harakiri*, the French Representative found the spectacle unendurable, and declared himself satisfied. It had been held, up to that time, that *seppuku* was a form of death displaying the highest courage, but after the Sakai incident such an exit from the world began to be differently regarded. Men saw that it savoured of savagery, and that it constituted one of the customs essentially differentiating Japan from the nations of the Occident with whom she desired to rank. About the same time Mr. Fukuzawa published his *Seiyō Jijō* (the State of the Occident), which found readers throughout the length and breadth of the land. That, it may be asserted, was the turning point in Japan's career. Hitherto men had known of foreign manners and customs only such meagre details as the missionaries were able to tell them orally, but now they began to have a clearer perception of the truth. Reform commenced, but its character was partial. *Seppuku* was abolished but the decapitation of criminals continued. The rights of women began to be discussed, but concubines continued to rank as secondary relatives (*niō-shū*). Prostitution ceased to be legal, promiscuous bathing was interdicted, and the Authorities took measures to stop the sale of demoralizing literature and pictures—measures which, though the impulse that proximately dictated them came from a desire to adopt Western standards, were in truth due to a wholesome reaction from the state of blunted morality into which the nation had lapsed during more than two centuries of peace and self-indulgence. The most prominent preachers of these reforms were the missionaries. They urged that the Japanese people had a liking for deeds of blood and acts of immorality, and in proof of the accusation they pointed to the theatres where revolting and demoralizing subjects were constantly put upon the stage. Therewith steps were taken to restrain such exhibition and to correct other abuses calculated to injure public morals. But these reforms were not undertaken for their own sake so much as for the sake of conforming with Occidental standards. That such was the case became apparent when dancing parties and fancy-dress balls found advocates among the very men prominent in the ranks of the reformers; when newspapers devoted their columns to popularizing those innovations, and when immoral incidents connected with them were discussed in the light of inevitable concomitants rather than as disgraceful abuses. It was about that time that the *Zoka Kiron* was published; a book which, under the pretence of being a learned treatise intended for purposes of instruction, belonged, in truth, to the class of immoral volumes. It obtained an immense vogue, for people are always ready to be depraved under the cloak of virtuous research. Everybody can remember how, at that epoch, the wicked act attributed to a prominent personage on the occasion of a certain ball, was lightly treated by the press, one of the arguments persistently employed to hush up the affair being that reputable journals in Europe never opened their columns to scandals about individuals. Then followed the era of literary fever, of stage reform, of musical enthusiasm, and so forth. But unfortunately all this zeal owed its strength to an imitative tendency rather than to a genuine desire for progress. All aids to progress are welcome. It can not be denounced as matter for regret that the incentive of ranking equally with foreign nations should have been employed so freely by the

leaders of thought in Japan. But an inevitable result of the superficiality of the motive was a tendency to revert to the fashions of former times. Moreover, absence of genuinely discriminating capacity marked the efforts of the reformers, so that, while, on the one hand, suppressing promiscuous bathing, the sale of immodest literature and such things, they encouraged, on the other, the extraordinary display of a disgusting nude figure at the Kyoto Exhibition of 1895. That picture was a recrudescence of the error that had taken the form of dancing parties and fancy-dress balls ten years previously. Simultaneously, literary men began to understand that the way to make their pens profitable was to prostitute them to the lowest tastes of the public. Editors of newspapers set themselves to collect scandals and personal gossip, which they dished up in their columns with whatever spice of phraseology could add to the attractions of the feast, and romances of more than doubtful morality were published as *feuilletons*, with additions of sensational pictures. For all these things the example of foreign journals could be pleaded, since their conductors had deliberately set themselves to pander to the depraved side of human nature, devoting far more trouble and money to procuring tidbits of gossip and immorality than to the inculcation of doctrines making for general improvement. The war with China, if it gave a spur to social progress, created also a taste for discussing and reading about deeds of violence, and thus helped the sensational and demoralizing tendency which must be considered characteristic of Japan to-day. Zola's novels, literature indefensible from any standpoint of sound morals, have found translators, and find also numerous readers. Foreigners contend that the way to be successful in trade is to adapt one's wares to the fancies of one's customers, and that the same principle applies to newspapers. It would appear, therefore, that the taste of the time turns to sensation of an inhuman and immoral character, for it is certainly to such a taste that the daily journals minister. An example was afforded by the recent Ocha-no-mizu murder. The crime itself was of a revoltingly brutal description and had its origin in immoral relations, yet not only the minutest details of the assassination but also all the facts relating to its origin were searched out and ventilated by the press, not for the purpose of imparting a deterrent aspect to the affair, but for the purpose of attracting readers. Ten years ago, these same newspapers were preaching the doctrine that it did not belong to the legitimate functions of journalism to rake up and expose personal scandals, but that sound doctrine seems to have been wholly rejected in obedience of the greed of gain. It would be interesting to ascertain where the responsibility for such a state of affairs primarily rests. There must be leaders for every change of customs. Usually the impulse comes from the upper ranks of society; sometimes from the administrative policy of the country. A long interval of peace and tranquillity leads to moral enervation; and time of warfare is succeeded by rough and violent inclinations. That is the teaching of experience. Twelve or fifteen years ago, luxury, display and social amusements were the order of the day, the example being set in high places. At present, the spirit and tastes that follow a foreign campaign prevail. The police records show that the majority of crimes now committed are due to greed of gain or to sexual immorality. Plutocracy has become the power of the era. Literary men who ought to be a reforming influence, lend their pens to provide material for degraded fancies, being themselves the slaves of the demon of gain, and thus they become, not merely panderers to evil but its promoters. It has been well said of Zola that he forgets Aristotle's wise dictum, namely, that a writer of popular literature should think first of the probable effect that his writings will produce upon the mass of his readers. Men of high morals and wide education feel only pity for the victims of the atrocities that Zola describes, and loathing for the miserable depravity that he depicts so vividly, but the multitude, the compara-

tively untutored and undisciplined multitude, peruse such recitals with very different feelings, and derive from them fresh incitements to immorality. It is true that a newspaper's prime rôle is not the improvement of public morality or the promotion of social reform. But assuredly it has no mission to impair the former or to retard the latter. That consideration has no apparent weight with Japanese editors to-day. They trick out vice in a guise so attractive and interesting that the sense of evil is subordinated to the excitement of novelty. Zola alleges that his works are intended to expose the state of society, and that the *Rougon-Macquart* series has no object but to administer a tonic to the debilitated morality of the household and the public at large. That is a plausible plea, but when poison in an attractive form is placed before all sorts and conditions of men, there certainly devolves upon the writer some responsibility to instruct them whether they shall take it or leave it. Zola's works might be otherwise described as pictures of the naked truth, and the appellation is more or less applicable to the newspapers of modern Japan. Their tendency is to familiarize people with vice. If it be admitted that they have competence to endanger public peace and good order by their writings; then certainly they may exercise the same baneful effect upon public morals. No fault is to be found with the fact that those in power used the international position of the nation as a lever to raise the people to a higher level of civilization, but they should unquestionably have considered whether the route led that they thus committed themselves to indicate. Looking back two decades, we see that while innumerable instances are on record of newspapers suspended for the offence of *chian bogat* (disturbing public peace), very few indeed met with any such punishment on the ground of *fusoku kairan* (injuring good morals). The heads of officialdom failed to apprehend the evils that must inevitably grow up under the conditions they were promoting. What are we to say? Has the country really progressed or has it retrograded in the interval of thirty years since *seppuku*, promiscuous bathing, and the sale of indecent pictures were abolished? These are the utterances of the *Nippon* in three remarkable articles, which our limited space has compelled us to greatly epitomize. They read very much as though they had come from the pen of Viscount Tani, whose connexion with the *Nippon* is understood to be of the closest character.

The Bonds purchased from Japan by a British Syndicate for £102 per 1,000 yen face value were sold by the Syndicate in London at £103 12s. 4d., and are now quoted in the open market at £105 2s. 4d., or 1,053.521 yen. Some critics regard that result as a financial success and congratulate the country on its attainment, but the *Fiji Shimpō* does not share their opinion. When British 2½ per cent. Consols are selling in London at 112, it can not be pretended that 105.35 is a good price for a five per cent. security the intrinsic value of which is 102.24. By the adoption of the gold standard Japan has eliminated all the metallic risks attaching to her Bonds, and if their credit were thoroughly good, they ought to command very much higher prices. What is the reason that they do not? There are two reasons: first, that the Bonds run for five years only before becoming liable to redemption, and that their holders are consequently exposed to the risk of having their money returned to them, or being asked to accept in exchange securities carrying lower interest; secondly, that in view of the violent fluctuation in the relative prices of the precious metals, investors can not feel certain of Japan's ability to maintain the gold standard. That is by no means an unreasonable apprehension. There is but one way to surmount such difficulties, namely, by recourse to a foreign loan, on such conditions as shall satisfy the lenders in the matter of redemption period, and shall pledge the national credit to pay in gold. Hungarian 3 per cents. are quoted in London at 99, and Turkish 3½ per cents. at 96½. There

is not the least doubt that Japan could get whatever money she wants at 3 per cent., especially as she needs it for purposes of productive enterprise, namely, the extension of telegraphs and telephones, the improvement and development of railways, the establishment of an iron foundry and forth. Selling Bonds to a foreign syndicate and raising a foreign loan are one and the same thing for all practical purposes: principal and interest must be paid abroad in gold. The sole objection to a foreign loan is the clamour of the anti-foreign conservatives, who try to persuade the public that the country sells itself when it contracts indebtedness to Western nations. That is a preposterous and ridiculous contention. Financial considerations pure and simple must be the sole guides and nothing could be more unwise than to raise money for national purposes at 5 per cent. when it can be had for 3 per cent. without any difficulty.

Writing on the same subject, the *Osaka Asahi* declares itself to be neither an ardent advocate nor a bigotted opponent of the introduction of foreign capital. It denies the justice of the contention that borrowing abroad inures to the benefit of the borrower solely, or to that of the lender solely, and explains that while the one finds a profitable investment, the other obtains capital for paying purposes—a platitude scarcely worth the space occupied in stating it. On the whole, however, the *Osaka* journal throws its influence into the scale against a direct foreign loan. It thinks that the safest and most satisfactory method is to leave the matter to individual management; in other words, to let capital enter the country by private sales of bonds, whenever circumstances indicate the expediency of that course. The country has pledged itself to a programme of military and naval expansion, and the responsibility of carrying out the programme devolves upon the country. If its resources prove unequal to the task, foreign capital can be enlisted, but the demonstration of the necessity should be left to the course of events. No precipitate measure should be adopted. In point of fact everything indicates a large outflow of Occidental capital to the Orient. China has had to borrow great sums in Europe in order to discharge her indebtedness to Japan, and Japan, by adopting gold monometalism and pledging herself to the abolition of all the restrictions hitherto conventionally imposed on foreign trade and travel within her dominions, has opened her doors to the influx of Western money. It is probable that the next twenty years will witness a very marked change in the economical conditions of the world.

The losses—five hundred thousand yen—incurred by the Tokyo Marine Insurance Company, and the fact that it has been obliged to devote one half of its paid-up capital to make good the deficiency in its accounts, furnish topics for discussion by the *Mainichi Shimbun*. It may be noted, *en passant*, that these losses were made subsequently to the establishment of the Company's London branch. The *Mainichi* has a good deal to say about the principles that ought to govern the business of insurance, and says it in a very clear and convincing manner, but we presume that a disquisition so trite could not greatly interest our readers. Our contemporary's conclusion is that the Company's officers do not know their business, and are not qualified to carry on the work they have undertaken. They lack judgment as to the nature of the risks accepted; they fail to appreciate the fact that insurance operations derive security from their magnitude, and they have not awoke to the imperative necessity of re-insurance. The *Mainichi* is not a little disheartened by this want of success, and longs for the day when Japan will have insurance companies qualified to rank with foreign institutions.

No words have ever been so much used by Japanese journalists and politicians as *Sekinin Naikaku* (responsible Cabinets), writes the *Sekai-no-Nippon*, and none appear to be so

little understood. A responsible Cabinet is a Cabinet that acknowledges its responsibility to the nation; is prepared to quit office in accordance with the nation's mandate expressed through its parliamentary representatives, and accepts as a whole the blame attaching to the acts of any one of its members. That is the definition given more than once by Count Okuma when out of office, and the definition announced by the *Shimpo-to*. But the conduct of the *Shimpo-to* since the Matsukata Ministry came into power has been a perpetual contradiction of any such doctrine of responsibility. The leaders of that Party have adopted, and are pursuing, the policy of attacking the Cabinet piecemeal. They set out by running a tilt at the *Banshoku Daijin*, as they choose to call three or four Ministers of State. Then they assaulted the Educational Department. Then they turned their arms against the Board of Audit and its chief; and now they are collecting materials for an attack upon the Colonization Department and its head, Viscount Takashima. Either they are the Cabinet's enemies, or they act in obedience to the principle so often repudiated by themselves in the past, namely, that the Ministry as a whole is not responsible for the mistakes of its individual members. Upon the horns of that dilemma the *Sekai-no-Nippon* impales the *Shimpo-to*, and mocks at the Party's inability to extricate itself.

The *Nichi Nichi Shimbun*, the *Hochi*, and the *Tokyo Shimbun* all discuss the Hawaiian question, but all write from the mistaken point of view that the Honolulu Ministry has shown itself hopelessly obdurate, and has rejected demands *en bloc*. The *Nichi Nichi* condemns the course adopted by the Government from the first. Strong measures, it considers, were wholly out of place where Japan's *vis-à-vis* is such a helplessly weak Power as Hawaii. It is not easy to distinguish whether our contemporary's article is directed against the agitators whose voices are now raised in favour of coercing Hawaii, or whether it intends to suggest that the Cabinet is seriously culpable; but the gist of its argument is that anything like a display of force ought to be carefully avoided, first because Japan can not afford to lay strong hands on such a puny antagonist, and secondly because coercion will simply be playing the game of the annexationists, who would find in it an excuse for throwing themselves into America's arms. The *Hochi* expresses profound astonishment at the contumacious attitude of the little republic, and concludes that it must have some backing not apparent to the public. It is scarcely credible that Hawaii can expect to be supported by the United States of America, a country friendly to Japan and guided by justice in its international dealings. But if such an expectation is entertained, and if America really does support Hawaii, Japan must act with boldness and determination. The tone of the article is high, almost defiant. The *Tokyo Shimbun*, imagining that no prospect now exists of an amiable settlement, wants to know what Count Okuma's next steps will be. Without actually denouncing the methods hitherto pursued by the Foreign Office, our contemporary takes no pains to conceal that it disapproves of what has been done. It further traverses very strongly a theory advanced recently by the *Yomiuri Shimbun*, namely, that if Hawaii does not wish to have Japanese immigrants, the best plan for the Japanese is to refrain from going thither, since there are many other places where they will be welcomed, and where they can find equally lucrative employment. The *Tokyo Shimbun* concludes that, in advancing such a pusillanimous proposition, the *Yomiuri* wrote to Count Okuma's dictation, and that the object of making the statement was to prepare the public for a policy of "scuttle" contemplated by the Count.

Latest cricket news from England, via Rangoon, is dated May 22nd:—Essex has beaten Yorkshire by three wickets; Surrey beat Sussex by 274 runs; Lancashire defeated Hampshire by eight wickets.

ATTEMPT UPON THE LIFE OF THE FRENCH PRESIDENT.

From telegraphic intelligence received in Tokyo on the 15th instant, it appears that an attempt was committed upon the life of the President of the French Republic on the 13th instant. No particulars are as yet known, but the following telegram officially transmitted to His Excellency the French Representative in Tokyo, happily dispels all uneasiness in connexion with the affair:—"L'attentat commis hier, 13 juin, contre le Président de la République, ne présente aucune espèce de gravité."

MARINE CASUALTIES.

The *Tenshin Maru*, of the Nippon Yusen Kaisha, while on a voyage from Otaru to Yokohama, ran on a sunken rock in the vicinity of Fukuyama on the 14th inst. about 1 p.m., and damaged her bottom. The *Toyohashi Maru* left Hakodate on the night of the 15th inst. to transship cargo of the stranded steamer. The *Ninsen Maru* and *Bankoku Maru*, that left Hakodate on the 15th inst., will also call at the scene of the disaster to extend help.

The N. Y. K. steamer *Mikawa Maru*, while proceeding to Hakodate, stranded near Mizunashi-seto, Iyo Province, on the afternoon of the 15th inst. The vessel succeeded in reaching the port of Shimonoseki at full speed and her cargo was landed. Upon examination, the bottom was found to be damaged to the extent of four feet square, together with other damage to the hull. Happily the cargo was undamaged. The steamer *Shinshu Maru*, then lying in Kobe, left on the 16th inst. to receive the cargo from the damaged vessel.

The steamer *Iwai Maru*, owned by Mr. Iwata Sadajiro, of Fukuyama, Hokkaido, struck a rock off Cape Ayasato, near Kamaishi, Rikuchu Province, on the 16th inst. at 3 a.m., and the vessel, together with her cargo, eventually sank. The passengers and crew are reported to have escaped. The vessel was insured for 52,000 yen in the Japan Land and Marine Insurance Company. The disaster was due to thick fog.

BOAT FARES IN YOKOHAMA.

We are courteously informed by Mr. Yuasa Sankichi, Superintendent of Water Police, that in consequence of the general rise in prices of provisions, etc., the Boat Guild in Yokohama has presented a petition for the amendment of the rates of boat hire, to which official sanction has been given. The new rates are as given below, and come into operation from the 15th instant:—

BOAT FARES IN YOKOHAMA HARBOUR.

15 *sen* is charged for two persons either going or returning to or from a ship in ordinary weather; 5 *sen* for every additional person; 23 *sen*, for two persons both going and returning to and from a ship in ordinary weather; 8 *sen* extra for every additional person, the period for going and returning being fixed at one hour; for waiting over one hour 8 *sen* per hour.

In rainy weather or when the harbour is rough, 20 *sen* is charged per person either going or returning to or from a ship, and 7 *sen* extra for each additional person; 30 *sen* for one person both going and returning to and from ship, and 10 *sen* for each additional person, the period for going and returning being fixed at one hour and a half; 10 *sen* per hour over one hour and half; 2 *sen* is charged for transferring from one boat to another; 85 *sen* is charged for the hire of a boat for a day; 40 *sen*, for towing a Japanese-style boat; 50 *sen*, for towing a foreign style boat.

The above rates are applicable only within the limits of the breakwaters. For going outside the breakwaters, or when the weather is stormy, rates will be arranged with passengers when engaging a boat.

THE REVISED TREATY WITH FRANCE.

That the Committee of the French Senate, appointed to examine and report upon the Revised Treaty with Japan, have recommended some alterations in the document, is now certain, as is also the fact that the recommendation was made by a vote of five to four. It does not follow, of course, that the progress of the Treaty through the Senate will be delayed by this action on the part of the Committee. The members of the latter would naturally find points not entirely to their taste, and would be bound to indicate them, but the Minister of Foreign Affairs by whom the Treaty has been concluded, and who is presumably satisfied that its provisions represent the arrangement most equitable in the interests of both the High Contracting Parties, will present it to the Senate, backed by the strength of his endorsement, and will doubtless be able to carry it.

Concerning the particular provisions to which exception was taken by five out of the nine members of Committee, nothing definite is known. The telegrams received at the Foreign Office in Tokyo indicate only the Articles concerned, and as each article contains several provisions, there is plenty of room for conjecture. We are disposed to think that, with regard to the clause extending the operation of the Treaty to French colonies, at their option, the Committee conceived it advisable that some restrictions bearing on the labour question should be inserted. But in the absence of clear information, hypotheses are of little value.

The *Japan Gazette*, we observe, professes to be in possession of information much more minute than any that has reached the Foreign Office in Tokyo. Many weeks ago, our contemporary alleged that the Committee had rejected the Treaty because the privilege of owning land in Japan was not secured to French citizens, and added that Count Okuma having conceded the point in deference to the Committee's remonstrances, the foreign residents might congratulate themselves that their interests, neglected by incompetent British diplomats, had been saved by French statesmen. That was certainly one of the most "previous" canards on record. Our contemporary now says:—

As our readers are aware the great point objected to by the Committee is the inequitable system of land tenure. We understand Japan would give way on this matter and even now it is just possible that the Japanese will stoop to conquer. After all it is only a fair exchange. Why Japanese should be able to hold land in England while Englishmen can only have a twenty-five years lease under the new Treaty, is a puzzle Lord Kimberly would hardly like to answer.

If "our readers" are aware of those things, they know more than the officials in Tokyo. Of course it is quite conceivable that the Committee desire to obtain the privilege of land-ownership in Japan, but we can only guess at the nature of their desires, whereas we can be sure that the French Government has not fallen into the error of imagining that Japan could be induced to yield upon the question of land tenure. We ourselves have very little sympathy with that particular phase of Japanese conservatism, but we recognise that the national mind is quite made up, and that no Cabinet could remain in office after making the conces-

sion referred to. It will be observed that the *Japan Gazette* clings tenaciously to its old blunder about the duration of land-leases in Japan. "Why," it writes, "Japanese should be able to hold land in England while Englishmen can only have a twenty-five years' lease under the new Treaty, is a puzzle Lord Kimberly would hardly like to answer." The real puzzle is the *Japan Gazette's* persistent ignorance. There is no such restriction as twenty-five years. The Civil Code assigns no limit of tenure. Over and over again that vital fact has been pointed out, but the *Japan Gazette* continues to publish the same misleading statement, with occasional variations as to the number of years. We can not suppose that there is any deliberate intention of deceiving the public, but truly we fail to detect any other explanation of such continuous falsehood.

JAPAN AND HAWAII.

An attempt has been made, we observe, to impart a highly sensational character to the negotiations now in progress between Japan and Hawaii, by declaring that preparations are secretly on foot for a Japanese descent upon the island republic, and that the Government in Tokyo has definitely made up its mind to annex Hawaii. That sinister view of the situation is propounded, with addition of practical details and political contingencies, by a correspondent of a local contemporary, who signs himself "One not quite in the Dark," and his forecast seems to be endorsed in a tentative manner—certainly is not contradicted—by the journal to which he addresses himself. It is not to be supposed that many persons will be misled by such rumours. Had the copious comments of the Japanese press on this Hawaiian complication contained the most shadowy indication of a desire for the addition of Hawaii to the Japanese dominions, there might be some peg whereon to hang a suspicion such as that formulated by our local contemporary's correspondent. But there has been not only a striking absence of any symptom of ambition in that sense, but also a most emphatic protest against the absurdity of attributing aggressive designs to Japan—an absurdity gravely perpetrated by some of the Hawaiian annexationists who from the first have endeavoured to magnify this complication into an instrument for inciting the interference of the United States. It appears almost a waste of space to contradict such silly rumours. Their incredibility must be patent to anyone having even a slight grasp of the situation. We venture to say that there could not be found in the whole of Japan a dozen men, however irresponsible, who are silly enough to entertain the wild and most unwise project attributed to the Japanese Government by "One not quite in the Dark." Japan's position in this matter is moderate and reasonable. She is understood to ask for nothing more than she has an undoubted right to demand, namely, that Hawaii should observe its treaty obligations, and should make reasonable compensation for the loss inflicted on Japanese subjects by its breach of these obligations. She has not the smallest wish to disturb the existing regimen in the republic, but she expects to be treated with the consideration observed by civilized states in their conventional relations with each other. We do not like to probe

for motives, and are willing to believe that "One not quite in the Dark" and his journalistic endorser are ingenuous victims of a hallucination, but we would call their attention to the fact that they lay themselves open to the suspicion of deliberately playing into the hands of agitators who seek to alarm the United States in annexing the Pacific republic.

One point to which this incident has given prominence, deserves special reference. "One not quite in the Dark," and the local journal in which he writes, evidently labour under the impression that every Japanese adult male receives military training. On that hypothesis they allege that the eighteen thousand immigrants now in Hawaii practically constitute an army, and require only weapons "in the use of which they have been trained when serving as conscripts at home." A little reflection would have obviated such an error. The number of Japanese males between the ages of 20 and 40 is six millions, in round numbers, and of these only twenty thousand pass annually through the ranks. In other words, out of the whole six millions, only four hundred thousand, or sixty-six in every thousand, have received military training. Hence, if there are 18,000 adult males in Hawaii, only 1,188 of them fall within the category to which the whole are assigned by "One not quite in the Dark" and his editorial fellow-thinker.

REFOUND.

We do not know whether the rediscovery of British prestige will be any satisfaction to the folks who imagined that it was lost. Any how the article is once more *en evidence*. It had gone astray, "almost disappeared," a fortnight ago, and now it has come up once more "all serene." What is prestige? The question propounded nineteen centuries ago and still unanswered, might have taken that form and shared that fate if the duty of finding a reply rested with the uneasy Jingoos whose irresponsible chorus of clamour deafens us all day long. Prestige, if we may infer the creed of those writers from their conduct, is to be perpetually asserting oneself; to be unvaryingly aggressive; never to desist from demanding and insisting that everything wrested by a rival from a weak Power shall be balanced by a like concession to oneself; always to be ready to interfere in every complication by whomsoever created and wheresoever located; and, above all, to pose ceaselessly before the public. That is a tall order, and the prestige that could survive implicit obedience to it must indeed be remarkable prestige. Tracing this matter to its origin, however, the fact seems to be that if evidences of the growth of the British empire become undiscernible for even a brief season, Britons get alarmed and feel uneasy lest the conquerable worlds should be slipping out of the lion's reach. It is a fine, old-fashioned sentiment, based upon the incontrovertible law of nature that decay is the only alternative to growth. Meanwhile England has a happy knack of dispelling those apprehensions. Just when the interval between the acts threatens to reach a tedious length, and just when the galleries are waxing clamorous, a *coup de théâtre* is provided. Where is it all to end? The

route to South-western China is now open. Is the journey to extend no farther? Has it ever stopped at such a stage of progress? May we be held guiltless of either grandiloquent or oracular intentions if we say that the star of empire is a restless planet, and that if the elements of its orbit are still beyond the reach of Oriental calculation, their want of clearness is not to blame?

THE NATIONAL DEBT.

It is plain that the advocates of a foreign loan for the purpose of converting the national debt of Japan are growing in number and conviction. The *Hochi Shimbun* writes in very confident terms, but its figures are a little perplexing. It repeats the assertion of the *Yorodsu Choho* that the country's total indebtedness in 1901 will be 495,700,000 *yen*, and that the interest will then amount to 25,670,000 *yen* annually; but as the rate of interest on all the public bonds is now uniform, namely, 5 per cent., it is plain that the annual interest on 495,700,000 *yen* is not 25,670,000 *yen*, but 24,785,000 *yen*. That, however, is a secondary consideration. It does not affect the *Hochi's* contention that a foreign loan should be raised at 4 per cent. for purposes of conversion, and that the saving would be nearly 5 millions annually. Our contemporary further claims that the economic effects of such a measure would differ from the effects of selling bonds abroad, as has just been done. The latter operation increases the amount of money in circulation and tends to raise the price of commodities, whereas the consequence of conversion by means of foreign capital must be that large sums would come into the hands of the upper classes, the present bond-holders, who would deposit the money in the banks, thus rendering it available as floating capital for industrial, agricultural, and commercial enterprise.

The *Hochi* writes as though this large operation of conversion could be effected in a few months. In fact, it speaks of the saving of interest as an immediate relief to the Treasury. But our contemporary appears to forget that a large quantity of the securities can not be dealt with in that summary fashion: the period for lawfully commencing their redemption has not come. That is true of all the War Bonds (125 million *yen*); of the portion (nearly 9 millions) of the Public Undertakings Loan floated last year; of the Railway Loan; and of some of the Consols. The Treasury can not arbitrarily change the explicit conditions under which the bonds were issued: they must be allowed to mature as fixed by law. We entertain no doubt that by going abroad for money, placing her bonds on a different footing, and pledging herself to redeem them in gold, Japan could get as much money as she wants at 3 per cent. But the slightest symptom of a disposition to break faith with her domestic creditors would injure her seriously in foreign eyes.

The *Osaka Mainichi* states that the number of payers of the business tax in the city of Kobe is some 5,970. The amount of the tax to be paid by them was at first estimated at about 150,000 *yen* by the revenue officers, but, after repeated reinvestigations, the amount is found to be about 130,000 *yen*.

THE SÖUL-CHEMULPO RAILWAY.

The *Nichi Nichi Shimbun* publishes very full details, which, of course, are avowedly accurate, of negotiations said to have been concluded between Mr. J. R. Morse, on the one part, and an influential Japanese syndicate on the other, for the sale of the Söul-Chemulpo Railway by the former to the latter. The price for the completed line, with rolling stock and plant, is said to have been fixed at \$950,000, gold, and the cost of construction and equipment being estimated at \$750,000, it would appear that the price paid for the concession is two hundred thousand gold dollars, or four hundred thousand *yen*, less, of course, the expense of promoting, which must have been considerable. We are in a position to describe this story as an example of the dimensions to which a fragment of truth can be inflated by rumour. That some negotiations have taken place in the sense indicated seems to be true, but that matters have reached the stage described by our Tokyo contemporary is an erroneous idea. Various interests have to be consulted in such a matter, and it may be taken for granted that, pending their satisfaction, the project, supposing it to be still entertained, will not become an accomplished fact.

JAPANESE NOTES.

Some of our readers may not understand the election that has just taken place for the House of Peers, since nothing of the kind has occurred for seven years. This, indeed, is only the second occasion of such an election, for the term of membership is seven years, and the Japanese Diet is only seven years old. The House of Peers is composed of nobles who sit by hereditary right; nobles elected by their respective orders; members nominated by the Sovereign on account of meritorious acts or special attainments, and representatives of the highest tax-payers. To the first class belong Princes of the Blood, Princes and Marquises; to the second, Counts, Viscounts, and Barons; to the third, ex-Senators, eminent jurists and scholars and other men of note selected by the Sovereign; and to the fourth, forty-five members, one from each of the three cities and forty-two prefectures. The election that has just taken place was for these last. The fifteen highest tax-payers in each city and prefecture choose one of their number by ballot, and send him up to represent them in the House of Peers. Thirty-six elections—including those at Osaka and Kyoto—have been held, and, strange to say, out of the thirty-six successful candidates two only—Mr. Yamada Takasuke (Fukui Prefecture) and Mr. Miki Takichiro (Tokushima Prefecture)—are re-elected members; the rest are all new men. It might naturally be supposed that in such an election the great majority of the former members would be returned a second time, but the very opposite is the case. There will be some interest in learning the reasons assigned for such a marked change. Possibly the former members desired to stand aside for the sake of giving a chance to others: that would be essentially Japanese. Possibly the highest tax-payers have not been satisfied with the parliamentary career of their representatives: that is a hypothesis not

difficult to reconcile with the record. At all events the result is surprising. If the elections for the Counts, Viscounts, and Barons, which are now pending, should be productive of anything like a corresponding change, the House of Peers will receive a large infusion of new blood, and may perhaps develop a disposition less complaisant than it has hitherto shown.

We read in the vernacular press that the total of the direct taxes—namely, land tax, industrial tax and trade tax—paid by the franchise-holders for the House of Peers is 829,381 *yen*. In other words, the contributions to the Treasury, under the headings of land, industries, and trades taxes, made by the 675 highest tax-payers in Japan, aggregate the above sum; an average of 1,214 *yen* annually, in round numbers. Were the income tax included a different result would be obtained, but the income tax is not mentioned in the Law of the Houses. As to the order in which the cities and prefectures stand, it is worthy of note that Niigata heads the list—Niigata generally supposed to be a poor district. The figures are:—Niigata, 78,955 *yen*; Okayama, 38,237 *yen*; Osaka, 32,565 *yen*, &c. We have here an evidence of the fact often recently alleged, namely, that the sun of prosperity is shining very brightly in the provincial districts at present. The names of the highest tax-payers for the purposes of this franchise stand thus:—

Taxes paid.

	Yen.
Mr. Ichijima Tokujiro (Niigata)	12,444
Mr. Morota Seiroku (Miye)	10,871
Mr. Nozaki Fukichiro (Okayama)	8,707

The last-named gentleman heads the list of those now elected. He is followed by Messrs. Sumitomo Kichizaemon of Osaka, who pays 6,787 *yen*; and Igarishi Junzo of Niigata, who pays 4,102 *yen*. A payment of a thousand *yen* annually in the form of land tax means the possession of at least eighty thousand *yen* worth of land, according to the official method of assessment. That fact furnishes an indication of the property of the above franchise-holders.

A telegram from Formosa, published by the *Nichi Nichi Shimbun*, gives intelligence of another outrage by the insurgents in Formosa. The scene of the trouble was a camphor manufactory at Getsubi (?) near Ilan, projected and started by Messrs. Oguri, Higashi and Oshima. It appears that some fifty or sixty Japanese workmen arrived recently at the factory, and that Messrs. Yakushi and Yano, with six assistants, were engaged in the transport of supplies for the work when they were set upon by a band of insurgents, and the whole eight were massacred. That is a terrible business. The pacification of Formosa has certainly not been a success in the hands of the Japanese, and unless security of life and property can be attained, there is no hope of the island's resources being developed so that it shall cease to be a charge upon the Treasury in Tokyo. Of course the Government appreciates all that clearly enough, but there appears, nevertheless, to be a want of capacity to deal with the problem. It is an exceedingly difficult problem, no doubt, but Japan has to solve it: there is no alternative.

The Settled Accounts for the fiscal year 1896-7 will not be completely compiled until the end of July, but the results are already pretty well known, according to

the *Fiji Shimpō*. Our contemporary gives these figures:—

	Yen.
Estimated Revenue	197,197.712
Actual Revenue	182,246.746
Estimated Expenditure	193,425.760
Actual Expenditure	165,100.929
Amount drafted from the Indemnity into the Budget	40,022.623
Amount actually drafted from Indemnity	32,178.313
Amount of Indemnity actually spent	11,789.389
Difference	20,388.924
Amount of Indemnity to be restored	28,233.234

The sum drafted from the Indemnity and other sources, according to the Budget, was to have been spent upon Army expansion (17,250,000 *yen*), Naval expansion (32,192,000 *yen*) and the establishment of an Iron Foundry, but the work in these various sections seems to have been unexpectedly delayed.

It is now alleged that Colonel Putiata—about whose doings and movements there has been so much talk lately in Japan, and who is supposed to have strenuously supported Mr. Waeber's project of employing a large number of Russian officers and non-commissioned officers in Korea—is not going home at all, as was reported, but has merely proceeded to Shanghai where he will meet Baron Rosen, the new Russian Representative in Japan. Baron Rosen is under instructions to come to Tokyo *via* Seoul, and the idea is that Colonel Putiata desires to convey some information to him before he reaches the Korean capital. That is very probable, and very natural, too, so far as we can see.

We read in the vernacular press that the various Ministers of Departments have been instructed to refrain from all new undertakings involving an outlay of funds, and to temporarily abandon the strongly prevalent idea of increasing the pay of officials, especially junior officials. It is thought better that every effort should be devoted to placing the finances on an easy basis before launching out in new directions.

The *Tokyo Shimbun* alleges that certain native tribes in Formosa use the heads of assassinated Japanese for wedding presents. Recently they succeeded in killing Ensign Yuki and 12 other Japanese soldiers, belonging to a reconnaissance party, and they employed them as here described.

Statements made by the Formosan insurgents taken prisoners at the time of the raid at Twatutia on the 8th of May, are to the effect that the raid was undertaken in obedience to a circular sent from Amoy. The document said that Japan would never be able to retain possession of Formosa permanently, and that the best device to hasten her departure was to create hostility to her occupation on the side of foreign nations. To that end an attack should be organized on the Settlement of Twatutia. If some houses were robbed and burned there, the foreign residents would complain that life and property were not secure under Japanese rule, and a considerable impulse would be given to the restoration of the island to China, in which event the plunderers and burners would be largely rewarded by the Chinese Government.

Since Count Okuma took the portfolio of Agriculture and Commerce as a temporary measure, he has been engaged in effecting the re-organization of the De-

partment, and the result of his labours was published on the 12th instant by Imperial Ordinance. The changes effected will be best understood by placing the old and the new organizations side by side:—

PRESENT ORGANIZATION.	NEW ORGANIZATION.
Bureau of Agriculture (Nomu-Kyoku).	Bureau of Agriculture (Nomu Kyoku).
Bureau of Commerce and Industry (Shōkō Kyoku).	Bureau of Commerce (Shomu Kyoku).
Forestry Bureau (San-rin Kyoku).	Bureau of Industry (Komu Kyoku).
Mining Bureau (Kosan Kyoku).	Forestry Bureau (San-rin Kyoku).
Patents Bureau (Tokkyo Kyoku).	Mining Bureau (Kosan Kyoku).
Geological Investigation Office (Chishitsu Chosa-jo).	Patents Bureau (Tokkyo Kyoku).
Marine Products Investigation Office (Suisan Chosa-jo).	Marine Products Bureau (Suisan Kyoku).

The Directors are to be of *chokunin* rank; the number of Councillors is reduced from 8 to 5; the number of Secretaries is to be 4; the number of Engineers, 32, the number of Mechanical Experts, 55, and the number of junior officials, 165. There will be a Chief Engineer in the Mining Bureau; an Inspector in the Forestry Bureau; two Chief Engineers, ten Examiners, a Vice-Director and twenty Assistant Examiners in the Patents Bureau; and one Engineer and seven Secretaries in the Commercial Samples Museum.

The following appointments are gazetted in connexion with the re-organization of the Department of Agriculture and Commerce:—

- To be Director of the Bureau of Commerce, Mr. Taketomi Tokitoshi, hitherto Director of the Bureau of Commerce and Industry.
- To be Director of the Bureau of Industry, Mr. Shimura Gentaro, hitherto a Secretary.
- To be Director of the Bureau of Marine Products, Mr. Fujita Shiro, hitherto Director of the Bureau of Agriculture.
- To be Director of the Bureau of Mines, Professor Hotta Rentaro.

It will be interesting to see how the leading politicians of Count Okuma's some-time Party, the *Shimpō-to*, and of the opposing Party, the *Fiyu-to*, regard the changes of organization effected by His Excellency at the Department of Agriculture and Commerce. Two sections of the Department, the Bureau of Forestry and the Bureau of Patents, have been greatly enlarged; the number of officials in the former being doubled, and that in the latter increased from 1,991 to 2,596. Further, the members of the High Council of Agriculture, Commerce and Industry have received an increment of fifty per cent.—twenty to thirty—and it is provided that an allowance of 300 *yen* annually may be granted to each member. This Department has been the target for many shafts of criticism in every session of the Diet, its management of the State forests being especially condemned. Count Okuma has, in one sense, endorsed the justice of the complaints by the sweeping changes now made in the Forestry Bureau, but, on the other hand, he has virtually declared that the fault lay, not with the indolence or incompetence of the officials, but with their insufficient staff. We suspect that his enemies will have a great deal to say on the subject; all the more because they must have hitherto been speaking under false impression.

There is a great deal of impractical sentiment in Japan. Some of it is now *en evidence* with respect to the approach-

ing election of Counts, Viscounts, and Barons for the House of Peers. They are denounced because they form combinations to secure the election of certain members. Why on earth should they not combine for such a purpose? Would it be right that the matter should be left wholly to chance? There are 85 Counts, 365 Viscounts, and 142 Barons in the empire, and out of that total of 592, there have to be chosen 104 for seats in the Upper House. In any country with which we are acquainted some kind of organization would be employed to contrive that the best men, or, at all events, the representatives of the most generally entertained opinions should be elected. We can not perceive that the dignity of the nobles would be in any respect compromised by uniting to return suitable peers from each Order. Not the least singular feature of the affair is that Marquis Asano, in a circular sent to the nobles, approves of the organization of political coteries, but condemns the organization of caucuses. The Marquis has no practical interest in the matter, being himself a hereditary member of the Upper House. Perhaps that is why his advice is so impractical.

The remaining portions of the Civil Code will be submitted for the approval of the Diet next session, and the whole will go into operation from July 1st, 1898, or a year and a few days previously to the date fixed for the earliest enforcement of the Revised Treaties. We take that intelligence from the *Nichi Nichi Shimbun*. It is doubtless correct, unless, indeed, the operation of the Treaties is to be postponed. Our contemporary adds that the Law Courts are already making preparations to apply the new body of laws.

Count Okuma, in an address delivered to the Local Governors, made the following remarks on the Hawaiian complication, according to the *Japan Times* translation:—

Twelve years ago, the immigration of Japanese labourers to Hawaii first took place, and since then more than forty thousand have gone over, about one-half now remaining in the country, the others having returned home. The result of Japanese immigration has been hitherto satisfactory, both to the immigrants themselves and to their employers. In the meanwhile, however, the attitude of the Hawaiian Government towards the Japanese labourers has undergone a sudden change. There has been a considerable increase of severity in the treatment accorded to the labourers, and the Hawaiian authorities have committed acts calculated to restrict as much as possible the immigration of Japanese labourers. Indeed, if this state of affairs be suffered to go on, the rights and privileges which Japan enjoys in virtue of the Treaty with that country would be seriously affected, so that Japan has been obliged to make strong representations to the Hawaiian Republic. In other words, Japan has pointed out that Hawaii's recent actions are flagrant violations of the Treaty, and irreconcilable with the spirit of international courtesy; that the rulings of her Courts were wrong; that the steps taken by her Executive and Judiciary are not justifiable in reason, and that for all these faults the Hawaiian Government must be held accountable. To be more specific, Hawaii must pay damages for the losses which Japan has been obliged to incur on all these accounts, and the Republic must give sufficient safeguards against repeating any such actions in future. On the basis of the above instructions negotiations were opened with Hawaii, but the reply which the latter has made was extremely vague, so that Japan has been obliged to demand further explanations. It is of course not possible to predict with any certainty the result of the negotiations. Some are of opinion that when a small country adopts a high handed attitude towards a large country, it is probably because the smaller country entertains sanguine hopes as to the backing of some stronger Power, and that the present complication may therefore be converted into one involving Japan and the

United States. The Count thinks otherwise. For not only are Japan and America bound by ties of special friendship dating from the opening of this country for foreign intercourse, but even viewed from the standpoint of the American constitution and of the principles that underlie the founding of the Great Republic, it is clear beyond any doubt that America will never interfere in the politics of other countries, much less sympathize with the present Hawaiian acts that are so distinctly opposed to the spirit of international courtesy; nor would America offer opposition to Japan. The Count believes that the question admits of a satisfactory solution. So long as Japan straightforwardly adheres to the dictates of right and justice, as she has consistently done from the first, there will be no occasion to call in the help of a third party.

It is alleged by the *Yomiuri Shimbun* that a grant of 17 million *yen* will be asked for by the Communications Department in the next Budget, the chief object of the appropriation being to double, or otherwise increase, the lines of telegraph already in existence. The Department finds that the time now required for transmitting telegrams is altogether too long. For example, from 10 to 15 or 16 hours are needed to send a message from Tokyo to Osaka, and similar tardiness exists for other places. If the proposed programme be carried out, it will be possible to despatch a message to Osaka from Tokyo in ten minutes, and no two places in the empire will be telegraphically separated by an interval of more than one hour.

A paragraph in the *Yomiuri Shimbun*, referring to the repeated fixing and repeated postponement of the date for performing the obsequies of the late Queen of Korea, says that the delay is entirely due to Madame On Sang-kung, one of the Palace ladies. It appears that, after the funeral, the King will have to take another wife, and Madame On, being *enceinte*, wishes to put off that conjuncture until after her own confinement, since if her child should be a boy, she would herself become Queen. She has accordingly induced the King to wait until the 7th of August. The *Yomiuri* adds that whether Madame On is really *enceinte* can not be ascertained, and that possibly she is merely finding pretexts for the postponement of the funeral. She has enlisted the Prince Royal in the same cause, persuading him that his interests would be impaired by the King's marriage. It is expected, therefore that when August comes, some fresh excuse for delay will be found.

Three volumes of considerable size have been compiled and issued by the Department of Agriculture and Commerce, containing much valuable information about countries in which Japan is interested. The first volume, consisting of a report by the Bureau of Commerce and Industry, relates to Hanchow, Ningpo and Chochiong, and discusses the system of administration; riverine matters; currency; postal and telegraphic communications; fiscal affairs; sericulture; cotton growing and spinning; fishing and other industries; machines of British make in China and Japan; American interests in and relations with the Orient, &c. The second volume embodies the first report issued by the High Council of Agriculture, Commerce and Industry convened last year under the presidency of Count Sano. The subjects discussed are the navigation of the Yangtze; the machinery for the circulation of money abroad; affairs of custom houses and bonded warehouses; extension of markets for Japan-

ese exports; marine insurance; foreign correspondence, and the control and protection of artisans. The third volume emanates from the Bureau of Commerce and Industry. It contains a mass of information about Mexico, Central America generally, British Colombia, Ecuador, Peru, Chili, and California. These books should be of great value at the present juncture.

"A review in which two Divisions take part is called *Tai-kido-yensku*, and a review in which the Emperor himself assumes command, is called *Tokubetsu Tas-yenshu*." The *Miyako Shimbun* is kind enough to furnish that information, and probably it will interest some of our readers. There is to be a *Tai-kido-yenshu* in the fall of the present year, we learn from the same authority. It will be held in the plains of Chiku-ho—that is to say, Chikugo and Buzen—and the Fifth and Sixth Divisions will constitute the force, Field Marshal Marquis Yamagata taking command. Two Divisions will furnish about eighteen thousand men of all ranks. The Field Marshal, and Colonel Inouye, of the General Staff, are already engaged inspecting the district, and it is expected that the manoeuvres will be arranged for the beginning of November. There is to be a big naval review at the same time.

The Military Authorities decided recently that the Artillery must be re-armed. The cost of the operation is estimated at six million *yen*, and as the arsenals in the country can not undertake more than a part of the work, large orders will have to be placed abroad. The *Yorodsu Choho*, from which we quote these particulars, says that German and French merchants are competing keenly for the commission, and that a trial of the weapons they offer is now proceeding on marshes near the Yotsukaido in Chiba, whither the foreign merchants repair every day to assist at the trials. It might be supposed from this statement that English weapons were not in the competition, but the fact is that specimen guns from Lord Armstrong and Company were tested last year at the same place in the same way, and when the results of the present trials with the French and German guns have been tabulated, choice will be made between the three. We believe that a severe test of endurance will be applied to the carriages also by dragging the guns over the Hakone Pass, or along some equally rough route.

The Nippon Yusen Kaisha have just made an exceptionally unfortunate record. The *Tokyo Maru* struck a rock on the 14th inst., and has been obliged to put back to Kobe. During the night of the same day the *Tenshin Maru*, a steamer of 2,907 tons, while *en route* from Otaru to Yokkaichi, went ashore at a place about 50 miles south-west of Hakodate, and had not been floated off at the date of our latest advices. On the 15th, the *Mikawa Maru*, a vessel of 1,940 tons, touched a rock in the Inland Sea and put into Shimonoseki with one of her holds leaking. She was able, however, to proceed to Nagasaki for repairs. Three casualties within 24 hours make a record novel in the annals of any steamship company, we imagine.

The *Yomiuri Shimbun* says that although the French Cabinet commanded a majority

in the Senate previously to the Greco-Turkish conflict, and could, therefore, have secured the passing of the Revised Treaty with Japan, despite the opposition of the Senate Committee, things have changed somewhat, owing to the Government's support of Turkey against Greece, and there is a possibility that the Minister of Foreign Affairs may find himself unable to have the Treaty approved.

Special correspondence from Korea, dated the 6th instant, appears in the *Yomiuri Shimbun* to the effect that Russians have been coming of late to Hamgyong-do, and buying all the oxen they could procure, without regard to price. The cattle are sent to Vladivostock, and it is supposed that they are there converted into ship's stores. The correspondent adds that Russian steamers have begun to frequent the ports of the same district and to engage in trade there, so that the conditions observable formerly in Saghalin, while a portion of it was still in Japanese possession, seem likely to be re-produced in Hamgyong-do. Colonel Patiala's abandonment of his projected trip to Europe is adduced by the correspondent as another evidence of the advent of ominous events, but the whole paragraph seems to be a mere sensational hotch-potch.

According to the *Tokyo Asahi's* information from Korea, the Söul-Chemulpo Railway works are not progressing very rapidly. Mr. Morse occupies himself principally with the financial arrangements, and Messrs. Townsend & Co. look after the construction. An engineer from America is expected to arrive shortly, but the correspondent says that the operations hitherto seem to have been dictated by a desire to keep the project alive, rather than to carry it to speedy completion.

Mr. Kawashima Jun, a well known member of the Lower House of the Diet, has been gazetted President of the new Industrial Bank, and Mr. Fushima Masataka Vice-President. Mr. Kawashima's political record indicated him as a man likely to receive consideration at the hands of the present Cabinet.

Large sales of various securities belonging to the Mitsubishi Firm have been made since May of last year, and the fact recently began to attract public attention. A representative of the *Shogyo Shimpō* accordingly visited the Mitsubishi Bank to obtain information, and the results of his inquiry are published by that paper. Briefly stated, the explanation given is that a transfer of capital from one class of enterprises to another has been effected. In May of last year, 15,000 shares of the Yusen Kaisha, the Sanyo Railway, and the Kiushu Railway were sold. In November and December of the same year, various shares, to the number of 20,000 were sold; and lately Sanyo Railway shares to the number of 14,480, Kiushu Railway old shares to the number of 10,730 and new shares to the number of 4,660, and Nippon Yusen Kaisha shares to the number of 4,000, a total of 33,870, have been sold. The aggregate is 68,870 shares, but the money value can not be calculated without fuller details. It appears, however, to be not less than from four to five million *yen*. The money was needed, we read, for the purchase of the Sado, Ikuno and other mines, and proper-

ties put into the market last year by the Imperial Household Department, as well as to subscribe for new shares in various companies. The fact affords some index to the magnitude of the transactions in which the Iwasaki family engage.

In a recent issue we re-produced a report from the vernacular press with reference to large purchases of oxen by Russian agents in northern Korea. The *Yomiuri Shimbun* reverts to the subject, and explains that the purchases are prompted by the necessity of obtaining increased supplies of beef for the largely augmented garrison at Vladivostok. An extensive pasturage has been formed at that place, and it is the intention of the Russian Authorities to stock it with several thousand head of cattle. That explanation sounds reasonable. We do not know what force of troops Russia has massed at Vladivostok. The wildest stories have been circulated on the subject, some calculations being apparently based on the hypothesis that all the soldiers reported, from time to time, as passing Nagasaki *en route* for Vladivostok are additions to the garrison, and that such an operation as that of relieving regiments does not enter into Russia's military programme. But whether there be fifteen thousand or thirty thousand, the problem of supplying them with fresh beef must grow constantly more difficult to solve, and the formation of extensive pastures stocked with Korean cattle would be a natural proceeding.

The *Mainichi Shimbun* prints the following list of private railways for the building of which charters have been granted:—

GANYETSU RAILWAY.		
From Koriyama to Sakaya; 108 miles 52 chains.		
Cost, 6 million yen.		
TOKUSHIMA RAILWAY.		
From Tokushima to Kawada; 21 miles 60 chains.		
Cost, 800,000 yen.		
TOHI RAILWAY.		
From Kumamoto to Otsu; 14 miles 4 chains.		
Cost, 600,000 yen.		
SHIKOKU RAILWAY.		
From Asami to Tadotsu; 96 miles 65 chains.		
Cost, 3,500,000 yen.		
SKTO RAILWAY.		
From Nagoya to Seto; 13 miles.	Cost, 250,000	
	yen.	
KURATE RAILWAY.		
From Miyata to Toga-kawa, 11 miles.	Cost, 400,000	
	yen.	
HOKUCHIKU RAILWAY.		
From Dazaiji to Yoshii; 20 miles 52 chains.		
Cost 1 million yen.		

The total length is 264 miles 13 chains, and the total cost, 11½ million yen. These lines, it will be understood, are the last batch approved by the Railway Council.

A kind of small sensation has been got up about a Russian gentleman now staying, or said to be staying, at the Imperial Hotel. The *Hochi Shimbun* describes him as a person without any of the habits or proclivities that distinguish the ordinary tourist, and says that he goes out every day without an interpreter, and devotes himself to examining the harbour and the railways. His name is given as Machius(?), and one of the suspicious circumstances connected with him is that he went by a different name when in Kobe. What an awful individual! And how foolishly he wastes his time! The idea of secretly surveying the port of Tokyo and the railways is only one degree sillier than the idea of imagining that such inspection could be in any way dangerous or detrimental to Japan's interests.

With reference to the above subject, our Tokyo contemporary adds a curious detail. It avers that the buyers of Korean oxen have been endeavouring to evade the customs dues by shipping the cattle at Kil-fu instead of Won-san, the former not being an open port. Several steamers are said to have called at Kil-fu for the purpose, but Mr. Olsen, the Commissioner of Customs at Won-san, not having been able to procure conclusive evidence against more than one, the *Vladimir*, has demanded that she pay a fine of 5,200 yen. How much truth there be in the story we can not pretend to say, but it sounds very apocryphal. Kil-fu is a place lying far to the north of Won-san, and we were not aware that it possessed a port suitable for such a purpose.

News has already been published of the arrest of one of the alleged ringleaders of the *emette* at Twatutia, in Formosa, on May 8th, and some particulars are now published by the *Sekai-no-Nippon*. Kimura, a detective attached to the gendarmes in Formosa, is said to have been the means of making the arrest. After moving about among the natives for some time in Chinese dress, he succeeded in identifying and apprehending the man on the 26th ultimo. His name is given as Chito, and he is said to have come to Formosa about 3 years ago, for the purpose of pursuing the dyer's trade. In February last, he came into contact with the chief of the rebels and the two concerted measures for an attack upon Taipeh, choosing the 8th of May for the purpose, since that was the last day of the period of grace within which the Formosans had to decide whether they would continue their allegiance to China, or become Japanese subjects. Plunder was the prime object of the scheme. The conspirators could count upon about three thousand men, but they desired to have a thousand more, and Chito proceeded to Amoy for the purpose of collecting them. It is alleged that he succeeded in obtaining the coöperation of that number, and that they came over in various disguises, giving themselves out as tea-growers after their arrival in Formosa. Four thousand men in all are said to have taken part in the raid upon Twatutia, and they operated in two parties, one of 2,500 and the other of 1,500. The latter served to decoy the Japanese away from Twatutia, and the former did the looting and burning. Considering the heavy casualties suffered by these rioters, the number of men engaged, and the small booty—forty thousand yen—that they carried off, their enterprise can not be considered a success.

"A SOUVENIR OF THE OVERLAND LIMITED."

Mr. T. D. McKay, the very active Agent of the San Francisco Overland Route, has sent us a volume illustrating the comforts enjoyed by travellers on the "Overland Limited" route. The book is a veritable gem as to typography and pictures, and the coloured views of the various cars, sleeping cars, dining cars, smoking and library cars, reclining chair cars, buffet cars, drawing room cars, and what not, are so vivid and attractive that they inspire one with a desire to pack a portmanteau and start at once for a trip on a railway offering such inducements. But the beautiful little volume is painful in one sense: it reminds us of what we have not in Japan. When will such cars be available for the weary traveller on the Tokyo-Kyoto line, for example?

THE NAVAL POCKET BOOK.

Mr. Clowes' *Naval Pocket Book* for 1897—is its second year of publication—is an ideal little volume for any one desiring information about the navies of the world. It is so arranged that all the necessary details about a ship, whatever the flag she flies, can be learned at a minimum cost of time and trouble. Moreover, a method of classification is adopted which enables the reader to compare, at a glance, not merely the relative positions of two countries as to the numbers and displacement of their ships—fallacious guides, after all—but also the actual fighting capacities of their fleets. Such information can not, of course, be conclusive: a margin of error must of necessity exist. The plan of Mr. Clowes is to divide the ships into 26 classes, distinguished by the letters of the alphabet. Thus, the letter "A" prefixed to the name of a vessel, indicates that, she is a first-class battleship; "B" that she is a second-class battleship, and so on. It is interesting to note, *en passant*, that ships of 9,500 tons and upwards, launched from 1882 to 1889 inclusive, are ranked equally with ships of 8,000 tons and upwards launched in or since 1890—so great is the value attached to modern improvements. Adopting that method of classification, the following result appears:—

	England.	France.	Germany.	Russia.
Fit for the line of battle—				
Battleships 1st class A	34	15	6	16
do 2nd class B	12	4	7	4
do 3rd class C	11	5	3	—
Sea-going Coast-defence ships D ..	5	13	8	8
Large Armoured Cruisers E ..	18	14	4	12
Commerce Protection, &c.—				
1st class Cruisers Protected G ..	21	4	4	2
2nd class do H ..	49	18	5	2
2nd class do Others I	11	6	—	—
3rd class do Protected J ..	28	16	7	1
3rd class do Partly Protected K ..	23	—	1	—
3rd class do Others L	1	13	6	20

We need not continue the list to the end. After the lists of ships, the *Pocket Book* contains a number of useful tables, showing the guns and small arms of various countries; the *personnel* of the navies; the dry docks in Europe, Asia and America; conversions of measures and so forth. It is a veritable *multum in parvo*, and we should think its invaluable character must be universally recognised. Before closing it we may notice that the index of ships covers 22 pages and that each page contains the names of 141 ships, approximately. Thus there are about 3,100 ships now afloat—irrespective of torpedo-boats and torpedo-destroyers—devoted exclusively to warlike purposes. What a world it is, to be sure, this world of the nineteenth century!

FORMOSA.

According to telegrams from Formosa the 8th company of the Second Regiment, which was sent out against the rebels, returned to Taipeh on the 25th instant. Captain Morita's Company, which is stationed in To-ai, encountered a party of 20 or 30 insurgents at Kanmin-shan, to the north of Jiu-chan, killed one of them, and drove the remainder into the hills. Captain Ota's company, which had been detailed to patrol the country between Gilan, Ping-un and Taipeh, returned to the first named place on May 31st. A detachment of the Gilan Garrison, sent out from that place under Captain Ishimori, fell in with a party of rebels at Sikan-jichow, killed 4 and took 14 prisoners, without suffering any casualties. Another detachment, under Ensign Yamamoto, while engaged in a reconnaissance near Ting-u, came into collision with 30 rebels, killed 4 and put the rest to flight. Two rifles and a quantity of ammunition were taken, and the Ensign's party did not suffer any loss. In consequence of the unsettled state of the country about Gilan, a battery of mountain artillery was despatched thither from Taipeh on the 9th inst.

THE NEW KOREAN CONSPIRACY.

NO particulars are to hand throwing light on the latest Korean trouble. Briefly stated, the affair resolves itself into a plot to eliminate Russian and Japanese influence; to remove the KING to the Kyong-pok Palace, and to place TAI WON-KUN in the position of Regent. Twenty-four suspects are said to have been arrested, their ringleaders being KO KEN-TZU, SHIN TAI-KING, LI SHOKYO and IN SHYAKU-SHUN. We are not familiar with any of these names, and can not draw any inference from them. It may seem strange that Japanese and Russian influences should be classed together by a party of Korean agitators, but, after all, whatever under-currents of rivalry may exist, the two empires are apparently running in Conventional harness—tandem with long traces, it must be admitted—and to Korean eyes the country's liberation from both must seem an essential condition of independence. It is suggested in some quarters that this last disturbance may be a scheme of the pro-Russian clique to alarm the KING, and drive him back to his old asylum. That is possible, of course, but scarcely probable, we think. A similar origin was assigned to the conspiracy of April, but the sequel did not confirm the hypothesis. It does not appear that Korean agitators affect any such subtleties. Their plots are of the straightforward, stab-and-poison order, without any refinement of motive or vicariousness of method. One indisputable fact is that the hot-bed of intrigue is just as fertile as ever in Söul. Its evil germs have not been sterilized, whatever so-called reforms—very few apparently—have been achieved in other directions. The fact suggests a thought which deserves to be stated. From the battle of Yashan to the retrocession of the Liaotung Peninsula Japan was supposed—rightly supposed—to be the dominating influence in Korea. It can not have escaped our readers' recollection that during that period every disturbance, every *émeute*, every conspiracy, in the Korean capital was pointed to as a proof of Japan's failure to carry out her programme of reform, and as an evidence of her administrative incompetence. Japan is no longer paramount at the Korean Court. Russia is paramount. What the effective value of her predominance may be, we do not pretend to estimate, but assuredly the common criticism is that she has supplanted Japan, and that the latter has been obliged to surrender to her all the advantages of prestige and position accruing from the war with China. We do not observe, however, that any reproaches are uttered against Russia because intrigues and disturbances continue to be prevalent under her regimen. No writer denounces the failure of her reformatory efforts, or the inefficiency of her administrative

methods. Yet surely what was sauce for the Japanese goose two years ago ought to be sauce for the Russian gander to-day. Perhaps the critics are beginning to see that to radically correct the wretched conditions prevailing in Korea demands an exercise of authority such as neither Japan nor Russia has ventured to assume in the peninsula. So far as winning the sympathy and confidence of the Korean nation is concerned, we can not perceive that Russia has done much better than Japan, despite the unique opportunity furnished for her by Viscount MIURA's demented proceedings, and so far as concerns the progress of Korean reform, the situation looks more hopeless now than it looked when the KING took refuge in the Russian Legation. After all, we come back to the old problem, is Korean independence a practical possibility? No international reputations have yet been made in the attempt to assert it.

BISHOP AWDRY ON CATHOLIC MISSIONS.

In addressing a meeting at Malshanger, in Hampshire, the country residence of Mr. Wyndham S. Portal, Chairman of the London and South-Western Railway Company, the Bishop of Osaka (Dr. Awdry) said:—

As an amusing instance of how down to the last forty years the Japanese conception of a foreigner was that of a Chinaman, Bishop Awdry mentioned that even now in the southern parts they would probably refer to him as "the tall Chinaman," or, more likely, "the hairy tall Chinaman" seeing that a Chinaman had no hair on his face. The Chinaman was slow and steadfast, and many people thought he had more of the future than the Japanese; but the Japanese when he had made up his mind moved forward at an astonishingly rapid pace, and their progress now was very real. Although he had been only one year in Japan he had seen sufficient to make him practically certain that the progress would be found to be real. It might break down by its own haste; as was said of individuals, the Japanese might "Sow their wild oats" to such an extent in the first years of their rush forward that they might destroy their future. He could not promise it would not be that, but if they remained more or less steady for a certain number of years he could not doubt they would have a very large part in the world's future. In addition to his own diocese he had been asked to undertake the responsibility of visiting Formosa until a regular mission could be established there, because some of our own countrymen were scattered along the western coast, and it was being colonised rapidly by Japanese. He hoped to spend the greater part of next March in Formosa. There were about 150,000 Christians altogether, and of these perhaps 50,000 were Roman Catholics. The Roman Catholics deserved their success, not so much because of their work now, as on account of their work 250 years ago, stamped out as it was in blood. Their mission was purely French, being carried on by the Société des Missions Étrangères de Paris. There was an interesting Russian mission, striking as being only a "one man" mission, with 23,000 converts. The only English mission in Japan was the one to which he (Bishop Awdry) belonged; there were no Non-conformist bodies from England. There were a great number of American missions of all kinds, one being in communion with the Church of England. Their own mission was small as yet, but partly because of its suitability to the Japanese character—combining its historical aspect, its system, and

so on with the power of having a purely national character given to it, its not being dependent on a foreign potentate in any way—he thought it was the one which had the greatest hope for the future. His impression was that in the event of other missions going back their people were more likely to turn to the English mission; indeed, there had been an instance of that within the past four months. It so happened that the American Independent Mission had gone back very much, and of three separate congregations two had transferred themselves in different places to Bishop McKim, an American Bishop of their Church, and the third was transferred to himself. Amongst Eastern nations adoption was absolutely equivalent to birth, and in virtue of the first Emperor claiming to be a god it went right down, and the present Emperor in the eyes of his Shinto followers was also a god. When the Japanese determined, less than forty years ago, that they would not maintain their isolation, when they made up their minds to choose the policy of mixing with the world they made up their minds if they adopted that policy they must take the whole thing complete with all its consequences, and they had been assimilating their most sacred customs to those of the West, not because of their love of the West, but because if they were to run with the West they must associate with the West. To grant freedom of religion would be of no use to a Christian if he was bound to worship the Emperor, and so the Emperor, by a stroke of political genius, had found a way of enabling Christians to be loyal by practically announcing that the honours paid to him on his birthday, and so forth, might be regarded as historic and patriotic. Of course there were plenty of petty officials who displayed petty persecution at times, but it would not be supported from head-quarters. The difficulties of the Christian in Japan were of the same kind, but immensely aggravated by the circumstances, as those which often confronted a Christian at home.

We wonder whether Bishop Awdry has been correctly reported. If so, we must distinctly join issue with him when he says that "the Roman Catholics deserve their success, not so much because of their work now, as on account of their work 250 years ago, stamped out as it was in blood." If any missionaries deserve success, they are the Roman Catholics. We do not share their creed, and should be sorry to see the world converted to it, but as to their work, it is above all praise. They are in truth the "heroes in the strife," the men that have "learned to labour and to wait." The splendid devotion of their lives, their absolute and unvarying self-abnegation, their cheerfully accepted exile from everything that makes existence pleasant to the senses; their "mute, inglorious" toil from year's end to year's end, unrelieved by any hope of reward other than that which their own conscience in the present and their Judge hereafter can bestow on them—these are spectacles that kindle the enthusiastic admiration of every impartial observer. If it is possible to be a martyr without being nailed to a cross or calcined at a stake, we have many martyrs among us, and the fact that their labours remain hidden from public gaze is precisely one of the evidences of their beautiful self-effacement. Bishop Awdry we believe to be a good man. It would pain him bitterly to think that he had been unjust. Yet he is emphatically unjust if he thinks that the blood of the martyrs of three centuries ago established a title to which the martyrs of the present era lend no increase of vividness or validity. We doubt whether the crown of thorns is at all easier to wear because it prickles in secret. The men that sealed their mission with their blood in days of medieval savagery, had at least the hope of apotheosis by their grateful Church, and the splendid exultation of occupying for a moment the central position in a pageant of which all generations would be admiring spectators. But there is no aureole for the martyr of to-day. His life is one long, unbroken record of *pains sine palma*. And to say that he does not deserve success!

"JAPAN'S RELIGIOUS DARKNESS."

The annual meeting of the Medical Missionary Association was held in Exeter-Hall on 3rd May, Mr. James E. Mathieson presiding. Among the speakers was Mrs. Bishop, who said that in her three years' journey in the Far East, from which she had returned a few weeks ago, she had visited twenty-eight medical missions. In Korea and Japan, physical healing seemed the sole object of the doctors, though theirs were the lips from which the people would most willingly take the Gospel message. In China the thoroughness alike of medical and spiritual work had much impressed her. A singular amount of good had resulted, patients carrying the Gospel back to their villages. Some of the hospitals were, apparently, insanitary; one was dirty and overcrowded, with people lying on their own mattresses between the beds, and another consisted of a series of piggeries—mud hovels, with no light except through the door and no ventilation except by accident. Still the proportion of cures was very high. The Hangchow hospital under Dr. Main was the best of all. It was patronised by the Governor, and mandarin patients often left \$100 and more as thank-offerings. At Mukden, the capital of Manchuria, and politically the second city of China, the Emperor's uncle and another mandarin had made public proclamation, with processions and bands, that Chinese medicine was a delusion and that they themselves had been treated at the United Presbyterian Hospital. The common people, therefore, came without fear, and the best results had followed. Mrs. Bishop also said that the more she travelled the more she was oppressed with the darkness of heathenism; and in Japan the darkness, in a religious sense, was thicker now than when she paid her first visit nineteen years ago. In Korea a medical missionary could to-day do more good than twenty others, and for every medical missionary now in the world fifty were needed.

Mrs. Bishop's impressions about Japan appear rather wide of the mark. Opinions may differ as to the progress made by Christianity among the Japanese, but we not think that there can be any difference on the subject of the religious quickening that the nation has undergone owing to missionary effort. In one sense it is vicarious quickening: Buddhism has been roused from its *dolce-far-niente* mood, and has become a militant creed. Its torpor and quiescence would certainly have remained undisturbed had not its sleeping palace been invaded by Christianity, and had it not found itself suddenly confronted by the necessity of fighting for its life. Mrs. Bishop evidently ranks Buddhism among heathen cults. That is a very old prejudice, none the less ugly for its wrinkles. Buddhism is millions of miles removed from heathenism, if the latter word be used in its ordinary sense, and we imagine that many a Christian missionary will support us in affirming that the revivification of Buddhism has been one of the benefits conferred on Japan by Christianity. The statement sounds paradoxical, but it rests on the simple truism that moral apathy is the most dangerous condition into which any people can fall. With regard to the direct results of Christian teaching in Japan, it is enough to point to the Christian literature of the time, as summarized every month in these columns. The volume and intellectual character of that literature are very different to-day from what they were when Miss Bird wrote *Unbeaten Tracks*, and had she given the question any serious consideration, she would never, we are convinced, have penned the strange error that religious darkness in Japan is thicker now than it was nineteen years ago. It is not thicker. A flood of light has come; not light that shines with precisely the kind of effulgence desired by every Christian, but light for all that, and most emphatically light that has been kindled, in great part, by missionary effort.

CHINESE NOTES.

With reference to the reports recently received about the prevalence of anti-foreign feeling in Tientsin, it appears that the trouble had its origin in extensive kidnapping of children, a species of outrage very common at the time when the tribute-rice boats pass through Tientsin. The children kidnapped are, of course, girls, and their destination is Canton, where they are sold for service in the flower-boats. They fetch from a hundred to two hundred dollars, and it is therefore well worth the while of covetous ruffians to engage in the enterprise. The kidnapping is, of course, particularly active whenever, owing to prosperous times or some other cause, the supply of girls duly offered for sale by their own parents is unequal to the demand. Such seems to be the case this year. A number of unfortunate children have been carried off from Tientsin, and the fury of the people became so great that two Cantonese junkmen, suspected of being engaged in the work, were attacked on Sunday, the 30th of May, dragged outside the city and summarily decapitated. It is not to be wondered at that parents resent such outrages, for although the lower orders in China are shockingly careless about the fate of female children, they must be well aware of the cruel sufferings that often await the unfortunates when sold into a life of slavery. A case recently reported in Shanghai illustrates this:—

Inspector Wilson brought to light a case of shocking cruelty, when he charged a man and woman at the Mixed Court this morning (May 29) with cruelly ill-using a Tientsin girl. The girl was purchased by the prisoners for the usual market price at which human nature is assessed by the average native, and besides being cruelly over-worked by her owners, she was also treated with wanton barbarity, and, when discovered by the astute detectives of Louza a few days ago, was in a most deplorable condition. Filthy and neglected, her body covered from the shoulders downward with large patches of blue and green bruises, and her wrists and ankles swollen by being bound for long periods with straw fastenings. Inspector Wilson pressed for a heavy penalty. The girl was confiscated by the Court, who handed her over to a native charitable institution; by this the prisoners lose \$120, the price they paid for the unhappy little slave. The man was fined \$20, but the woman who was accused of the ill-treatment was liberated without punishment.

After the kidnapping had been going on for some time in Tientsin, rumours began to be spread that foreigners were connected with it, and an agitation was fanned against the new Catholic Cathedral, which, as our readers are doubtless aware, has been re-built on the site of the cathedral destroyed by the rioters in 1870. The ceremony of opening the Cathedral had been fixed for June 21st, the anniversary of the day of its predecessor's destruction, but as the choice of that day might have the effect of inflaming the popular mind, it was suggested that a change might be advisable. We do not know whether the suggestion received any attention, but, on the whole, we should be sorry to learn that it did. There seems to us to be only one way of proceeding in China. Concessions are always misconstrued.

The *Peking and Tientsin Times* says:—"The Chinese loan with which Dr. Dudgeon's name has been so liberally associated down South, has, we believe, fallen through, after getting through the preliminary stages. Quite another loan scheme with an English syndicate has been on the tapis simultaneously, and so far we believe it is in a healthy and thriving condition."

A singular event has occurred in Shanghai. A man claiming to be a British subject, and possessing documents that proved his claim, was arrested by the French police on a charge of assault, but his own Consular Authorities refused to recognise him on the ground that he had not registered since 1894. He was accordingly sent into the city to be dealt with by the Chinese Magistrate. Such, at any rate, is the statement made by the *North China Daily*

News, but we find it scarcely credible. The British Consular Authorities are not competent to divest themselves of the jurisdiction that they have assumed by Treaty simply because a British subject declines to pay a poll tax imposed by them. Such a theory would imply that the ability of Her Majesty's Consular and Judicial Authorities to preserve order among British subjects in China depends upon the willingness of British subject to submit to British official control. If a man can place himself beyond the range of that control simply by failing to pay a poll-tax—which, be it observed, is not payable in the United Kingdom—then it follows that Great Britain has pledged herself by Treaty to do something which she has no power to do. We lay no special stress on the other phase of the question; the fact that no British subject can be held to have forfeited his nationality by failing to pay a tax. There are means provided for making him pay the tax, and if the Consular Authorities neglect to avail themselves of those means, neither perfunctoriness nor his evasion can effect his national status in the smallest degree. We lay no stress upon that point, because it is too obvious to be worth considering, for we do not imagine that any one could seriously entertain the notion of a British subject ceasing to be a British subject because he violates British fiscal regulations. The more important consideration, we think, is that Her Majesty's Consular Authorities have no right to leave undischarged the judicial functions devolving on them by Treaty. The Chinese Magistrate has no competence to assume criminal jurisdiction over a British subject, nor can he possibly acquire competence because the subject has neglected to pay a British tax of which the Treaty takes no cognisance. It results that this man—his name is not given—stands outside all control, and may commit with impunity any crime that he pleases.

A correspondent of the *N. C. Daily News*, writing from Weihaiwei, in Shantung, says:—

The interior of this province (Shang-tung) has caught the wheel-fever, and among her thirty million natives and two hundred foreigners (Chefoo excepted), she now possesses something over a score of American wheels and perhaps a few of European make. At one interior city on the Grand Canal some half-dozen enterprising natives have procured wheels through the good offices of the local missionaries. Not only this, but several ambitious gunsmiths, tinkers, and blacksmiths have rolled up their sleeves and turned out a few hand-made bicycles which are very fair copies of the foreign originals. I got a glimpse of one of these the other day and was astonished at the skill displayed in the tedious reproduction of sprocket-wheels, chain, pedals, and handle-bars. While the finish is not to be compared with the foreign workmanship, still it is a good example of the Chinaman's ability to imitate any sort of machinery. I cannot guarantee the quality of their work, but am told that one wheel so constructed has been running for a year without dissolution. In lieu of pneumatic tires, they plait a solid tire of hemp, and cover it with rawhide! The resemblance to a foreign tire is fair, but the prime object of the pneumatic is lost. It would be interesting to know to what extent this kind of native enterprise is being developed elsewhere.

A badly conducted son meets with scant grace in China. Here is a case embodied in an edict by the Empress Dowager, which the Emperor "hastened to confirm":—

The Princess Fu Chin, 2nd Order, the Consort of the Prince Fu Chin, has presented to us (the Empress Dowager) a memorial complaining of the headstrong, wilful, and unfeeling conduct of Prince Tsai Shu, 3rd Order (*Beileh*), her eldest son and heir to his father's estate. As a matter of fact he frequently showed contempt of his mother's efforts to restrain his headstrong conduct and of late has wilfully shown disrespect in his daily bearing towards his widowed mother. For instance, the 10th instant was the birthday anniversary of the Princess Fu Chin. Instead of showing due filial piety by evincing an interest in or directing the proposed festivities to be held in honour of the occasion, Prince Tsai Shu pretended to fall ill the day before and asked to be excused from participating in them, thereby evading certain important ceremonies which as the eldest son and head of the house he should have tried by every means in his power to perform. Then, to crown all, when

our (the Empress-Dowager's) birthday presents to his mother arrived at the Fu Chin Palace, Prince Tsai Shu made no attempt to appear and show his loyalty and respect for us as well as thankfulness for this mark of Imperial bounty to his mother, by reverentially kneeling at the grand entrance of his Palace while the Imperial gifts were being borne within. Furthermore, neither did he worship at the tablets of his ancestors nor pay congratulatory obeisance before the image of his mother, which he should have done on such an occasion, even if he had been considerably more ill than he pretended to be. In a word, this audacity, this contempt for the first principles of filial piety and loyal devotion to his parent has really gone beyond bounds, and if we do not make a most severe example of the culprit we cannot expect to see dutiful and loyal conduct in others. Our (the Emperor's) sentence, therefore, is that Tsai Shu be forthwith stripped of his princely title and handed over to the Imperial Clan Court for the administration of eighty blows of the broad-bladed bamboo. He is then to be immured for ever within the four walls of an empty room. We hereby depute the carrying out of our sentence to Shih Tu, Prince of Li, 1st Order, who is the senior member of the Imperial Clan, and he is to see that the sentence be wholly carried out. As for the successor of Tsai Shu, we hereby leave the Princess Fu Chin herself to select the next heir to the late Prince Fu Chin and his estates.

To be immured for ever within the four walls of an empty room is a sentence of sentences.

The celebrated E-ko-tang, who distinguished himself by being the only Chinese General that inspired the Japanese with any respect in the Manchurian campaign, seems to be a man of another type in the piping times of peace. He recently reported "the carelessness amounting to crime" of a captain among the troops under his command. The Captain, according to General E-ko-tang's report, arrived with a squadron of cavalry on the bank of the Liao river just as some privates were escaping after robbing three boats in which an expectant magistrate with his family were proceeding up the river. Without pausing to inquire who was who, the Captain ordered his men to fire, and the unfortunate magistrate fell dead, while the pirates escaped scot free. That was the General's story, and in the sequel the Captain and 4 of his men were beheaded. But the truth is said to be that the officers and his patrol were the real pirates. The General, however, dared not tell the truth, as the responsibility of such a flagrant failure to preserve discipline among the troops under his command would have fallen on himself.

SAVINGS' BANK DEPOSITS.

The *Nippon* publishes a statement regarding deposits made in Postal Savings Bank by men of various occupations during the 28th year of *Meiji* (1895). Japan has not yet made any detailed investigation into the numbers and the various callings of her people and there is no means of definitely ascertaining the census of her artisans. It is therefore impossible to ascertain what class of workers makes the greatest deposits in the Postal Savings Bank. The following table, however, is a fairly trustworthy classification of depositors and their callings:—

	Numbers.	Amount of Deposits. Yen.	Average per man. Yen.
Farmers	453,445	8,213,686	18.100
Merchants	224,246	6,750,466	30.100
Industrials	95,402	2,607,808	27.300
Miscellaneous occupations	79,711	2,492,580	31.300
Artisans and Employés	68,604	1,476,002	21.500
Fishermen and sailors	13,258	331,410	25.000
Officers and Soldiers	83,448	2,605,809	31.200
Students	66,301	342,056	5.200
No fixed occupations	12,238	331,395	27.100
Unknown occupations	99,005	2,796,788	28.200
Total	1,195,658	27,948,000	23.400
Shrines, temples, and other institutions	27,427	1,017,427	37.100
Grand Total	1,223,085	28,965,427	23.700

ACCIDENT TO THE "TOKIO MARU."

The Nippon Yusen Kaisha's steamer *Tokio Maru*, Captain Barstow, soon after leaving Kobe at noon on the 14th, on her passage to Sydney, struck a rock near Miako. The cargo is undamaged. The passengers of the *Tokio Maru*, who included 220 emigrants for Australia, were transferred to the *Yokohama Maru*. The *Kobe Chronicle* of the 15th said:—"As soon as information reached Kobe, the Nippon Yusen Kaisha sent down the *Yokohama Maru* to her assistance, and both the *Sagami* and the *Totomi* afterwards assisted in the operations. All efforts made to move her yesterday proved unsuccessful, however, and though she was moved about seven o'clock this morning, she simply drifted a few yards and again became hard and fast." Eventually the vessel was got off and arrived in Kobe in tow of four steamers. The *Tokio's* propeller was completely smashed.

WITTING AND UNWITTING PLAGIARISM.

It is often very amusing to watch the course of newspaper paragraphs in their travels from the columns of one paper to those of another. Many and many a time does it happen that paragraphs appearing in the *Japan Mail* are copied into Shanghai or Hongkong journals, and re-copied from the latter into the columns of our *Yokohama* or *Kobe* contemporaries. A case is now before us. About three weeks ago, we reproduced the article in the *Dingley Tariff* relating to the examination and taxing of the clothes and personal effects of Americans or foreigners entering the States, and appended some comments of our own. The whole paragraph was transferred without acknowledgement, into the columns of the *Shanghai Mercury*—a frequent occurrence—and is now copied by the *Kobe Herald* with due acknowledgment to the *Shanghai Mercury*.

AUDIENCE OF THE SPECIAL RUSSIAN AMBASSADORS.

As already stated in these columns, Prince Ukhtomsky and suite arrived at Peking on the 21st ultimo, but owing to the absence of the Emperor at Eho Park it appears that the special Russian Ambassadors did not have their audience until the 26th of the month. In the meantime the Russian Princes stayed at the Russian Legation instead of the quarters specially prepared for them near the Board of Rites. The time between their arrival and their audience of the Emperor was occupied with visits and return visits between the Ambassadors, the Ministers of the Grand Council, the Ministry of War, and the Taungli Yamen. On the 26th, the day of the audience,—his Majesty having returned on the afternoon of the 25th—the Russian Princes, after presenting an autograph letter of the Czar also presented the list of presents sent to H. M. Kuang Hsi by their Sovereign and impressed upon the Emperor that several of the presents had been personally selected by his Russian Majesty. The Emperor smiled and said he would "value them all the more for this." The audience took place in the usual Throne-hall—the *Wen Hua Tien*. It is reported that the Russian Ambassadors also wish to present the Czarina's gifts to the Empress Dowager personally, and have requested a private audience to do so; but it is not yet settled whether this audience will be accorded, although there ought not to be any difficulty, since Manchurian ladies are accustomed to meet male guests at their own homes.—*N. C. Daily News*.

All her many friends in Yokohama, Tokyo, Shanghai, and elsewhere will regret to hear of the accident that befel Miss Eldridge on Friday week. She was riding her bicycle along Main Street, and in attempting to avoid a dray—a frequent cause of nasty accidents in Yokohama—was thrown from her machine, breaking her knee-cap and sustaining a severe shaking.

NEWS OF THE WEEK.

The Japanese men-of-war *Matsushima*, *Fuso*, *Chinyen*, *Itsukushima* and *Takao* are to be stationed at Kobe during the celebration of the Diamond Jubilee of Queen Victoria.

The fancy-matting dealers of Hiogo, Okayama, and Hiroshima intend forming an association under Government protection which will start a matting factory in America, supplying the raw material from Japan. By this means they intend to circumvent the new American tariff.

The interest, as well as the face value, of the war bonds lately purchased by the London Syndicate, to the amount of forty-three millions of yen, are of course guaranteed to be paid in gold. Yet it is alleged that the Specie Bank has lately sold some silver bonds in London in small quantities. We do not understand the statement, for there are virtually no such things as silver bonds in Japan at present.

The chief officer of the steamer *Afridi* was seriously assaulted by the head-coolie of a gang of cargo men, when the ship was discharging at Kobe. The coolie was drunk and without receiving any provocation struck the officer with an iron cargo hook. The matter was reported to the British Consulate and the coolie was arrested. It is alleged that the Japanese police on board saw the assault but took no notice.

The *Shogyo Shimpō* publishes a report of the transactions of the Bank of Japan, which shows a sudden and considerable decrease of deposits. The actual deposits on the 5th June are stated at 11,127,136 yen against 20,128,860 yen on the 29th May, indicating a decrease of 9,001,723 yen. The abnormal increase and decrease of deposits, however, are ascribed to receipts and delivery of securities connected with subscriptions to the Industrial Bank.

Mr. and Mrs. Mowat, left for home on the 18th inst., by the *Empress of China*. Judge Mowat's health has been indifferent for some time—ever since the Carew trial, we believe—and his medical advisers have recommended a trip home. We sincerely hope that His Honour may be completely restored by a few months' rest, and by the invigorating air of the old country. He has made many friends and earned a high reputation in Japan. During his absence Her Majesty's Court will be presided over by Mr. H. S. Wilkinson.

The Yokohama Silk Trading Guild held a special general meeting, says the *Shogyo Shimpō*, on the 7th instant, and revised the scale of fees as below for the sale of raw and waste silk:—

The revised fees are to be enforced from the 1st July, with the proviso that insurance be paid out of the same.

	Fees for	Revised rate.	Present rate.
Raw silk
Noshi and floss
Tama
Raw hemp, pierced & waste cocoons, & refined cotton.

There seems to be a chance of sleeping cars being introduced shortly on the railways of Japan, if the *Yorodsu Shimbun* is rightly informed. Our contemporary says that in view of the approaching completion of a through line from Bakan in the south to Aomori in the north, the Railway Authorities have turned their attention to the necessity of providing sleeping accommodation for passengers. Quite recently a Tokyo merchant, acting on behalf of certain Americans, applied to the Railway Authorities for an order for the supply of the proposed sleeping cars, and the authorities are now busying themselves in investigations as to the designs and specifications of sleeping cars best suited for Japanese use.

The Governor of Taipeh Prefecture, Formosa, in the course of a report to the Governor-General, observes that the people of the Island could not grasp the full significance of their change of rulers.

for a long time, but now they are gradually discovering the system of administration by which Japan proposes to govern the Island. At first the Formosans had an active horror of detectives and interpreters. The latter they called "tongue-officers," declaring that they derived a living by a dishonourable use of their tongues. As for detectives, they were men to be shunned as monsters of treachery. These prejudices are gradually dying out. The conferring of badges of honour upon the leading inhabitants of the various districts has had considerable influence in winning over the gentry to the new administration.

Kobe is gaining for itself an unenviable reputation in the matter of rowdy coolies. Every other day or so the local papers contain reports of assaults on foreign ladies and children, varied at times by attacks on ship's officers. The *Kobe Herald* of Tuesday, tells us of another instance in which a party of ten coolies mobbed a lady and her children after Church last Sunday. In beginning its account of the disagreeable affair our contemporary says:—"It is useless to attempt to disguise the fact that it is no longer safe for ladies and children to venture into unfrequented parts of the town without an escort. The behaviour of many of the coolies and some of the *jinrikisha* men towards ladies and children is sometimes most insulting and occasionally actually menacing."

Japanese cotton crêpe has long had a ready sale in China, Hongkong, and India; then it was exported to Europe and America with excellent results. But the Japanese manufacturers made the usual mistake, producing a coarser and inferior material to that originally supplied, with the result that the trade fell off, as the following export figures will show:—

Yen.	Tan.	Yen.
1890	75,826.....	51,130
1891	113,543.....	77,621
1892	290,171.....	275,983
1893	605,695.....	586,970
1894	1,088,389.....	1,067,573
1895	469,595.....	585,909
1896	384,629.....	400,734

The *Yomiuri* publishes a long story of ill-treatment that a Japanese named Mayeda Miwajiro, is alleged to have received in San Salvador. This man went to Central America in 1893, and obtained employment as a sugar-boiler at Santa Maria, San Salvador. He soon found the work too arduous for his strength and requested leave to break his contract. This was refused, and upon making another application, the man was beaten. One day when Mayeda was away on an errand his master beat Mayeda's wife, and then treated him to similar indignity when he returned. Mayeda then appealed to the police for protection, which was afforded. He has since applied to the Japanese Legation in Mexico, and the officials there have accordingly opened negotiations with San Salvador.

The reform party have won the day in the Hongwanji and the corruptions and abuses so long complained of will now be completely eradicated. The affairs of the big temple and its subordinate shrines will henceforth be governed on democratic principles, sixty representatives being elected from among the congregations to form a legislative and executive body. The new system was inaugurated at a convocation specially convened in Kyoto over which Mr. Kobayashi Konin presided. This convocation decided to divide the Empire into twenty-one electoral sections, and fixed the first election to take place on the 30th of June. Competition is already noticeable among candidates who seek seats on the Hongwanji Council.

"Jean du Briest, writing from Yokohama on the 9th of April to the *Courrier d'Haiphong*, tells a remarkable story of a Japanese steamer which was caught in a storm and tried unsuccessfully to take shelter in the Korean port of Fusan. She drifted out to sea and found herself some hours afterwards on the coast of China, not far from Ningpo. Here she was boarded

by a band of Chinese, many of them in uniform, who forcibly set to work to pillage the cargo and then set fire to the vessel. The crew duly reported this to the Japanese Consul at Shanghai, and were then sent home to Nagasaki." We take this from the *N. C. Daily News*. It is an exaggerated version of an incident translated into these columns at the time from the vernacular press of Tokyo.

The Red Cross Society of Japan has now a membership of 360,000, but the governing Council declare that its organization needs radical changes to render such a huge body of really efficient service in times of war. As a preliminary step, a council of various Local Governors and others, now in Tokyo attending the Conference of Local Prefects, is to be convened. It has been mooted that a period of ten years should be allotted for the development of the Society's organization, the first five of which shall be taken up in perfecting the system of local branches, and the latter five in making preparation for times of war, in laying up supplies of medicines, medical instruments, and the equipment of proper field and hospital ambulance brigades, etc. The elaboration of this programme will be carried out in concurrence with the wishes of the Authorities. In the 35th year of *Meiji*, the Japan Red Cross Society will celebrate its 25th anniversary. A long document has been drawn up, containing advice, admonitions, and hints for future development, which is now being circulated among the members.

On Saturday afternoon a new yacht, named the *Kodesu*, was launched at the Yokohama Engine and Iron Works in the presence of her owners—a syndicate composed of Messrs. J. F. Lowder, B. Hyde Pearson, C. F. McWilliams, Lefroy Murray, and Edisson—and Mr. and Mrs. W. W. Campbell, Mrs. B. H. Pearson, Messrs. F. H. Tanner, S. W. Lewis, M. Schellenberg, F. J. Hall, and J. McArthur. Mrs. B. Hyde Pearson christened the dainty craft, breaking the bottle of champagne with neat precision, at the same time saying:—"I wish you all success and prosperity." Mr. W. W. Campbell was the designer of the *Kodesu*. She is 26 ft. in length with a 7 ft. beam, and will probably be classed as a 17-rater. Messrs. J. W. Weaver and R. W. Hammond superintended the launching.

Fishing enterprises entitled to the bounty in accordance with the Deep Sea Fishing Encouragement Law, consist, says the *Tokyo Shimbun*, in the capture of whales, otters, seals, sharks, bonito, codfish, sardines, cuttle-fish, and flounders. The places in which fishing is to be carried on are the China Sea, the Formosan and Korean Straits, the Yellow Sea, and Japan Seas. The tonnage of vessels, and their crews are to be as follows:—

Steamers:—Registered tonnage.	Crew.
Upwards of 100 tons.....not more than 35	
" " 200 tons....." " 44	
" " 250 tons....." " 47	
" " 300 tons....." " 52	
" " 350 tons....." " 53	
Sailing Vessels:—Registered tonnage.	Crew.
Upwards of 60 tons.....not more than 26	
" " 80 tons....." " 28	
" " 100 tons....." " 29	
" " 140 tons....." " 31	
" " 160 tons....." " 32	
" " 180 tons....." " 34	
" " 200 tons....." " 37	

With regard to the inspection of tea carried by the Nippon Yusen Kaisha steamers to Seattle, concerning which there has been some little difficulty, owing to the competition of the railway companies, the local agency of the N.Y.K. have been favoured with the following extract from a letter by the Company's Agent at Seattle, delivered by the *Empress of India's* mail:—"The Hon. J. C. Saunders has been authorized by the Secretary of the Treasury to announce, as Collector of Customs for Puget Sound, to the Deputy Collectors at Seattle, Tacoma, Port Angeles, Everett and other ports—all reporting to, and under the orders of Mr. Saunders, who is re-

cognized as a thoroughly impartial officer, and who will not allow any discrimination or favour in his subordinates—that all ports in the District have equal privileges."

The foreign trade returns for last month are now in process of compilation by the Finance Department. The returns for Kobe and Yokohama, which were lately completed, show the excess of imports since January this year to be over 18,600,000 yen in value. If this state of affairs continues for any length of time, the excess at the end of the year can scarcely fail to fall short of fifty millions of yen. As the financial world at present is considerably influenced by the vicissitudes of foreign commerce, the excess of eighteen million yen in the value of imports is a source of great anxiety. So remarks the *Yorossu*:

Bradstreets observes that, with the exception of China, all the nations of the world have now become members of the Postal Union, and China has announced her intention to join the Union as soon as she is in a condition to assume the responsibilities of the association. This announcement was made at the second plenary session of the Universal Postal Congress, which was recently held. The Chinese representatives asked that the protocol be left open for her admission. The Korean delegates announced the agreement of their Government to the general compact, to take effect at a date not later than January 1st, 1899, the time fixed for the convention signed at the Congress to go into effect.

The recent law partially emancipating French universities from their bondage to the State, says *The Times*, has already begun to bear fruit. The universities of Laon, Bordeaux, Montpellier, and Paris, and now finally of Nancy, are becoming, with gratifying frequency, the recipients of bequests and donations. Rich citizens, now that they are sure that their gifts can be utilized by the local authorities of the local institutions which they know and love, show an enlightened and practical patriotism, which is of good omen for the future. The great institutions of learning, which, in the terrible vicissitudes of centralization, had almost all of their essential life crushed out of them, are now likely to renew their vitality and importance.

The production of fish and rape-seed oil increases year by year, says the *Osaka Asahi*. The amount of the latter oil produced last year being as follows:—

Prefecture.	Koku.	Value. Yen.
Niigata	2,702	75,798
Hiogo.....	4,308	114,308
Osaka	45,376	1,336,482
Miye	23,785	562,042
Aichi	18,055	472,016
Shizuoka	9,974	233,127
Miyagi	10,72	32,477
Fukuoka	24,492	563,138
Total	129,854	3,389,522

One-third of this oil is used for culinary and other purposes and the remaining two-thirds for lubricating machinery. Shimbashi Railway Bureau consumes more than twenty thousand casks per year, and the consumption of the Sanyo Railway Company amounts to over ten thousand yen in value every half year. Fish oil is chiefly exported to America to be refined there for re-export.

The *jinrikisha* coolies of Yokohama, according to the *Tokyo Asahi*, having found the cost of living pressing upon them more and more of late, have selected some of their number as representatives, to commence an agitation for the reduction of the existing tax on *jinrikishas*. These representatives visited the Kanagawa Kencho on Friday last and requested an interview with the Governor of the Ken. But Mr. Nakano, the Governor, being absent in Tokyo, Mr. Arakawa, Chief Secretary, received them, when they presented a petition stating that they would never withdraw their request whatever official oppression

were enforced upon them. The *jinrikisha* men purpose opening a grand lecture meeting at one of the Yokohama theatres in a few days to appeal to the public for assistance.

The C. D. Acts question has been revived with vigour during the past two months, owing to the action taken by the Secretary of War to revive registration and examination in India. The opponents of the measure have already held an indignation meeting, at which Mr. Maclaren presided. Professor Stuart, Mr. Stansfeld and several lady agitators—the “shrieking sisterhood” as some one has dubbed them—spoke. On the other hand, a women's memorial has been presented to Lord George Hamilton urging immediate action to prevent the spread of contagious disease in the Indian Army. The first signature to this memorial is that of Princess Christian, who, it is well known, represents the Queen's views in this matter. Then follow the Duchess of Connaught and the Duchess of Teck, Miss Florence Nightingale, the Matrons of the principal London Hospitals, and many eminent women.

The *Yomiuri Shimbun* states that the following terms of reconciliation between the Mercantile Exchange and Mr. Nakano's party, in regard to the establishment of a Bourse in Yokohama, have been arranged:—

- 1.—The parties in combination shall forward a fresh application to the Department of Agriculture and Commerce for permission to establish a bourse.
- 2.—A bourse shall be organised with a capital of 400,000 *yen* in 8,000 shares of 50 *yen* each. Each party shall hold half the amount of these shares, viz., 4,000 shares.
- 3.—The shares may be distributed among the members of either party according to convenience, but applications must bear the names of three representatives of the shareholders of the Tokyo Mercantile Exchange besides those of the twenty-six mentioned in the former application.
- 4.—The initiatory proceedings shall be conducted by the two parties, each appointing three commissioners for the purpose.

From the report of the Liverpool and London and Globe Insurance Company for 1896, a copy of which has been forwarded to us by the local agents, Messrs. Mollison & Co., we learn that the Fire Premium income for the year, after deducting the sums paid for re-insuring surplus risks, amounted to £1,552,835. The losses, inclusive of full provision for all claims that had arisen up to the close of the year, amounted to £839,970. The account, after providing for expenses, shows, without the addition of interest, a surplus of £201,934; which has been carried to profit and loss account. In the Life Department, during the year policies were issued for £576,360. The balance at credit of profit and loss account was £1,241,760, out of which it was proposed to pay a dividend of 20s. per share and a bonus of 11s. per share on account of the Fire Department, and a bonus of 3s. per share out of life profits, making £1.14s. per share, free of income tax.

The following account of experiments made at Shoeburyness, by the officers of the Ordnance Department and the Superintendent of Experiments at the School of Gunnery, on the one hand, and the officers of the School of Military Ballooning at Aldershot on the other, is given in *The Scientific American*:—“A captive balloon was sent up over the estuary of the Thames, attached, by a cable of about 700 yards, to a boat loaded with ballast, which was set adrift on the water. The weather was somewhat boisterous, and the morning dull and hazy. The field-piece was placed on the marsh land beyond the school of gunnery from where the firing took place. The distance of range was ascertained to be about 4,000 yards. . . Shrapnel shell was used, and good practice was made from the first. On the sixth round, however, excellent elevation and direction and distance were obtained, and shell was observed to burst almost immediately over the balloon. After oscillating for a few seconds, the balloon was observed to be collapsing, and then it gradually fell. Its descent was slow, and, as far as could be judged, had the car contained any occupants,

it is possible they would have sustained but little, if any, injury had the balloon fallen on land. . . It was impossible to ascertain the extent of the injury which was done to the balloon itself, but the wicker car appeared to have sustained little or no damage.”

The report of the *Hastings* court-martial was published on 7th May. It shows that the charge of which Commander Holland was found guilty was that of negligently and by default losing the vessel. The sentence has been reduced by the Viceroy in Council from a severe reprimand to a reprimand only. At the same time a notification is published in which the Viceroy places on record his sense of the excellent conduct of Commander Holland and the officers and crew of the *Warren Hastings* after the striking of the vessel. The notification continues:—“The coolness and judgment displayed by the Commander of the vessel and the perfect discipline and courage of the officers and men under circumstances of the most trying nature are worthy of high praise, as also the admirable conduct of the troops, whose discipline stood the extreme test of inaction in the face of imminent danger.” Reports of the officers commanding are also published and the gallant conduct of several of those on board is recommended to the notice of the Royal Humane Society.

The German emigrant is no longer to be a dead loss, according to the *Frankfurter Zeitung*. The country, having paid for his education and training, intends to profit by his settling abroad. Hence the tide of emigration will be turned as much as possible away from North America and toward South America. North America, it is argued, is useless to Germany as a home for her surplus population. The American is so similar in character to the German that the latter is speedily assimilated and is soon ready to compete with his former countrymen in all agricultural and industrial branches. In South America, especially in Southern Brazil and in the La Plata States, German customs and the German language are preserved much longer, and the German settler in those parts remains a customer to Germany to a much greater extent. On the whole, it is certain that the German resists assimilation much longer among the Latins than among the English races. This does not mean that emigration to the United States will be forcibly stopped, or that the Government will make special efforts to send to South America people who have already decided to go to North America. The Government will, however, undertake to secure special advantages for all those who can be induced to swell the population of the Southern continent.

The *Yoroku Choho* has for some time past constituted itself a censor of public morals. In its English Department the peccadilloes, backslidings, and moral delinquencies of foreigners are at times held up to obprobrium and denunciation: its Japanese columns often treat of the alleged “licentious habits of Marquis Ito, Count Matsukata, Ministers of State, Vice-Ministers,” and, in fact, the Government generally. Recently the editor observed that “the example of the higher orders of society is invariably followed by the lower.” He used this platitude as a peg whereon to hang some statistics of crime taken from the columns of the *Official Gazette*. These statistics cover the period from 1892 to 1896. The year 1894 exhibited the largest increase of criminals: then the numbers decreased; remarkably so in 1896. Offences which show the greatest tendency to increase year by year, are perjury, abortion, adultery, illegal marriages, and offences connected with opium, slander, calumny, and obscenity. Decreases are noticeable in transgressions relating to escapes of prisoners, illegal protection of offenders, evasion of accessory punishments, murders, bankruptcy, &c. The most remarkable decrease after the war with China was in burglaries, manufacture of counterfeit coins, and unarmed thefts. Statistics show that in the 25th year of *Meiji* (1892), the number of offences against public morality

was 40,612; in the 27th year 43,316; and in the 29th year 47,299; while offences of obscenity, adultery, and illegal marriages totalled 324 in the 25th year, 386 in the 27th year, and 477 in the 29th year. “Who is to blame for these phenomena,” asks the *Yoroku Choho*? “Who is really responsible for such a state of affairs? Society has sunk to the bottom of the well of corruption.”

Statistics published in the *Nippon* show that at the end of May last the number of joint stock companies throughout the empire (with the exception of railway companies and banks) was 1,900, with an aggregate capital of 285,311,667 *yen*, showing an increase of 47 companies and of 3,343,380 *yen* capital as compared with the figures for the previous month. The various companies are classified as follows:—

COMMERCIAL.		Capital.
Number.		Yen.
New	31	1,352,500
Increase of capital ..	9	103,760
Dissolved	4	52,480

INDUSTRIAL.		Capital.
Number.		Yen.
New	24	1,757,000
Capital increased	11	658,440
Dissolved	7	601,000

AGRICULTURAL.		Capital.
Number.		Yen.
New	3	115,000
Increase of capital ..	1	10,000

The following comparative table shows the number of different joint stock companies and the amount of their capitals for the two months:

COMMERCIAL.		Capital.
Number.		Yen.
April	882	126,660,985
May	909	128,064,765
INDUSTRIAL.		Capital.
Number.		Yen.
April	889	153,324,006
May	906	155,138,546
AGRICULTURAL.		Capital.
Number.		Yen.
April	82	1,982,755
May	85	2,107,755
TOTAL.		Capital.
Number.		Yen.
April	1,885	281,967,746
May	1,900	285,311,067

The secrets of the Government's financial condition are often brought to light, remarks the *Yoroku Choho*, through the actions of Mr. Amenomiya Keijiro and the columns of the *Toyo Keisai Shimpō*, the former being a councillor of the Matsukata Cabinet, and the latter an organ of the Bank of Japan. Mr. Amenomiya, according to the *Yoroku*, has been urging Count Matsukata to reduce the rates of interest on public bonds. The *Keisai Shimpō* of the 15th inst. commenting upon the necessity of an issue of bonds bearing a low rate of interest, says:—“The amount of public loan bonds increases year by year. It will reach 495,700,000 *yen* by the 34th year of *Meiji* (1901), and the annual interest upon them will then exceed 25,670,000 *yen*? This is to be defrayed out of ordinary expenditures, and if it were reduced the saving might be appropriated to other items of ordinary outlay. If the bonds are to be exchanged for bonds bearing lower rates of interest, the best scheme would be to offer them for sale in Europe. War bonds, which only run for a period of three years, were immediately bought up to the amount of forty millions of *yen* at a higher price than their face value. Should bonds be issued to run for a period of fifteen or twenty years, foreigners would perceive that the utmost safety attached to them as investments, and it would be easy to effect sales of such bonds to the amount of several hundreds of millions of *yen*, even if issued at three or four per cent. interest per annum.

Orders with regard to railway subsidies were issued, says the *Nichi Nichi Shimbun*, by the Governor-General's Office in Formosa under date of the 15th May. The articles which relate to subsidies are as follow:—

CHAPTER VII.—SUBSIDIES.

Art. LIV.—Subsidies will be granted for the construction of railways, exclusively, in the following places, each section of work being entitled to

the bounty:—Between Kelung and Taitong; between Taitong and Chiai, between Chiai and Takow, with a branch to Anping.

Art. LV.—The amount of capital required for the three sections of work as specified in the foregoing article shall be fifteen millions of yen, and the approval of the Governor-General must be obtained for the programme as well as the amount required for each section, previously to the commencement of the work. In case it is found necessary to increase or decrease the amount of capital, according to the nature of the work, the sanction of the Governor-General must be first obtained by presenting a statement of the reasons for the change. In the case of an increase of capital, the subsidy shall be granted according to Article LVI.

Art. LVI.—The subsidy shall bear interest at the rate of six per cent. per annum on the capital paid up, from the month immediately following the payment of the capital until twelve years after the commencement of traffic on the whole line, for each section of the railway. The term "Industrial funds," or simply "funds," is to mean all the outlays for railways, cars, locomotives, stations, land, buildings, etc. Such outlays are to be designated *kogyōki*, or industrial expenditures.

Art. LVII.—Whenever it is deemed necessary for purposes of armament or of colonization to double the line, increase the number of cars or stations, or alter the buildings or other things already completed, orders may be issued to that effect at any time during the period of the subsidy for each section of railway.

If in cases specified above an increase in the amount of capital becomes necessary the subsidy shall be paid according to Article LVI.

Art. LVIII.—The estimates of the subsidy shall be presented every year on the 31st of March.

Art. LIX.—At the end of each working year the settled accounts of receipts and expenditures, that have been passed by the general meeting of shareholders, shall be presented within thirty days after such meeting is closed, and approval be obtained from the Governor-General of Formosa.

CORRESPONDENCE.

RUDE CONDUCT OF JAPANESE TOWARDS FOREIGNERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am sure that the great majority, if not all of your readers were thankful to see an article under the above heading in your issue of the 8th inst. and it is to be hoped that you have succeeded in drawing the attention of those largely responsible for it to the rudeness you most justly complain of. Would you kindly allow me space for a remark or two on the subject which, as you say, is an important one to the Japanese people at large, for if this rudeness, which seems to be rapidly increasing everywhere, is allowed to continue, Japan will soon lose the "admirable reputation for courtesy which its people have acquired." I was not aware until lately that the rudeness to which the foreign residents of Nagoya have long been subjected prevailed to any extent in other places, but several references to the subject in the *Mail* during the past few months indicate that it is increasing everywhere.

The most deplorable feature of the matter is that this rude conduct is not confined to "*jinrikisha*, *sando* and street *gamin*," whose ignorance constitutes some excuse for misbehaviour," but, on the contrary, as far as my own experience and observation, extending over a period of eight years, go, is far more prevalent amongst those who would be tremendously indignant if they were to be described as belonging to the lower orders. Among the words and phrases which ring in our ears whenever we take our walks abroad here are *paki*, *chan-chan bōsu*, and *baka*, not to mention the old familiar *tojin*, frequently embodied in what the popular mind seems to consider a pretty little chant.

*Tojin, tojin ketōjin,
Uma ni karavate ya, chin, chin.*

Now if this complimentary language were used only by street *gamin*, people would probably, as you say, "take little more notice of it than they do of the barking of a dog" but this is not the case. I have had these phrases shouted at me from the upper storey of a Judge's residence; I have heard them used by the sons of military officers, and they may daily be heard proceeding from the students of our schools, from the little boys and girls who attend the primary classes to the young men, presumably the sons of officials, professional gentlemen and other respectable citizens, who are preparing to take a share in the affairs of their country by a course of study in the *Middle School*.

Now who is responsible for this state of things? I have been told that the Buddhist priests teach the people all sorts of rude things about us mis-

sionaries because they dislike the religion which we teach. That may be so, but it is not on the priesthood that I would place the blame principally; I believe that the greatest weight of responsibility in this matter rests upon the public school teachers who, in many cases at least, not only refuse to exert their influence against this rudeness but actually countenance and encourage it.

On one occasion as I was passing a school while the children were playing outside, shouts of "paki" "paki" filled the air. One of the teachers being in the play ground, only a few feet from the street from which it was separated by a low hedge, I stopped and politely asked him if he did not hear what the children were shouting. At first he paid no attention to what I said, but on being pressed for an answer he replied, in a very discourteous manner, that the children were saying nothing wrong and that I probably did not understand their language.

A few days ago, a lady here, who understands Japanese very well, told me that she was passing the Middle School one day when some of the larger boys, accompanied by teachers, were coming out. The students at once began passing the most insulting remarks about her, which seemed to amuse the teachers but drew from them no word of rebuke.

Another friend of mine, not in this city however, has a little Japanese boy living with him who attends the primary school. One evening this little fellow asked his guardian why the Japanese school teacher taught the boys never to get out of the way of a foreigner. His foreign guardian had taught him that children should always make way for their seniors, but his Japanese school teacher said, "not so, a Japanese must never make way for a foreigner, no matter who he may be." If children have such school teachers as these it is no wonder that they should act rudely. Of course, school teachers are not wholly to blame and cannot alone correct the evil; parents have also a great responsibility and I believe that if the press could be induced to bring the matter before the public many parents would perceive their duty in the matter and great good would result. My experience in bringing cases of rudeness to the notice of teachers and policemen have not been very encouraging, but when I have arrested a boy, and I have frequently done so, and brought him before his father or mother, I have almost invariably been thanked for my trouble and the exhortation I offered, the boy being made to apologise. In the next place I quite agree with you that it would be a great help if policemen were to receive such instructions as would cause them to render assistance when appealed to by persons suffering violence or insult. A few days ago, a gentleman here drew the attention of a policeman to a case of gross rudeness on the part of a youth towards a foreign lady in the street. The policeman's reply was "*shikata ga nai*." Surely there ought to be something done in such cases!

Finally, is not every educated and respectable Japanese responsible to a certain extent for this deplorable prevalence and increase of rudeness? Nothing astonishes me more than their utter indifference to it. I have frequently been insulted in the streets when in company with Japanese gentlemen, and can only recall one or two occasions when anything was said about it even in the way of apology to me. If the Japanese as a nation do not regard all foreigners as despicable barbarians; if they believe that this rudeness is wrong and a disgrace to their country, why don't respectable people raise their voices against it? If they would only do so the disgrace would soon be wiped away.

I observe, Mr. Editor, you mention the scowls and jeers of the Tokyo students in the list of their boorish acts. Well, there is plenty of scowling and jeering here, but throwing sticks and stones and spitting at foreigners being not altogether uncommon forms of diversion here,—I do not say amongst students—we take little notice of looks at least.

Let me again express the sincere hope that your timely and able article will be successful in attracting the attention of those who have the remedy in their hands. I have often felt moved to address to you a letter on the subject but until the present have refrained from doing so. Now, however, thinking that perhaps a few plain words from another quarter of the Empire might help to emphasize, in some small degree, what you have so faithfully described, I venture to write.

Like yourself, I have no desire to magnify the defects of the people amongst whom and for whom I am content to spend my life and who in many respects command my admiration. I am deeply conscious also of the defects which the Japanese must see in the foreigners who sojourn in their land, and thus write, not in the spirit of a critic, but as a sincere friend and well wisher.

Believe me, Sir, yours faithfully,
J. COOPER ROBINSON.
Nagoya, June 10th, 1897.

PROTECTION OF RAILWAY COMPANIES IN FORMOSA.

IMPERIAL ORDINANCE No. 274.

We hereby sanction the provisions relating to the protection of Railway Companies in Formosa, and cause the same to be promulgated.

(His Majesty's Sign Manual and Great Seal.)
June 4th of the 30th year of Meiji.
(Countersigned.)

VISCOUNT TAKASHIMA TOMOYENOSUKE,
Minister of State for Colonization.

Art. I.—The Governor-General of Formosa may, if he deems it necessary, grant free of cost any Government land to be appropriated for the construction of Railways by the Railway Companies in Formosa.

Art. II.—The following land may be set apart for the use of Railways:—

1. Land over which the line of railway passes. The extent of such land for the line, excavations, embankments, bridges, &c., shall be determined according to the nature of the work undertaken.
2. Land for the construction of stations, as well as godowns for cars and cargo belonging to the same.
3. Land for the construction of dwelling houses for station masters, conductors, and engineers, and of huts for watchmen, whose constant residence within certain precincts is absolutely necessary.
4. Land along the line to be employed for building workshops where cars, wheels and implements necessary for the establishment of a railway or for transportation are manufactured, and also warehouses where all these things as well as materials and utensils may be preserved.

Art. III.—Any land which, though not actually needed for the establishment of a railway, is required for a service line for the transportation of coal for trains and workshops, or of materials for the construction of a railway, and other land which may be needed, being in the Government's possession, may, if the Governor-General deems it necessary, be granted or leased without charge until the work is completed by the railway company in Formosa.

Art. IV.—In case the land required for the construction of a railway, or for the purposes specified in the above Article, belongs to private persons, and in case a railway company in Formosa applies for a grant of Government land with a view to have the same exchanged for such privately owned land, the Governor-General may grant such land without charge.

In that case, however, the Government land shall be limited to a quantity equal in appraised value to the privately owned land in question.

Art. V.—In case the Governor-General deems it necessary for public benefit to deliver to a railway company in Formosa, free of cost, the Government Railways already constructed and buildings and utensils appertaining to the same, he may take steps to that effect.

Art. VI.—The buildings and plant on Government land which is granted without charge shall also be handed over free of cost.

BEGINNINGS OF JAPANESE HISTORY.

A meeting of the Asiatic Society was held at No. 54, Tsukiji, Tokyo, on Wednesday, June 9th, at 4 p.m. Mr. Tyng occupied the chair.

After the preliminary business of the Society had been transacted, the Chairman called upon the Rev. Isaac Dooman to read his paper on the "Beginnings of Japanese History, Civilization, and Art." Mr. Dooman stated that as his paper was very long he would only give a summary with comments:—

In a previous Paper read before this Society the present writer endeavoured to trace the origin of the Japanese to that North Himalayan family of mankind commonly called Altaic or Mongolian; a race which has displayed great aptitude in developing some innate germs of self-expansion and civilization: the race which is gradually coming to displace the mastery of the planet with the aggressive Aryan. In the present Paper my object is to give a succinct sketch of the early history and civilization of the nation till reaching the period of authentic documentary data, which cannot be earlier than the 6th century of our era: the universally accepted time of the introduction of Buddhism into Japan.

The traditional history of Japan, as we have it in the *Kojiki* and the succeeding historical books, deeply needs a thorough recon-

struction; and this reconstruction must be achieved along the same line which Mommsen, following the footsteps of his famous compatriot Niebuhr, has reconstructed the early history of Rome. It is quite surprising to see that even Western scholars who have attempted to write a history of these delightful islands and their people, while eliminating the mythical element, have faithfully followed the quasi-historical chronology and material collected in the *Mito dai Nihon shi*: that *magnum opus* of Japanese scholarship and erudition.

The authorities, beside the language, which will considerably assist the future scientific historian of Japan, are two venerable volumes which remote antiquity happily has left to posterity, namely the *Kofiki* and the *Manyoshu*. The former will render invaluable help in picturing the struggles of the divers elements in the national life till the establishment of Imperialism; while the latter is the most complete mirror of the habits and manners, both domestic and religious, of the primitive Japanese.

Now, the first and most important question which presents itself to every student of early Japanese history is:—when did the first Japanese colonist reach these islands from the continent of Asia? Judging from the gradual expansion of the Aryan toward India, and its final subjugation, the advent of the first Japanese has to be placed between the fifth and tenth centuries before our Christian Era. According to this theory, from the first appearance of the continental Japanese till the introduction of Buddhism we have a gap of more than a millennium which the historian has to fill up. Now, if we turn to the *Kofiki* we can clearly see, I think, three distinct stages of the colonial evolution towards nationalism and ultimate Imperialism. These three stages are:—(1) The struggle between the colonists and aborigines; (2) The struggle of the colonists between themselves after the subjugation of the aborigines, and (3) The Yamato ascendancy and the final unification of the country under Imperialism.

In regard to the first and second stages of the development of the early history of Japan, the *Kofiki* places the theatre of action in the Southern provinces of Kyushiu, and Inaba; provinces near to the continent, hence the oldest settled. It appears that the continental colonists on crossing the channel were quite advanced in the science of war; both offensive and defensive. The *Kofiki* legends repeatedly mention the sword and the spear; and many metal swords and other species of weapons are still found in the Yamato *tumuli*. The struggle between the colonists and the aboriginal Aino must not have been unlike that which has been going on for ages between the civilized and the savage in every corner of the earth. The multitude of numbers avails nothing against discipline, and more civilized instruments of destruction!

The present writer is strongly inclined to think that the first continental colonist did not, at once, precipitate a war of extermination with the Ainos. He acted more like the Puritan of New England, than like the reckless Pizarro and Cortes in Mexico and South America. With all probability the new comers intermarried with the natives till they became strong enough to constitute a new race which eventually succeeded in subjugating and absorbing completely the Aino of the Southern States (just like what the Spaniards accomplished in South America) whilst the Northern Aino was gradually pushed back to the island of Yezo.

Immediately after the disappearance of the Aino as an element of resistance to the continental settlers, internal feuds and wars must have begun till the assertion of the Yamato ascendancy and the final pacification of the country. The idea of claniship has always been a greater factor in moulding the whole history of Japan, than the thought of a united nationality. Hence it is permissible to suppose that the panorama of the national wars before the establishment of the Yamato Imperialism was not dissimilar to the picture of the sanguinary battles which took place between the different families and clans when the imperial power and influence from a multiplicity of causes had been enfeebled almost to the last stage of existence.

The third and last epoch is the Yamato ascendancy and the establishment of the present Imperial dynasty. The legend of Jimmu being commissioned by the divine Agora to establish his throne in Yamato contains too many flagrant absurdities to be believed. While we cannot accept Jimmu as a god, I cannot see any plausible reasons against the supposition of his being a man, and the real founder of the durable Japanese Imperialism. In all probability Jimmu was a noted Chief of Yamato and around his name human credulity accumulated those

myths and legends during subsequent ages. It would be simply the annulling of the utility accruing from historical scepticism to doubt the fact that the final unification of the colonists under one banner and into a united nationality was the glorious achievement of Yamato. It is for this reason alone that the word Yamato became identical with Japan; and *Yamato kotoba*, and *Yamato damashii* mean respectively "Japanese language" and "Japanese spirit." As Rome expanded into an empire, Yamato expanded into a country.

The evolution of the Yamato Imperialism is better attested by historical data than the stages preceding it, simply because we come nearer to the epoch in which a higher form of the continental civilization was introduced into Japan. Moreover, the *Manyoshu* gives us some very striking historical poems, which indicate that the rise of the Yamato Imperialism began from Yoshino, and gradually expanded itself. The exigencies of the new situation compelled the Government to change its capital frequently till about 800 A.D. when Nara was made the permanent metropolis of a united country. Even to the present day Yoshino has preserved many vestiges of an old civilization; far older than that of Horiuji or of Nara. However, it is quite evident that the authentic history of Japanese art and civilization has to begin from the Nara Era.

Both the *Manyoshu* and *Kofiki* coincide that the continental Japanese on his first appearance in these islands was in a quite advanced state of primitive civilization. He is clean in his habits, and practices daily ablutions, and is very fond of bodily ornaments. The *Manyoshu* is full of most beautiful poems expressing the sublime sentiments of domestic happiness and the affection of the husband to his wife and children: sentiments so unlike the present degraded state of family life amongst the middle and higher classes of Japan. One poet sings:—

*Imo ga hye ni
Sakitaru umu no
itsu mo, itsu mo
Nari namu toki ni
Koto wa sadamenu.*

Will a modern Japanese conscience, overburdened with the tremendous weight of half-a-dozen concubines, be able to sing this noble family anthem which his ancestors two thousand years ago rapturously sang?

In regard to religious life among the ancient Japanese also we see the same intensity of feeling, love, and reliance upon that Higher Invisible Being commonly called God. One poet sings:—

*O umi no nami wa Kashikoshi Shikaridomo,
Kami wo itwatte fune desoba Ikani?*

Which may be rendered, "O how terrible the ocean waves are; while trusting God if you sail your vessel what fear!" which sounds more like a Hebrew psalm than an old hymn of a grossly polytheistic nation!

In the early Japanese religion also we find three distinct stages of development, namely (a) Nature worship, that is, the deification of objective phenomena, especially those which have the power of striking terror: as water, thunder, lightning, &c. (b) Heliolatri, that is, the worship of the sun and moon. One *Manyoshu* poet sings:—

"Hi Tsuki no tattobu beki Kami."

We know that the largest Shinto temple in Japan was erected to the worship of the sun goddess, Amaterasu; and the present writer is strongly inclined to think that the second largest Shinto temple in Japan, that of Kasuga in Yamato, was likewise built for the lunar cultus. The third and last stage is Hero worship; or the substitution of the visible ruler for the invisible God. Anthropotheism has always been the last stage in the history of the religious evolution of humanity, whether we look to Rome or to Mexico. The continuation of Shintoism to the present day is a convincing proof of the immovable tenacity of the Japanese mind to a few archaic and simple religious ideas.

With the introduction of Buddhism into Japan begins a new epoch in the life and thought of the nation. Buddhism gave a new impulse to the forward movement of the nation which found its full and happy expression in the infinite world of art. Japan is preeminently an artistic country, hence no writer of its history can do full justice to its genius and civilization without studying its art. Perhaps in no other country has the life of art been so long, and blessed with a pleasing variety, as in Japan; the main cause of this is the happy combination of beauty with common labour.

In the writer's opinion the art life of Japan divides itself into three periods, governed by three distinct types. The first is from the beginning of the introduction of Buddhism to the early part of

the 14th century, during which period Japanese art is purely Hindoo with no traces of Chinese or Korean influences. This is the greatest period of art in Japan. The purity of the Aryan art of this period with no mixture of other influences, has led the writer to think that the early Japanese Buddhism and its art came directly from India through China; and not from Korea as the Japanese annals tell us. A large number of the Buddhist canons, written on palm leaves in Sanscrit, are still found in the old Yamato temples, and considerably strengthen this theory. The second period begins from the time of *Keishohi* and extends down to the establishment of the Tokugawa Government. During this period, as far as art is concerned, Japan is converted into a little China. The Aryan influence gradually becomes fainter and feebler. It is the age of great master painters like Shiugetsu, Sesshu, and many others. The last stage is the beginning of the birth of native art: the advent of the Popular and Natural schools of painting.

In the perfect harmony of these three types of art, assisted by new ideas received from the West, lies the salvation of the future art of Japan. The efforts of Japanese and foreigners who have lately preached a return to the old simplicity, I am afraid, will terminate like those of J. J. Rousseau, who, instead of leading the French people back to their childish and innocent naturalism, precipitated them into the horrors and chaos of '93.

A discussion followed the lecture, in which the Chairman, Mr. Lloyd, and others took part. The meeting adjourned at 5:30 p.m.

CRICKET.

MR. LIAS' TEAM V. MR. PHILIP'S TEAM.

A match was played on Saturday afternoon by teams of the Y.C. and A.C. captained respectively by Messrs. Lias and Philip. The weather in the earlier part of the day looked threatening, but the rain held off during the afternoon. The attendance of visitors was smaller than usual. Lias won the toss and went in first. The only noteworthy features in the innings were the capital play of young Tyng, who carried his bat out with 46 runs to his credit, and Edwards' score of 31, which included 4 fours. The innings closed for a total of 128. Philip's team opened their innings strongly, 45 being scored for the first two wickets. Then a rot appeared to set in for a time, the 8th wicket falling for 63, and it looked like a victory for the eleven led by Lias. G. C. Alcock, however, eleventh man in, by some very smart batting, changed the aspect of the game, his score of 37 turning the balance, and Mr. Philip's team, which numbered fourteen players, thus succeeded in putting together a total of 135, winning by 7 runs. White took six wickets for 45 runs and Edwards made the fine average of five wickets for 19 runs. The scores were as follow:—

JAPAN AND PORTUGAL.

Writing from Lisbon under date of May 2nd, a correspondent remarks that the new Ministry is composed of liberal elements, the forward party being represented by its most able men. Already they have given proofs of their desire to promote the good of their country, having published a programme of financial reforms that finds acceptance even among their opponents. Portugal is a land that can not indulge in economic caprices. Its people are too fond of a *dolce far niente* existence to develop its rich natural resources to their fullest extent, the result being that trade is always below the capacities of the State. Still during the past few years, its merchants have been proceeding along the path of steady progress and future prospects are bright for the Kingdom that once ruled the Seas.

The new Japanese treaty of commerce will give Portugal a capital opportunity for renewing an acquaintance with a trade in which she was the first pioneer. The ships of the "Portingalls" were the first of all the Occidentals to plough the sunny waters of "Cipango." Centuries have waxed and waned since then, but still many of Portugal's productions are imported into Japan, though now, alas, in foreign bottoms. A third part of the world's supply of cork comes from Portugal; its port wine also is world-famous. These are staples that Portugal can sell to Japan along with coffee, rubber, wax, cocoa, vanilla, almonds, figs, honey, and many kinds of preserved vegetables. In return Japan can sell to Portugal porcelain, *papier-mache*, silk, paper, fancy-goods, camphor, screens, lacquer, rice, umbrellas, tea, etc.

Portugal is now busily engaged in negotiating treaties of Commerce with the European nations, but at present Japan leads the field with the first concluded treaty. This result is due mainly to the diplomatic ability of Mr. Sone Arasuke, the Japanese Ambassador, who concluded the negotiations most skillfully. Here then is a splendid opportunity for Japan to establish a capital trade. Some of the commercial treaties, like that with Germany for instance, have been in process of negotiation for the last three years.

RAILWAYS OF JAPAN.

SANYO RAILWAY COMPANY.

During the first half of each year, in the intermediate season of spring and summer, it is usual to have numbers of tourists visiting places noted for fine scenery along this Company's line. This was especially the case this half year (April-Sept. 1895) in consequence of the opening of the Fourth Domestic Exhibition. The resumption of the military transportation service on a large scale a month or so after the Expedition was undertaken caused great obstruction to ordinary passenger and goods traffic. One special contrivance provided by the Company during the half year under review was a goods service, both up and down, once a day, which, even when troops or military stores were not carried, was not broken-up at Kobe, but was sent straight on along the Government line, thus expediting the conveyance of goods between the Company's stations and the Government lines.

The passenger traffic during the second half (Oct. 1895-March 1896) of the year, unlike ordinary years, showed no falling off in business. Owing to the sudden reaction in the market and the activity displayed generally, passenger traffic was unusually brisk. The troops and stores to be carried were not quite so numerous in the first half year, but as they were carried almost incessantly during the latter half year, and as the landing of troops could not be accurately timed, it often happened that several steamers full of troops or stores arrived simultaneously. However, as in the first half-year, trains with no fixed times were kept in reserve and served the purpose of military transportation, so no serious inconvenience was felt. During this half year also, after conference with the Railway Bureau, a through passenger train service, both up and down, was started between Kyoto and Hiroshima, and a very satisfactory result was obtained.

KYUSHU RAILWAY COMPANY.

That a favourable result was shown by this Company during the first half of the year (April-Sept. 1895), though greatly due to transportation of troops, coolies, and stores, must also be attributable to development in business, every trade, industry, and calling in Kiushiu being very prosperous. The prolongation of the Takeo section in particular

bringing Sasaho and Nagasaki into greater proximity, traffic on the Saga section grew very brisk. Since the opening of the Hoshiu Railway in August of the current year, coal produced in the vicinity of Tagawa was carried to Moji by means of the Gyoji section. The reason why the quantity of coal carried was somewhat less than in the previous half year was due to the temporary drop in the coal market and the consequent diminution in the quantity sent to Moji.

During the second half of the year (Oct., 1895-March, 1896), not only was the transportation of troops, coolies, and military stores less than in the two preceding half years, but shipping business was gradually restored to its former condition, the number of steamers set free to engage in ordinary coasting trade being largely increased, so that facilities of marine transportation at Wakamatsu, Misumi, and so forth revived. In spite of these deterrent factors, the traffic on the Company's lines continued to present favourable aspects, due chiefly to the prosperity that appeared after the War, to the remarkable activity in various local enterprises, and to the increasing intercourse between residents of the vicinity. The volume of coal carried from Toyama to Moji and Kokura by the Hoshiu Railway was almost doubled. The quantity of rice for shipment abroad carried by the railway during this season was comparatively small; but in December and Jan., in consequence of a rise in the rice market, rice from the Hi-Chiku districts poured in for transportation, and necessitated the running of express goods trains. In the end the quantity of rice carried rose above the normal.

Such is a brief account of traffic on the Nippon and two other railways. Other companies also, have considerably increased their passenger and goods traffic, enabling them to declare better dividends than usual.

RAILWAY ACCIDENTS.

On July 24th, at a distance of 13 miles 64 chains from Moji on the Kyushu Joint-stock Railway Company (that is to say, on the northern bank of the river Karato at Kuzuhara in Kirioka-mura, Kiku District, Buzen Province, Fukuoka Prefecture), a train was upset by a storm, and out of 48 passengers one was seriously wounded and 5 others slightly injured, while one fireman was killed on the spot. That day the sky was ominously overcast, the wind was rather strong, and rain fell, but there was no impediment to the running of trains. Just before noon the wind gathered force and stations were telegraphed to suspend the running of trains. By that time, telegraphic communication between Moji and Kokura was interrupted, and it was impossible to convey the orders to the train that subsequently suffered the accident. The train left Kokura at 25 minutes past 11 a.m. (10 minutes behind time), and as the intervening distance between Jyō-no Station and the scene of the accident was sheltered by a mountain from the north-east, no particular danger was felt on the passage. But as soon as the train emerged from the shelter of the mountains and became exposed to the wind from the Suwo Sea, it was overturned. Subsequently the Company increased the number of wind-gauges, and, by enjoining station-masters to stop the running of trains as soon as any danger was apprehended, provided means against such accidents in future. At 25 minutes past 1 a.m. of July 25th, No. D. express military up train was overturned between Onomichi and Itzaki on the Sanyo Railway, and of the 358 passengers, 8 were killed, 97 wounded, while the guard and two sweepers were killed and one fireman injured. On investigating the cause of this lamentable mishap, it was found that the district was visited that day by a gale of such a character as had seldom visited it before. The wind at first blew from the south-east and the line was much sheltered by the islands that there dot this sea. In the evening the wind gradually veered round so that the train became directly exposed to the full force of the storm. Moreover, the tide was full at the time, and violent waves struck the side of the embankment, dashing the water over the track. As the waves receded the stones that constituted a sort of parapet on the embankment were overturned, and the earth on the top of the embankment and the broken stones were washed away. Lastly the stones that formed the frontage walls were struck one by one. The waves that rushed against the embankment destroyed the top of the stone walls, and carried away a great deal of the earth that formed the embankment. The track was washed away and the rails left without support. The night was pitch dark. As the train came on at full speed, the locomotive was derailed on the sloping concave surface. At this instant the guard attempted to arrest the motion of the

train by putting on the brake. The effort was ineffectual, and the locomotive, tender, front brake-van, and five passenger cars fell into the sea heaped one on another, and were destroyed, while the six remaining cars were left on the embankment uncoupled. It may be mentioned that No. 48 up train passed over this portion of the line less than two hours before. This shows how great was the damage done in a short space of time. On September 7th, at Omiya Station on the Nippon Railway, No. 14 train, that left Mayebashi for Ueno, collided with the locomotive of No. 87 train from Ueno for Mayebashi. Both locomotives and four waggons were derailed and wrecked, a station porter was killed, while an engine-driver and a fireman were wounded. Happily no accident happened to the passengers. This accident was due to some delay in the shunting of some carriages. On Dec. 28th, at Akabane Station on the Nippon Railway Company, No. 105 train, that left Ueno that day for Amori, and a train that left Shimabashi for Akabane, came into collision, and 33 passengers were wounded. No. 105 down train reached the Station at the appointed time, but as the train from Shimabashi had not arrived it awaited its arrival at the station. In the meanwhile No. 107 down train passed through the station two minutes late. The distance signal, the home signal, and the flag-men at the points all showed the danger signal; but the conductor failed to stop the train, which thus ran into the rear of No. 105 train, and this latter was sent forward for about 120 ft. Just at this moment, No. 18 down train, seeing the proper signal displayed, was about to draw up along the platform. The result was a collision. At 49 minutes past 5 p.m. on Nov. 19th, No. 22 train on the Nara Railway came into collision with an electric tram car at a crossing on the line of the Kyoto Electric Company. The tram car was partially wrecked; three passengers were killed, six were seriously wounded, and 23 slightly injured. The cause of this accident was due to the conductor of the tram car neglecting to pay attention to the danger signal exhibited at the semaphore at the side of the road. The casualties on private railways during the fiscal year, or 1895, are as follows:—

TRAFFIC RECEIPTS AND DISBURSEMENTS.

Traffic receipts of the private Companies during this fiscal year, or 1895, were, exclusive of subsidies and amount carried over from the previous year's account, 10,333,935 yen, as against traffic disbursements of 4,665,975 yen, the balance, net profit, being 5,667,960 yen. Compared with the previous year, traffic receipts show an increase of 2,578,697 yen, or 33.3 per cent.; traffic expenses of 940,533 yen or 31 per cent.; and profits 1,638,144 yen, or 35.4 per cent. As alluded to in the foregoing part of this section new lines were opened for traffic this year, thus causing a difference in the traffic mileage. To arrive precisely at the relative increase or decrease of various items this year as compared with the last, it must be stated the profits corresponded to 9.13 yen per 100 yen construction expenses this year, that is to say, an increase of 14.1 per cent; while for 100 yen traffic expenses the ratio of profit amounted to 154 yen, or an increase of 10 per cent.

Total... ..	660,911.617	1,520,000.000	1,000,000.000	3,180,911.617	2,126,170.425	1,054,741.192

As shown in the above table, all the items, with only one or two exceptions, show increases, due to fresh openings for traffic or expansion of the scope of business, while increases in the amount of capital and construction expenses may be partly attributable, besides the causes referred to, to the rise in the price of land and commodities, which occasioned deficits in estimates and consequent later adjustment. The construction expenses per traffic mile of the respective companies and the ratio that rolling stock bears per mile have been calculated and the result thus obtained is compared with that obtained in the previous year, as follows:—

TABLE 15.

Joint-stock Railway Company.	Average construction.		Rolling Stock per Mile.					
	Expense per Mile.		Locomotives.		Cars.		Waggons.	
	Current fiscal year.	Relative increase or decrease compared with last year.	Current fiscal year.	Relative increase or decrease compared with last year.	Current fiscal year. BRITANNIA MARCHES ON.

By H. W. S.

(Indebtedness to Mr. C. Tyndall, of Bristol, Eng. and to Mr. C. P. Wally, of Canada, duly acknowledged.)

From out the east there breaks a cry
Upon the Sea Queen's ears:
A hundred thousand martyrs call,
With groans and blood and tears.
Will it rouse her into action?
That the bloody Sultan fears,
As he goes murdering on.

Refrain—Glory, glory Hallelujah!
Glory, glory Hallelujah!
Glory, glory Hallelujah!
Glory, glory Hallelujah!

Britannia marches on.
The nations watch Britannia,
All with jealous eyes of hate,
As calm she stands, and ready there,
Above her narrow strait,
'Tis fear of her swift vengeance
Makes e'en the Sultan wait,
As he goes murdering on.

She stands alone and friendless,
E'en when all the world unites,
Yet, with all the world against her,
Ready to defend the right.
"God and His truth forever"
Is the watchword of her might,
As she goes marching on.

Britannia rouses slowly,
For her patience suffers long;
But when once her wrath is kindled
Before the sense of wrong,
The Spirit of her Fathers, still
Will make her people strong,
As they go marching on.

No longer peaceful traders,
But the Vikings of the North,
With Columbia to befriend her,
What if all the world be wroth!
Her people God hath called His own,
His praise they shall show forth,
As they go marching on.

She speaks, and Flying Squadrons,
—For her seas have dragons bred,—
Glide out of quiet harbours,
Filling all the world with dread.
'Tis God thus far hath led her,
And 'tis He who goes ahead,
As she goes marching on.

This will be our Armageddon,
This will be our Jabbock's ford.
A night of awful agony,
But at dawn we'll see the Lord.
Britannia and Columbia
Both are moved with one accord,
To victory, marching on.

Rouse then, O Mighty Sea Queen,
For the world hath suffered long.
Ye Saxons, O ye Sons of God,
'Tis yours to right the wrong.
Awake, O Righteous People,
And in His strength be strong,
To Glory, marching on.

Sung at Sendai last week, at the Commemoration of the Diamond Jubilee.

A KIPLING PARODY.

As I was walkin' the jungle round, a killin' of tigers an' time:
I seed a kind of an author man, a writin' a rousin' rhyme:

'E was writin' a mile a minute an' more' an' I sez to 'im 'Oo are you?'
Sez 'e, 'I'm a poet—er majesty's poet—soldier an' sailor too!

An' 'is poem began in Ispahan an' ended in Kalamazoo;
It 'ad army in it, an' navy in it, an' jungle sprinkled through.

For 'e was a poet—er majesty's poet—soldier an' sailor, too!

An' after I met 'im all over the world, a doin' of things a host;
'E 'ad one foot planted in Burmah, an' one on the Gloucester coast;

'E's 'alf a sailor an' 'alf a whaler, 'e's captain, cook and crew,
But most a poet—er majesty's poet—soldier an' sailor, too.

'E's often Scot an' 'e's often not, but 'is work is never through,
For 'e laughs at blame, an' 'e writes for fame, an' a bit for revenue.

Bein' a poet—er majesty's poet—soldier an' sailor, too!

'E'll take you up to the Arctic Zone, 'e'll take you down to the Nile,
'E'll give you a barrack ballad in the Tommy Atkins style.

Or 'e'll sing you a Deepsea Chantey as the bloom-in' bo'suns do,
For 'e is a poet—er majesty's poet—soldier an' sailor, too!

An' there isn't no room for others, an' there's nothin' left to do;
'E's sailed the main from the 'Orn to Spain, 'e 'as tramped the jungle through.

An' written up all there is to write—soldier an' sailor too!

There are manners an' manners of writin' but 'is is the proper way,
An' it isn't so hard to be a bard if you'll imitate Rudyard K.

But sez, an' shore, an' peace an' war, an' every-thing else in view—
'E 'as gobbled the lot!—er majesty's poet—soldier an' sailor, too!

'E's not content with 'is Indian 'ome, 'e's lookin' for regions new.
In another year 'e'll 'ave swept 'em clear, and what'll the rest of us do?

'E's crowdin' us out!—er majesty's poet—soldier an' sailor, too!

BUDGET FOR THE 30TH FISCAL YEAR OF MEIJI.

CLASS A.
ORDINARY REVENUE.

	As introduced by the Government.
I.—Taxes	90,084,459.179
1. Land Tax	38,668,901.130
2. Income Tax	1,905,666.123
3. Sake Tax	29,823,852.836
4. Alcohol Tax	8,556.188
5. Tobacco Tax	2,234,146.867
6. Deeds, Certificates, &c., Tax	981,284.311
7. Say Tax	1,479,994.746
8. Export Duty on Liquors from Okinawa	46,310.999
9. Tax on Exchanges	684,001.316
10. National Banks Tax	117,096.234
11. Drugs Tax	837,328.999
12. Boats and Ships Tax	10,872
13. Mining Tax	281,000.849
14. Hokkaido Marine Products Tax	366,023.302
15. Hunting Tax	149,166.600
16. Trades Tax	5,874,168.487
17. Customs Duties	6,626,829.320
II.—Stamp Duties, Registration, &c.	7,525,616.111
III.—Receipts from Government Industries and Properties	21,280,598.341
1. Receipts from the Monopoly of Leaf Tobacco	859,698.000
2. Receipts from Official Gazette	185,077.850
3. Miscellaneous Receipts from Custom House	201,726.911
4. Receipts from Hokkaido Breeding Stations	971.328
5. Receipts from Forests	1,359,773.022
6. Receipts from Posts and Telegraphs	12,132,137.494
7. Receipts from Convict Labour	258,942.310
8. Sale of Medicinal Opium	15,813.900
9. Rents from Government Properties	395,610.640
10. Sales of Standard Weights and Measures	101.321
11. Profits from the Mint	270,589.051
12. Profits from the Printing Bureau	167,177.833
13. Profits from Mines	1,935.000
14. Profits from the Denju Woollen Factory	2,173.575
15. Railway Profits	5,425,773.387
16. Profits from Telegraph and Lighthouse Articles Manufactory	3,096.755
IV.—Miscellaneous Receipts	795,386.908
1. Licences and Fees	4,974.867
2. Fines and Confiscations	287,634.076
3. Commutations	78,231.744
4. Miscellaneous Receipts	275,085.561
5. Receipts according to the Public Officials Families etc. Relief Law	122,648.874
6. Receipts under the Law of Pensions to School Directors and Teachers and Aids to Relatives of the same deceased	16,100.438
7. Receipts from Okinawa Ken.	10,083.256

8. Receipts from Ogasawarajima	628.092
V.—Interest on Deposited Money.	1,724,185.000
Total	121,410,245.537

EXTRAORDINARY REVENUE.

I.—Sales of Government Properties	557,831.854
1. Sales of Mines	253,928.000
2. Sales of Lands	31,564.450
3. Sales of Buildings	6,427.033
4. Sales of Articles	217,135.025
5. Sales of Live Stock	19,997.446
6. Sales of Articles at Horonai Colliery and of the Horonai-Ikushumbetsu Railway	28,779.900
II.—Miscellaneous Receipts	298,767.682
1. Receipts from Ships or Boats built or repaired by the Navy.	107,064.662
2. Money Refunded	184,423.020
3. Miscellaneous Receipts	7,280.000
III.—Amount realized by manufacture and issue of public Bonds.	8,357.589
IV.—Aids to Fund for building men-of-war	2,099,195.591
1. Imperial Grant	300,000.000
2. Money collected from Officials	1,799,519.591
V.—Payment from China on account of Occupation of Wei-hai-wei	750,000.000

MARQUIS ITO ON THE ISSUES OF THE DAY.

Marquis Ito, formerly premier of Japan, arrived at quarantine, Victoria, on the steamer *Empress of Japan* on May 18th. He was accompanied by his private secretary, Mr. T. Osada, and Marquis Kido and Mr. S. Tukioka, the latter a member of the Imperial Household. They continue their voyage to Vancouver on the *Empress*, and will be there met by the steamer *Earnschiffe* with a party of prominent citizens on board. To a representative of the *Colonist* the Marquis said:—

"In framing a constitution for Japan I selected

features from the constitutions of various countries, but that of Bavaria was followed more closely than any other. I think I may say in a general way that our constitution is based upon that of Bavaria. Our people have as large a measure of freedom as is enjoyed by the people of Canada or any other country. The Government has the confidence of the people and the Government fully trust the people."

"What is the basis of your government?"

"Our political system is based upon the common schools. Our idea is that if the people have freedom and free education they can be trusted to develop on broad and safe lines."

"The people of America," added the Marquis, "do not understand the Japanese people. They class us with other Orientals, which is a mistake. The great progress which we have made has been accomplished in a few months, or I might more properly say a few days as compared with the life of a nation. This could not have been the case if we had been like other Oriental people. But we are not like them. Before Commodore Perry visited us we were different from our neighbours. The whole history of our nation fitted us for the progress we have made since the change began. We think it is remarkable. Not long ago we had a feudal system such as England had, but whereas it took England centuries to get rid of feudalism, we have done it in as many years, and while in England the feudal lords retained their great estates and revenues, our feudal lords surrendered theirs to the State. We have a full measure of popular constitutional government, although we have not yet become sufficiently familiarized with the new conditions to adopt party government as it exists in Great Britain and America."

"Do any nations now make any distinction between Japanese and other nations?"

"No; that is practically none do, for we have 'the favoured nation' clause in our treaties with all countries except Austria, and we have as a consequence of the war every privilege we desire in China. In Japan we extend to all foreigners precisely the same civil rights as are enjoyed by our own people; but we have, of course, withheld civil rights from them except when they become nationalized. We make foreigners welcome, and give them the fullest protection of our laws. Such a law as the British Columbia legislature proposed to pass to exclude Japanese is wholly useless in my opinion. I do not think there is the slightest reason for Canada or the United States to anticipate any influx of Japanese people. Some will come, no doubt, to the continent, but we have our own northern provinces to develop, and Formosa also, and our surplus population will find plenty of room there for years to come. The case of Hawaii does not apply to other countries. Hawaii invited us to send people there, and made special pledges to us by treaty, and so our people went there in great numbers. I do not think that either Canada or the United States need expect many Japanese immigrants."

"You have spoken of Hawaii, what is there in this talk about the annexation of the islands by Japan?"

"Nothing whatever. I am not in the Government, and of course do not speak officially, but I can say with confidence that if the Hawaiian Government should offer us the islands, we should refuse them. They are too far away to be of any use to us. Besides, Japan wishes to be on friendly terms with the United States, and the Washington Government would be certain to regard our taking possession of the islands as an unfriendly act. We have, however, certain treaty rights, and we propose to see that these are respected. I am quite satisfied that the Hawaiian Government will do what is right in that matter. From what you tell me as to the expressions in the American and Hawaiian papers, I should say that there is a great misconception as to the policy of the Japanese Government in regard to Hawaii."

"You have said that America need not fear Japanese immigration. How about Japanese competition in manufactures?"

"We will be your competitors, but only in China, and the population of that country is so great that there will be ample room for us all. We will manufacture many things for China. We make a great deal of cotton yarn now for China. We buy raw cotton in the United States, India and China, and make it up into yarn and sell it in great quantities to the Chinese. This trade will grow enormously, and we will interfere to some extent with American and European manufactures there; but so far as our competing in America or elsewhere is concerned, there need not be occasion for the least anxiety. In fact, when the people of America begin to understand Japan they will see that our interests, so far from being antagonistic, are substantially identical. We pro-

duce things that you want, and you produce things that we want. We will want all the lumber you can spare us. We have upwards of two thousand miles of railway now, and not only will these roads be widened and generally improved, but many new lines will have to be built. So greatly has the internal commerce of Japan developed of late that our railways cannot begin to accommodate the traffic. Our domestic supply of timber never was equal to yours in size and quality, and it is fast becoming exhausted. We have forests in the North and South that yet furnish considerable timber, but the forests of the Centre are government preserves for the purpose of holding the water to supply the rivers. We must become very large importers of Canadian lumber. You tell me that you may export coal oil. When you do you will find a ready market in Japan, but you should send it in tank steamers. We are also likely to consume a great deal of your wheat. It is of importance to Canada to study our market. Commissioners should be sent there to see what the people want and the form in which they want it shipped to them. If this is done there is no reason why a very extensive trade between the two countries should not be built up. No. I do not think the construction of the Siberian railway will have any material effect upon the trade with America or that with Europe via Canada. You ought to have a very large commerce, especially as your route is much the shortest. You will find Japan ready to do her part to build up a profitable trade."

"What are the prospects for other Oriental markets for American goods?"

"They are good. China will take a great deal of American produce, but the Chinese will be much slower to realize the advantage of trading with you than the Japanese have been. As I said, it is a mistake to regard all Orientals as identical. They are very different from each other. China cannot progress as we have done, if for no other reason than because there is not the same serenity of government as in Japan. The educated classes there are not loyal to the ruling destiny. Korea will also furnish a market, but the people there will be slow to arouse themselves."

"How do Japan and Russia stand as regards Korea?"

"Everything is settled between them. Russia has agreed to recognize the independence of Korea and so has Japan, and China has been compelled to. I do not anticipate any disturbance as to Korea."

"And Formosa?"

"Formosa is being tranquilized. It is a valuable possession and its development will also give America a new market for its produce."

"There has been some talk in Canada about the Dominion being exempted from 'the most favored' nation clause in the treaty. How would Japan regard that?"

"We would protest, of course. We know of no reason why such exceptional treatment should be accorded us. Canada has nothing to fear from us in any way, but everything to gain from us. If I were speaking to the Canadian Government I should say to them:—'Learn to understand us and the better you understand us the clearer will it appear that our interests are identical. I understand that you have a great undeveloped country in Canada, and it seems to me as if, with such a market opening for you as Japan will afford, it would be a great mistake to throw any obstacles in the way of trade.'"

"Are you going to London as an envoy?"

"No; my position is somewhat unusual. I am going in an advisory capacity to assist the Prince, who will be the direct representative of the Emperor. I will meet His Imperial Highness in Paris, and after the jubilee ceremonies in London we will return home by this route. We will not make a long stay at any point on our return journey, perhaps a day or two in the United States, but not more."

In concluding the interview the Marquis was asked, generally, as to the condition of Japan. He said:—

"It is highly prosperous; the country is steadily advancing; the people are contented; life and property are secure and education is universal."

PARISIAN GOSSIP.

(FROM OUR OWN CORRESPONDENT.)

Paris, May 8th.

Tuesday May 5th, will henceforth be a "black" letter day in the French calendar. Within the space of half an hour, 117 individuals belonging to the rank, fashion, respectability, and business worlds, perished at a common funeral stake. The

sun shone the brightest of the year, and Society was in its merriest mood. But in the Rue Jean Goujon, a wooden shed had been converted into a Charity Bazaar, which in turn served as a tinder box, a fire trap, for over 1,200 persons. The Bazaar is held annually in May and June; it is organized by several Religious Orders, and centralizes the efforts and aims of sixteen charitable societies. The net proceeds of the two months' sales at the Fancy Fair amount to over half-a-million of francs. The patronesses comprise the leading members of the aristocratic, business, and financial circles. The shed was composed—because temporary—of the slenderest deal planking, well tarred and coated with oiled bitumen paper; the flooring was of deal; tarred underneath, waxed and varnished on the surface. The site was enclosed by a tarred planking. Theatrical scenery had been loaned, representing old Paris and its shops; this extended down the shed for one-hundred yards; the shops, doing duty for stalls, were filled with fanciful knick-knacks. The scenery was painted canvass, on lath framing, and had been re-varnished, the wooden walls inside the shanty, and its roof, were likewise freshened up with varnish. The ladies were in their spring toilettes; that is, in light tissues. Of the several doors, all were closed but that used for entering. To set fire to this gunpowder train, only a spark was required—a match or a cigarette. But that fatality was reserved for a little show where the cinematograph was exhibited. To work the apparatus a lamp is necessary and a cylinder of prepared oxygen. It was the *première* representation. The lamp went out; soon it relit itself; spurts of flame ascended; the oxygen reservoir had burst, and the fiery cross, in less than a few seconds, sped throughout the entire hall; the turpentine emanations lapped the flimsy woodwork into a sheet of flame, the canvass and card-board scenery vanished as smoke. Like sheep the terrified visitors rushed for the only exit: the strong trampled down the weak, the wall of burning victims became higher and higher. Some escaped to the outside, and in flames, or scorched, ran frantically about. Several were pulled into the street by rescuing hands, and stable men passed on buckets of water to extinguish their burning clothes and flesh. As they ran morsels of their burning clothing dropped away, and nearly naked as many were, displayed horrible-bleeding wounds.

With the crashing in, of the blazing roof, the principal act of the gruesome tragedy finished. Relief parties arrived, and the first feelings of paralysing terror gave way to concerted action. The Duchesse d'Uzes had escaped by a small badly closed side door; she was soon followed by many: an aged Marchioness on crutches passed through the ordeal unscathed; being unable to rush was the cause of her safety. Several men plunged into the very heart of the fire and dragged out the living: one plumber, who declined to give his name, in this way saved 40 lives. The proprietress of the Hôtel du Palais, assisted by her servants, hammered off the grating of a store room that overlooked the site, passed out a chair, pulled up women and children through the window, many still on fire; while sparks fell thick around and the heat scorched her. Her presence of mind extricated 150 persons from certain death. And this work was continued though her hotel was menaced by the fire. Well did she and her cook merit the personal thanks of President Faure.

The work of extracting the bodies commenced when the hose had cooled the wooden beams, and rendered the smouldering embers dangerous. Nearly all the corpses were headless: this is attributed to the voluminous tulle and lace head gear the ladies wore—mammoth hats. The skulls were stripped of flesh as if exhumed from a residence of twenty years in a grave; only they were black, and the teeth as a rule handsome and pearly white. Of the total victims only one, a young lady aged 18, who was to have been married next June, had features intact: they displayed no trace of fright; she calmly and smilingly reclined in death. By degrees bereaved relatives recognised the charred and shapeless masses of twisted bone and crisped flesh of their loved ones, by trinkets, scraps of half burned clothing, and by the teeth above all. The Magistrate, satisfied with the proofs, after a formal signing of the description, handed over the remains—that lay on canvass sheeting in rows, in one of the *salles* of the Palace of Industry. It was by her teeth, that her dentist most ingeniously and conclusively established the identity of the shapeless remains of the Duchesse d'Alençon, sister of the Empress of Austria. Perhaps ultimately not more than five bodies will remain unrecognised. But there are about a dozen individuals missing: these are supposed to have fled in terror, and were received by families and cared for till they could explain who they were. But as the Police authorities have

called upon citizens to declare if they shelter such wounded, and on the doctors to state if they treat any unknown patients suffering from the conflagration, all will soon be declared. It is the opinion of the fire superintendents that no remains could be totally consumed within half an hour.

Being a private festival, the police had no power to control the safety of the building or to insist on the adoption of measures of security. The only two policemen present, who were burned to death poor fellows, the Prefect sent unsolicited, to allow no outside crushing. It is certain he will be invested with extensive powers to meet such fêtes henceforth. He had a right to interfere the moment it was decided to give a spectacle where fire accessories would be requisite. But the Charity Bazaar Committee declined to advise him. For that they will have to answer in due course. Had the permission being solicited, it would never have been accorded for such a death trap. The accounts of miraculous escapes and of providential absence from the Bazaar, crowd newspaper columns, while sad are the descriptions of the sudden plunging of families into grievous sorrow and of happiness wrecked for ever. The sympathetic messages of condolence from every quarter must please the French in this hour of adversity. But no message in its eloquent brevity, simple as profoundly sincere, has so much gone home to the feelings of France, as that sent by Queen Victoria. And coming too after the homage of her empire to the lowly fishermen of the Ushant Isles, for their affectionate humanity to the *Drummond Castle* sufferers.

In time the reigning gloom will lift from over the city, for the dead must bury their dead; men must work, and women must weep. At present, interments, the screwing down of coffin, and the making of mourning, are the chief occupations. Nothing can be more gratifying than the sincere manifestations of commiseration on the part of the working classes and of the poor for the calamity that has befallen the richer strata of society, whose members chiefly made up the holocaust and over which tears fall feelingly and fast. The sacrifice was in the interest of the indigent and the afflicted; let them keep that green in their souls when the days of mourning shall be past.

The opinion is focussing to the conclusion that it is full time for the Powers not to stand upon precedents as to waiting till either Greece or Turkey demands a cessation of hostilities, but to impose peace. No side victory that Greece could now obtain can influence the inevitable issue of the war. The Hellenes wish to have a few battles more, to retrieve their honour, rather compromised by the panic of Tournavos and Pente-Pighalia. But Europe has had enough of Greece playing with fire, and thinks that she is rather abusing her position as the spoiled child of diplomacy. The war has revealed a deplorable internal condition of the Government, and the military situation of Greece. The dynasty trembles in the balance. It allowed the little nation to indulge in megalomaniac day dreams, and sent its soldiers untrained and unequipped to combat the seasoned Turks, while it placed the high commands in the hands of carpet knights and courtier generals.

All honour then to the Czar, for not hesitating to bell the cat by coming forward and offering his services to Greece to end the useless and unequal war; to save her perhaps from extinction, or at least her sovereign from being sent to join the pretty large family of Monarchs compelled to retire from business. If after that offer Greece refuses to order her troops out of Crete and leave her destiny to the Powers, the Turk must be allowed to carry out his provoked campaign. Coercion might result in a revolution in Athens, but concession can also, if too liberal, beget revolution in Constantinople. The Federated Powers will never consent to hand over Crete to Greece. Opinion must be prepared to find the Sultan not so docile as before the war, and the suspicious intimacy between him and the Kaiser is a political fact that Europe must bear in mind.

It is felt that the relations between the Transvaal and the British Government are a shade less gunpowdery. The cool resolve of England to be master—and not any foreigner—in her own house, is working beneficially on President Krüger; he reads aright the significance of the Delagoa Bay naval demonstration; of the precautionary accretions of strength in the Cape Colony garrisons; of the arrival of Sir Alfred Milner, as ready for peace as for war, and last but not least, the presence on the field of diplomacy of Mr. Cecil Rhodes—all contribute to the belief that the Boers will be shrewd enough to come into line in time. The French condemn, as strongly as do the English people, their investments in the Rand being jeopardized to meet the "Shent per

Shent" monopolies fanned by Dutchmen and imported Germans.

The weather continues to be so variable that it only adds to the depression of the times. Are we to be for ever in gloom?

BASEBALL.

A game of baseball was played on the Cricket ground on Tuesday afternoon between a nine from the Y.C. & A.C. and a team representing the Yokohama Baseball League. The Club opened with one run in the first innings, made 11 in the second, 4 in the third, and five each in the fourth and fifth. The League scored four runs altogether. Score:—

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

TURKEY AND THE POWERS.

London, June 11.

The Porte has ordered a tax on sheep to be levied and collected in Thessaly.

A Turkish Governor has been appointed at Pharsala.

The Porte officially denies the accusation made by the Greeks that atrocities were committed by the Turks in Thessaly and Epirus.

The *Daily News* correspondent at Constantinople states that Tewfik Pasha (Turkish Minister for Foreign Affairs) has informed the representatives of the Powers that it is against the Moslem religion to restore territory which has been acquired by the shedding of blood. Tewfik Pasha is supported in this attitude by the German Ambassador.

A COMPLIMENT FROM THE BOERS.

London, June 13.

The Transvaal Volksraad has proclaimed that "Diamond Jubilee Day" shall be recognised as a public holiday throughout the Transvaal.

REVIEW OF COLONIAL CONTINGENTS.

H.R.H. the Duke of Connaught has held a review of the combined contingents of Colonial troops, to the number of 500, at present quartered in Chelsea Barracks. A dozen of the Colonies were represented, including Hongkong, and the Straits Settlements.

ATTEMPT TO ASSASSINATE THE FRENCH PRESIDENT.

London, June 14.

A man fired at President Faure while on the way to the race-course yesterday. Fortunately the President was not injured.

GREAT EARTHQUAKE IN CALCUTTA.

A severe earthquake occurred last Saturday in Calcutta. The shock lasted for five minutes, during which time nearly every house in the city was damaged. Many buildings are in ruins, and the spires of the cathedrals and churches were brought down. Several natives were killed and very many injured.

PLAGUE AMONG THE PILGRIMS.

The plague has appeared at Jeddah (the port to which swarms of Mahomedans go every year on pilgrimages to Mecca).

FRANCE AND RUSSIA.

The *Times* correspondent at Paris states that a definite alliance is to be signed whilst President Faure is at St. Petersburg.

UNITED STATES AND HAWAII.

London, June 15.

There are indications that President McKinley is considering the question of annexing the Hawaiian Islands, or of establishing a Protectorate, which would be likely to lead to a very similar result.

THE EARTHQUAKE IN CALCUTTA.

The damage caused by the earthquake in Calcutta last Saturday is far more serious than was at first thought.

THE SULTAN AND THE QUEEN.

The Sultan of Turkey has appointed Murid Pasha as his representative at the Record Reign celebrations in England.

THE UNITED STATES AND HAWAII.

London, June 16.

It is understood that, directly the tariff question has been settled, President McKinley will submit a treaty to Congress for the unconditional annexation of Hawaii.

THE VENEZUELA QUESTION.

The final ratifications of the Anglo-American treaty with reference to the Venezuelan boundary question have been exchanged at Washington.

SUICIDE OF A MILLIONAIRE.

Mr. "Barney" Barnato has committed suicide by jumping overboard from the Union Line steamer *Scot*, while near Madeira, on the way to England from South Africa.

(GOVERNMENT DISPATCH.)

THE U. S. TEA TARIFF.

New York, June 10.

According to the report current here the Republican members of the Senate will withdraw the amendment respecting the tax on tea.

(SPECIAL TO THE "JAPAN MAIL.")

THE "TOKIO MARU" ACCIDENT.

Kobe, June 16, noon.

The *Tokio Maru* was floated off yesterday evening and is now in Kobe. Three blades of her propeller are smashed and some of her plates are dented, otherwise she is uninjured.

SEALING NEWS.

Hakodate, June 17.

The *Borealis* has arrived here with 300 seal-skins.

(FROM JAPANESE PAPERS.)

RAILWAY COLLISION.

Sapporo, June 17.

Yesterday an up and a down train collided at Oiwake-yeki on the Muroran line of the Tanko Railway and both trains were greatly damaged. Neither injury nor loss of life have as yet been reported.

THE "FUKUOKA'S" PASSENGERS.

Nagasaki, June 7.

Three hundred passengers on board the *Fukuoka Maru*, which had three cases of plague in board, have now been permitted to land.

SEVERE THUNDER-STORMS.

Matsuyama, Iyo, June 17.

Last night a severe thunderstorm raged here and lightning struck several places.

Nagoya, June 17.

A severe thunderstorm occurred here last night and several buildings were struck by lightning.

CHINESE LABOUR FOR SIBERIA.

Nagasaki, June 17.

120 Chinese labourers have passed through here on their way to Siberia.

KOBE TEA SALES.

Kobe, June 18.
27,700 cattie of new tea changed hands yesterday. Prices ranged from yen 34 to yen 18.50.

THE MINISTER TO ITALY.

Mr. Makino, Minister to Italy, arrived here this morning and at noon left for Bakan by the steamer *Seitoku Maru*.

JAPANESE WAR VESSELS.

Kobe, June 18.
The Japanese war-vessel *Chinyen* arrived here this morning from Tokuyama. The *Matsushima*, *Takachiho*, *Fuso*, *Suma* and other vessels are expected to arrive at this port before the 21st inst.

THE EMPEROR'S RETURN TO TOKYO POSTPONED.

Kyoto, June 18.
Measles being still prevalent in the vicinity of the Imperial Palace, Tokyo, the departure of Their Majesties the Emperor and Empress is postponed until next month.

MORE THUNDER-STORMS.

Atami, June 18.
A thunderstorm occurred here last night and the long continued rain has ceased.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season: and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season: and reopens on Friday, 1st October.

SOLUTION OF PROBLEM No. 319.

- | WHITE. | BLACK. |
|-------------------|--------------|
| 1—R to K 7 | 1—Kt to B 7 |
| 2—Q to B 4 ch | 2—P takes Q |
| 3—Kt to B 5 mate | |
| 2—Kt to B 4 ch | 1—K to B 4 |
| 3—Kt takes P mate | 2—K to B 3 |
| 2—Kt to Kt 5 ch | 1—Kt to B 5 |
| 3—Q to Q 4 mate | 2—R takes Kt |
| 2—Q to K 2 ch | 1—P to B 7 |
| 3—Q to B 3 mate | 2—K to B 4 |

Correct answers from W.H.S., J.W.E., and Omega.

SOLUTION OF PROBLEM No. 320.

- | WHITE. | BLACK. |
|---------------------|----------------|
| 1—R to Q B 2 | 1—Kt to K B 7 |
| 2—B to Q 2 mate | |
| 2—Q takes Kt mate | 1—Kt to Q B 6 |
| 2—Q takes K Kt mate | 1—Kt to Q Kt 7 |
| 2—R takes R mate | 1—P takes Kt |
| 2—Kt to K B 5 mate | 1—R to K 5 |
| 2—Q to B sq mate | 1—B to Q 5 |
| 2—B takes B mate | 1—B to B 4 |
| 2—Q takes B mate | 1—B to R 2 |

Correct answers from W.H.S., and Omicron.
J.W.E.—B to Q 5 breaks down if Black replies Kt to K 2. He escapes by K to B 7!

PROBLEM No. 323.
By PERCY HEALBY.

White to play, and mate in three moves.

PROBLEM No. 324.
By H. D'O. BURNARD.

White to play and mate in two moves.

MASTER-PLAY.

| | 44 P Q6 |
| | 45 R xP |
| | 46 P Q7 |
| | 47 K Kt7(i) P B7 |
| | 48 Resigns.(j) |

NOTES.

- (a) An old-fashioned defence, and inferior to either B to B 4 or Kt to B 3.
- (b) Not a usual move. We should have thought a speculative player like Schiffers would have played Kt to R 3 here. White gives up a pawn, but obtains a very rapid development of his minor pieces by his move.
- (c) Seeing the lack of development in White's position, Black was perfectly justified in thus developing his game instead of taking the pawn.
- (d) Obviously a miscalculation.
- (e) White probably overlooked that it was no use playing now 24—Q to K 4, for after R takes Q ch, 25—B takes R, Kt takes R, and White will not be able to catch the Black knight.
- (f) The position arrived at is most extraordinary. One would imagine that Black ere this ought to have safely trapped his opponent's wandering king. We fail to see at which point black might have done better; but we hardly agree with black's last move. R to B sq is promising, though we cannot say that any definite result can be proved from it.
- (g) The king goes merrily on his way, and, as a matter of fact, if there is any thing to choose between the two, we would rather have White's game.
- (h) There is no virtue in this check, as it only brings the king nearer to the pawn.
- (i) This is the final and most fatal mistake. K to Kt 5 was, of course, the right move.
- (j) If 48—R to B 7, K takes P ch wins.

KOBE v. NAGASAKI.

The *Kobe Herald* prints a diagram (which we reproduce) of the Game B, and naively says, "the position at present is not so unfavourable to the local players"—(!) Their opponent has only a passed pawn and is *plus* a bishop and a pawn. We should think that a graceful resign would now be in order.

Mr. JORDAN.

KOBE C.C.

GAME No. 727.

QUEEN'S PAWN'S GAME.

- | White—Mr. Mason. | Black—M. Tschigorin. |
|------------------|----------------------|
| 1 P Q4 | 1 P Q4 |
| 2 B B4 | 2 B B4 |
| 3 B xKt | 3 B xKt |
| 4 P xP | 4 P xP |
| 5 Kt B3 | 5 Kt B3 |
| 6 P K4 | 6 P K4 |
| 7 P xP | 7 P xP |
| | 8 B Kt5 ch |
| | 9 Kt B3 |
| | 10 Q Q2 |
| | 11 Q Kt5 ch |
| | 12 Q xB ch |
| | 13 B K8 ch |

NOTE.

(a) Although the capture on the 3rd move is weak, it will be seen that thereafter every move of White's is a developing move, while Black fritters away his time and blocks his own pieces in short-sighted attacking play.

THE GREATEST WONDERS OF MODERN TIME

'HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist, Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, JUNE 26TH, 1897.

MARRIAGE.

On 19th June, at Christ Church, by the Rev. E. Champneys Irwine, CHARLES GUSSEY CONINGHAM, late Royal Artillery Militia, second son of Major-General Herbert Coningham, Her Majesty's Indian Army, to LILY REBBCCA, eldest daughter of William Bourne, of Yokohama. No cards. [Military and Naval papers please copy.]

SUMMARY OF NEWS.

A NEW Imperial University is to be opened at Kyoto in September next.

THE Emperor's return to the capital from Kyoto has again been postponed.

THE rebels are still giving much trouble in the central provinces of Luzon.

THE workmen at the Naval yard at Yokosuka propose striking for higher wages.

THE Hawaiian Annexation Treaty was submitted to the U.S. Senate on the 17th instant.

THE doubling of the line of the Tokaido Railway is to be started at once, in sections.

MOST of the Japanese papers have published congratulatory articles on the Queen's Jubilee.

THE Jubilee celebration subscriptions at Hongkong amounted on the 16th inst. to \$56 559.

THE trial and testing of some lately imported quick-firing guns for the army has been going

on for some time at Shimoshizu, Chiba Prefecture.

MR. CHINDA, the new Japanese Minister to Brazil, left Tokyo for this port on the 18th inst.

THE N. Y. K. steamer *Tokyo Maru*, which grounded near Kobe, has been got off with little damage.

THE Japanese Government have lodged a protest against the annexation of Hawaii by the United States.

THE ratifications of the amendments of the Chinese-British convention were exchanged at Peking on the 8th instant.

THE celebration of the Diamond Jubilee of Queen Victoria passed off at Yokohama on the 22nd with great *clat*.

A MOST successful Ball was given by H.B.M.'s *Chargé d'Affaires* at the British Legation on the night of the 21st instant.

A NEW section is to be opened in the Imperial Tokyo University, for the training of diplomatic and consular officers.

QUARANTINE on vessels arriving from Japan at Honolulu was withdrawn on the 10th inst., the date of the *Gaelic's* arrival there.

THE steamer *City of Peking*, which left Yokohama on the 19th inst., is reported to have taken 380 Chinese labourers to Hawaii.

SOME four hundred carpenters in Yokohama have gone on strike for higher wages. They are paid 55 cents per day but want 75.

THE new Japanese battle-ship *Fuji Kan* was to take part in the Jubilee Review of the fleet by Queen Victoria on the 24th instant.

A CONFERENCE of Police Superintendents throughout the country took place at the Home Department on the morning of the 22nd inst.

THE decoration presented by the Emperor of Germany to the Emperor of Japan was received at the German Legation in Tokyo the other day.

THE Bicycle parade on the occasion of the Jubilee celebration in Yokohama, proved not only a novel but a very effective and pretty display.

A VERY severe hailstorm occurred in Nagano Prefecture on the 21st inst. in which five persons were killed, many injured, and more than a score of houses demolished.

IN the House of Lords on the 20th inst. an Address of Congratulation was passed unanimously. In the House of Commons a similar Address was passed by 459 to 44 votes.

ON the 19th inst., on the Yokohama-Tokyo railway, two goods vans were derailed and fell into a ditch near Shinagawa Station, owing to the blunder of a pointsman. No persons were injured.

MR. GERALD LOWTHER, H.B.M.'s *Chargé d'Affaires* in Japan, proposed the health of the Queen at the reception at the Naval Depot, Yokohama, on the evening of the Diamond Jubilee celebration.

THE Jubilee prizes for the boats of the Yokohama Yacht Club were won by *Alary, Snap*, and *Almee*, gold cups; *Maid Marion, Spray, White Violet, Eclair, Susume*, and *Chocho*, silver cups.

THE Pollard's Lilliputian Opera Company opened very successfully at the Public Hall Yokohama on Monday the 21st, the piece selected

being "La Mascotte." On Wednesday they gave a very pleasing performance of the comic opera "Dorothy" and on Thursday performed the evergreen "Pinafore."

A PERFORMANCE of Wallace's opera "Maritana," was given at the Public Hall on Friday evening by local amateurs under the leadership of Mr. T. V. Twining and with the assistance of Mr. Morse, his tenor protégé.

A SAD fatality occurred on Monday night to a seaman named Fothergill, of H.M.S. *Grafton*, who, while nailing up a flag at the Salvation Army Home, fell from a window and fractured his skull, dying immediately.

SPECIAL thanksgiving services were held in St. Andrew's Church, Tokyo, and Christ Church Yokohama, on the occasion of the celebration of Queen Victoria's Diamond Jubilee on the 20th and 22nd, and drew crowded congregations.

THE American, French, German, and other foreign communities in Yokohama, freely availed themselves of the invitation extended to them by the British Committee, and cordially joined in the celebration of Her Majesty's Diamond Jubilee.

A TAX collector set fire to an alcohol store in Yokohama on the 21st inst. by dropping a spark from a match into a jar of spirits, and the entire premises were burnt down, the proprietor of the store, the tax collector, and an employé being also badly burned.

AMONG the recipients of Jubilee Honours are Sir William Robinson, Governor of Hongkong, and Mr. G. Jamieson, Consul and Assistant Judge at Shanghai. The former has been raised to the Grand Cross of St. Michael and St. George, and the latter made a Companion of the same Order.

THE *Japan Times* says that the Judge of the Tokyo Lower Court, in giving judgment yesterday in the case brought by Mr. Masujima against the Tokyo City Council for yen 20,000, for services rendered in the Water-pipe Scandal case, said that the full claim could not be established, but he awarded plaintiff the sum of 12,000 yen.

THE Import market generally has been very dull during the past week, with the exception of yarns, in which a good business has been done with country buyers for delivery ahead, rates consequently hardening slightly. Piece goods, fancies, and woollens have scarcely moved. There has been a delay in telegraphic communication with Europe and this has interfered with business to some extent. Small transactions have taken place in certain classes of metals, principally iron plates and bars, but buyers generally appear to be well supplied for the present. In sugar there has been a fair business, at previous rates, arrivals of brown being large. The kerosene market continues dull, purchases being only for immediate requirements. In exports, the tea market is quieting down and prices are gradually lowering since the rush of last month. The uncertainty regarding the duty in the United States still continues, and has had the effect of making buyers very careful, now that the most pressing requirements have been filled. The prospects in the silk market are brighter than ever for producers and holders: news having been received of damage to the Italian crop which it is calculated will reduce the out-turn by 15 per cent. less than last year, while a big crop and high prices are anticipated in Japan. So far very little business is doing. Exchange remains very weak, with slight fluctuations.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Hawaiian question occupies the attention of the leading Tokyo journals to the exclusion of almost every other topic.

The *Fiji Shimpō*, as might have been expected, writes with the most conspicuous moderation. It finds nothing surprising in the news of President McKinley's conclusion of an annexation treaty. Ever since Hawaii became a republic, the question of its inclusion in the dominions of the United States has been upon the tapis, and although a number of American politicians opposed the measure, it can not be said to have been excluded, at any time, from the field of practical politics. The only point deserving special attention at present is the suddenness of the step taken by the President. What consideration has precipitated the action of the American Cabinet? It looks as if the advocates of annexation had made an adroit use of the complication between Japan and Hawaii, and had succeeded in persuading the President that unless he stepped into the breach Japan might develop dangerously aggressive designs. It is scarcely credible that such an impression can have honestly existed. Japan's demands have been limited by the dictates of simple justice, and she has pursued towards Hawaii a perfectly moderate and conciliatory course, asking for nothing that she was not absolutely entitled to receive. That her attitude was capable of misconstruction can hardly be imagined. From the point of view of her trouble with Hawaii, she can only congratulate herself should the annexation of the islands become an accomplished fact, for with whatever gentleness and conciliation she might conduct the negotiations, there was always a certain sense of shame in entering the diplomatic lists with so puny an opponent. The United States, on the contrary, will be easy and pleasant to deal with, and may be counted on to do what is just. But there are other aspects of the case. Small as the Hawaiian islands are, their geographical position lends them importance in the eyes of more than one Power, especially Great Britain, for they lie in the direct route of telegraphic communication between Canada and Australia. It remains to be seen, therefore, what attitude England may assume. The Senate, of course, may not endorse the President's action, and pending its decision, further comment seems superfluous.

The *Nichi Nichi Shimbun's* tone is less moderate. The line taken by it hitherto has been to warn the Government against such a display of strength in dealing with Hawaii as might be construable by interested politicians into an evidence of aggressive design, and it finds in the present conjuncture not only a warrant for its warnings but also a basis of indictment against Count Okuma's conduct of foreign affairs. The question has to be regarded from two stand-points: the stand-point of international relations, and stand-point of national interest. Hawaii is a small and comparatively insignificant country, but it is a country with which Japan was on terms of friendly intercourse. The overthrow of its national independence and the absorption of its people into another State are conjunctures that Japan can not regard with indifference. Her conduct towards Korea should be remembered. Korea, too, is a small country incapable of standing alone, but Japan has spared no pains to guarantee its independence, sometimes working in concert with China for the achievement of that end, sometimes enlisting the co-operation of other States, and not even shrinking from an appeal to the sword when the circumstances dictated such an effort. Hawaii's case is not greatly dissimilar. Every country is bound to consider and protect its own interests. The annexation of Hawaii by the United States would seriously impair Japan's interests in the immediate present and their development in the future. One fourth of the population of the Hawaiian islands are Japanese, who have gone thither

in the capacity of labourers. Annexation by the United States would mean that the laws of America with reference to the exclusion of all the Japanese residing there would necessarily follow, and it goes without saying that the subsequent ingress of free labourers from Japan would cease. Not the shadow of a Japanese would be seen in Hawaii, and with their disappearance would simultaneously disappear the trade that has been growing up between Japan and the little republic. If material interests constitute any title to discuss the fate of a country, Japan's title in this instance stands beyond the reach of all dispute. Some time ago, Mr. Hoshi Toru, acting under instructions from Count Okuma, approached the Government in Washington, and received an assurance that no intention of annexing Hawaii existed. On the strength of that assurance Count Okuma, recently addressing the assembly of Local Governors, said that the United States was at one with Japan as to the impropriety of Hawaii's conduct, and might be trusted not to oppose Japan's just demands. His Excellency also referred to the apprehensions prevailing among a section of the Japanese people on the subject of the possible annexation of Hawaii and the expulsion of Japanese labourers, and took the occasion of giving an assurance that these apprehensions were unfounded. It would seem that the Minister of Foreign Affairs allowed himself to be over-easily persuaded. At the very moment when he was proclaiming such assurances, negotiations for the annexation of Hawaii must have been proceeding with every prospect of success in Washington. It would also seem that the American Government deliberately made a deceptive declaration to Japan. Count Okuma's failure is the failure of Japan's Foreign Minister, and therefore the failure of the Japanese empire. There now devolves on him the responsibility of correcting his error and averting its evil consequences, if that be possible. The *Nichi Nichi Shimbun* has always felt, and has often expressed, doubt as to the wisdom of the policy that placed a display of force in the forefront of negotiations with a State like Hawaii, especially when the annexationists were eagerly seeking some pretext to justify their policy. Unfortunately events have fulfilled that forecast. If the Hawaiian people were unanimously desirous of annexation, their wishes should be respected. But that is not the case, and even if it were, there is the contingency that a nation may become the victim of a temporary hallucination. It is Japan's duty to take care that her intentions with regard to Hawaii do not minister to any such hallucination, and it is also her interest. She has been seriously deceived by the United States, and, while making it perfectly clear that she seeks from Hawaii nothing but simple justice, nor is actuated by any motive except a strictly legitimate resolve to safeguard her own interests, she must call upon the Cabinet in Washington for some explanation of the deception practised by it towards this country.

The history of Hawaii's relations with the United States is reviewed in detail by the *Yomiuri Shimbun*, from 1876 to 1893, the conclusion reached being that annexation has been a kind of plank in the platform of the Republican Party whereas it has been uniformly opposed by the Democrats. That it is contrary to the American unwritten constitution, there can be no doubt. The Republicans endeavour to represent such a step in the light of an extension of the Monroe doctrine, but that is a plainly absurd distortion of the celebrated tenet. The Monroe doctrine says, in effect, America for the Americans. By America it means the continent of America. No chain of reasoning, however extravagant, can connect with the American continent a group of islands lying two thousand miles distant in the wide Pacific. Were such an application of the doctrine justifiable, no part of Asia would be beyond the sphere of American influence. In matters of this kind the Republican Party have always violated the spirit of American policy as well as the unwritten law of the Republic, and with equal persistence their

mistaken procedure has been resisted by the Democrats. Had there been any discernible reasonableness in extending the Monroe doctrine to an island, Cuba, which, lying in the Gulf of Mexico, may be regarded as a part of the American Continent, would certainly have been brought within the pale of the United States' recognition. But even that step has been opposed by the Democrats, who, in all matters of the kind must be acknowledged to be the true guardians of their country's best interests. President McKinley has now signed an annexation treaty, but, in order to become effective, the document has to receive the endorsement of two-thirds of a Senate in which the Republicans number only one-third of the members. The fate of the Treaty is, therefore, more than problematical, above all when we consider how little substantial interest America has in the matter. There are but four thousand Americans in Hawaii, including women and children, and of these only a section favour annexation. Thus a little band of adventurers from the Pacific Slope are to decide the fate of the Hawaiian Republic, and to push the United States into a path not leading to any benefit whatever for herself, and certainly involving her in complications with England, and other Great Powers. It is impossible to suppose that the American people will be blind to these facts, by whatever vertigo the McKinley Cabinet has allowed itself to be carried away. So far as Japan is concerned, however, she has to look beyond this annexation question, which, as has been shown, is most unlikely to be carried farther than the conclusion of an abortive treaty. She has to consider the true inwardness of the annexation problem and the dangers by which Hawaii is menaced. The agitation for annexation owes its momentary force to the fact that the McKinley Cabinet, in pursuance of its protective policy, has refused to renew the Reciprocity Treaty with Hawaii, and is about to levy an import duty of 1.75 cents per lb. upon raw sugar from Hawaii. Such a duty means \$32.50 per ton, and when it is added to the prime cost of the sugar (\$16) and the various expenses attendant upon placing it in the American market, the final figure becomes \$71.50 per ton, whereas sugar produced in America can be sold for \$63. Under such circumstances it is plain that Hawaiian sugar would be totally excluded from the American market, and it is in view of that imminent contingency, a contingency fatal to the prosperity, if not to the very existence, of the sugar industry in Hawaii, that the advisability of getting the islands included among the American dominions has forced itself upon the attention of the Hawaiians. They are in truth placed in a most pitiable position, and inasmuch as the prospect of annexation by the United States is more than problematical, their industrial future looks hopeless, unless they can find another market for their sugar. That is the outlook with regard to which Japan should shape her Hawaiian policy. It may be possible for her to supply the market that Hawaii must lose in America should the McKinley Tariff become law. Japan's consumption of sugar is very large and shows a steady tendency to increase. Last year, she bought 2,260,000 piculs of refined sugar from abroad, and this year her purchases promise to become still larger. If she could admit the raw sugar of Hawaii free of duty, and refine it herself, not only would Hawaii's difficulty be solved, but an important industry would be started in Japan. An increasing field of profitable labour would be provided for her emigrants, a larger market opened for her goods, and an era of assured prosperity inaugurated for Hawaii. On the other hand, it is possible that the United States, in consideration of the relations hitherto existing with Hawaii, may agree to modify the McKinley Tariff in the latter's favour, so as to admit Hawaiian sugar at one-half, or one-third, of the rate now proposed. In that event Hawaii could compete with American sugar in American markets, but it would behoove her planters to reduce the cost of production. Cheap labour would thus become more than ever essential, which means that the labour markets of China and Japan would have to be drawn upon, and as Japanese labour is procur-

able at less expense, and is, on the whole, more advantageous than Chinese, the situation would inure to Japan's benefit. These are the points that really call for earnest attention on Japan's part. Annexation, being a most improbable contingency, need not concern her.

The *Tokyo Shimbun* (Opposition), on the contrary, sees no reason to anticipate any serious objection on the part of the Senate. The idea of annexation is nothing new. It entered the field of practical politics in President Harrison's time, and would have been translated into action had not the Harrison Cabinet gone out of power. President Cleveland, coming into office, despatched a commissioner to investigate the state of affairs in Hawaii, and the latter's report declared annexation to be untimely, on the ground that the Hawaiian Republic was upheld solely by the presence of American men-of-war and American marines, on whose withdrawal the restoration of the monarchy was a certainty. That forecast, whatever basis of fact may have existed at the time, has now ceased to have any value, and President McKinley has signed a treaty of annexation. There is no reason to suppose that the Senate will not endorse his act. Has Count Okuma, upon whom rests the responsibility of managing the country's foreign affairs, paid due attention to the history of this problem? Has he appreciated that, under the presidency of McKinley, reasons in favour of annexation would become imperative? If he did recognise the facts of the past and the prospects of the future, why has he failed to adopt towards the United States such an attitude as would have postponed annexation until Japan's dispute with Hawaii had been settled, and her material interests safeguarded. Before a Committee in the last session of the Diet he expressed an opinion the gist of which was that annexation could not be regarded as a party question in the States, since it found supporters among the Democrats as well as among the Republicans. Hence he can not have counted on the rejection of an annexation treaty by the Houses of Congress. Moreover, he gave it to be understood by the Diet that he intended to prevent the annexation of Hawaii, but in truth he has promoted that result by playing into the hands of the pro-annexationists, who concocted a scheme to provoke Japan's anger and induce her to make a display of force which could be used as a means of persuading America to take the desired step. Count Okuma, by adoption of a "strong policy" towards Hawaii has allowed this empire to be made the tool of a handful of intriguers in a petty little island, has lowered the prestige that Japan won so hardly in the war with China, and has sacrificed his country's material interests.

The *Chuo Shimbun* (National Unionist Organ) compares this incident to the retrocession of the Liaotung Peninsula, in so far as both occurrences may be described as the sudden interference of outside Powers in matters that concern Japan only. It recalls the fact that Count Okuma was among the severest critics of the Ito Cabinet on the occasion of the Liaotung affair, and declares that Count Okuma has now been the means of subjecting the country to a like humiliation. How would the United States feel if, while its Government was engaged in negotiating with Hawaii for the settlement of a wrong suffered at the latter's hands, Japan were to step in, and without a word of warning to the Washington Cabinet, annex Hawaii? The *Chuo* does not expect that the United States Senate will endorse the Treaty concluded by President McKinley, but it strongly recommends Count Okuma to adopt the course which he ought not to have neglected hitherto, namely, to place himself in communication with England and Germany, which Powers are both opposed to annexation, and to induce them to address remonstrances to the Government in Washington.

The *Hochi Shimbun* regards this incident as an example of what may be called "peaceful

aggression." America has not proceeded to possess herself of Hawaii by force of arms, but has resorted to the expedient of sending thither a handful of adventurers, who, though numerically they amount to only a small fraction of the population, have usurped a position that apparently entitles them to speak for the whole, and are now concluding an arrangement for the final disposal of territory that does not belong to them, over which they have no right of control, and against the wishes of whose inhabitants they are running counter. The *Hochi* does not suggest, of course, that there has been any deliberate plot of that kind on the part of American statesmen. It merely asserts that when the accounts of the situation are cast up, the net result presents these figures. If there be a law that requires a bystander to interfere when he sees a man's life threatened with violence, there is no law that requires him to abstain from interference when he sees murder on the eve of consummation by poison. Public opinion will make itself heard sooner or later. What the issue will be, the *Hochi* does not undertake to predict, but it refuses to believe that the McKinley Cabinet will be able to consummate this act of "peaceful aggression."

The *Kokumin Shimbun* concludes that Hawaii's contumacious attitude towards Japan's just claims was due to the conviction that she would be able to shift her responsibilities to the shoulders of the United States, her annexation by the latter being imminent. The fact is that the Hawaiians, becoming jealous of Japan's growing influence in the islands, cast about for means to destroy her position there, and hit upon this annexation scheme as the most promising device, for under American administration the free employment of Japanese labour would be impossible, and the expulsion of the Japanese from Hawaii would be practically assured. The concoctors of the plot found the McKinley Cabinet ready to fall in with their views, for it is plain that President McKinley, as soon as his new Tariff has been passed, intends to adopt a high-handed foreign policy. However, the annexation is not yet consummated. The voice of the Senate has still to be heard, and so also have the voices of other countries directly interested in the question, among them being Japan. It should not be difficult to prevent the carrying out of the project. Japan, throughout the whole of this complication, has treated Hawaii with the utmost courtesy and consideration, never allowing the slightest evidence of superior strength to obtrude itself. But Hawaii has rejected Japan's just demands in the briefest manner, and has shown no disposition to atone for the wrongs suffered by Japanese subjects. The intention of the Honolulu statesmen has been to back out of the breach, and take shelter under America's protection. Hence the consequence of annexation will be that Japan's claims will remain unsatisfied, that the emigration of her people to Hawaii will be stopped, and that her subjects who are already settled there, will be driven out.

The *Nippon* briefly reviews the history of America's attitude towards Hawaiian annexation, and concludes that President McKinley is simply pursuing the policy inaugurated by President Harrison, that is to say, the policy of the Republican Party. Our contemporary does not think, however, that the Treaty will obtain the necessary two-thirds' vote in the Senate. Turning to Japan's position in the matter, it finds that the Okuma Cabinet has been taken by surprise, just as the Ito Cabinet was on the occasion of the "Three Powers' interference in 1895, and it attributes the fact to the secrecy observed by the McKinley Cabinet, all the negotiations for annexation having been carried on by a special commission whose proceedings were not disclosed to any one except the President. Japan would not take a present of Hawaii were the little islands with their sugar plantations offered to her. None the less, her interests require that she should oppose their annexation by America, since, under American adminis-

tration, the profitable market that they offer for her labour would be completely closed.

The *Asahi Shimbun* (Tokyo) writes at considerable length, but its articles (two) are chiefly taken up with historical details. It predicts that the Treaty will not be ratified, first because the annexation of Hawaii would be fatal to the interests of American sugar-growers, and secondly, because the Democratic Senators opposed to such an extension of the Monroe doctrine are in a majority. The *Asahi* thinks that the McKinley Cabinet has shown great want of consideration towards Japan. Considering the magnitude of Japan's interests in Hawaii, and considering the fact that she was engaged in a delicate and important negotiation with the little Republic, the annexation of the islands by the United States ought not to have been concluded by treaty without some reference to Japan.

Other journals, as the *Seikai-no-Nippon* and the *Meiji Shimbun* also comment on the question, but their remarks do not travel beyond those already quoted.

JAPAN'S ACTION WITH REFERENCE TO HAWAII.

The *Mainichi Shimbun* says that the main points of the communication which Mr. Hoshi Toru is instructed to make to the American Government are these:—

"The independence of Hawaii has an important bearing on the affairs of the Pacific. Japan desires that Hawaii should be independent. Therefore she must assume an attitude of unqualified opposition to any one seeking to impair that independence under whatsoever conditions. The Treaty for annexing Hawaii to the United States completely changes the independent status of Hawaii and makes the islands a dependency of the United States. Consequently, the Japanese Government can not assent to the Treaty of Annexation. Moreover, the Treaty annexing Hawaii to the United States impairs all the rights and privileges that Japan enjoys *vis-à-vis* Hawaii. Hence Japan must oppose the Treaty."

The above communication is said to have been accompanied by the following instructions:—

"The Japanese Government's wish is to increase the warmth of the relations that have existed between Japan and the United States for forty years. But the fact that the Government of the United States, regardless of the injury inflicted on another country, and regardless of the national policy of the United States itself, has concluded a Treaty for the annexation of Hawaii, suggests that there may possibly be some deep reason for the step. In view of Hawaii's present inability to discharge the functions of an independent country, some persons apparently imagine that unless America annexes the islands they may become the object of another Power's aggression. Some, indeed, go so far as to assert that Japan has become an aggressive State since the War, and that she will probably end by seizing Hawaii. Such assertions are complete misinterpretations of the intentions of the Japanese people and the Japanese Government. Japan entertains no aggressive designs whatever against Hawaii. On the contrary, she regards Hawaii as a friend and desires to uphold its independence. It is to be hoped, therefore, that Japan's disposition will be made known to the Senate and to the American people, and that the American Government will reconsider the situation and refrain from a step inconsistent with the relations hitherto existing between the United States and Japan."

In the Mosquito Yacht Club's races sailed on Saturday and Sunday, the boats finished in the same order:—*Nandesuka* first, *Sodesuka* second, and *Kodesu* third.

THE VERNACULAR PRESS AND THE JUBILEE.

There is a tone of hearty sincerity in the utterances of the vernacular press with reference to the Diamond Jubilee. Most of the leading Tokyo journals publish long articles reviewing the events of Her Majesty's reign in glowing language, and expressing unstinted admiration for the progress made by England under her beneficent sway. It would be tedious to translate the historical portions of these articles, though they are by no means without interest, as showing the intimate knowledge that Japanese journalists possess of the progress of events in the British dominions. We shall translate from each paper only such paragraphs as contain expressions of original opinion and sentiment:—

THE "JIJI SHIMPO."

Not merely the various countries owning England's sway and her Colonies, but all the nations of the world, Japan included, regard this sixtieth anniversary of Her Britannic Majesty's accession as an occasion for congratulation. From the point of view of politics, literature, learning and science, Japan has come to have much in common with England, and although the two countries lie in different hemispheres, their national interests are in many respects identical, and the adversity or prosperity of either appeals equally to the other's sympathies. But it is not merely because of our relations with England that we Japanese offer our congratulations on this occasion. Apart from such comparatively narrow considerations, we can not choose but express, as members of the human family, our hearty joy for the good fortune that has attended Her Majesty's reign. The great progress that British industries have made in recent times is due primarily to the value that Englishmen set upon learning and science and to the encouragement that they extend to them. In the domain of her foreign relations, also, England's advance has been continuous. Her national prestige has been splendidly enhanced. Her dominions have been extended and her colonies have grown to an extent without parallel in ancient or modern times. Eastward or Westwards the dominions of the Empress-Queen have no limit. The sun never sets upon them. Such splendid results are due, in great part, to Her Majesty's wise government. In all times there have been few rulers whose reigns have been marked by such prosperity at home and glory abroad. If for these reasons, apart from any question of the relations between the two countries, we offer our hearty congratulations on the occasion of this Jubilee, we are induced to do so all the more in consideration of the warm friendship that exists between England and Japan.

THE "KOKUMIN. SHIMBUN."

Her Britannic Majesty ascended the Throne sixteen years before the arrival of Commodore Perry at Uraga. Japan was then in a state of darkness and sleep. Her Majesty is the only Sovereign that can compare the progressive Japan of today with the Japan of that era of benighted slumber. English civilization has contributed the greater part of the material for building up New Japan, and it is for us above all other nations to celebrate this Jubilee. Ten years ago, on the occasion of the fiftieth anniversary of Her

Majesty's Coronation, our relations with England were not entirely satisfactory, and the number of Japanese that celebrated the Jubilee with genuine heartiness was small. But now, at this great festival every unit of the Japanese people wishes long life to the Queen-Empress of Great Britain. In the interests of the relations between the two countries, and in the interests of Humanity, we pray that Her Majesty may long be spared.

THE "CHUO SHIMBUN."

In the year following Her Majesty's Coronation, the State revenue of England was £52,500,000; now it is £112,000,000. In the year of the Coronation, the foreign trade of Great Britain represented a value of £125,000,000; last year, it totalled £738,000,000. Such are the results of the growth of the British dominions; of the development of British trade and industry; of the progress of British military systems, of the power of British armaments. To such a preeminence of wealth and strength has England been raised among the nations of the earth. To the Sovereign of the country that shines as the glory of nineteenth-century history; to the Sovereign of the country that boldly took the lead in revising Japan's Treaties; to the Sovereign of Anglo-Saxondom, we tender our profound congratulations. Long live the Queen!

THE "YOMIURI SHIMBUN."

Her Majesty lost her Royal consort when she was in her forty-second year, but her devotion to duty never faltered. Imperative necessity sometimes dictated an appeal to the sword in the conduct of her country's foreign relations, but by wise government, and by the perpetual promotion of commerce, industry, literature, and science, she has contrived that there should fall to the nation's lot such fortune as has no parallel in history. We belong to another race, but as sincere friends we offer our profound congratulations on this occasion unprecedented in the career of nations. Long live the Queen!

THE "HOCHI SHIMBUN."

Her Majesty came to the Throne twenty-two years after the celebrated soldier Wellington, at the head of the allied armies, conquered Napoleon at Waterloo, and after that monarch, the troubler of Europe, had been banished to an island. The virtues of the Queen attracted to her council board many able Ministers, through whose loyal services the domestic and foreign affairs of the country were managed with admirable wisdom. Very shortly after her coronation, troubles had to be dealt with in Canada, and North America from the Atlantic to the Pacific was brought into a state of order. In the Crimea, Russia was defeated. In India, control was re-established. To such a height was the country's power raised that a conflict with the whole world would not have dismayed it. * * * We offer up a warm prayer that Her Majesty may long be spared.

THE "TOKYO ASAHI."

England's greatest good fortune has been under the rule of Queens rather than of Kings. In Elizabeth's time she defeated Spain; with Mary's accession the Declaration of Rights is associated; under Anne, France was beaten back; and under the sway of the Empress-Queen Victoria unprecedented progress has been

made in literature, commerce, industry and national growth. * * * We pray that our Sovereigns may be like Victoria, and our people like her people.

THE "MEIJI SHIMBUN."

The dominions of Her Majesty stretch across the Western and the Eastern Hemispheres. The world has never seen such a vast empire until now. Only a Sovereign possessing the highest qualities could have ruled that huge realm successfully for the long period of sixty years. Great Britain and our Emperor are like relatives. While offering our respectful congratulations to the Sovereign and the people of Great Britain, we venture to hope that by the united efforts of England and Japan, the tranquillity of the Orient may be preserved.

THE TROUBLE AT TIENTSIN.

The latest number of the *Peking and Tientsin Times* tends to suggest that affairs in Tientsin were assuming a calmer complexion at the time of going to press, but correspondence appearing in the columns of the *Chuo Shimbun* is more disquieting. The Tientsin paper is dated June 5th. Its article concludes with the words:—"There is less excitement observable in the public demeanour according to latest accounts, but nothing to justify any relaxation of caution." The *Chuo* correspondent dates his letter June 7th, and what he says may be summed up thus:—"Strange rumours are current among the people in the city to the effect that the frequent cases of kidnapping reported of late are the work of the Roman Catholic Missionaries or their agents, the object being to use the eyes and kidneys of the children for medicinal purpose. It is alleged that a conspiracy has been formed to attack the foreign settlement on the 21st of June, and to burn the Roman Catholic Cathedral. These sinister rumours become more and more prevalent every day, and the Consuls of the various nationalities have deemed it prudent to telegraph the facts to their Governments, and to ask for the protection of men-of-war. The gate leading from the Foreign Settlement to the Chinese quarter is closed every night at 11 o'clock. In answer to an appeal from the Japanese Consul, the gun-boat *Akagi* has been sent round from Chefoo and is now anchored at Taku, but as the Peiho is not navigable at present, marines will have to be landed for the protection of the Japanese residents. Chinese soldiers are quartered in various parts of the city for the express purpose of checking rioters, but that measure rather alarms than reassures the Japanese, who suspect that, in the event of a disturbance, they would have more to fear from the soldiers than from the citizens."

Only by a person familiar with Tientsin can the perils to which it is constantly exposed be appreciated. The foreign settlement lies in a little suburb of a vast city teeming with seven hundred thousand Chinese. The French Cathedral, which was burned to the ground on June 21st 1870, and which, having been rebuilt, is to be opened on June 21st, 1897, stands far up the river, some three miles from the settlement, and in a position very difficult to protect. What happened on Tuesday the 21st of June twenty-seven years ago can never be forgotten. At 2 o'clock in the afternoon, a mob having assembled near the French Consulate, and broken

some windows, the Consul, Mr. Fontainer, proceeded in uniform to the Yamén of the Viceroy. He was there murdered. In his absence the mob broke into the Consulate, and slaughtered the Abbé Chevrier, M. and Madame Thomassin, and a Priest. M. Thomassin was an attaché of the French Legation in Pekin. He had arrived from Paris on the previous day, with his young and beautiful bride. Simultaneously the Cathedral was set on fire, and the Hospital of the French Sisters of Mercy assaulted. All the sisters were dragged into the street; stripped naked; subjected to nameless indignities; their eyes plucked out; their breasts cut off; their trunks ripped open; their hearts dragged out; their bodies cut into pieces, and the flesh distributed among the mob. The entire hospital was then burned, together with nearly a hundred orphan children who were receiving charitable nurture there. A Russian merchant and his wife, a French merchant and his wife, and about 50 Cantonese, suspected of being friendly to the Europeans, were also butchered. That awful incident had its origin in reports precisely similar to those now industriously circulated. But whereas, in 1870, no one paid much attention to the reports, nor were any measures of defence organized, the sinister significance of such rumours is now fully recognised, and precautionary steps have been taken. We may reasonably hope, therefore, that actual violence will be arrested, but certainly the situation suggests much cause for uneasiness.

JAPANESE TOPICS.

Count Okuma's instructions to the Japanese Representative in Washington with reference to the question of the Hawaiian Annexation are, of course, concealed from the public, but the *Mainichi Shimbun* professes to have learned the gist of them from a trustworthy source. They are to the effect that while fully recognising the exceptionally friendly relations hitherto existing between this country and the United States, and while desiring to develop that friendship still further, Japan, seeing that the rights and privileges already secured to her conventionally and constitutionally are threatened, has no choice but to ask the American Government to reconsider the question. If the Treaty just concluded between the United States and Hawaii for the annexation of the latter by the former be put into force, the result will be not only the abolition of the treaty now existing between Japan and Hawaii, but also the abrogation of all the rights and privileges enjoyed by Japan under the Treaty and the constitution. It will therefore be impossible for Japan to consent to the annexation unless it involves no change in her present Treaty with Hawaii, or in the laws relating to it. The *Mainichi* adds that the Japanese Government is resolved to push the matter vigorously.

An Imperial Ordinance has been issued authorizing the change of the name "Imperial University" to "Imperial Tokyo University," and the adoption of the name "Imperial Kyoto University" for the institution in Kyoto. The Ordinance further provides that the organization of the Kyoto University shall not be regulated by the ninth Article of the Imperial University's Law but that there shall be a

Law College, a Medical College, a Literature College, a College of Philosophy, and a College of Engineering. Discretionary power to determine the time for opening the Kyoto University and its Colleges is vested in the Minister of State for Education.

According to information published by the *Nippon*, the purpose of the plot just discovered in Korea was to get the King to return to the Russian Legation. The details of procedure were, first, to set fire to the Japanese Settlement, during the night, and then to fire some blank cartridges, whereupon the King, in his alarm, would naturally seek the advice of the foreign Representatives. The conspirators were then to declare that an attack upon the Palace by the Japanese was imminent, and that no recourse offered except for His Majesty to seek the protection of a foreign Legation. Neither the English nor the American Legation having guards, there would, of course, be no alternative, but the Russian Legation. But there is also another version of the affair, namely, that the ultimate object was to dethrone the King and put the *Tai Won-Kun* in his place.

Some statistics are published by the Department of Agriculture and Commerce with reference to the number of cattle and horses in Japan. We quote:—

Cows, Japanese breed	608,076
Bulls, do. do.	34,146
Cows, Mixed breed	34,146
Bulls, do. do.	13,555
Cows, Foreign breed	7,720
Bulls, do. do.	2,564
Total number of Cattle	700,207
Mares, Japanese breed	806,522
Sires, do do	652,354
Mares, Mixed breed	10,109
Sires, do do	7,554
Mares, Foreign Breed	205
Sires, do do	277
Total number of Horses	1,477,021

Through the charitable coöperation of Messrs. Izawa, Tsuda, Ouchi, Tanabe, Maeshima, Verbeck and others, a number of blind men have been brought from Formosa for the purpose of being placed in the Tokyo school of instruction for the blind and dumb. A concert will be given next Saturday (26th instant), to provide funds for the support of these afflicted persons. We beg to draw attention to the announcement of the event in our advertising columns.

The latest trouble in Korea appears to have been an affair of the pettiest description. Some twenty arrests are said to have been made, but evidently no excitement was created, and there are no consequences.

One of our local contemporaries has published a translation of a note appearing in the *Tokyo Asahi* to the effect that Mr. Yokoyama Magoichiro and two or three others undertook to procure for Messrs. Oppenheimer Frères ten million yen worth of Japanese bonds, but were obliged to cry off their bargain owing to the refusal of Baron Iwasaki and Mr. Yasuda to aid them in getting the bonds. We are asked to say that, so far as Mr. Yokoyama is concerned, the above statement has no truth whatever.

THE BRITISH VICE-CONSUL AT MACAO AND THE PORTUGUESE.

Mr. Goffe, the British Vice-Consul at Macao, has been getting himself into an awkward scrape. Asked, as a member of the Lawn Tennis Club, to initial a circular referring to an arrangement for the supply of tea to the members and their friends during the summer months, he accompanied his consent with a proviso that no Portuguese should be invited. Of course a tumult immediately arose. The Governor of Macao being a member of the Club, Mr. Goffe's discrimination assumed a semi-official complexion. A meeting was held for the declared purpose of passing judgment on the Vice-Consul. In the meanwhile, appreciating the dimensions of the storm he had raised, Mr. Goffe's discretion came to his aid, and he penned the following despatch to the Colonial Secretary of Macao:—

"I beg you would convey to His Excellency the Governor, as the representative of Portugal, my deep regret for what I had written on the circular of the Tennis Club. Had I known that it would have offended anybody I would have certainly refrained from such inconsiderate action, inasmuch as during my stay in this colony I have invariably been the object of the utmost courtesy, both officially and privately. I reiterate my deep regret for having caused any apparent offence to the people of Macao, but they may rest assured that I do not entertain any if not the highest respect for His Excellency the Governor and for the nation he represents."

Mr. Goffe seems to be as strange to the usages of the English language as to the amenities of social intercourse, yet we can not but pity the miserably humiliating position in which he found himself. His apology—abject enough, in all conscience—was not accepted: expulsion from the Club followed by the vote of a large majority. Not the least strange part of the affair is that all the residents, British and Portuguese, resigned from the Tennis Club, leaving Mr. Goffe in solitary possession—a peculiar result, considering that he had already been expelled.

There is not a word to be said in Mr. Goffe's defence except that he recognised his error, and had the manliness to retract it—a circumstance that might have weighed with the community sufficiently to deter them from pushing matters to an extreme involving the virtual wreck of the unfortunate young official's career. The incident, however, is unpleasantly suggestive. How many foreign clubs—Social Clubs, Cricket Clubs, Base-Ball Clubs, Lawn Tennis Clubs, Bicycle Clubs, and so on—in China and Japan are open to Chinese and Japanese subjects? There is an excellent answer of course: all the associations organized for purposes of recreation in the Far East are necessarily so small that to throw them open to the people of the country would probably place their control completely in the hands of the latter, and would certainly over-tax their accommodation. But that view of the case, we must always remember, is not the first that presents itself to a Chinese or a Japanese subject, and it is a pretty sure thing that the discriminating attitude of the foreigner is often interpreted in a painful sense by the native. Such features of life in the East are, in the main, inevitable. They belong to the big category indicated by the poet's generalization:—"There's somewhat in this world amiss shall be unriddled by-and-by."

THE HAWAIIAN QUESTION.

It need scarcely be explained that the instructions which, according to some vernacular journals, notably the *Mainichi Shimbun*, Count Okuma is supposed to have conveyed to the Japanese Representative in Washington, with reference to the annexation of Hawaii, are evidently wide of the mark. Such language would entail responsibilities which Japan is not at all likely to accept, and which the occasion does not impose upon her. She is certainly bound to make her voice heard in connexion with this affair, for she has risen by her own exertions to the acknowledged place of a Pacific Power, and the national status of Hawaii has a distinct concern for every Power having interests in the Pacific. She is also bound to make her voice heard because the rights and privileges secured to her subjects by Treaty in Hawaii will not receive recognition from the United States, according to the proposed terms of annexation. That is an important point. Hawaii has become a profitable field for Japanese labour and a promising factor in Japanese commerce; both of which characters it will lose after absorption into the dominions of the United States. Possibly that view may be traversed on the ground that contract labourers, working under the conditions to which the Japanese have to submit in Hawaii, scarcely deserve diplomatic consideration. But in whatever capacity men are employed and under whatever circumstances, they are entitled to the care of their country so long as they retain their nationality. The practical view of the situation is that a not inconsiderable fraction of Hawaii's wealth has been diverted to Japan by legitimate methods, and that Japan would be extremely silly if she abandoned such an advantage without a struggle. Labour has its rights as well as capital. There is a third reason why she should make her voice heard, namely, that Hawaii's incorporation into the United States must greatly postpone the satisfaction of Japan's just claims in connexion with the Dole Administration's recent acts. No observers outside Hawaii, not even the critics habitually conspicuous for want of sympathy with Japan, have discovered any legal justification for the conduct of the Hawaiian Authorities towards Japanese immigrants. If Hawaii fears to be inundated by Japanese labourers, or if she finds it in her interests to shut out East-Asiatic immigrants she is entitled to legislate in that sense. As an independent State she possesses competence to determine whom she will admit within her borders, and whom she will exclude. But she has no shadow of right to apply one and the same law in diametrically different ways to precisely similar situations. She had previously allowed hundreds of Japanese immigrants to land under the provisions of the very law that she employed to interdict the ingress of Japanese immigrants last March. Her liability to compensate the victims of her arbitrariness and variability is undeniable. It concerns Japan's dignity to obtain speedy satisfaction for an injustice so flagrant, and she is entitled to object to anything that tends to postpone a settlement of her people's claims. In the above respects the position is perfectly clear, and the propriety of Japan's protest will, of course, be recognised.

There is one other phase of the matter

to which Japan can not be indifferent. If the McKinley Cabinet has been influenced, however slightly, by distrust of this country's designs, the misapprehension should be resolutely dispelled. Since the war of 1894-5, it has been the fashion in some quarters to attribute a bellicose and aggressive mood to Japan. That kind of reputation is exceedingly inconvenient. Possibly it may have swayed Mr. McKinley. Strong efforts were made by the pro-annexationists to delude the public into thinking that Japan wanted to add Hawaii to her own possessions, and the precipitancy of Mr. McKinley's action suggests that he was among the victims of the delusion. It is difficult to suppose that he entertained any project of immediate annexation up to the end of June, and though we can hardly suspect him of such a want of perspicacity as would be implied by a belief in Japan's aggressiveness, there is plainly something in his hasty conduct that needs elucidation. Mr. Hoshi Toru will doubtless be able to disabuse his mind of such fancies, but it is a pity that the task could not have been accomplished sooner.

THE FIRE AT TAIPEH.

The conflagration that occurred in the vicinity of the so-called "castle" at Taipei, on the afternoon of the 15th inst., seems to have been attributed, not unnaturally perhaps, to the work of insurgents. The whole town is said to have been thrown into confusion, men and women flying hither and thither in a panic-stricken manner. It must be confessed that the experience furnished by Twatutia's fate just a month previously, had not been calculated to inspire the citizens of Taipei with strong confidence in the ability of the Japanese to defend their lives and property. Happily the alarm was unfounded on the occasion in question. The fire, which broke out in a workshop belonging to the Joint-Stock Building Company on the north-east of the "castle" gate, is ascribed to the carelessness of an artisan in emptying the ashes from his pipe among combustible material. A strong north-westerly wind prevailed at the time, and despite the strenuous exertions of the gendarmes and police, seventy houses were destroyed. They were houses inhabited by people of the poorest class, and their inmates being reduced to a destitute condition, official measures were at once organised to serve out rice-gruel from seven stations. Subscriptions were also opened by the *Taiwan Shimpō* and the *Taiwan Nippo*.

THE ANNEXATION TREATY.

The following is the text of President Harrison's Annexation Treaty, which is said to be virtually identical with the Annexation Treaty now before the Senate, the chief differences being that the debt assumed by the United States is increased to four million dollars, and that the ex-Queen and her niece are not to receive any consideration:—

TEXT OF THE TREATY.

The United States of America and the Provisional Government of the Hawaiian Islands, in view of the natural dependence of those islands upon the United States, of their geographical proximity thereto, of the intimate part taken by citizens of the United States in there implanting the seeds of Christian civilization, of the long

continuance of their exclusive reciprocal commercial relations whereby their mutual interests have been developed, and of the preponderant and paramount share thus acquired by the United States and their citizens in the productions, industries and trade of the said islands, and especially in view of the desire expressed by the said Government of the Hawaiian Islands, that those islands shall be incorporated into the United States as an integral part thereof and under their sovereignty, in order to provide for and assure the security and prosperity of the said islands, the high contracting parties have determined to accomplish by treaty an object so important to their mutual and permanent welfare.

To this end the high contracting parties have conferred full power and authority upon their respectively appointed Plenipotentiaries, to wit: The President of United States of America, Hon. W. Foster, Secretary of State of United States, and the president of the executive and advisory councils of the provisional Government of the Hawaiian Islands, Lorin A. Thurston, William R. Castle, William C. Wilder, Charles L. Carter and Joseph Marsden.

And the said Plenipotentiaries after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:—

Art. I.—The Government of the Hawaiian Islands hereby cedes, from the date of the exchange of the ratifications of this treaty, absolutely and without reserve to the United States forever all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, renouncing in favour of the United States every sovereign right of which as an independent nation it is now possessed; and henceforth said Hawaiian Islands and every island and key thereunto appertaining, and each and every portion thereof, shall become and be an integral part of the territory of the United States.

Art. II.—The Government of the Hawaiian Islands also cedes and transfers to the United States the absolute fee and ownership of all public, government, or crown lands, public buildings or edifices, ports, harbours, fortifications, military or naval equipments and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining. The existing Laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands, but the Congress of the United States shall take special laws for their management and disposition; provided that all revenue from or proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military or naval purposes of the U.S. or may be assigned to the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

Art. III.—Until Congress shall otherwise provide the existing Government and laws of the Hawaiian Islands are hereby continued, subject to the paramount authority of the United States. The President, by and with the advice and consent of the Senate, shall appoint a Commissioner to reside in said Islands who shall have the power to veto any act of said Government, and an act disapproved by him shall thereupon be void and of no effect unless approved by the President. Congress shall within one year from the exchange of the ratifications of this treaty enact the necessary legislation to extend to the Hawaiian Islands the laws of the United States respecting the duty upon imports, the internal revenue, commerce and navigation; but until Congress shall otherwise provide the existing commercial relations of the Hawaiian Islands both with the United States and foreign countries shall continue as regards the commerce of said Islands with the rest of the United States and with foreign countries, but this shall not be construed as giving to said Islands the power to enter into any new stipulation or agreement whatever or to have diplomatic intercourse with any foreign Government. The Con-

sular representatives of foreign Powers now resident in the Hawaiian Islands shall be permitted to continue in exercise of their consular functions until they can receive their exequaturs from the Government of the United States.

Art. IV.—The further immigration of Chinese labourers in the Hawaiian Islands is hereby prohibited until Congress shall otherwise provide. Furthermore, Chinese persons of the classes now or hereafter excluded by law from entering the United States, will not be permitted to come from the Hawaiian Islands to other ports of the United States, and if so coming shall be subject to the same penalties as if entering from a foreign country.

Art. V.—The public debt of the Hawaiian Islands lawfully existing at the date of the exchange of the ratifications of this Treaty, including the amount due to the depositors in the Hawaiian postal savings banks, is hereby assumed by the Government of the United States; but the liability of the United States in this regard shall in no case exceed \$3,250,000. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are continued, as heretofore provided, said Government shall continue to pay the interest on said debts.

Art. VI.—The Government of the United States agrees to pay to Liliuokalani, the late Queen, within one year from the date of the exchange of the ratifications of this Treaty, the sum of \$20,000 during the term of her natural life, provided she in good faith submits to the authority of the Government of the United States and the local Government of the islands. And the Government of the United States further agrees to pay to the Princess Kaiulani within one year from the date of the exchange of the ratifications of this treaty the gross sum of \$150,000, providing she in good faith submits to the authority of the Government of the Islands.

Art. VII.—The present Treaty shall be ratified by the President of the United States by and with the advice and consent of the Senate, on the one part and by the provisional Government of the Hawaiian Islands on the other, and the ratifications thereof shall be exchanged at Honolulu as soon as possible. Such exchange shall be made on the part of the United States by the Commissioner herein before provided for, and it shall operate as a complete and final conveyance to the United States of all the rights of sovereignty and property herein ceded to them. Within one month after such exchange, of ratifications the Provisional Government shall furnish said Commissioner with a full and complete schedule of all the public property herein ceded and transferred. In witness whereof the respective Plenipotentiaries have signed the above articles and have hereunto affixed their seals.

Done in duplicate at the city of Washington, this 14th of February, 1893.

CHINESE NOTES.

The *Peking and Tientsin Times* of the 12th instant contains only one allusion to the state of feeling among the Chinese, a subject concerning which great interest and some anxiety has been aroused among the general public. The following brief paragraph is all that our contemporary has to say:—

Reports are again current of renewed excitement in the Native City. It is stated in some quarters that several children were discovered on a junk in the river, and that the Taotai has ordered all junks to be searched at the mouth of the river. The official appears to be doing his utmost both to suppress all public excitement and to prevent its cause. He has issued a proclamation that

those inciting the public to any violence will be severely punished.

We notice, however, that a Japanese gun-boat and H.M.S. *Peacock* were lying at Taku, and that a French gun-boat was daily expected on the 12th inst.

The French, despite the advice tendered by the Tientsin paper, decided not to put off the ceremony of opening the new Cathedral. Their resolve elicited from the Tientsin journal a paragraph which, when contrasted with its utterance of a week previously, constitutes such an interesting example of "facing-both-ways" journalism that we reproduce the two comments:—

Peking and Tientsin Times, June 5th.

All religious bodies who are here for the ostensible purpose of doing good, would do well to unite as far as possible with their commercial fellows in avoiding ground for offence or misunderstanding. In connection with this thought, we are in hopes that the Catholic body will not, as we have heard it suggested they may, fix the opening ceremony of their new cathedral for June 21st, with which date such unfortunate memories are associated.

The events connected with the former cathedral building may be ancient history, but not sufficiently so to obviate the possibility of such a pointed reminder acting as an undesirable stimulus under present circumstances. Whether there is any risk in the association of such a ceremony with such a date or not, however, our Catholic friends would earn the respect and admiration of the entire foreign community we feel sure, and probably enlist the sympathies of the more intelligent Chinese, by a change of programme, thereby obviating any reminiscences of the past being associated with the reopening of the cathedral.

Evidently the ceremony passed off without trouble; otherwise news would have reached Tokyo before the present date.

Here is a specimen of the pleasant experiences that foreigners in China have to encounter:—

We (*Peking and Tientsin Times*) learn that on Wednesday night (June 9th) as Mr. Moffat, of the Imperial Railways, whose residence is on the other side of the river, was returning to his house after seeing a friend off at the ferry, had a narrow escape of being mobbed and probably maltreated by the villagers across the river. It appears that he had just passed the figure of a native who was apparently lying asleep in the road-way, when he noticed a slight hissing noise which struck him as sounding like a signal. Almost instantly every alley-way was alive with villagers, beating tom-toms, and raising a hue and cry. Mr. Moffat realized there was not a moment to be lost, and dashed on to the railway track to escape the mob, and get along faster. But finding the mob was already ahead of him when he came to a bend in the line, he had to make for his house across country. Thanks to the night being pitch dark, he was able to elude his pursuers, and reached shelter happily unharmed, but in a sorry plight after his run. This serves to show that in the present excited state of the populace some little care needs to be exercised by even well-known foreigners in going about in the native quarters, especially at night. The villagers were presumably in ignorance of whom they were chasing, as Mr. Moffat is one of the last men we believe who would be singled out for attack. But as the natives are evidently keeping a sharp lookout for any and all aliens, the greatest caution is advisable. We hope Mr. Moffat has reported the matter through his Consul to the Taotai, as the Tipao of the villages should be held responsible for the attempted outrage.

The *N.-C. Daily News*, which has intelligence from Tientsin up to the 15th inst., says:—

Peking and Tientsin Times, June 12th.

While we could have wished the ceremony of the French had not preceded our festivities quite so closely, we must admire the quiet determination to carry the undertaking through as projected, which course is strictly in harmony with the principles which we as Britishers have always inculcated, but have not rigidly adhered to of late.

From Tientsin we hear under date the 15th inst. that a state of absolute panic reigns in the city. The natives cannot sleep at night for fear of kidnappers, and they are being urged on by anti-foreign intrigue, and rascals who have baser ends to serve, to vent their spite on foreigners. Several causes combine to produce this condition of things: (1) the public discontent at the restoration of the French Cathedral in the city, and the decision of the priests to rededicate it on Jubilee Day; (2) the discontent of the Mahomedan element; (3) the desire of Li's following to put the present Viceroy in a fix; (4) the cases of kidnapping by Cantonese junkmen that have actually occurred; and (5) the discontent of the enormous boat population whom the railway is throwing out of work. The foreign officials are well informed as to what is going on, and are working with the native officials; there is a naval force at Taku, and there is no alarm in the foreign settlements, but all are on the alert. A few days ago an attack was made just outside the North Gate on a party consisting of Dr. and Mrs. Porter and their children, and the Rev. A. H. Smith, who were proceeding in boats to Shantung. The boats were stoned by a large mob of Chinese and assistance had to be requested from the nearest *yamen*. A guard of soldiers was sent down to protect them, and they were able to proceed on their journey the next morning.

The Shanghai Taotai has notified the wheelbarrow coolies that they will have to pay the increased tax of six hundred cash from July 1st. At the same time he has applied to the Consular Body, asking that the Municipal Council be invited to fix a tariff for the wheelbarrows, so that they may not suffer loss. It is alleged that to fix a tariff is totally impossible, owing to the variety of loads and distances, but we fail to comprehend that argument. At all events, rumour alleges that the French Consul-General has rejected the Taotai's application, whereas the British and German Consuls-General have endorsed it.

General E-ko-tang-a, Commander-in-chief in Manchuria, has memorialized the Throne for permission to buy a quantity of magazine rifles and smokeless-powder cartridges, for the use of his troops, and some swift steam-launches to chase the pirates that infest the great rivers of Manchuria. He says that he had some hundreds of magazine rifles during the war with Japan, and found them most useful, but he ran short of ammunition, and has not been able to procure any since then. Funds for making the desired purchases have been raised by selling ranks and the General innocently writes:—

Memorialist granted an audience, recently, to a certain foreign arms merchant in Mukden who informed him that he (the merchant) had with him 400,000 smokeless cartridges for small bore Mauser rifles; 5,000 single-fire Mausers for infantry, and 1,200,000 cartridges for them. He also said he had on the way out one million smokeless cartridges for the small-bore Mannlicher magazine rifles, and further stated that he had with him 2,180 infantry Mannlichers, with short bayonets, the balance of a contract with the Pei-yang administration. The said merchant then offered to sell the whole of the above to the memorialist. The latter, finding that the price charged for the Mannlichers was extremely moderate, accordingly made arrangements with the said merchant to purchase the whole lot offered him in order to provide for future emergencies, and he (memorialist) asks the sanction of the Throne to this.

Considering that, according to law, the sanction of the Throne should have been sought before the purchase, the General's report is decidedly nonchalant.

The costs of two lines of telegraph are reported in the *Pekin Gazette*. One is in Chinese Turkestan, beginning at Turfan, outside the Great Wall, and running to the old city of Kashgar, 793 miles. It cost Tls. 225,637. The other is from Shuchou, near the western extremity of the Great Wall,

across the desert of Gobi, to Urumtsi, 689 miles. It cost Tls. 173,653.

The significance of the following information, which we take from the *N.-C. Daily News*, will strike every one:—

According to a memorial of the Board of Revenue recommending a new system of taxing native grown opium, the chief opium producing provinces in this country are stated to be Szechuan, which will produce this year a crop of 120,000 piculs; Yunnan, 80,000 piculs; Kweichow, 40,000 piculs; Chékian, 14,000 piculs; Kiangsu, 10,000 piculs; Kirin, 6,000 piculs; Anhui, 2,000 piculs; Fukien, 2,000 piculs; and the provinces of Kansu, Shensi, Shantung, Shansi, Hunan, and Chihli, an aggregate amounting to 60,000 piculs, or a total of 334,000 piculs from 14 out of the 21 provinces which constitute the present empire of China—not including Outer Mongolia and Tibet. The memorial further states that according to the above estimate, which the Board has reason to believe to be quite accurate, having been compiled by Sir Robert Hart at the Board's request, the duty on the native opium this year should amount to at least 20 million taels, at the ordinary tax of Tls. 60 per picul; but, so far, not a-third of this amount has found its way to the Imperial exchequer, the rest having gone to enrich the provincial authorities and their tax collectors. It is now proposed to begin with the provinces of Kirin, Szechuan, Yunnan, and Kiangsu, for the collection of native opium duty which is to be handed over to the I.M. Customs at Shanghai, Chungking, Mengtze, and Chinkiang, respectively.

There appears to be really a chance that the habit of foot-binding may be given up in China. We take the following from a Shanghai exchange:—

According to a leading article in the *Sinuen-pao* yesterday exhibiting its readers to taboo bound feet in women, and strongly advocating natural feet for the next generation of women in China, it appears that a large number of influential members of the *litterati* and gentry in Kuangtung province have also written against foot-binding, and several anti-binding societies have in consequence already been established in that province. "Hence mothers need not fear now that their daughters cannot marry well with natural feet, as the members of these societies have agreed to let their children intermarry. As all the members, so far, are either men of high literary standing or wealth, the natural-foot girls will be able to marry into the best of provincial families." In the prefecture of Shao'ing, Kuangtung, the people of over eighty villages never bind their daughters' feet. Indeed, young women with bound feet there are always concubines, while the wives proper have natural feet—a reversal of the order of things in this Empire. This antipathy to foot-binding found its origin in the Taiping rebellion. When the rebels got to Shao'ing they killed all the women with bound feet, while those with natural feet all escaped.

THE COMPOSER OF "MARITANA."

The performance of extracts from "Maritana" at the Public Hall, Yokohama, brings to recollection the name of a composer once distinguished and honoured in the world of music, but now almost forgotten, except by a few of his contemporaries who knew him well and who watched his course with the keen interest of personal regard. William Vincent Wallace was a man whose gifts and acquisitions would have enabled him to exercise a commanding influence not only in his own country, but in the art centres of all Europe, if the misfortune of feeble health had not prevented the fulfilment of his most ambitious hopes. The ease with which he secured, at an early age, the foremost position of his order in London, justified the belief of friends that he was destined to a worthier renown than that of a writer of modern English operas. His youthful successes gave him no great pleasure, apart from the opportunities they seemed to open for larger achievements in other fields. More than once the chance of submitting his powers to the highest test was offered, but on each occasion he was compelled to deny himself this privilege, and the greater part of his life was passed in a vain conflict with the maladies which condemned him to comparative

inactivity, and baffled every endeavour to realize his loftiest aspirations.

Wallace came before the public of London under circumstances doubly disadvantageous to a musician of his quality. In the pursuance of his plans, the first important step was to make his mark as a composer of what was then called,—and doubtless is still called—English opera, though the name signifies nothing more than opera the music of which is sung to English words. While other nations have their characteristic school, clearly reflected in the lyric drama, England is content to accept any sort of *mélange* that amuses the popular ear, and let it pass upon the stage as a natural product of the country. There was a time when English music had a distinct and charming colour of its own, and operas were once written in which the spirit of the lovely old glees and madrigals prevailed. But the pure taste which fostered the graceful, if not strikingly robust creations of past centuries has gradually disappeared, and at the period of Wallace's advent, the general conception of English opera was regulated by the clever song-maker Balfe, whose standard was not exalted, and whose ideals were extremely vague, although his fluent and sprightly melodies were well calculated to captivate the fancy of the multitude. All the attention that London was inclined to bestow upon the so called English musical drama was at Balfe's disposal, and even his works were not, for the moment, objects of the highest attraction. It happened that London society was passing through an abnormal and unusually prolonged stage of devotion to Italian opera, the charm of which had become so intensified by conditions not exclusively æsthetic that no rival interest was allowed to assert itself. Notwithstanding the common impression that Italian opera is purely an aristocratic indulgence in the British metropolis, it is the fact that this class of entertainment was introduced there before it became established in either France or Germany; and although it has always been liberally, not to say lavishly, supported by wealthy patrons, it could hardly have held its own without a considerable amount of popular encouragement. In the forties, the favour it enjoyed was altogether exceptional, owing to circumstances, as has been said, not closely connected with artistic appreciation. Lord Lowther, then the lessee of Her Majesty's Theatre, embarrassed by the sudden loss of his manager, Laporte, had offered the direction of that magnificent establishment to its solicitor, Lumley; and the drastic reforms instituted under this gentleman's energetic régime had provoked a war in which the most eminent vocalists of Europe enlisted as leaders for a long term of years. Each artist of rank had legions of partisans, and the strife that raged between the opposing camps at Her Majesty's and Covent Garden was followed by every section of the musical community with an eagerness so absorbing as to exclude all consideration of minor operatic affairs, until the over-confident and unfortunate Lumley was forced to close his doors with as loud a crash as ever echoed through the Court of Bankruptcy. While the excitement lasted, the Balfes and the Wallaces were renounced, with all their works, and little heed was given to the question of their relative claims to supremacy, or to the fortunes of the theatres in which those claims were upheld.

It was not Wallace's desire, however, to enter into direct competition with Balfe. He would rather have avoided it, if he could have done so, for he was bound by a very different creed from that of the older composer, and had trained himself to a faith in nobler methods. But he soon found that he must either surrender many of his convictions or abandon the attempt to get a hearing. The managerial potentates would not listen to any departure from the conventional order of proceedings, and the music-publishers, without whose sanction no important production could be undertaken, insisted that every new opera should contain a bountiful supply of easy, ear-catching tunes, which could be printed and sold while the vogue of the running piece was at full height. Wallace was obliged to

conform to a system which he did not approve; but the experiment was, after all, only a means to an end, and it cost him little to satisfy this particular demand, since he believed he could show what he was capable of, in spite of all restrictions. He took care that there should be no lack of agreeable melodies in "Maritana," from the circulation of which the publishers reaped a prolific harvest, and, at the same time he threw such vigour into the entire work, and gave such evidence of sound culture that critical judges were prompt in recording a verdict far more flattering to the author than the acclamations of the unreflecting public. "Maritana" expresses the composer's earnest desire to rise above the level of the average, common-place "English opera." The overture, for example, closes with a sonorous fugal movement, the like of which has certainly never been heard in any of the mellifluous effusions of the Balfe School.* Why, indeed, should the song-writers of the nineteenth century trouble themselves to construct fugues which the pit and gallery could not understand, and which would never find their way into the albums of the publishers? Wallace, however, had higher aims, and the reward of his conscientious labour came in the shape of an invitation to compose an opera for the grand academic theatre of Paris, a proposal which he had scarcely dared to hope for at that early day, yet which he welcomed with perfect confidence and self-reliance. But the project could not be carried out. He was already a sufferer from exhausting illness, and the course of study to which he subjected himself for this crowning enterprise overcame him completely. Respite from all toil, and a long sea voyage, were declared essential by his physicians. He crossed the Atlantic, travelled for a while in South America, and afterward went to the United States, where he recovered sufficient strength to undertake a series of concerts with the assistance of his wife,—known before her marriage as the famous pianist Hélène Stoepl, and a woman of such resplendent beauty that, admirable as her performances were, they counted for little with audiences in general, in comparison with the magic of her superb presence. Wallace himself was an excellent player upon many instruments, the violin being his favourite. He had a quick faculty of technical mastery, which never left him until his hands were cramped and stiffened by rheumatism. During his first years in America, he wrote little besides drawing-room ballads and fantasies for the pianoforte. His "Concert-Polka"—a brilliant piece of mechanism which has never, in its way, been surpassed, and which could have been produced only by a person minutely familiar with the resources of the piano,—dates from this period. After several successful tours he settled in New York, where he gradually resumed the practice of composition, though not, for a long time, upon any extensive scale. Publishers tempted him with handsome offers for every fragment from his pen, but he was unwilling to waste his impaired energies upon trifles, hoping that he might yet recover enough force to execute the plans he had been compelled to lay aside before leaving Europe. The Opéra Comique, as well as the great Parisian home of serious opera, had expressed the desire to enlist his services, and the French capital was the goal upon which his thoughts were always bent. The outlines of several operas were sketched, and the studies which he never entirely suspended were renewed whenever his condition permitted. He made little progress, however, and seemed to be awaiting some stimulating impulse, until his attention was directed to the bold and far-reaching innovations of the rising musical star of Germany, Richard Wagner. Like many other composers of the last generation, Wallace was profoundly impressed by the reforming theories of the author of "Tannhäuser," and especially by the extraordinary orchestral developments of this and other works from the same hand. In his

* This overture has frequently been heard at concerts in Tokyo, Mr. Eckert having arranged it for the orchestra of the Imperial Household.

library on Sixth Avenue the failing invalid gathered as full a collection of Wagner's scores as could be obtained, and from their stirring suggestions appeared to derive fresh resolution and restored vitality. With industrious application he revised the scheme of his half-finished opera "Lurline," enlarging its scope and enriching its instrumental effects by many devices characteristic of the new German school. Much of what he then wrote was afterward suppressed, as he expected it would be on the English stage; but he never relinquished the hope of a representation on the continent, where he anticipated greater freedom and a more sympathetic appreciation of his design. The work was completed with surprising rapidity, considering his enfeebled state, and he carried it to London where it was at once accepted and put in rehearsal by the manager of Covent Garden. For several years the tide of public favour had been turning in the direction of "English opera," and more than one theatre had found it profitable to encourage productions of this class. Balfe was still contributing his periodical supply, with the same facility if not always with the same inventive buoyancy as of old. Benedict and MacFarren were also in the field, but from the moment of Wallace's re-appearance his title to the first position was cordially and universally admitted. The "Lurline" which the audiences of Covent Garden saw and heard was not, however, the "Lurline" upon which the composer based his expectation of ultimate triumph. Traditional restraints were still in force, and he found it necessary to make many sacrifices of his own taste and judgment. Probably he thought these sacrifices would be only temporary, for, almost to the last, he looked forward to a decisive recognition of his artistic claims by the habitués of the Paris Opera, in which establishment his genius could rise above commercial trammels, and defy the obstructions which could never be overcome in London. But he was doomed to disappointment. The authorities of the lyric temple in the Rue Lepeletier hesitated to contract with a composer who had been obliged to release himself from a previous engagement, and though negotiations were opened, no definite conclusion was reached. Unwilling to interpret the delay to his disadvantage, Wallace pursued his labours unremittingly, though constantly warned by physicians of the risk he incurred. While awaiting the favourable response which he reckoned upon from Paris, he wrote and produced "The Desert Flower," an opera distinguished by many happy fancies, and in no sense unworthy of the reputation he had thus far won, but showing no advance upon his preceding works. The effort was, indeed, too severe for his waning strength. He was gratified by the knowledge that he could again command applause among his own people, but he aimed at results so much loftier that the success of his last composition brought him no real satisfaction. He now understood that, even if the way to Paris should be opened to him, it was too late to accomplish the great wish of his life; and when the hope that had sustained him through years of trial vanished, he gave up the struggle for existence. Since his death, some thirty years ago, his operas have been represented at intervals in America, but not one of them, we believe, has been honoured by a revival elsewhere.

Such, briefly recorded, was the cheerless career of a musician whose endowments were rich and varied, whose purposes were true and honourable, and who would have fought a good fight for the elevation of his art if cruel infirmities had not crippled him from the beginning, and paralyzed his efforts to proclaim the real power that lay behind his various tentative exploits. Of what he might have been, with happier fortune, the world can form no estimate. What he was when he stood at the humble starting-point from which he looked forward to the acquisition of an enduring fame, is amply shown in the volumes of his published works.

The annual boat-race between crews representing the Universities of Sydney, Melbourne and Adelaide was rowed on the 22nd May, and resulted in a win for Sydney.

"LIVES OF TWELVE BAD WOMEN."

Some time ago, Mr. Fisher Unwin, the well known publisher, gave to the English-reading public a book entitled "Lives of Twelve Bad Men," and the venture succeeded so well that it has now been followed by "Lives of Twelve Bad Women." The series begins with Alice Perrers, favourite of Edward III., and ends with Mary Anne Clarke, whose story carries us down to the year 1852. It is not altogether edifying, and it certainly does much violence to one's patriotic pride, to read such pages of history as this work exposes, but, on the other hand, they give us a remarkably clear insight into the manners and customs, frailties, and foibles, of our ancestors, near and remote. Not much of the respect that superficial records inspire for the memory of the victor of Cressy and Poitiers survives the perusal of Edward's amours with Alice Perrers. Knight, in his admirable history, dismisses the matter very briefly. "The expiring passions of dotage," he says, "more miserable than its tears, had thrown the conqueror of France under the dominion of a mistress, Alice Ferrers." He even misspells her name. Edward was 57 years old when Philippa died, and Knight leads us to believe that his lapses from the straight path did not commence until after the decease of his Queen. But a man is not in his dotage at 57, and from the book now before us we learn that the public scandal in connexion with Alice had commenced some years before the Queen's death. Alice was a woman of low origin, originally a poor servant. She had no special graces of person, and how she gained her place in the King's favour remains to this day a mystery. That part of the story, however, interesting as it is, commands our attention less than the revelations we obtain as to the administration of justice, the ways of the Court, and the customs of officialdom in England during the fourteenth century, five hundred years ago. The first recorded grant to Alice—made, by the way, in 1366, or three years before Queen Philippa's death—took the extraordinary form of an annual allowance of two tuns of wine, and one of the very last grants, made eleven years later, when the King was moribund, took the same form. But in the interval Misses Alice had obtained from her royal lover estates, sums of money, and jewels—among the latter being 21,868 large pearls and 30 ounces of small—the catalogue of which is truly formidable. How she enforced her titles, how she defended them, how she treated her enemies and how they treated her—these things furnish an extraordinary commentary on the men, women, and manners of the time. It is difficult to believe that the England of then can have been transformed into the England of now. Fancy this kind of thing happening to-day:—"Alice indulged in the offence of maintenance, or of helping litigants to bring actions on condition of sharing in the winnings in the event of a successful issue. The weaker the cause, the higher was the price to be paid for its support, and the higher the price, the greater was the chance of a favourable judgement. For if, in the early days of the system, the judges had ventured to disregard the evidence of witnesses suborned by Alice, she soon found a way of teaching them manners, if not justice. When a case in which she was interested came on for hearing, she appeared in Westminster Hall and took her seat on the bench. From that point of vantage she was able to instruct the judge as to what was true and what was not, and as to the finding it was proper to give on the evidence as interpreted by her. The judges knew the character with which they had to deal, and were too wise to do otherwise than bow to what was, for them, as for others, the royal will. Their brothers in the ecclesiastical courts were in a like case. They, too, had to bear the presence on their bench and the assistance in their councils of the self-appointed coadjutor, and knew no alternative but to concur with her if the defendant, though guilty of the worst crime known to the consistory, was only rich enough to pay her fees." What a spectacle! This woman, a

poor servant who "had learned the ways of love from a certain fool that used with his hands to carry water from the conduit to men's houses for necessary use"—this woman sitting on the bench of the courts of law and dictating verdicts to its judges of the realm! However, Alice Perrers and her doings are ancient history. Much more vivid is the record of Mary Anne Clarke and her relations with the Commander-in-chief of the British army, the Duke of York and Prince-Bishop of Osnaburgh. Mrs. Clarke was a Phryne, pure and simple: no other description applies to her. She was living in Tavistock Place under the protection of a certain "Mr. O." when the Duke of York made her acquaintance, and to wit, talent, a good education, and radiant beauty, she then added 12 or 13 years' experience of men's weaknesses, for she had begun her career of love before she was sixteen. Mary Anne's chief method of making money was the sale of military commissions and promotions at prices below the regulation figures, the Commander-in-chief being induced to give the necessary orders gratis. She also sold preference in the Church, and whatever other posts her infatuated lover's influence could procure. The details of the scandalous history are all given in this volume, the compilation of which must have involved great labour and research. Mrs. Clarke was afterwards induced, by specious promises never performed, to give evidence in the House of Commons against the Duke of York, on a motion by Colonel Wardle. She made nothing out of that performance, however, and it was only by threatening to publish the Duke's correspondence that she ultimately managed to blackmail the King to the tune of ten thousand pounds down and an annuity of six hundred a year for herself and two hundred for each of her daughters. She had the good grace to spend the rest of her life quietly, and she died five years after Queen Victoria had come to the throne. Startling, indeed, are these records, but they are valuable if only for the sake of the strong, deep line that they enable us to draw between the Court of England as it is now and the same Court before Her gracious Majesty's time.

HAWAIIAN AFFAIRS.

News has been received that a treaty for the annexation of Hawaii by the United States was signed on the 16th instant in Washington. The fact is somewhat surprising, for it does not appear that the majority of the Hawaiian planters are in favour of such a consummation, and President McKinley can scarcely expect that the Senate will endorse the treaty. The policy of the United States has never varied with regard to such questions: there has been a uniform determination to refrain from annexing any territory not continuous with the territory of the Republic, and we fail to see why America should depart from her traditions in this instance. So far as the claims of Japan are concerned, nothing could be more fortunate than annexation, for the Government in Washington would assuredly accept the responsibility of seeing that justice was done. From the point of view of the islands' prosperity, however, the step would be disastrous, unless, indeed, some special arrangements were made with regard to the admission of Asiatic labour.

We take from the *Hawaiian Gazette* the following account of an interview with Mr. Shimamura on the 24th of May. The Minister said:—

"I was very much surprised this afternoon to read in the newspapers what purported to be a transcript of a communication which had been, or would be sent me by Minister of Foreign Affairs Cooper. It seemed so unusual," continued Minister Shimamura, "to find a communication of a diplomatic nature in public print before it had reached the person to whom it is addressed. I suppose I should not object; it may be diplomatic etiquette according to Hawaii. I had been invited to assist Commissioner Hawes at his reception this afternoon, and arranged to leave the Legation at 3.30. I had several callers before that time, and after the last one had departed, and I was

waiting the hour to leave, the newspapers arrived and I was amazed to find an account of the letter that had been sent. Shortly afterward the document arrived.

"I cannot show you the letter. From our standpoint, it is not for publication, but if you are willing to accept what appears in the afternoon papers, and said to be a copy, you can do so. I do not consider what I have received to be an answer to my request for particulars, and I shall make another attempt to secure one. Japan asks nothing unreasonable; she wants justice and fairness in the matter—nothing else. If she cannot get it—well, I do not know what will follow. The action of the Hawaiian Government in refusing a landing to people who, Japan believed, after an investigation made before their departure, were eligible to land, was a gross violation of the treaty. Now, I have asked for an explanation; for reasons for this Government's actions, and get what? This (reading from an afternoon paper) is what the Foreign Office gives out as its answer to Japan's request:

"The position taken by the Hawaiian Government is that the immigration laws are a reasonable exercise of the police power of the State and that the administration had impartially enforced them. For this reason, the Hawaiian Government considers that the principle in indemnity cases does not apply.

"Another paragraph of Minister Cooper's answer states that if in the future there should be any infraction of the present immigration laws by Japanese immigrants, a like action will follow."

"My Government tells me to get a reasonable excuse for the action taken. I can not find it in this. I do not think that my Government is acting arbitrarily in this, a matter which involves the honour of a nation. Japan asks nothing unreasonable, nothing unjust. Japan is acting according to the law of nations. She is not dealing with the Board of Health, the Custom House or the quarantine officers; the case is one of nation with nation. The United States has been advised of the affair, and probably knows the status of the case as well as we, and if the Government at Washington believes that the position taken by Japan is right, according to international law, there will be no interference. On the other hand, if our position is arbitrary, any nation may interfere.

"In Japan's attitude toward Hawaii, it is not an exhibition of the power of the strong over the weak. Hawaii is a sovereign State and stands among nations the same as England or Japan or any sovereignty; there can be no difference."

Replying to a question regarding the possibility of the matter being left to arbitration in the event that no satisfactory answer could be obtained and no agreement arrived at, the Minister said:

"In small affairs arbitration may be allowed, but never where the honour of a nation is at stake. There is no court where cases in international law are tried—the only tribunal is the strong arm and the strong vessels—honour is too sacred a thing to any nation to be played with by courts of arbitration.

"Here is the situation: To further the interests of the chief industry of the Hawaiian Islands, Japanese immigration is invited; a treaty or convention between the two Governments is entered into and the Japanese labourers come here to work. Japan did not seek the treaty, nor did she seek the territory for her subjects—they came upon invitation. Then Hawaii discovers that the Japanese are competitors, and a law is passed to restrict the immigration. Japan is quite satisfied, and, in order that there can be no misunderstanding, investigates the status of every emigrant leaving her shores. Every emigrant who left Yokohama for Honolulu did so according to the laws of the Republic—Japan was satisfied of this before they left. Each free labourer had the amount of money required, and was eligible to land, but the authorities here said no!

"If it was found that more labourers were coming to Hawaii than the demand called for, I am quite sure that an intimation of the fact from the Executive to my Government would have had the proper consideration. But there was none sent, and without any cause, so far as I am able to learn, the men and women were returned. At this stage of the proceedings the emigration matter cuts a very small figure—the honour of Japan is at stake, and an explanation must be had.

Japan understands that there is a tacit agreement that the United States has an interest here, and I am at a loss for the word—that, while not assuming the proportions of a protectorate, she stands in the nature of godmother to the Island Republic, but the officials of the Government of the United States are too well versed in international law and the custom of dealing in such mat-

ters as to say Japan is wrong if she is right or that Hawaii is right if she is wrong.

Japan has respect for the United States because of the cordial relations existing between the Governments and the enormous trade being developed by the two countries. Think, then, how little Japan considers Hawaii from a commercial standpoint. If Hawaii can get on without the Japanese in the cane fields, well and good. I am quite sure Japan will be satisfied, but, of course, the present difficulty will be settled first; there can be no open breach of the treaty on the part of Hawaii without some explanation.

"When will the negotiations cease? I am sure I wish they were at an end now, but if the Government here delays matters by sending communications like the one I received to-day, I am sure I cannot say when they will end. My instructions in the matter are plain. If I cannot get a reasonable answer to my request I may go home, and perhaps some one else will have better success. If I withdraw, you know what follows. I hope it will not reach that point. It would be an unpleasant ending to a very pleasant sojourn in Hawaii."

The reply of the Hawaiian Government to Japan is thus summed up by the same journal:

The reply of the Hawaiian officials is terse and to the point, concerning the intentions of the Republic. To all intents and purposes, it is simply a reiteration of previous assertions that Hawaii intends to administer immigration laws according to the dictation of legislative enactment; Hawaii recognizes no interpretation of its laws outside that given by the executive and judicial departments of the Government. No lengthy explanation is given and no instances cited in which Hawaii has dealt in a similar manner with any other nation with which it has treaty relations. Our officials have evidently taken the letter from the Japanese Foreign Office as a formal request to "back down." The reply asserts that Hawaii will not retract, basing its refusal on the right of a sovereign state to administer its own laws.

Captain Kurooka and the officers of the *Naniwa* gave an "at home" on the night of the 23rd of May. The affair is enthusiastically described by the Hawaiian papers, and seems really to have been most successful. A press dinner was also given to the representatives of Japanese journals, now on a visit to Hawaii. It took place in the Hawaiian Hotel on May 15th, and is reported at great length, but the speeches seem to have been rapid and uninteresting.

The *Yomiuri Shimbun* says that, immediately on receipt of the intelligence of the signature of the Annexation Treaty by President McKinley, Count Okuma telegraphed to Mr. Hoshi Toru, instructing him to approach the United States Government on the subject; and, at the same time, telegraphed to Mr. Shimamura in Honolulu, directing that he was to prosecute the negotiations with Hawaii, quite irrespectively of the Annexation question.

Mr. Kato, Japanese Representative in London, telegraphs that Great Britain has protested against the annexation of Hawaii by the United States. The Colonial Office was projecting a submarine cable from Canada to Australia, which would necessarily touch at Hawaii. Moreover, the establishment of an American Naval Station at Hawaii would impose upon England the necessity of fortifying her Pacific littoral. Hence from several points of view she objects to the annexation of the islands. Of course this is not the first time that England has advanced such an objection. The position she takes with regard to Hawaii is perfectly familiar to the American Administration, and not the least remarkable feature of President McKinley's procedure is his indifference to Great Britain's interests.

During the debate in the United States Senate on the question of the Reciprocity Treaty with Hawaii, Senator Sayers warned the Senate not to be frightened by the report that England would take possession of the islands, and added these significant words:—"Next to a conflict with my own brother, I would deplore war with England. I don't believe England wants a war with us any more than we want a war with her."

The votes in the House of Representatives against continuing the Reciprocity Treaty numbered 53, and the votes in favour of continu-

ance, 85. Senator Hilborn, commenting subsequently on the figures, said that the "ayes" represented the Annexationists, and that they would probably not be able to muster so much strength on any future occasion. The 85 included, according to his analysis, the remnant of the Harrison administration feeling, the anti-Cleveland faction, and those secured by personal work on the part of the Hawaiian delegates.

One of the hallucinations under which some people labour is that the Constitution of the United States interdicts annexations of territory beyond the borders of the American continent. A local contemporary, speaking of the annexation of Hawaii, says:—"Such an annexation is a distinct violation of the principles of the United States' Constitution." As a matter of fact, the Constitution of the United States does not contain a word bearing on the subject.

We should like to know what kind of language would have been employed by the Japanese newspapers that now condemn the sending of the *Naniwa* to Hawaii, had she not been sent, and had a riot been fomented by the Japanese immigrants in the islands. There would then have been a nice outcry, we suspect, about the improvidence of the Japanese Government. The *Naniwa's* presence at Honolulu has apparently served as a demonstration of friendship, rather than as a menace. Her principal business has been to fête the leading residents of the place, and we find the Hawaiian papers speaking highly of the hospitality and cordiality of her officers, and the orderly conduct of her men.

It is assumed in some quarters that President McKinley would not have sent down the Annexation Treaty to the Senate unless he had been assured of its endorsement; an assumption based on the hypothesis that the Senate's rejection of a Presidential recommendation on such a subject would be a serious rebuff to Mr. McKinley at the outset of his administration. The idea seems natural enough, and is certainly in accord with English political conceptions. But we have heard Americans allege that as the Democrats constitute a majority in the Senate, no hostile action on the part of the latter body would be construed by the general public in a sense derogatory to the President. Persons taking the latter view are inclined to think that the President has signed the Annexation Treaty with the object of effectually disposing of a troublesome problem. That is to say, he does not himself believe in annexation, nor yet does he believe that the Senate can be induced to favour it, but he does believe that until a definitely hostile declaration is elicited from the Senators in conclave, the question will continue to be inconveniently agitated. Hence he has constituted himself a species of forwarding agent, transmitting the Treaty though fully persuaded that it will be rejected. For us such a theory is wholly untenable. By signing the Treaty the President must be held to endorse it, and by presenting it to the Senate, he must be held to recommend its legislative adoption. It is inconceivable that he should so far prostitute his convictions to the convenience of the moment as to publicly figure in the character of the advocate of a measure which, in reality, he desires to see defeated.

For the information of persons who think that the danger of Japanese aggression in Hawaii has been successfully flouted before the eyes of American politicians, we quote the following statement of Mr. Thurston's position, publicly announced in Washington at the beginning of May:—

The position of Mr. Thurston regarding the Japanese relations has been incorrectly stated. He has not charged that the Japanese Government is pressing emigration to Hawaii, or has any ulterior purposes in permitting the recent large emigration to that place. He has simply stated the fact that this emigration may involve serious consequences, owing to its large proportion.

That the attitude of the labouring classes in America towards the Japanese is rapidly becoming

ing identical with their attitude towards the Chinese, frequent indications present themselves. The following is the latest:—

Tacoma (Wash.), May 9. h.
A dispatch from Everett says that several hundred workmen from smelter, nail works, paper mills, and sawmills here met last evening and determined not to allow twenty Japanese labourers to go to work Monday night on the night shift at the Everett Box Factory. The meeting appointed a committee, which went to the Japanese boarding-house and notified them of the action taken. The Japanese referred the committee to the proprietor of the box factory, and also stated that they would have to consult with Japanese Consul Saito at Tacoma before they could give any answer.

Later in the evening they were told to leave the city by Monday night. This they do not intend to do unless Consul Saito advises. They think they are being treated unjustly and hope a Japanese warship will be sent to Puget Sound to protect their rights. Consul Saito cannot be seen to-night having gone to Seattle to meet the officers of a Japanese steamship there. To-morrow a representative of the Everett Japanese will confer with him.

The telegraphic extract now published of President McKinley's message, shows that our interpretation of his attitude is correct, and that he has taken the position of an out-and-out advocate of Annexation.

JAPANESE TEA IN AMERICA.

The *Tokyo Shimbun* states that the following report, under date of the 24th May, was received from the agent in New York of the Central Tea Guild.

"The tea market continues active. One prominent tea importer in the city has been enabled to place from 80,000 to 110,000 boxes during a single week. Prices remain tight, being quoted at from three to six cents. Japanese tea, of the lower grade in particular, has risen in price on account of scarcity of stock. The lowest quality tea is quoted at four cents, while Foochow black tea is of the same value. In short, the market presents an aspect of unusual prosperity. The revised tariff is to be brought up for discussion to-morrow, and it may be expected that the market will certainly be crowded with speculative buyers. The teas sent by the Tea Manufacturing Company in Yokohama arrived here on the 17th instant. The condition of these teas, however, is inferior to that of teas shipped the previous year, but far superior in cup and colour, and wins the admiration of the merchants in the latter respects. Their market price was supposed to be thirty cents, but in consequence of teas of the same quality having been imported by a certain firm, which, under contract of delivery at the beginning of next month, sold them for twenty cents per catty, their price will be between twenty cents and twenty-eight cents. Importers are anxiously awaiting the arrival of new goods. Quotations for Japanese tea are:—

	Cents.		Cents.

WEDDING AT CHRIST CHURCH.

A very pretty wedding took place at Christ Church on Saturday afternoon, when Miss Lily Bourne, the eldest daughter of Mr. William Bourne, one of the veteran foreign residents of Yokohama, was united in the bands of wedlock to Mr. C. G. Coningham. The bride has a wide circle of friends and acquaintances, and her popularity was shown by the large attendance, ladies of course predominating, at the ceremony, while among the friends of the bridegroom present were several from Tokyo, including Colonel Endo Sadayoshi, Governor of the Imperial Military Academy, accompanied by several other Officers in full uniform. The Church was very tastefully decorated—a labour of love on the part of the members of the Circle of King's Daughters, of which the bride was one of the first in Yokohama. A happy conceit was

the decoration of the central aisle on either side with white lilies, the graceful flower from which the bride takes her Christian name while eight of the youngest King's Daughters, stood in line on each side of the aisle. The rite was performed by the Rev. E. Champneys Irwine and Mr. J. T. Griffin presided at the organ and played during the course of the ceremony Schumann's Birthday March, the Bridal March from *Lohengrin*, and as the happy couple left the Church Mendelssohn's well known Wedding March. The bride looked very charming in her bridal array. She wore a white silk gown, and orange blossoms. She was accompanied by the Misses Alice and Bella Goddard as bridesmaids, who wore straw coloured silk frocks, trimmed with lace, and hats to match. Mr. K. Wilson attended the bridegroom as best man; Messrs. Libeaud and H. and W. Goddard acted as ushers. The bride was given away by her father. After leaving the Church the bridal party proceeded to Mr. Gielen's house on the Bluff, where a reception was held, after which the newly married pair left for Tokyo.

"GOD SAVE THE QUEEN."

The British National Anthem, notwithstanding the associations and memories that gather round it, must evidently sooner or later either modify the clumsy rhymes of the latter half of its verses or suffer dissolution. It is essential that the national character should be retained. At present there seems to be what may be called a teetotalizing spirit in the revisions of the National Anthem, watering it down to the Edwin and Angelina beverage. We append a recent local essay:—

God save our gracious Queen,
Long live our noble Queen,
God save the Queen.
Send her victorious,
Happy and glorious,
Long to reign over us:
God save the Queen!

O Lord, our God, arise,
Scatter our enemies,
And make them fall:
Guide Thou Britannia's helm,
Traitor and knave o'erwhelm,
Give peace to every realm:
God save us all!

Thou, who art King of kings,
With Thine almighty wings
Protect our Queen.
Strong in Thy power and might
May she uphold the right,
Grant her eternal light:
God save the Queen!

E. CHAMPNEYS IRWINE.

"HYMNS OF OLD ENGLAND."

The Rev. Champneys Irwine, chaplain of Yokohama, has compiled and published a sacred anthology entitled the "Hymns of Old England." There is some incongruity in the title, for many of the hymns can not possibly be classed as "old," and several are by authors not of English origin; but inasmuch as all have become familiar and dear to the people of England, the appellation chosen by the compiler is in a sense justified. Mr. Irwine tells us that the book is an attempt to supply a want long felt and often expressed; the want of "a concise collection of the best hymns in the English language." Four hundred and thirty hymns seem to him to merit that epithet, and we do not quarrel with his choice, for, on page after page, we find verses breathing the true spirit of poetry and religious ecstasy. What a host of memories, some sad, some pleasant, but all resonant with the church bells whose echoes have faded out of so many of our lives in the Far East, do these hymns awaken! The volume is a link between our exile and the homes from which we have been so long separated. The work of compilation has entailed great labour, for no less than five pages of the preface are devoted to a list of persons with whom Mr. Irwine was obliged to communicate, or whose assistance he had to

seek, in discharging his task. He has arranged the hymns in six books, following the order of the English Bible of 1611; namely, the Law, the Psalms, the Prophets, the Gospel, the Apostles, and the Revelation. Opinions will probably differ as to the appropriateness of his classification in some instances, but on the whole the manner of discrimination commends itself. Opinions will also differ as to whether the collection should not have been more extended. We are surprised, for example, to find that while American and German writers of hymns are represented, such a writer as Coffin receives no notice, though his hymn "O luce qui mortalibus" will for ever occupy a high place. But criticism of that nature would lead us very far afield. Mr. Irwine himself is the author of many beautiful hymns. We are entirely content to rely on his judgment, and glad to see that he has incorporated some of his own writings in this excellent little volume. One of them, a truly exquisite chaplet of verses, we quote:—

"And they shall see His face."—Revelation 22, 4.

There is a garden, heavenly bright
By faith beheld, though not by sight,
That gleams for ever in the light
Of Christ alone.

And there we know, O Saviour King!
That Thou our sleeping child wilt bring
Among the flowerets of Thy spring;
Thine, Thine alone.

The maiden shall awaken there,
A lily in that garden fair,
Bending her head in silent prayer
Before Thy Throne.

The long lost youth shall rise and shine,
A deathless hyacinth of Thine,
Bearing one purple passion-sign,
Thy Cross alone.

She, whom Thy voice hath called away,
Shall rise at breaking of Thy day,
A rose, reflecting but the ray
Of Christ alone.

Thy faithful servant, laid to rest,
Who loved his home, but loved Thee best,
Shall flourish like a palm-tree blest,
Beneath Thy Throne.

And all, whom Christ Himself hath sealed
Shall blossom in that holy field,
Immortal flowers and fruit to yield
To God alone!

DIAMOND JUBILEE AT KOBE.

Kobe began its Jubilee celebrations with a ball and a variety entertainment on Monday. At midnight Mr. John Carey Hall, H.B.M.'s Consul, addressed the assembly, and proposed the singing of the National Anthem. This was taken up with enthusiasm. On Tuesday, Captain Forsyth and Officers of H.M.S. *Narcissus* gave a reception on board. At midday this vessel fired a salute of 60 guns, to which the French flagship *Bayard* and the Japanese standing squadron replied with royal salutes of 21 guns. At the same time the Consul sent off to Her Majesty the congratulations of her loyal subjects in Kobe, Hiogo, and Osaka. A children's entertainment was given in the afternoon: and a cricket-match was played between teams captained by Mr. J. Marshall and Mr. J. Scrymgeour, the former winning with a score of 72, against the latter's 44. The decorations and illuminations were very fine, every nationality joining in. During the celebrations on Tuesday, Mrs. G. D. Clarke had the misfortune to fall into a fire-well that had been uncovered on the Bund in preparation for any outbreak of fire. The *Chronicle* says that an intrepid coolie hearing the cries of a little child that accompanied the unlucky lady, jumped into the well and keeping Mrs. Clarke above water enabled Mr. Sim and Mr. Playfair to reach down and pull her up. Mrs. Clarke was naturally terribly frightened and was taken in a drenched condition to the residence of Mrs. R. H. Cook, where Dr. Martin was summoned. The doctor ascertained that fortunately no bones were broken, and after an hour or so Mrs. Clarke was conveyed to her own residence.

THE HAWAIIAN QUESTION.

ONE point which certainly deserves to be emphasized in connexion with the question of Hawaiian annexation, is that the Japanese press has not displayed anything of the excitement and intemperance attributed to it by its foreign interpreters in Yokohama. One of the English journals published in this Settlement says:—"The ire of the Japanese nation is strongly evinced by the emanations of the native press." * * * "The news of the pending annexation by the United States of Hawaii has provoked a general wail on the part of the vernacular press, mixed with, as it appears to us, a quite unwarranted expression of indignation that a course should have been taken by the Washington Government which is not compatible with friendship towards Japan." * * * "The spontaneity of the outcry which has arisen in Japan within a few hours of the intelligence being made public, proves how deeply, though secretly, the idea has been entertained, that at some favourable conjunction or another, Japan might look forward with confidence to seizing the group and do what America is seemingly bent on now, annex the islands, and thus add them to the possessions of this Empire." Another local English paper, having described the Japanese press as "the most bellicose in the world"—a description diametrically opposed to the truth—goes on to say:—"The utterances of the Japanese press, magnified by American headlines, have sufficed to impress people in America with the ridiculous idea that Japan, gorged with Formosa which she has not half assimilated, is eager to swallow also so very indigestible a morsel as the Hawaiian Islands with their heterogeneous populations." Neither of these journals has any wish, we presume, to misrepresent the Japanese, but unquestionably their description of the tone adopted by the vernacular newspapers is exceedingly erroneous. We have carefully epitomized the articles published by all the leading journals of Tokyo, and if our local contemporaries will refer to our "Spirit of the Vernacular Press" they will see how incorrect is the impression that they convey to their own readers. We fully appreciate the almost insuperable difficulty of procuring translations that really reflect the tone of Japanese newspapers. A little clumsiness on the part of a translator suffices to pervert the whole character of the article he translates. Much of what has appeared on the present occasion, under the guise of translations, is absolutely unrecognisable by any reader of the translated articles, which, on the whole, are temperate, dignified and pacific; much more temperate, much more dignified, and much more pacific than could reasonably have been expected, under the circumstances. After all, the situation is undoubtedly very galling to Japan. Her subjects in Hawaii constitute

more than one fourth of the total population of the islands; she has large material interests at stake; she has suffered unquestionable wrong at the hands of Hawaii, and she is actually engaged in negotiations to obtain some measure of redress. Yet, without conveying to her the slightest hint of any such intention, the President of the United States has affixed his signature to a document for the annexation of Hawaii. We can not call that friendly treatment. It bears no semblance of friendship. We venture to say that any European nation finding itself placed in such a position, would bitterly resent and indignantly denounce the action of President MCKINLEY. However, there appears to be strong reason to think that the Government of Japan, having sought information of the American Cabinet's intentions through the recognised diplomatic channels, received an answer which not only imparts to the present issue the character of an extraordinary surprise, but also compels Japan to choose between one of two hypotheses, the first wholly untenable, the second almost incredible, namely, either that she has been deliberately deceived, or that some of the most important of the United States' foreign affairs are managed without the knowledge of the statesmen primarily responsible for them.

The Japanese Government, however, are not the only victims of a surprise. There have been a series of surprises. The first was connected with an incident scarcely less important than Annexation, and, in our opinion, directly responsible for Annexation, namely, the Senate Committee's elimination of the clause in the Tariff protecting the Reciprocity Treaty with Hawaii. Up to the moment of the publication of the Committee's report, Senators of all shades of opinion seem to have thought that the Treaty was safe. For the information of readers that have not studied Hawaiian affairs, we may explain that, under the Reciprocity Treaty, Hawaiian sugar finds its way into the United States duty free. Hawaii sells annually to America from a hundred and fifty thousand to two hundred thousand tons of sugar—from one-tenth to one-eighth of America's total consumption. If Hawaiian planters were brought within the purview of the MCKINLEY Tariff, they would have to pay import duties aggregating 7 million dollars on their sugar. Of course their industry would be seriously crippled, if not wholly destroyed by such a tax. But the American manufacturers of beet sugar and growers of cane sugar want protection, and the Senate Committee seems to have determined that they are entitled to protection. The Committee claims, indeed, that its chief object is revenue, but in view of the facts that America produces forty thousand tons of beet sugar and two hundred and forty thousand tons of cane sugar, and that the duty proposed by the Senate Committee ranges from 78.2

to 144.3 per cent., it is obvious that the measure must prove much more efficacious for purposes of protection than for purposes of revenue, since foreign sugars will very soon be excluded altogether from the American market. It is calculated, however, that ten years must elapse before the United States can become self-supplying in the matter of sugar, and during those ten years the American people will have the pleasure of paying 160 million dollars annually for the sugar which they now purchase at 90 millions, the public revenue benefiting proportionately. Such are the ways of protection. To grant to Hawaii immunity from the tax would have put 8 million dollars annually into the pockets of her planters. It seems to have been confidently expected that the Senate Committee would recommend that very liberal procedure, but the expectation was suddenly falsified. On the top of that surprise comes the President's sudden signature of the Annexation Treaty. The two incidents are difficult to reconcile from the point of view of revenue, for, of course, so soon as Hawaii becomes a part of the United States, her sugar will be admitted duty free. They are difficult to reconcile from the point of view of protection also, since American sugar-producers will now have to reckon Hawaii as a competitor on equal terms. But, as has been shown above, America and Hawaii together produce less than one-fourth of the total consumption of the people of the States. They have still a margin of 2½ million tons to monopolise. Hawaii's admission to the splendidly profitable business opened up by the Dingley Tariff can not, therefore, seriously embarrass the sugar interests in the States. There are plums enough for both, and to spare. Besides, the Hawaiian planters will be obliged to dispense with Asiatic labour, or, at any rate, to limit themselves to the Asiatics already in the islands. They can afford to do so, however. The additional eight million dollars put into their pockets by Annexation and the Dingley Tariff will enable them to double their present outlay on account of labour without the slightest inconvenience. We strongly suspect that before the Annexation Treaty goes into operation—supposing it to receive the endorsement of the Senate—a great many Hawaiian planters will be eager to avail themselves of their last chance of getting a few thousand additional Japanese labourers.

This sugar question seems to us to be the real issue at stake. We do not imagine that President MCKINLEY places the smallest credence in rumours of Japanese designs upon Hawaii. He is far too well informed. American public opinion may be slightly influenced by such canards, and by the correlated and contemporaneous story that, in the event of the abolition of the Reciprocity Treaty, Hawaii will throw herself into England's arms, and is actually

making preparations to do so. But American officialdom pays no heed to falsehoods so transparent. To rescind the Reciprocity Treaty, however, and to leave Hawaii out in the cold, would be to starve her to death very rapidly. President MCKINLEY prefers Annexation to the perpetration of such a crime against four thousand of his countrymen. Possibly he looks to a compromise. Possibly he expects that the Senate will not endorse either Annexation or the complete rescission of the Reciprocity. That, however, seems unlikely: its choice lies between Annexation and industrial death. There are no longer any anti-annexationists in the island, we imagine.

IT is certainly true that the little band of Americans who have arrogated the right to dispose of the Hawaiian Islands, are usurpers; that they attained their commanding position by a trick, and that they have not the slightest moral title to the property which they are now quietly undertaking to hand over to the United States. But it is also true that the inclusion of Hawaii in the dominions of the States has been a contingency, not merely contemplated as possible, but even actually assented to, by the rulers of the islands ever since 1850. If the basis of the country's foreign relations had to be stated concisely, the statement would take this form:—"Hawaiian administrators, whether of native or of foreign origin, have uniformly considered that annexation by the United States, or the establishment of a United States' protectorate, is their inevitable recourse against aggression on the part of another Power, or against the adoption of such a financial policy by America as would destroy the industrial prospects of Hawaii." That analysis of the position may be very easily deduced from the Hon. J. W. FOSTER'S despatch covering the exhaustive report on Hawaii's foreign relations, compiled by Mr. A. H. ALLEN, Chief of the Bureau of Rolls and Library in the State Department. In 1850, Lord PALMERSTON, visited by a Hawaiian commission, recommended to his visitors the alternatives of a protectorate under the United States, or of becoming an integral part of America in fulfillment of a destiny due to close neighbourhood and commercial dependence on the great Republic. In the following year (1851), Hawaii became involved in trouble with France and found itself menaced by *force majeure*. Thereupon a contingent deed for the cession of the islands, drawn and signed by the KING, was placed sealed in the hands of the United States' Commissioner, who was to open it and act upon its provisions at the first shot fired by France. In 1854, the draft of an annexation treaty was actually agreed upon with the Hawaiian Ministry, but its com-

pletion, delayed by foreign influence, was finally defeated by the death of the KING. In 1867, the sentiment in favour of annexation prevailed so strongly in the islands that Mr. SEWARD gave instructions for the acceptance of any overtures in that direction, and officially placed on record his opinion that "if the policy of annexation should conflict with the policy of reciprocity, annexation was in every case to be preferred." In President JOHNSON'S Annual Message of 1868, we find it stated that reciprocity was desirable, "until the people of the islands should, of themselves, at no distant day, voluntarily apply for admission into the Union." President GRANT and Mr. FISH took a similar view, and Mr. BLAINE, in 1881, instructed the American Representative in Honolulu that, in the event of any difficulty in securing the benevolent neutrality of Hawaii, "the United States' Government would unhesitatingly meet the altered situation by seeking an avowedly American solution."

If, then, the protection platform of the MCKINLEY Cabinet forbids the continued grant of reciprocity to Hawaii, is not annexation the alternative which strictly accords with America's traditional policy and with the frequently ascertained wishes of the Hawaiians themselves? The answer would be a simple affirmative but for one difficulty: President CLEVELAND, in his Message to the Senate and the House of Representatives on December 18th, 1893, distinctly declared that the Provisional Government was not entitled to deal with the Hawaiian Islands, and that the United States would be guilty of an international fraud did it receive them from the hands of that Government. The point deserves to be clearly understood at the present juncture. In February, 1893, President HARRISON submitted to the Senate the draft of an Annexation Treaty. His covering Message said:—"The overthrow of the Hawaiian monarchy was not in any way promoted by this Government, but had its origin in what seems to have been a reactionary and revolutionary policy on the part of Queen LILI'UOKALANI, which put in serious peril not only the large and preponderating interests of the United States in the islands, but all foreign interests, and, indeed, the decent administration of civil affairs and the peace of the islands." In other words, President HARRISON'S proposal to receive the islands from the Dole Administration, was avowedly based on the hypothesis that the overthrow of the monarchy had been accomplished by the will of the majority of the nation, and not by the assistance of any foreign strength coercing the nation. President CLEVELAND, coming into office a few days after the submission of the Annexation Treaty to the Senate, withdrew the document for fuller examination, and despatched a Special Commissioner to Hawaii for the purpose of ascertaining

the exact circumstances under which the monarchy had been subverted, and a republic set up. The Commissioner collected a mass of evidence, the whole of which was subsequently published. It established conclusively that President HARRISON'S view of the facts had been erroneous, and it induced President Cleveland to address to Congress a Message containing these words:—

Thus it appears that Hawaii was taken possession of by the United States' forces without the consent or wish of the Government of the Islands, or of anybody else, so far as shown, except the United States Minister. Therefore, the military occupation of Honolulu by the United States on the day mentioned was wholly without justification, either as an occupation by consent or as an occupation necessitated by dangers threatening American life or property. * * * This wrongful recognition of the Provisional Government by our Minister placed the Government of the Queen in a position of most perilous perplexity. * * * If the Queen could have dealt with the insurgents alone, her course would have been plain and the result unmistakable. But the United States' had allied itself with her enemies. * * * She knew that she could not withstand the power of the United States, but she believed that she might safely trust to its justice. Accordingly, some hours after the recognition of the Provisional Government by the United States Minister, the palace, the barracks, and the police station, with all the military resources of the country, were delivered up by the Queen upon the representations made to her that her cause would thereafter be reviewed at Washington, and while protesting that she surrendered to the superior force of the United States, whose Minister had caused United States troops to be landed at Honolulu and declared that he would support the Provisional Government, and that she yielded her authority to prevent collision of armed forces and loss of life and only until such time as the United States, upon the facts being presented to it, should undo the action of its Representative, and re-instate her in the authority she claimed as the constitutional sovereign of the Hawaiian Islands. This protest was delivered to the chief of the Provisional Government, who endorsed thereon his acknowledgment of its receipt. The terms of the protest were read without dissent by those assuming to constitute the Provisional Government, who were certainly charged with the knowledge that the Queen, instead of finally abandoning her power, had appealed to the justice of the United States for reinstatement in her authority; and yet the Provisional Government, with this unanswered protest in its hand, hastened to negotiate with the United States for the permanent banishment of the Queen from power and for a sale of her kingdom. * * * But for the lawless occupation of Honolulu under false pretexts by the United States' forces, and but for Minister Stevens' recognition of the Provisional Government when the United States' forces were its sole support and constituted its only military strength, the Queen and her Government would never have yielded to the Provisional Government even for a time and for the sole purpose of submitting her case to the enlightened justice of the United States. Believing, therefore, that the United States Government could not, under the circumstances disclosed, annex the islands, without justly incurring the imputation of acquiring them by unjustifiable methods, I shall not again submit the treaty of annexation to the Senate."

For all purposes connected with Annexation the situation remains exactly as President CLEVELAND left it nearly four years ago. The evidence collected by his Commissioner stands unrebuted by any fresh testimony, and the "substantial wrong" that he denounced remains as substantial as ever. That is the stumbling block in the path to annexation. President MCKINLEY has not found it a stumbling block. He has unhesitatingly taken up the position described by President CLEVELAND as that of having actually "set up a temporary Government on foreign soil for the purpose of acquiring through that agency territory which we had wrongfully put in its possession," and he has readily made himself a party to a bargain concerning which President CLEVELAND said that it "would be called by a familiar and unpleasant name when found in private transactions."

It must be admitted, too, that President MCKINLEY is thorough-going. President HARRISON'S Treaty proposed to make an annual allowance of twenty million dollars to Queen LILUOKALANI and a grant of a hundred and fifty thousand dollars to Princess KAIULANI. President MCKINLEY'S Treaty gives them nothing. The Queen's appeal to American justice has fallen upon the wrong ears.

SUMMARY OF CURRENT JAPANESE LITERATURE.

Dr. Kaiō Hiroyuki's German treatise on "The Struggle for Supremacy among the Powerful," has attracted a good deal of attention both in Germany and France. The following, according to the *Tetsugaku Zasshi*, is the gist of what Karl Vorländer has to say in the *Zeitschrift für Philosophie und philosophische Kritik*:-

This is the first time that a book written by a Japanese has been criticised in a German philosophical magazine. That in 20 years an Eastern nation should be able to produce a man capable of writing in polished German a high class philosophical treatise, abounding in historical allusions and possessing a flavour and purpose peculiar to itself, cannot but excite admiration and cause wonder in thoughtful Western minds.* Dr. Kaiō gives evidences of having made himself thoroughly acquainted with modern philosophical writers and with the works of writers on the history of civilisation. But for a man with so much learning, he is certainly one-sided in his views. Among the various schools of thought in Japan, Dr. Kaiō espouses the cause of the extreme evolutionists. In applying the results of our knowledge of development, I think he has gone further than known facts warrant. However, on the subjects of the philosophy of the development of sociological power, he has collected a variety of valuable material. I will content myself with giving the fundamental idea of Dr. Kaiō's monograph.

The rights possessed by man have been won by the display of physical strength. The weak have had no alternative but to allow the strong to establish such rights as they deemed fit. The character of the men that have gained ascendancy in the world has differed immensely. Some have been fierce, brutal, and unscrupulous as to the means employed to compass their ends. Others have shown refinement and respect for certain moral codes. But that has made no difference as to the ultimate foundation of power. It has been in every case physical force pure and unalloyed. Dr. Kaiō sees no difference in origin in the reign of the virtuous and the reign of the vicious. The preëminence of the virtuous and the vicious alike rests on physical force as a basis and always has done so. There is no such thing as pure altruism. The principle that lies at the base of all action is some form of self-interest, each individual and each State for itself. In order to illustrate this principle Dr. Kaiō culls from universal history instances which show the struggles for ascendancy that have taken place between the upper and lower classes of society, the educated and uneducated, the rulers and the ruled. In all this there is not much that is new, except where Dr. Kaiō has given us an insight into Chinese and Japanese life. Taken on the whole, there is no denying that Dr. Kaiō has stated his views in a very clear manner and Germans

* It is perhaps well to state that since referring to Dr. Kaiō's German book last month, we have been informed that its language underwent considerable revision by the hands of an expert before being sent to Germany. This was the case, too, with a French work published by Mr. Ariga, noticed by us some months ago. We have not the slightest doubt, however, that the opinions expressed in the works are those of the author and not those of the revisers. Dr. Kaiō reads and understands German perfectly well, but has had, we understand, little practice in writing in that language.

cannot but welcome the new philosopher who has appeared in our midst as a representative of intellectual life in the Far East.

The *Tetsugaku Zasshi* says that there is a great want of suitable text-books on Ethics and that to supply that deficiency Dr. Inouye Tetsujiro and Mr. Takayama Rinjiro, until recently a teacher in the Sendai Second Higher School, have prepared a new work, consisting of five parts, called *倫理教科書 Rinri Kyōkwa Sho* (A Text-book on Ethics). In the preface to this work it is contended that foreign works on Ethics are not suited to the Japanese, as they do not take into consideration national sentiments on ethical questions. Just as many of the elements of the old Roman family life were destroyed by Christianity, so there is danger of the Japanese losing many of those moral sentiments connected with their hearths and homes under the guidance of Western teachers. To guard against this tendency the new text-book has been issued.

The *Sekai no Nippon* has an instructive article on Newspapers and Journalists. The esteem in which journalists are held, says this authority, is not what it used to be. In former days the term *senset* was used of this class of writers, but now one more frequently hears them described as *Shimbun-ya* (屋). The *Chōya*, the *Mimpō*, the *Niroku*, the *Kessui*, the *Seiron*, have all disappeared, and dailies like the *Hōchi*, the *Jiji*, the *Mainichi* and even the *Nichi Nichi* have grown mercenary and aim at making money rather than figuring as high class literary organs. Taking journalism as a mere money-making business, it is a very poor affair. We are informed that there are not more than ten journalists in receipt of salaries ranging from 50 to 100 yen a month, and that all the rest earn only from 25 yen to 40 yen a month. Is it to be wondered at that in the ranks of journalists few men of ability are found, and that the men who run the papers resemble sellers of the jelly known as *ame*: they stretch the material at their disposal so as to cover the allotted space day after day.

Mr. Katayama Sen, M.A., has published a book of 200 pages entitled *Eikoku Konnichi no Shakai* (Modern English Society) which ought to prove interesting to Japanese unacquainted with the West. Many of our great cities are described and accounts are given of a number of institutions good and bad. Not only are the Salvation Army and the churches noticed, but a description is given of our gin palaces and our brothels. The book sells at 50 sen at the Keiseisha.

The same publishing house has just issued a number of short biographies entitled *Shakai Kairyōka retsuden* "Lives of the Reformers of Society," such as Wesley, Wilberforce, Abraham Lincoln, and others.

We observe that the *Shigaku Zasshi* (Historical Magazine) is to be remodelled. For some time past, complaints of the dryness and inutility of the matter furnished by this organ have been heard. It now purposes to publish various opinions on the study and compilation of history. To this part of the magazine the heading *説林 Setsurin*, "A Forest of Opinion," is to be given.

The number of the *Shigaku Zasshi* before us protests at some length against the adoption of Fisher's "Outlines of Universal History" as a text-book in Middle schools, on the ground that the work has been curtailed to the extent of making it a dry and frequently unintelligible record of events. To make use of Fisher's History, says this organ, is the way to disgust Japanese students with universal history. Sain-ton's Universal History, the *Shigaku Zasshi* thinks, is a much more suitable text-book.

The first number of the *Kyū-baku-fu* noticed in our last summary has made its appearance. It contains a picture of Ieyasu and a facsimile

of a manuscript poem written by the great Shōgun. Mr. Kimura Kaishū is engaged in collecting historical material bearing on the last years of the Tokugawa Shōgunate, which will appear in the *Kyū-baku-fu* from month to month. Under the heading of "Historical Material" the first number gives an account of the war that ushered in the Meiji era, based on diaries kept at the time, publishes biographies of Bakufu officials, &c. and sketches the surroundings of the chief persons who figured at the close of the Tokugawa era.

We announced several months ago that the Dainihon Zusho-Kaisha had published a lengthy work on Japanese literature entitled *Kokubungaku-tai-kō* (大綱). Chinese literature has now been treated in the same way, and in July next the first of a series of 16 volumes, each volume consisting of 200 pages, is to appear under the title of *Shina Bungaku-tai-kō*: "A comprehensive summary of Chinese Literature." The price per volume is to be 25 sen. The authors under review begin with Mencius. No less than 24 writers of a later date are to be dealt with. The editors of the work are Messrs. Fujita, Saakawa, Shirakawa, and Omachi. Its object is to furnish students of Chinese literature with a concise account of the principal Chinese writers and thus save them the trouble of wading through an enormous amount of superfluous matter. The method of treatment is said to be Occidental.

The Waseda Semmon-gakkō has published a translation of the "History of the English Parliament," with an appendix prepared by the translator, Mr. Takata Sanai, giving a variety of information on England's Royal dynasties and other subjects. The book sells at 1 yen 30 sen.

Mr. Samura Hachirō, for many years past, has been engaged on a giant work, to consist of 24 volumes, the first of which is to appear this month. The work is called the *國書解題 Kokusho-Gedai*; its design being to furnish a commentary on the chief literary works of Japan. No less than 16 scholars have been assisting Mr. Samura in his task. The character, contents, object, date and author of each work is given, a life of the author, and a critical review of his opinions and doctrines. The *Tōyō tetsugaku* speaks in the highest terms of the accuracy and care with which this great undertaking has been conducted, and considers Mr. Samura one of the greatest heroes of modern days.

Judging from the numerous phrase books, &c., that are appearing, we are inclined to say that the study of English has revived. Among recently published works are the following. (1) The *和英通譯指針 Wa-iei tsūyaku Shishin*, which is designed to be a guide to the translator from English into Japanese. It furnishes a list of mistakes frequently made by Japanese and gives a number of words that are used in different senses in the two languages, notwithstanding the fact that their original meaning is the same, and indicates the nature of the quicksands in which the Japanese translator is apt to become involved. The book sells at 40 sen at the Kyōyeki-shōsha, Takekawa-chō, Kyōbashi, Tōkyō. (2) The *英文典語句慣用法 Ei-bun ten goku kwan'yō-hō* "The grammatical usages and idioms of the English Language," by Mr. Azevagi Tōarō. Published by the Hakubun Kwan; price 70 sen. (3) The *實用英語階梯 Jitsuyō-Eigo-kaitet* "Graduated Exercises for the Study of Practical English," by Mr. Saiō Kenri, 2 vols at 50 sen. Published by the Ikeda-shoten, Kogura-chō, 3 chōme, Ushigome, Tōkyō. (4) The *英文解 Eibun-kai*, Explanations of English, by the above named author, price 25 sen. Issued by the Ikeda-shoten. (5) The *實用速成英和會話 Jitsuyō sokusei-Ewa-kaiwa* "A Quick and Practical Method of Learning English and Japanese Conversation." The author is Mr. Shimada Yutaka, the compiler of a lexicon known as the *Wayaku Eiji*. The work has been

revised by the Rev. Arthur Lloyd and sells at the Shōyōeidō, Minami-Kōnya-chō, Kyōshashi, Tōkyō at 40 sen. (6) The 和英實用作文法 *Wa eijitsuyō sakubunhō*. This work aims at teaching the art of letter writing. It furnishes Japanese letters with English translations. Mr. Inoue Utarō is the author: published by the Eigo-gakkai, Sarugaku-chō, Kanda, Tōkyō. Price 20 sen. (7) By the same author the 英和新式尺牘範範, *Ei-wa shinshiki sekidoku kiban*, "Models of New Style English and Japanese Letters." In this work specimens of English letters are furnished with Japanese translations appended. Price 20 sen. The same publisher as the above. (8) In addition to the above the Sarugaku-chō Eigo-gakkai has in hand a series of small books, 12 in all, to be called the 英語學自修全書 *Ei-gogaku-jishū-sensho*, their object being to enable the student to acquire a knowledge of English without the aid of a teacher, by furnishing him with a number of specimen translations, idiomatic phrases in both languages, with explanations and discussion of points of grammar, &c.

We cannot vouch for the reliability of any of the above works. Even in the case of the book with which Mr. Lloyd's name is connected, it is impossible to say to what extent the revision of the book was entrusted to Mr. Lloyd. We would recommend purchasers to proceed with caution in making a selection.

(TO BE CONTINUED.)

NEWS OF THE WEEK.

The foundation stone of All Saints' Church Kobe, was laid on Monday, Mrs. Hellyer performing the duty. The service was largely attended. The Rev. H. J. Foss gave the sermon.

The admirable police arrangements, more particularly at Yato Bridge, on Jubilee day and evening, have evoked warm praise from many residents. The Bluff police had charge at the Bridge, the Naval Depot, and elsewhere on the Bluff, and their management of the dense traffic was most praiseworthy.

The *Nagasaki Press* has purchased the entire plant of the *Rising Sun* Printing Office, together with the goodwill. The *Nagasaki Shipping List* and *Rising Sun* will cease publication at the end of this month, and their place will be taken on July 1st by the *Nagasaki Press*, which will be published daily.

The Bluejacket Fothergill, who lost his life by falling from the first floor window of the Salvation Army Naval and Mercantile Home, on the eve of the Jubilee, was buried with full Naval Honours on Wednesday morning at 10 o'clock. The Salvation Army officers of the Home, were present at the funeral and also sent a wreath to adorn the grave.

We are requested to state that the Committee appointed to carry out the celebration of the 60th anniversary of H.B.M.'s accession, which took place on Tuesday, desire to thank all residents and visitors of other nationalities, who assisted, for their hearty co-operation, that contributed towards the success which characterised the several features of the programme.

At the half-yearly meeting of the P. & O. Steam Navigation Company, which was to be held in London on the 4th June, the Directors decided to recommend a dividend at the rate of 5 per cent. per annum on the preferred stock, and an interim dividend at the rate of 7 per cent. per annum on the deferred stock of the Company.

Among the passengers by the *Empress of China* on Friday last were Judge and Mrs. Mowat. His Honour goes home on sick leave. In all probability we shall not see him back in Japan again, as he has put in over 30 years of Far Eastern service for the Crown and is entitled to retirement and a pension. In that case Mr. H. S. Wilkinson would receive substantive rank as Judge in H.B.M. Court for Japan.

On Tuesday night the dead body of a man seemingly of about 23 or 24 years of age, clad

only in a shirt and with sandals on his feet, was found floating in the water near the English Hatoba. The corpse was conveyed to the Police Station by the Water Police and upon examination the body was found to be so decomposed that it must have been at least three or four weeks in the water. As it was found impossible to identify the body it was handed to the Town Office for burial.

The settled accounts of the Central Famine Relief Funds for the year 1895, have just been published by the Finance Department in Tokyo. Receipts amounted to yen 104,489, and expenditures to yen 184,188; but a balance still remains of yen 1,748,347. In the same year, the receipts of the relief funds administered by the cities and prefectures amounted to yen 1,107,053, but the outlays were only yen 374,729. The balance in hand all over the empire when the year closed was yen 20,541,653, showing an increase of yen 732,324 on the twelve-months' working.

Habulaye exported to America during March, April, and May this year shows a considerable increase, being more than four times the quantity exported last year. Below is a comparative table:—

	30th year.		29th year.	
	Am. unt. Yen.	Value Yen.	Amount. Yen.	Value Yen.
March	23,391	360,714	11,720	167,393
April.....	29,914	541,646	7,850	101,885
June	37,776	694,698	5,161	71,766
Total.....	91,081	1,597,058	24,731	341,044

The Cash Parcels Post system was established by a Notification of the Department of Communications last year and enforced in November. The number of parcels that were delivered in exchange for cash during the past five months, has, according to the *Tokyo Shimbun*, reached 17,000, involving 84,185 yen. Deliveries of parcels as well as the value realized in each month up to March were as follows:—

	Deliveries.	Value. Yen.
November, 1896	811.....	743
December, 1896	2,120.....	17,895
January, 1897	2,150.....	17,482
February, 1897	2,378.....	20,688
March, 1897	2,620.....	20,686
Totals	10,079.....	84,185

The *Kobe Chronicle*, on the authority of a vernacular contemporary, states that recently a thief, or thieves, entered the godown adjoining the residence of Prince Tokugawa Keiki, the ex-Shōgun, at Shizuoka. Valuables were stored in the godown, and it is estimated that the property stolen is worth between fifty and sixty thousand yen. Amongst the articles taken away is said to be a belt (*karamaki*) of pure gold six inches wide and about three-eighths of an inch thick. A climb over a high wall was necessary to get to the godown, and from the footmarks it appears as though only one man had entered. He left an iron bar about five feet long with which he seems to have broken the iron network and bars of the ventilator and thus effected an entrance.

Particulars of the hailstorm which occurred in the vicinity of Minami Saku-gun, Nagano Prefecture, show, the *Asahi Shimbun* states, that on the 21st inst. from about 6 p.m. the weather began to be threatening, and shortly afterwards a hurricane came sweeping over the locality, followed by heavy thunder and hailstones of extraordinary size, which accumulated on the ground to a depth of six inches. The crops of grain, mulberry leaves, and even the boughs of many trees, were stripped. In the vicinity of Noyama-machi 26 houses were demolished and 44 partly destroyed, while five persons were killed by the hailstones, those slightly wounded being very numerous.

On the 15th instant an enquiry into the circumstances attending the collision between the N. Y. K. steamer *Takasago Maru* and the Japanese junk *Eiryoku Maru*, was held at the Tokyo Marine Office. The evidence showed that the steamer *Takasago Maru* left Yok-

kaichi, Ise Province, bound for Yokohama at 3.15 p.m. on the 26th of December, 1896, under command of Captain John George de la Lande, a British subject. When the vessel was nearing Hamamatsu at about 8 p.m. the Captain left the bridge to take a rest, entrusting the command to the third officer, George Hay, a British subject. It was about 10.30 p.m. when the third officer sighted the junk *Eiryoku Maru*, and tried to avoid the collision, but without success, the steamer running over the junk. One of the crew on board the junk was lost. After hearing evidence the Court found that Captain De la Lande was not to blame but George Hay had his certificate suspended for three months.

We note among the recipients of the Jubilee Honours the names of Sir William Robinson, K. C. M. G., Governor of Hongkong, who has been raised to a Grand Cross of St. Michael and St. George; and Mr. G. Jamieson, Consul and Assistant Judge at Shanghai, who has received a Companionship of the same Order.

A Brisbane telegram to a Sydney journal states that in connection with the stranding of the steamer *Yamashiro Maru* on the Tannadice Reef, in Torres Straits, early in March, the Marine Board has found that Pilot Pebbles, who was in charge, neglected his duty, and has in consequence cancelled his license.

A Thanksgiving Service, in commemoration of the Sixty Years' reign of Her Majesty Queen Victoria, will be held in the Central Tabernacle (Chūō Kaido), 23, Haruki-machi, Hongo, Tokyo, on Sunday, June 27th, at 3 p.m., when the Rev. John Scott, D.D., will preach on "The Divine Hand in the reign of our Queen." All British residents are earnestly requested to attend, and those of other nationalities will be most cordially welcomed.

The microbe, that scapegoat of modern science, has to bear the burden of yet another human infirmity, if we may credit the report made by Dr. Sabouraud to the Dermatological Society of Paris. He asserts that premature baldness is chiefly due to the ravages of a bacillus, which takes up its abode in the fatty cells lying about the roots of the hair. Whether this parasite consumes the nutriment provided by nature for the support of the capillary crop or secretes a "toxin" which is fatal to the hirsute growth, seems to be as yet undecided. The eminent physiologist has succeeded in cultivating the creature after the most approved Pasteurian methods, and the fleece of a sheep inoculated with the virus shows bare patches of a most gratifying nature.

Since official permission has been granted to opium smokers and dealers to indulge in their habit, or carry on their trade, the *Sekai-no-Nippon* remarks, smuggling into Formosa as well as illicit sales, have naturally decreased, and the demand for licences increases day-by-day. The following figures are the result of an investigation conducted between the 1st April and the 22nd May this year:—

OPIUM SMOKERS AND SELLERS IN MAY.		Smoking divans.
	Retailers.	
Taicheng Prefecture	Within the castle	4
	Banks	32
	Tsautia	55
	Keelung	12
	Tamsui	37
Tainan Prefecture	Hsin-chu	64
	Tainan	60
	Aupin	8
Totals	272	81

The quantity of opium transported up to the 24th May was fifty-two boxes, each containing thirty-six pounds, valued at 22,127 yen. Second class opium amounted to 138 boxes, worth 44,360 yen; and third class, 308 boxes, worth 76,420 yen. The total import therefore, together with powdered opium, does not fall short of 142,933 yen in value, while the population of the towns above mentioned is only 131,642.

The *Hochi Shimbun* publishes a paragraph extolling the probity of conduct and lofty

idea of a Mr. Kuwamura, head-man of Waki-moto-mura, Aomori, who, it appears, was recently presented with a cup by the State, in acknowledgement of his valuable services as head-man in his village, but this conscientious official is reported to have declined the honour conferred on him, and to have given the following reasons for his conduct, in a communication addressed to the President of the Decorations Bureau:—"The affair of the 27th and 28th years of Meiji was unprecedented in the requirements made upon the Government and the people to bring about the victory of Japan. With regard to this victory, however, there was little ground for congratulation. Thousands of gallant young men perished in the war and their dependent relations in many instances suffered want and hardships, while millions more among the population laboured under the imposition of heavy taxation in consequence of the war. Considering that the little cup offered me as a reward for my services, was paid for out of the 'blood and sweat' of a people made thus wretched, a man like myself, whose duty it has been to mix with them, comfort them, and collect taxes from them, could not conscientiously receive such a reward, which moreover, should only be conferred for rare merit. As for myself, I have done nothing to merit such distinction. I have only done my duty and am not entitled to any such honour, and must therefore decline to accept the Cup offered." Such abnegation and conscientiousness is rare amongst officials, high or low, and is therefore worthy of record.

The *Hochi Shimbun* prints an interesting table drawn up by Mr. Kure Bunso, the well-known statistician, with regard to the causes or circumstances attending love-suicides. According to his figures, the number of love-suicides occurring during two years and a half, from January 1895 to February 1897, totalled fifty-nine. Of these forty-five were voluntary suicides, twelve inevitable (whatever that may mean), and of the remaining two the causes were unknown. Most appear to have originated from dissipation, debauchery, and distress. Another cause was the impossibility of concluding marriages. Cases falling under this category are invariably found to involve prostitutes. As to the occupation of the victims, it may be of interest to note that business men constitute the greatest number, next come medical students and pharmacutists, labourers being lowest on the list. Four soldiers were among the victims. In the case of women, prostitutes are the most prominent, forty-two having fallen victims to the mania; the daughters of farmers come next; married women next, and singing-girls last. Among unavoidable suicides labourers are the most prominent class. In most cases death was brought about with a cutting instrument. Poison and strong chemicals are also favourite means of making an exit from a dreary world. The pistol and drowning were resorted to in very few cases. As regards ages, both men and women were generally between twenty-one and twenty-five, while the months in which most suicides occurred were February, November, and December, in the 29th year of Meiji, and January and February in the 30th year.

From the latest numbers of *El Comercio* to hand, says the *China Mail*, it appears the rebels are still giving much trouble in the central provinces of Luzon. In Pampanga Province fighting has taken place in the village of San Nicolas and in Gatan around Mount Arayat, where some 27 rebels were killed in one encounter, and in the village of Santa Maria. In Bulacan Province, rebels have attacked Bagumbayan, a hamlet of the county town, the hamlets of Licton and Lanca near Polo, Bahay Pare, near Bulacan, and the important town of San Miguel de Mayuno, where several encounters have taken place. The gunboat *Otalora* has been sent up from Manila to Bulacan, to be under the orders of the General-in-Command. In the Province of Nueva Ecija numerous groups of rebels have appeared in San Juan, a hamlet of the large town of Aliaga, but were repulsed. In Tulae Province the Spanish troops attacked a group of rebels near Bambon (a station on the

Manila-Dagupan Railway) who the day before had sacked the village of Moriones, dispersing and killing 11 of them, recovering many arms and provisions. In the same Province, in the village of O'Donnell, the rebels attempted to capture the Spanish priest, but the Balugas, the mountain tribes inhabiting the hills around, came to his defence and kept off the rebels with their bows and arrows, the only arms available—and when these were all exhausted they took him to the hills for safety, where he was secreted until help arrived.

CORRESPONDENCE.

THE CATHOLIC TRANSLATION OF THE GOSPELS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to address you the following remarks in answer to those which appeared in the *Mail* of the 11th inst. with regard to the translation of the four Gospels recently published by the Catholic Mission.

It is no wonder to us that, seeing a Catholic translation of the Gospels signed by Mr. Takahashi Goro, a Protestant, the writer of the "Summary of the Religious Press" was somewhat taken by surprise. Indeed, were it not explained the fact may well seem strange.

We hasten to say that in the present circumstance, the Catholics have in no way departed from the rule commonly observed in Christian Societies not to leave to one private person the translation and interpretation of Holy Scriptures. They did not let out of sight that the Catholic Church to whom, according to their principles, it belongs to judge of the true meaning and interpretation of the Scriptures, could not show so little concern for what may, even remotely, touch upon the integrity of faith.

Nevertheless desiring an exact translation, a faithful rendering into Japanese of our duly authorized Latin Vulgate, we asked Mr. Takahashi for a draft of that translation for two reasons:—he was a linguist and literary man of no common ability—than whom a more qualified we did not know—and, at the same time, most faithful in meeting his engagements. But his work, as was proper, was submitted to the examination and discussion of competent men. It is by no means necessary to be better read than an author in order to judge of the accuracy or inaccuracy of his expressions. This version thus carefully examined was found to reproduce, as nearly as possible, the text of our Vulgate, and we had consequently no reasonable motive to reject it.

But Mr. Takahashi was a Protestant! What then? What we have to consider is not the belief of the author, but his literary composition and attainments. Now, with the latter we find no fault worth speaking of. And his being a Protestant, so far from being injurious to our cause, gives us on the contrary a special advantage. How often indeed have not Catholics been charged with concealing the Sacred Books that they might have (it was said) a free hand in their interpretation and give them a wrong meaning in their Catechisms! Such accusations left us rather indifferent, but this time an occasion having offered, it seemed to us that an absolutely literal translation of our Bible, made and signed by a Protestant, was the shortest and most direct answer to all those accusations and reproaches.

Believe, dear Sir, yours sincerely,

P. M. OSOUF, Arch.

RADICAL CHANGES IN THE BANK OF JAPAN.

Rumours have long been current that the Bank of Japan would, simultaneously with the increase in its rate of interest, commence issuing loans to private individuals. But the scheme had not been carried into operation up to the present and the public were disposed to blame the Bank for its procrastination, as it caused not a little embarrassment to the economic world. The Bank, however, has been engaged in elaborate investigations and has now perceived the necessity of introducing radical changes in its system of business, with a view to promote the circulation of money and to maintain equality in the rates of interest. From the 14th instant, private loans have been granted, the old rules regarding security have been rescinded, and the limit of interest as well as discount raised. The principal points noticeable in the changes are as follow:—

1.—LOANS TO INDIVIDUALS.

Loan transactions of the Bank of Japan have been carried on hitherto with other banks only, at lower rates of interest than those charged by those banks to the general public. The Bank now proposes to issue loans to private individuals at higher rates of interest, of which public notice is given, in dealings with companies other than Banks, provisions similar to those with private individuals are to be applied. The ordinary scale of interest payable by private individuals is as follows:—

Daily interest, per 100 yen.
Interest on loans and discount of notes, issued upon security of goods 2.7 sen.
Discount on commercial notes 2.4 sen.
The ordinary rate of interest on transactions among private people in Tokyo being 2 sen and 8 rin or 2 sen 7 rin, according to the nature of goods hypothecated, there is little or no difference in the rate fixed by the Bank of Japan. The new system adopted by the Bank can hardly fail to prevent minor banks from acquiring in future exorbitant profits by the issue of special private loans to individuals.

2.—INTEREST ON LOANS TO OTHER BANKS.

It is also a matter of paramount importance to establish a fixed rate of interest for loans to other banks. The scale of interest has accordingly been fixed as follows:—

Daily interest, per 100 yen.
Interest on loans and discount of notes, issued upon security of goods 2 sen 3 rin
Discount on commercial notes 2 sen —
Discount of other than commercial notes 2 sen 3 rin
Interest on temporary loans and overdrafts 2 sen 5 rin

The rate of discount on commercial notes remains exactly the same as before, rates on loans and discount of notes on security of goods being raised by two and three rin respectively. The reason for adopting a comparatively different scale for discount on notes and for interest on loans is solely owing to a desire to encourage the issue of notes of exchange, by which transactions based on credit can alone be developed.

3.—RESCISSON OF THE SYSTEM OF SECURITIES.

The system of securities is not a measure required by the Statutes of the Bank of Japan. It was established through a petition of shareholders in the 23rd year of Meiji (1890) as a temporary expedient for abating the pressure in the circulation of money. But the measure having since been considered prejudicial to the development of the system of notes of exchange, has now been relinquished. Baron Iwakura, who has commented upon the pernicious nature of the system of security ever since his appointment to the post of President, deserves the merit of having removed one of the elements derogatory to the legitimate functions of the Bank of Japan.

4.—RECIPT OF PUBLIC SECURITIES.

Although the Bank of Japan has now abolished the system of securities, anxiety is still entertained lest the resolute measure so taken might produce the result of creating sudden changes in the money market, and provision has been made that railway shares and other substantial securities may be received as substitutes for notes or bonds from debtors as heretofore, until the revision of the statutes of the Bank is completed.

The Bank of Japan will hereafter issue loans on certain classes of railway shares at a discount of forty per cent. on their market value. The price of shares is to be fixed by taking the average for one week. Below is a table showing the different prices:—

Railway Shares.	Current price	Revised value for security.	Former value for security.

THE DIAMOND JUBILEE.

THANKSGIVING SERVICE AT ST. ANDREW'S CHURCH.

The Diamond Jubilee Celebrations in this part of the world commenced on Sunday with a Commemoration Service at St. Andrew's Church in Tokyo—a "Service of Thanksgiving." The whole staff of St. Andrews, numbering seven, took part in the Service, headed by the Venerable Archdeacon Shaw, Bishop Bickersteth being absent in England. The Church, tastefully decorated for the occasion, was filled to overflowing, the Settlements of Tsukiji and Yokohama contributing a quota. The Emperor was represented by His Excellency Baron Sannomiya, Grand Master of Ceremonies, and three members of the Board of Ceremonies, all in full uniform. We need scarcely say that Mr. G. Lowther, H.B.M.'s *Chargé d'Affaires*, and all the Legation Staff attended, as did also Mr. von Treutler, His Imperial German Majesty's *Chargé d'Affaires*. The hymns, "O God, our help in ages past," "Praise, my soul, the King of Heaven," and "Now thank we all our God," were well rendered, Mrs. Squire presiding at the organ. A most interesting and carefully compiled sermon was preached by the Archdeacon, who reviewed the moral, philosophical, and scientific progress of the British race under Queen Victoria's sway, and dwelt upon the noble example set before the nation in the blameless life of the beloved Sovereign. The preacher's text was "Righteousness exalteth a nation." A collection was taken in aid of the Jubilee fund for the re-building of Christ Church in Yokohama, and the Service terminated with the singing of the National Anthem.

BALL AT THE BRITISH LEGATION.

On the evening of the 21st, Mr. G. Lowther, Her Britannic Majesty's *Chargé d'Affaires*, gave a ball at the British Legation in Tokyo in honour of the occasion. Happily the wind, which had blown strongly throughout the day, subsided at sunset, and in the perfect calm of a moonless summer night the guests had the pleasure of seeing one of the prettiest and most effective illuminations that have been achieved in this country with Japanese lanterns. The scheme of decoration was partly geometrical and partly irregular, the general effect being that of a landscape of lights set in a framework of graceful devices. Over the entrance gate the letters "V. R." stood in monographic transparency, flanked by the figures "1837—1897," and surrounded by a mass of red and white lanterns. The same design was repeated on the reverse of the gate, on both sides of an arch spanning the main branch of the avenue, and over the facade of the Legation building, the roof of which was surmounted by an arrangement of gigantic lanterns, spelling "God Save the Queen." Festoons of lanterns, alternately red and white, each inscribed with the monogram "V. R.," hung at various points on the boundary of the illuminated area, the space within being a panorama of mountains and valleys of light, at once soft and brilliant. At the western side of the building a spacious marquee had been erected, communicating with the verandah on which the reception and refreshment saloons opened. The band of H.M.S. *Grafton* played throughout the evening, but until eleven o'clock the guests contented themselves with exchanging congratulations, watching a brilliant display of fireworks in which many of the set pieces bore reference to the auspicious occasion, or wandering about the illuminated grounds. After eleven, however, dancing commenced in the marquee and was kept up till a late hour. Refreshments on a profuse scale were served continuously from the beginning to the end of the entertainment, which certainly deserves to be described as a festivity worthy of the occasion. The guests comprised all the Cabinet Ministers now in Tokyo; a number of distinguished military and naval officers, including Field Marshal Viscount Nodzu and Lieutenant-General Viscount Katsura; Rear-Admiral Oxley and his staff; the Foreign *Chefs-de-Mission* and their staffs; many Japanese officials, nearly all the foreign residents of Tokyo, and some fifty people from Yokohama.

YOKOHAMA'S CELEBRATIONS.

Ten years have passed since Yokohama saw such a day of general rejoicing as that in which the whole community participated on Tuesday. And what a host of memories of that first Victorian Jubilee flooded the minds of many folks as the day of commemoration passed along! Yet the principal thought of all was for the aged and best-beloved of British Sovereigns, the centre of the whole celebration, who that day

"Passed through her people towards St. Paul's great fane

To render thanks unto the King of Kings,
For the blessings of her reign."

The leagues of land and water that lie between Japan and London town were bridged over by memory many a time and oft on Tuesday; exiled Britons, here as everywhere, thinking with heartfelt fondness of the country that all love so well, the country of which Tennyson wrote:—

It is the land that freemen till,
That sober-suited Freedom chose,
The land, where girl with friends or foes,
A man may speak the thing he will;
A land of settled Government,
A land of old and just renown,
Where Freedom slowly broadens down
From precedent to precedent.

The day opened rather mistily, giving promise of very warm weather, and this expectation was not falsified. All during the forenoon a haze hung over the bay and banks of clouds at times obscured the horizon, but actual rain-clouds never formed. After noonday the sun shone out with vigour from a dappled sky and the heat was rather oppressive; still "Queen's weather" was undoubtedly the order of the day; and the night was calm and star-lit.

DRESSING OF THE SHIPS.

The day's programme began in Yokohama with the dressing of the ships in port—a most pretty ceremony—at 8 o'clock. H.M.S. *Grafton* hoisted the Royal Standard punctually to the hour, its blazoned glories of three-fold couchant lion, for England and Wales, the blood-red rampant lion of Scotland, and the harp of Ireland being flung to the breeze amid the cheers of the ships' companies, the music of the bands, and the discharge of many rockets from the Bluff and Settlement. The U.S. flagship *Olympia* arrayed herself in a glory of flags, the *Concord* following suit, while the *Yayeyama Kan*, that came up from Yokosuka on Sunday afternoon specially for the occasion, was not behind any of them in the matter of gay bunting. The merchant steamers and four-masted and other sailing ships hung out every flag they could, while the yacht squadrons were alike bedecked. Altogether it was a lovely sight and the crowds on the Bund expressed their delight in many ways. The Boat-house flew the signal: "Great Britain, hearty congratulations." This was repeated by the flagship of the Mosquito Yacht Club, and other yachts.

THE SERVICE AT CHRIST CHURCH.

The first celebration of the occasion observed by the residents of Yokohama was the special thanksgiving service held on Tuesday morning in Christ Church. Long before the hour fixed for the commencement of the service all the seats had been taken, with the exception of a few at the front which had been reserved, and were afterwards filled by a number of Japanese and foreign officials, including the Governor of Kanagawa Ken and suite, some officials from Tokyo, the British Consul General, Mr. Jas. Troup, and foreign Consuls at Yokohama, in official uniforms, Admiral Oxley, Mr. Wilkinson, Acting Judge of H.B.M.'s Court at Yokohama, in his robes, and others. Seats were later on placed in the aisles, but the accommodation was still insufficient and while many crowded round the door, many others failed altogether to obtain admission to the building. A full choir and the services of the orchestra of the Philharmonic Society had been arranged by Mr. J. T. Griffin, who had been put in charge of this department by the Committee for the Celebration. The service commenced with the familiar Old Hundredth Psalm, rendered by the choir, orchestra, and congregation. The Rev. E. Champneys Irwine conducted the service and read the psalms, lessons, and collects for the day. Jackson's *Te Deum* was sung by the choir, as was also the same composer's Jubilate, both being excellently rendered. Mr. Morse sang a solo from Mendelssohn's *Elijah*, "Then shall the righteous shine forth," with great effect, and after the prayers for the Queen, the Royal Family, the Emperor of Japan, and for the Clergy and People, the hymn "Hark! the song of Jubilee" was sung. After the collect, the special coronation anthem, by Handel, Zadock the Priest, was rendered by the full orchestra and choir. The words of the anthem are briefly as follows:—

Zadock the priest, and Nathan the prophet, anointed Solomon King.
And all the people rejoiced and said: God save the King! Long live the King! God Save the King! May the King live for ever.
Amen, Hallelujah, Hallelujah, Amen.

The anthem is a difficult one for a small choir but it went fairly well, with the exception of a little

hitch towards the end, when the time went wrong for several beats, but otherwise it might be considered a success. The sermon followed. Mr. Irwine preached from the text: "Fear thou the Lord and the King, and meddle not with those that are given to change," from Proverbs XXIV., 21. He said—We are met to-day in the name of the Most High to celebrate, in common with all our own people, the long continued and happy reign of her most Gracious Majesty Queen Victoria. But we are not only met to-day for that purpose, because there are many in this congregation who hold allegiance to other sovereigns and kings. They, therefore, while they have not the same cause of congratulation on this particular day that we have, show by their presence here their kindly human sympathy with our celebration of the long reign of our devoted Queen. I may venture to say that there is perhaps no country which more than this empire of Japan can appreciate and understand our feelings of gratitude for the long continuance of our Monarch, and of the reign of our own beloved Monarch in particular. In the words of one of the greatest—or at least wisest of Kings (whose magnificence, though not extending over such empires as exist in the world at present, is yet and will always remain the type of royal splendour) in the words of Solomon, the wise King of the Jews—whose reign antedates our own by nearly three thousand years—"Fear thou the Lord and the King, and meddle not with them that are given to change." Let us consider very briefly these heads this morning. Fear thou the Lord. Amongst those who listen to me—among the representatives of various nations here to-day—I venture with all deference to say that there is not one of them who does not recognise a supreme and invisible Power, whose seat is above us, above the visible heavens. I am sure that there is no one present who does not believe in some mighty extrinsic Power which guides and shapes the destinies of men and of nations. Therefore, each according to his own interpretation, let us fear the divine Lord. For the Christian there is but one Lord, and we believe his reign will be co-existent with this terrestrial globe. We therefore bend in adoration before Him whom we believe to be the future Prince of Peace and King of Kings, and we sympathise with those, who, according to the traditions of their fathers and such light as God has given them, worship the Unseen Power above. But not only are we bound to reverence the Great Unseen Power above us; it is also our duty and privilege to reverence the King.

The whole world, I may say, was struck with amazement when during the illness of the heir of the British Monarchy some years ago, deputations and inquiries of sympathy came from bodies of men who professed to believe in no government at all. I say "professed" for I do not think that the man exists who does not believe in some form of kingship. It is human to choose a leader. What is human nature is in that one sense divine, for our instincts were given to us from above and they change not—no more than the frame of man has changed in the years that have rolled over him. As long as men live they will have a King. He may be an uncrowned King. Even the rebel hosts of hell have a king whom they obey. It is nature which causes us to bend our wills to a stronger and a wiser power. We know it is for our good to do so. Granted that not always is the stronger the wiser power: yet viewing the matter in the light of history one can see that those peoples who have not meddled with change, been fickle as the wind, fancifully seeking that which is not, have at the present moment a power on the earth which the others possess not. Granted that change may be necessary; yet let none seek change for its own sake. For continuity is one of the great laws of our being. What has been done we find by habit easier to do: what has been done is easier to repeat. Grant that in the fullest sense each country has the right to govern itself as it pleases—and we recognise that those Governments which we call republican have the right also to choose their King—yet let us, whatever the form, take heed that we meddle not with them that are given to change. That is why to-day we feel special congratulation and thankfulness that not only has the monarchy existed for hundreds of years, but also that we have not been troubled by thoughts of dynastic change, or by houses warring with each other, and that our present house has ruled over us wisely and justly for three score years. Nor are we only thankful for that. There may be long reigns which are not venerable. You may have the heavy head which is a crown of glory; and you may have the heavy head of wickedness which is a crown of shame. The precious white-haired lady, who sits to-day upon the throne of England—whose sons and daughters have gone out into the world to fill different places with the honour and love of their peoples; who

has come through the sorrow and is brighter and the sweeter for it; who has come through storm and change, through tempests that would have shaken many wiser and stronger heads and who has always taken a share in the sorrows and joys of her people—deserves respect and veneration not merely for her length of days. I cannot express to you one-half of the feelings that rise in our hearts as we think of the Queen—lonely in her house in one sense, though behind her there kneel to the third generation a host of children in every one of whom England takes an interest—without occupying your time more than would be just on this day of rejoicing. Permit me therefore to read you a few simple words:

TO OUR QUEEN.

Hail! Queen Victoria, Sovereign Lady, hail!
Defender of the Faith that cannot fail,
Constant for threescore years at England's helm
Guiding the counsels of her mighty realm.

Though loud and fierce the thunderstorm of war
Sweep the dark Euxine, burst on India's shore,
Girt by Britannia's sons, upon thy throne
Rest undismayed, and trust in God alone!

Many great empires that have been of old
Fell without hope, despite of arms and gold,
For luxury and vice and godless pride
Sapped their foundations, till they sank and died.

But thou, O Queen, didst ever love and fear
The King of Kings, who, not by sword nor spear,
But by His own right arm and His great might
Saveth His people, battling for the right.

And in thy court, Victoria, thou wast true
To Honour and Religion; and these two
Pillars of Righteousness, august and grand,
Uphold a dynasty, exalt a land.

Within thy home, where love and order dwell,
The majesty of goodness most was felt,
And sympathy went forth in word and deed
For those in trouble, sorrow, or in need.

Oft has thy message cheered the miner's gloom,
Or children lying in their darkened room,
Or women mourning for their warriors brave,
Who sleep beneath the green sward or the wave.

So when the solemn shade of death came down
To dim the noonday brightness of thy crown,
Thy country wept for thine and England's loss,
Thy early widowhood, and heavy cross.

Then to thine inward vision came once more
The princely form, remembered as of yore:
His bright intelligence shone forth again,
An afterglow of sunlight on thy reign.

And Art and Science in the wake of Truth,
Like soaring eagles, have renewed their youth,
With Ignorance and Misery to wage
A deadly war in this Victorian age.

From Sinim's coast to far Vancouver's Isle,
From Cape Speranza to the Land of Nile,
From Austral reefs to Himalaya's snow
The heart of all thine Empire is aglow.

From every clime that owns thy peaceful sway
Thy subjects rise to call thee blest to-day:
Rise, Britons, join, and let your anthem be—
God save the Queen to all eternity!

The hymn "Hail to the Lord's anointed," the Benediction, and the National Anthem, sung first by the sopranos, then by the contraltos, and then by the full choir and congregation, with orchestral accompaniment, brought the impressive service to an end. Mr. Griffin presided throughout at the organ, while Mr. C. I. Fraser wielded the conductor's baton. The choir numbered fully fifty voices, and the orchestra some twenty performers, by far the largest choir that has ever taken part in a service in Christ Church, and taking it throughout the musical service was a success and decidedly effective.

"GOD SAVE THE QUEEN."

At twelve o'clock a salute of sixty guns was given by the warships in the harbour. As the last gun was fired, Mrs. Mollison led off the opening stanza of "God save the Queen" on the Grand Hotel verandah. The place was densely packed and the various verses were taken up with great *verve* by the cosmopolitan community, but the soloists were all under the disadvantage of the strange environment. They were, in addition to Mrs. Mollison, Mrs. E. C. Irvine, Mrs. Jas. Walter, Miss Burdett Leach, Mr. A. B. Wallford, and Mr. Sydney Morse. Mr. Twinning conducted, Mr. Whitefield acting as organist. Hearty cheers were raised at the close.

TELEGRAM OF CONGRATULATION.

Mr. Troup, Consul-General for Great Britain,

despatched the following telegram to England at noon:—

Private Secretary,

Buckingham Palace, London.

The British Communities of Yokohama and Tokyo send respectful and loyal Congratulations to Her Majesty.

Celebration Committee,
Yokohama.

THE BICYCLE PARADE.

At a quarter past twelve o'clock the bicycle parade was organised by Mr. Flint Kilby at the Cricket-ground. Very few ladies took part in the proceedings, their number not exceeding three; but the men were in ample force, 150 in all participating. Mr. Coghill Jackson, as *Prince Up-to-date* led off the procession, preceded by an Inspector of the Karagawa Police, also on a bicycle. He was followed by a tandem and next by "Monkey Brand," that remarkable product that "won't wash clothes"—Mr. F. S. James. Then came 50 members of the Sorin Bicycle Club, of Tokyo, dressed in neat jockey costumes. They were followed by the Reliance Wheelman in their new Club colours; then a naval detachment of fifteen riders—one representing H.M.S. *Grafton*; then a series of riders representing National characters followed; next came the Nippon Bicycle Club. They made a brave showing in the characters of the Forty-seven Ronin. The famous feudal romance of the "Chiushin-gura" is probably familiar to most of our readers. How Asano Naganori, a *daimyo*, and Governor of the city of Aki, being treated contemptuously in the Palace of the Tokugawa, drew his sword on one of his enemies, Kira, but failed to avenge the insult, and was forthwith ordered to commit *harakiri*, while his estates were confiscated. Forty-seven of his faithful retainers, after many hardships and dangers, accomplished what their lord had vainly essayed, only to be ordered to commit *harakiri*. The chiefs among these famous *samurai* were personated by members of the Club, Mr. J. L. O. Eyton appearing as Oishi Kuranosuke, the leader of the band; Leonard Eyton as Oishi Chikara Yoshikane, son of the chief, Mr. T. M. Laffin as Chiba Saburobei Tanetoshi, Mr. J. Eyton, Jr., as Fuwa Radzney-mon, Mr. W. H. McGowan, as Hara Goyemon, and Mr. K. Kingdon, as Horibe Yasubei, all celebrated warriors of the clan. The costumes had been most carefully selected and the members were "got-up" and dressed by a well-known Japanese theatrical dresser, and the spectacle was both striking and novel. The members of the Nippon Bicycle Club were accompanied by seven members of a wheeling association in Tokyo, including several of the nobility, who were the guests of the Nippon Club for the day. Many of the fancy costumes were very cleverly conceived. Mr. H. Goddard represented *Folty*; Mr. W. Goddard, a *Fester*; and Mr. H. S. Goddard, a *Nigger*. Mr. Bob Jones appeared as *President Kruger*, with amusing mottoes on back and front; Mrs. R. Jones was a *Japanese Pilgrim*. Mr. May was a *Clown*. Mr. E. L. Cox and Mr. H. A. Cox took the parts of a convict and policeman—a device capably carried out. Mr. L. Mottu appeared in the costume of *Punch*, and Mr. E. J. Libeaud as *Effendi Pasha*. A clever and particularly "taking" pair were the *Sisters Giggie* (Masters Johnnie and Charlie Moss): they received vociferous applause all along the route. A very pleasing tandem was that of Miss Vera Irvine and Mr. Arnold, who were appraised as *Pierrot* and *Pierrot*. Master Harold Dare appeared as *Prince Charming*; Mr. W. Moss as a 'ricksha man. Mr. H. V. Summers was a *Chinaman*; Mr. H. May, a *Highlander*, with a particularly roseate nose; Mr. G. H. Irvine a *Turk* of peculiar reddish hue; Mr. W. Gibson represented "Flowers and flags"; Mr. L. S. Lewis rode a bicycle decorated with flowers representing the national colours, red, white and blue; Mr. W. Johnstone decorated his bicycle with yellow flowers and Mr. W. Dare had red blossoms; Mr. C. H. Fearon sported the national colours and carried also on his machine a representative of the "younger generation." Mrs. Going rode the most ambitious wheel—"Leda and her Swan"—this was capably carried out. Another taking machine was that ridden by Mr. W. W. Campbell, a hobbyhorse, or velocipede, of 1837, that "Willy-wally" vainly tried to persuade his friends and acquaintances had been specially sent to him by the Queen on the condition that he should ride in the national costume of a "son of the Emerald Isle" while he might "not grease the bearings." One therefore wonders why a spar that once graced the *Sayonara* should have found a place in the construction. It had

been arranged that Messrs. C. M. Duff—attired as a jockey in yellow and white—and F. E. White—dressed in a jockey's costume of scarlet and white belt—should act as marshals of the procession, but they were despatched to the Post Office as couriers with the Message to the Queen, and were unavoidably prevented from taking the part that their costumes deserved.

Prizes were awarded and presented in the afternoon on the Cricket Ground by Mrs. Troup, to the following participants in the bicycle procession:—Mrs. Going and Mrs. R. Jones, for decorated bicycles; Mr. L. Mottu for the best comic costume (*Punch*); Mr. E. J. Libeaud for the best national costume (*Effendi Pasha*), Miss Irvine (*Pierrot*) and the *Sisters Giggie*, girls' prizes; and Harold and W. Dare, boys' prizes.

YOKOHAMA YACHT CLUB.

The Committee of this Club did their best on Tuesday to provide good sport for the members and amusement for the community by giving twelve handsome and valuable gold and silver cups to be competed for by the whole of the yachts on the Club register on the occasion of Her Majesty's Diamond Jubilee. The yachtsmen had a very pleasant afternoon for sailing but scarcely enough wind, the result being that while the small boats had two capital and closely contested races, the 39 raters race was little more than a procession and the 26 raters were unable to complete the race in time. However, the skippers took their failure easily and even seemed rather pleased that they would now have a chance of sailing the race over again. There were four races on the programme and three prizes were offered for each, the yachts competing under an arbitrary handicap and all races to finish by 5 p.m. The first race, that for 39 raters, was round a flagboat off Tsurumi and the Honmoku Lightship, three times round the first mark and twice round the second, distance 10½ miles. The start was at 2.15 p.m. *Riever* was over the line too soon and had to return, the start then being made in the following order:—*Maid Marion*, *Mary*, *Golden Hind*, *Spray*, *Daimyo*, and *Riever*. There was a nice little breeze from southeast and the yachts went away before it at a good pace, and all fairly close together. When clear of the harbour they hauled in their sheets and fetched out to the Tsurumi mark on the starboard tack. The wind failed as they went out and in consequence *Mary*, *Maid Marion*, and *Spray* drew away from the other three yachts and continued to widen their distance from them throughout the race, their capacity for sailing in a light breeze as compared with the others making a great difference during the windward part of the race, which was sailed against a fairly strong flood tide. After rounding the Tsurumi markboat, where *Mary* was leading, the yachts had to beat to the Lightship, they first stood in on the port tack and if the breeze had not been so fickle should on standing out again have fetched the mark, but this they all failed to do. By the time they did fetch the Lightship they were very much spread out, *Mary* being back at Tsurumi again as the last boat was rounding the mark, where the times were as follows:—*Mary*, 3h. 9m.; *Riever*, 3h. 27m.; *Maid Marion*, 3h. 13m.; *Golden Hind*, 3h. 28m. 40s.; *Spray*, 3h. 16m. 30s.; *Daimyo*, 3h. 31m. 45s. The run back to Tsurumi was made with spinnakers set to starboard and was followed by another beat to the Lightship during which *Mary* widened her distance from the other yachts very considerably, as may be seen by the times taken when the yachts rounded the Lightship for the second time, which were as follow:—*Mary*, 4h. 3m. 30s.; *Maid Marion*, 4h. 16m. 30s.; *Spray*, 4h. 20m. 30s.; *Riever*, 4h. 29m. 30s.; *Golden Hind*, 4h. 33m. 35s.; *Daimyo*, 4h. 35m. The yachts now started, on their last run to Tsurumi on their way home, the wind continuing very light, making it already rather doubtful whether they would finish the race within the time limit. However the leading boat kept going and made the run in 22 minutes, just the same time as on the last round, and at Tsurumi had still 35 minutes in which to complete the race. The times at this mark were:—*Mary*, 4h. 25m. 30s.; *Maid Marion*, 4h. 38m. 20s.; *Spray*, 4h. 44m.; *Riever*, 4h. 55m.; *Golden Hind*, 5m. 57s.; *Daimyo*, 5h. 5m. 30s. *Mary* came in close hauled on the port tack and fetching the harbour entrance nicely beat from thence to the finishing line in 12 minutes and completed the race to minutes inside of the time limit allowed. The other yachts were still a long way behind and so *Mary* was the winner of the race and added another valuable cup to her owners' already large collection of trophies. The wind veering slightly *Maid Marion* was unable to enter the harbour until she had made a tack and the same shift of course saved

the yachts astern of her still worse and they fetched in nowhere near the entrance. The finish of the race was timed as follows:—

Rating.	Owners.	Finish.	h.m.s.	Handicap.	h.m.s.	Corrected.
Mary.....39	T. M. Laffin	4.50.20	—	allows.	4.50.20	—
Teri.....39	A. Weston	Did not start.	—	—	—	—
River.....39	M. Pora	5.33.00	30	5.13.00	—	—
Maid Marian.....37	J. Martin	5.09.07	6	5.03.07	—	—
Wanderer.....36	Wimmer, Nabholz and Deck	Did not start.	—	—	—	—
Spray.....34	J. O. Averill	5.14.55	22	5.03.55	—	—
Golden Hind.....32	A. Owston	5.48.05	12	5.37.05	—	—
Dalmay.....32	G. H. Seidmore	5.48.05	25	5.17.20	—	—
Swanhill.....32	C. B. Stedman	Did not start.	—	—	—	—

WINNERS.

Mary.....1st Prize	Diamond Jubilee Cup (Gold)
Maid Marian and Prize	Diamond Jubilee (op Silver)
Spray.....3rd Prize	Diamond Jubilee Cup (Silver)

Next came the 26 rater's race, the entries for which were—*Albatross, Molly Bawn, Lady Louise, Surprise, Ronin, Elise and Ideal*. This class had to sail twice round the Tsurumi mark and Lightship, distance 9 miles, starting at 2.30 p.m. and to finish at 5 p.m.

They made a very good start and did fairly well during the first part of the race. *Molly Bawn* showed herself much the fastest boat in the light breeze and rounded the Lightship at 3h. 40m. and 17 minutes ahead of *Albatross*, who came next. *Molly Bawn* continued the race, although it soon became evident that it would be impossible to finish at 5 o'clock, and rounded the Lightship next time at 4h. 46m., the others all giving up. *Molly* eventually finished at 5h. 19m. which being too late the race will of course have to be resailed.

At 2.45 p.m. the race for the 17 rating class was started and this proved to be the best race of the day, the little boats as usual showing good sport both to skippers and onlookers. Their course, 6 miles in length, was round two markboats moored outside the breakwater and off the Bluff respectively, the latter to be rounded twice. The boats went away smartly on the gun being fired, *Violet* leading, followed by *Bonito, Undine, Eclair, Snap, Isabel* and *Coogee* in order. A fair breeze soon took them outside the harbour and then they had to beat to the Bluff Mark against the tide, giving their skippers an opportunity to show their skill in the art of boat sailing. *Violet* led for a time, then *Eclair* came to the front and shortly before they reached the mark *Snap* assumed the lead and was never overtaken again during the whole of the race, although hard pressed by *Eclair* who stuck to her like a burr to the end. The times at the Bluff Mark were:—*Snap*, 3h. 34m.; *Eclair*, 3h. 34m. 15s.; *Violet*, 3h. 34m.; *Undine*, 3h. 37m.; *Bonito*, 3h. 37m. 10s.; *Coogee*, 3h. 40m.; *Isabel*, 3h. 43m. 40s. The boats then ran in to the markboat off the breakwater, coming along in a string with their spinnakers out to port. At this mark they gybed over and hauled to the wind on the starboard tack, rounding it at the following times:—*Snap*, 3h. 47m. 55s.; *Eclair*, 3h. 48m. 40s.; *Violet*, 3h. 50m. 40s.; *Undine*, 3h. 51m. 15s.; *Bonito*, 3h. 51m. 45s.; *Coogee*, 3h. 53m. 40s.; *Isabel*, 3h. 56m. 23s. The wind having veered slightly they headed for the Bluff mark but the tide being on their weather the boats, fetched to leeward and had to make a short tack in order to round it, which they did at the following times:—*Snap*, 4h. 3m. 35s.; *Bonito*, 4h. 9m. 20s.; *Eclair*, 4h. 4m. 15s.; *Coogee*, 4h. 16m.; *Violet*, 8m.; *Isabel*, 4h. 18m.; *Undine*, 4h. 8m. 50s. It was again a spinnaker breeze back to the harbour entrance and with the flood tide under them the boats came along fairly well although the wind was now very light. *Eclair* held on to *Snap* but could gain nothing on her, but *Violet*, who goes much faster off the wind with her new and larger sails, drew perceptibly up on both of them. The boats entered the harbour in the following order:—*Snap*, 4h. 28m. 32s.; *Bonito*, 4h. 55m. 30s.; *Eclair*, 4h. 29m. 10s.; *Coogee*, 4h. 33m. 20s.; *Violet*, 4h. 32m. 20s.; *Isabel*, 4h. 45m. 45s.; *Undine*, 4h. 33m. 15s. *Snap* again had the best of it during the beat up the harbour and gained a minute on *Eclair* by the time they reached the finishing line. *Violet* had also to finish before the race could be decided as she was well within her handicap on entering the harbour and had been as fast by the wind as she was off it she would have won the race with ease. In the end the result was as follows:—

Owners.	Finish.	h.m.s.	Handicap.	Corrected.
<i>Eclair</i>L. Salabelle	4.48.15	—	allows.	4.48.15
<i>Coogee</i>R. Rose	5.01.45	—	—	—
<i>Isabel</i>L. Salabelle	5.04.23	6	4.58.23	—
<i>Bonito</i>K. Kingdon	4.54.28	—	allows.	4.54.28
<i>Snap</i>C. B. Clausen	4.44.01	—	allows.	4.44.01
<i>Undine</i>W. Schmiedcke	4.51.44	5	—	4.49.44
<i>Prick</i>R. & C. Abenheim	Did not start.	—	—	—
<i>Violet</i>N. F. Kingdon	4.50.12	9	—	4.41.12

Snap...1st Prize Diamond Jubilee Cup (Gold).
Violet...2nd Prize Diamond Jubilee Cup (Silver).
Eclair...3rd Prize Diamond Jubilee Cup (Silver).

The 12 raters had to sail three times round a course marked by the bathing barge and two of the pier buoys, and were started at 3 p.m. With

the wind from the south they ran to the first buoy and reached to the second, from whence they beat back to the barge. *Botchan* was unable to start having broken her centre board as the race was about to commence, the five others—*Aimes, Waratah, Tombo, Susume*, and *Chocho* went away well together when the gun was fired and completed their first round in a bunch. Each round, the breeze being very light and a strong flood tide running past the barge, the boats had trouble in getting round that mark and changed places with each other. In the end *Aimes* won the race by nearly a minute. The times were as follows:—

Owner.	1st Round.	2nd Round.	Finish.
	h.m.s.	h.m.s.	h.m.s.
<i>Aimes</i>F. H. Abbey	3.57.33	3.56.33	4.59.37
<i>Botchan</i>J. R. Black	Did not start.	—	—
<i>Waratah</i>H. Rose	3.57.00	3.57.30	Did not finish.
<i>Tombo</i>W. H. Walker	3.58.20	4.00.47	4.58.45
<i>Susume</i>F. & C. Yama-	—	—	—
<i>Chocho</i>R. Boyes	3.57.40	3.56.15	4.50.30
	3.57.50	3.57.50	4.53.00

Aimes, 1st Prize, Diamond Jubilee Cup (Gold).
Susume, 2nd Prize, Diamond Jubilee Cup (Silver).
Chocho, 3rd Prize, Diamond Jubilee Cup (Silver).
Mr. C. D. West, assisted by Captain F. Owston, attended to the duties of officer of the day.

WATER SPORTS.

To fill the interval between tiffin and the sports at the Cricket-ground, some scratch boat races were arranged by the Yokohama Rowing Club. The following entered for the "fours."

"FLAMINGO."	"SWAN."
Kuhn.	Stevens.
Williams.	Levedag.
Allcock.	Jackson.
Schellenberg (St.)	Goddard, W. (St.)
J. Moss (Cox.)	— (Cox.)
"PELICAN."	"DARTER."
Morton.	Irvine.
Azbill.	Goddard, H. S.
Goldman.	Carst.
Abenheim (St.)	Hayward (St.)
Tucker (Cox.)	Goddard H. (Cox.)

A good race between the *Darter* and *Flamingo* ended in the latter getting home by about a quarter of a length to the good. The other two had a hard fight for third place, *Pelican* just managing to get its nose in front. The *Pairs* brought out two crews.

"WIDGEON."	"MALLARD."
Allcock.	Hayward
Schellenberg (Stroke)	Jackson (Stroke)
Mottu (Cox)	Bowden (Cox)

A very easy win for "Widgeon."

SPORTS ON THE CRICKET GROUND.

Long before the hour fixed for the commencement of the sports on the cricket ground, hundreds of spectators flocked to the spot, comprising all classes and all the nationalities represented in the cosmopolitan communities of Yokohama and Tokyo—for there was a strong contingent down from the Capital to take part in the amusements—and a little later on, when the various events provided for the entertainment of competitors and spectators alike were in full swing, the scene was one of the liveliest and gayest probably ever seen in Yokohama. A bright sun shone above, but the heat was tempered by a gentle breeze. The ladies had donned their lightest and daintiest summer toilets and graced the scene in numbers rarely witnessed at any foregathering in the port, while all sorts and conditions of the sterner sex, including numbers of the participants in the Bicycle Parade in their fancy costumes, added variety and colour to the gathering. Tents were provided for the ladies and children—for the little ones were there in full force and thoroughly enjoyed their particular share of the day's entertainment and the refreshments provided for them at special stalls, etc.—while the bar in the Pavilion was, as might have been expected, well patronised by those who preferred other refreshments than tea, as the programme naively put it. The Town Band performed on the ground throughout the afternoon, and beside the set events a fund of amusement was afforded by the comedians of H.M.S. *Grafton*, who made their first appearance at the ship's sports the other day, and parties of marines and bluejackets from the same vessel, who went through various gymnastic and other exercises. Aunt Sally was again very much in evidence, a live Aunt Sally in a tub, who had to dodge sometimes half a dozen or more cudgels thrown at her at once, a dangerous pastime, which does not appear to us equal in amusement to the old fashioned dummy with a pipe in her mouth, or cocoa-nuts, while there is always the possibility of knocking an eye out, or otherwise maiming the unfortunate target.

Before the programme proper was entered upon

a pleasant and most agreeable little ceremony took place in one of the tents, a number of very beautiful baskets of flowers being presented by a deputation of the Yokohama Chamber of Commerce, the Yokohama Tea Guild, and numerous leading merchants, to Mr. Jas. Troup, as representative of the British Committee of Celebration of H.B.M.'s Diamond Jubilee, for which Mr. Troup gracefully returned the thanks of the British community. The first of the competitions was a quarter mile race for men-of-war's men, in which four started, the champion of the *Grafton's* sports, White, winning easily, with Greenway second and Cox third. In the one hundred yards race for boys from 12 to 14 years of age, R. Crane was the winner, with Austen second, and W. Graham third. In the next event, one hundred yards, for boys under 12, J. Irvine was first, V. Hearne second and Averill third, out of a field of sixteen. The one hundred yards race for girls from 12 to 14 was won by Miss Ida Salabelle, Lily Moss being second, and Alice Woodruff third. In the race for girls under 12, also one hundred yards, Edna Funcke was first, K. Woodruff second, and C. Woodruff third; good honours for one family in two races, and let us hope the plucky little runners will get a first next time to reward them. The sack race, which as usual gave cause for lots of fun and laughter, was won by Clements, Clements second, and Purvis third; all men-of-war's men. The two hundred yards race for boys between 12 and 14 did not bring out a large field, Austen winning, with W. Thompson second, and L. Thompson third. The two hundred yards race for boys under 12 was won by A. Jeffries, Corea second, and V. Hearn third. The girl's skipping competition, which took place in a railed off square in the centre of the ground, and was expected to attract a number of the younger members of the fair sex present, failed to fill as well as anticipated, partly no doubt because in the crowded state of the field it was not easy to find out what was going on until the event was half over. Among the six competitors Miss Una Brocklebank outskipped all her opponents, gracefully and well, Miss Herb being second. The girl's hopping race resulted in a victory for Miss C. Woodruff, Miss C. Watts being second. For the boys' hopping race A. Jeffries was first, R. Miller second, and C. Watson third. The last event, a 200 yards race for seamen, White, the champion runner of the *Grafton* won easily, out of a field of seven. The prizes were afterwards distributed by Mrs. Troup, from a little bower of flowers among the lounges and tables in the railed-off square on the centre of the grounds. Mrs. Troup was assisted in her pleasant duty by Mesdames Mollison, Irvine, J. Walter, Miss Burdett Leach and other ladies, besides Messrs. Troup, Duff, Irvine, Mollison, Fraser, and Coghill Jackson, members of the Committee of Management, to whom credit is due for the satisfactory carrying out of all the arrangements. Three cheers for Her Majesty and the ladies brought the proceedings to a close.

THE ILLUMINATIONS.

Of course the principal illuminations were along the water-front, though other parts of the town were not neglected. All along the Bund, from the Grand Hotel to Messrs. Jardine, Matheson's premises, every house was decorated and lighted up. Streamers of coloured lanterns were arranged along the sea façade of the Grand Hotel, the whole surmounted by an illuminated Royal Crown; the P. & O. Company's offices were ornately decorated with lanterns and transparencies bearing many devices, but principally the Company's flag. Mr. Dodd's private residence, Mr. Dunlop's house; the M.M., P.M. and O. & O. Companies' premises, and the Standard Oil Company's building were all boldly dressed, in lanterns and illuminated letters. The Boathouse of the Y.A.R.C. hung out transparencies of the White Ensign and the Union Jack. But the most splendid scheme of decoration was that displayed by the Yokohama United Club. The pillars on the water-front were garlanded in evergreens, lanterns hung here and there amid clusters of electric lights, and a huge transparent "Diamond Jubilee 1837-1897," and a predominating V.R., surmounted by the British Crown—also illuminated—formed the features of the device. The effect from the water was very pretty. The Club Hotel, Jardine's, McArthur's, the Hongkong and Shanghai Bank and other buildings were lighted in various ways, and these with the illuminations elsewhere along the Bund, the fireworks and the outlined shipping made a beautiful scene that should long be remembered. Main Street and Water Street perhaps looked gayest by day, with their banners and flags, than at night. Clausen's hotel had some lanterns hung out; the German Club was lit

up with garlands of lighted *chochin*. Big diamond-shaped transparencies bearing the letters V.D.J. done in red, white and blue, with further decoration of blue iris, were suspended at the Japan Mail office windows. The *Japan Gazette* displayed several flags of various nationalities. The Chartered Bank was most profusely decorated with lanterns and devices, as were also Mr. John Hall's premises; Messrs. Harding's, Messrs. Vincent & Bird's, Mr. Harlow's, Messrs. Green, Evison and Sutcliffe's, Messrs. Curnow & Co., Mr. Shand's, Messrs. North & Rae. In fact, all the stores and offices in the principal thoroughfares of the town did their best to celebrate the occasion worthily. The Fire Brigade Station was one big blaze of light. Wright's Hotel was gaily bedecked with loyal mottoes and like other places in the settlement made use of the figures 1837-1897. Dr. Wheeler had a huge illuminated "God Bless Her," surrounded by a wreath of shamrocks, placed on the Bluff in front of his residence—a capital effect being obtained. Other houses on the Bluff were profusely illuminated in various ways.

THE EVENING FÊTE.

At nine o'clock most of the community assembled at the Naval Depot. The spacious compound was arranged with seats facing the sea, affording a capital view of the fireworks; and refreshment buffets were placed in the godowns. Around the flag-staff a special circle of seats was set and here Mr. Lowther, H.B.M.'s *Chargé d'Affaires*, delivered the only speech of the evening, giving the toast of Her Gracious Majesty. Mr. Lowther said:—

Ladies and Gentlemen,—I have been invited by the Committee of Management of this Celebration to propose what I believe is the one Toast of the evening, the Health of our Most Gracious Sovereign Lady Queen Victoria, and I have naturally acceded to that request without hesitation, although I am sorry the honour has not fallen to one who has more the power and the habit of making speeches than I have. In the few words I have to say, I propose to address myself especially to the British subjects present, but I take this opportunity of thanking those who belong to other nationalities for their presence here to-night. Ladies and Gentlemen: The Toast of the Queen has become with many of us a matter of almost daily occurrence, but the occasion on which we drink Her Majesty's health to-night is no ordinary one. It is one that will never be forgotten by any of us here or by any of the little ones who have celebrated the occasion with us this afternoon, and it is one which is attracting the attention and evoking the sympathies of the entire civilized world. Ten years ago, in this very place, was celebrated the Queen's Jubilee, and no doubt those who were present then were filled with pride in thinking of the wonderful benefits that had been conferred upon our country during this remarkable reign. How much more, then, to-day, when 10 years have been added to a life—years, alas, not unclouded by some deep sorrows, but teplete also with benefits and advantages to her people—how much more, I say, ought we now to be proud of our Sovereign, who has acquired by her many acts of wisdom, kindness, benevolence, and clarity the esteem, love, and affection, nay more, the very adoration of her people. Most of us are born loyal British subjects, or perhaps it would be more correct to say, that loyalty is one of the first lessons of our youth we fully appreciate, and that loyalty is extremely desirable, but I think we all here feel a stronger kind of loyalty, a loyalty which has, in spite of the distance we live from England and from our Queen, increased as we have advanced in years, until it has grown to be a sober, steadfast, heartfelt loyalty, engendered by the conviction that the Queen has, during the 60 years of her reign, been labouring unceasingly for our benefit, and has been sharing our joys and sorrows. That is the sentiment which dominates us. Loyalty and devotion to our Sovereign. There are qualities which will assist the Empire. I will not attempt to relate the many noble acts of the Queen during her reign, or the many incidents which will render her reign for ever memorable in history. Those who have forgotten them can readily refresh their memories by referring to the many works that are appearing now on the subject. But I ask you to join with me in the expression of our fervent hope that Her Majesty may be spared for many years yet in health and wealth long to live for the honour and glory of the Empire and for the people committed to her charge. I give you the health of Her Most Gracious Majesty the Queen.

A. Mr. Lowther finished speaking the *Grafton's* band struck up "God Save the Queen." Once again the singing words were heartily taken up by all present. Three rousing cheers were then raised for "The Queen"—and one cheer more:

after which Mr. Bayne called for "three cheers" for Mr. Lowther. These were enthusiastically given. Meanwhile the fireworks were being discharged from floats in the harbour; and also from the *Golden Hind*. At eleven o'clock a torch-light procession paraded the Band, bringing the festivities to a close.

BUDGET FOR THE 30TH FISCAL YEAR OF MEIYI.

DEPARTMENT OF FINANCE.

	As introduced by the Government, Yen.
I.—The Department Proper	328,035,866
1. Salaries and Allowances.....	205,615,500
2. Office Expenses.....	29,914,335
3. Repairs.....	3,610,953

REPORT ON LABOUR IN HAWAII.

Labour Commissioner E. L. Fitzgerald has finished his official report of his visit to the Hawaiian Islands, which will be printed in pamphlet form and distributed by the Chamber of Commerce, says the *San Francisco Call* of May 15th. The report is as follows:

"My investigation through the Hawaiian Islands has brought to my attention many new conditions and phases of labour, the most important of which is the Asiatic hordes that now infest the Islands and predominate in numbers upon the plantations. I have seen about 20,000 barefooted labourers, half of whom work under penal contract; I have seen a reward offered for their arrest when they violated their contract and deserted the plantation, and their number printed across their photograph, in convict style; I have seen four or five hundred Japanese walk 10 miles to back up the position of one man when only a few days' work was involved. I have seen murder upon the plantations and riot; I have heard the Japanese say their people have brought the sugar industry to the position which it now occupies and that they propose to hold the controlling influence upon the Islands at any hazard; I have seen them demanding that white men should be discharged and Japanese taken in their place; I have seen one of our American men-of-war anchored in the harbour for the purpose of defending the planter against his own labourers, and I have seen the warship of Japan anchored at its side simply to encourage the Japanese upon the Islands in their arrogant and insolent behaviour and to further demand that more should be added to the already overburdened condition, 'that more fuel be added to the flames.' I have seen the Government depot 1,170 of the lowest grade of these serfs upon a technicality; I have seen the Govern-

ment discriminate in its last contract in the building of a public highway against the employment of more than one-half of Asiatic labour upon the same, and I have found a majority of the planters eager to welcome any change that may bring the Anglo-Saxon into their midst. The Government is unqualifiedly the champion of American labour, the press and the people of the Islands nearly to a man are struggling to beat back a horde which threaten their undoing—trying to free themselves from the grip of a monster.

The only question with them regarding the change of their labour for American is:—'Can they stand the climatic conditions? Will they work faithfully, and at such wages as will guarantee to the planters a reasonable dividend upon their stock?'

'There is nothing in the climatic conditions against white labour performing the work and drawing the three or four million dollars that is paid annually to the Asiatics, as the temperature on the plantations runs no higher than 90, and stands at an average of about 75.

'Chinese fill the positions of store-keepers, clerks in the hotels, millmen, teamsters, etc. On the plantations the number and nationality of labour is by the last report: 1,615 Hawaiians, 2,268 Portuguese, 12,193 Japanese, 6,289 Chinese, and about 715 of other nationalities—a total of 23,780. The Hawaiians are the best workmen; the Portuguese are next, and to-day are considered the 'bone and sinew' of the Islands, as the most industrious, quiet and peaceable; and Chinese next and the Japanese last. It is my opinion that 15,000 white people will do the work of the 25,000 Chinese and Japanese now working upon the plantations. The Japanese are slow, careless, and they work much after the style of a convict.

'Now, regarding the supplanting of those people with Americans and their families, there is nothing to hinder the same, it being a question of 'a good day's work for a good day's pay,' but it must be done systematically and gradually, as there must be great changes wrought before this can be accomplished, inasmuch as it necessitates the planters to build homes for them. There is one condition under which American labour should be introduced and which the planters are agreeable to, and that is on a profit-sharing basis—giving to labor a certain field where 10 to 100 can co-operatively cultivate the same. It takes between 15 and 18 months in which to harvest the crop, and the planters are perfectly willing to advance them a monthly allowance of, say, between \$16 and \$20, to be deducted, without interest, when the sugar is marketed. This includes a home, with land enough for garden purposes, free fuel, water, and in many cases pasturage for a cow, with free schools, etc. Nothing can better demonstrate how eager the planters are to bring in a worthy class of Americans than the fact that they are willing to maintain a department in America that this change may be brought around systematically, so that only those who are willing to work and work faithfully should go to the Islands, also, that no one should go on a 'wild goose chase' to find no work for him, as there must be a place made in advance for all who go. The under rate of wages per day is somewhat offset by the fact that the work goes on day in and day out year in year out, and the toiler need never miss a day unless he so desires. I have been assured by the Government and by President Dole that it is their desire (and I have no doubt but that it will be included in his recommendation) that the Legislature should create a department for the introduction of American labour.

'I could have taken orders for many hundred men, but I deem it thoroughly unwise in the interest of labour and the planters to undertake this in a slipshod, haphazard way. However, I will fill one or two orders for about 50 men with families. I had the pleasure of picking out the site for their homes and assisting to draw plans for their houses—a beginning that may mean the end of the controlling position occupied by the Japanese upon the Islands. I would not advise, under any circumstances, that labour be sent there to be paid by the day at present, as it may necessitate their competing with the penal contract labourers; but if they can be sent under a profit-sharing proposition, which I said before the planters are agreeable to, and if the standard of wages can be maintained so as to make it an object to American labour, Hawaii to-day opens the greatest market in the world for the American wage-earner, as, outside of the canefields, the coffee industry, which is only in its infancy, is one of the most healthful and remunerative occupations.

'There are now about 5,000 acres coming under cultivation, and that 5,000 acres has done more to bring in the Anglo-Saxon than all the other industries combined. It is naturally the pursuit of a man with a family, as the ratio of labour in-

creases in the picking time from about 1 to 6 and 8, and as the labour upon the plantations in other industries is being used at the same time the coffee should be picked there is no surplus upon the Islands from which to draw—the school children are not in numbers enough to save the crops. The coffee industry has an uncertain future unless a change in the labour system is brought about. There are 30,000 or 40,000 acres on one island alone of the finest coffee lands, much of which has been taken up under long lease from the Government or purchased outright, all of which I believe will be in coffee in a very few years, and the amount of help necessary to pick this crop for two or three months in the year will be enormous.

"Regarding what effect the abrogation of the treaty will have, I briefly state that in my opinion the same would mean a death-blow to the introduction of Americans into the Hawaiian Islands, for the fact that the only thing that remains between the absolute assurance of the Americans supplanting Asiatic labour, provided the former proved satisfactory, is the wages to be paid, and if 40 per cent. or any portion thereof should be taken from the present profit, I should advise the labourer to stay at home, and the planter to stay at home, and the planter will undoubtedly turn again to the Asiatics, for it is cheap labour.

"There is an appropriation of \$50,000 to 'assist immigration other than Asiatic,' to pay the passage of the women and children taken under 'the 16 per cent. clause,' in other words, there is a regulation which compels the planter to import 10 per cent. of all contracted labour from America or Europe. The Government assured me that they would gladly spend the money in bringing the families of the Americans, and they now stand ready; besides, the planters will advance the passage money on all who may be sent to them.

"It is useless for the people of this country to attempt to blind themselves to the fact that every country has its quota of unemployed persons; it is useless for the theorist to insist that depressed economic conditions do not exist and vainly propose measures far beyond the grasp of those principally affected by way of remedy. Therefore, in the interest of wage-earning multitudes of this country I simply suggest a means by which from 15,000 to a much greater number may be transformed from non-producers to producers and consumers to a greater extent, and even if they are now producers their places will be filled by those who are non-producers, and in looking to a foreign land for these opportunities I do not consider in the strictest sense that these persons cease to be American citizens and component parts of our commonwealth, as they become the customer, for American consumption, and though they may be temporarily geographically diverted they will simply look across the Pacific during a brief interval before the American flag floats over them again in their island home.

Let us see to what extent the sugar industry of the Hawaiian Islands interferes with the beet industry of California, of which I am as thoughtful as anyone. We have a vast consumption of 2,000,000 tons a year in the United States, of which we only produce about one-sixth and the Hawaiian Islands send into our markets between 200,000 and 250,000 tons, and in California we are producing not more than one-third of our consumption. This year, I understand, fully half of the sugar from the Islands will go to New York, so at present I cannot see where the sugar of the Hawaiian Islands hampers the beet-sugar industry. Further than that, let us see to what extent protection of sugar will assist the producer and the labourer. With the exception of one factory in California and one in Utah, the sugar industry of the United States is practically controlled by the Sugar Trust, and I have never known it to be recorded where any industry was at the mercy of a trust that it ever received 1 cent benefit from increased prices. Besides this, I have the very best authority for the statement that one sugar beet factory in California, running 144 days last year, paid 70 per cent. dividends upon its capitalization.

"The highest price paid to the beet-raiser for the beets is \$4 per ton, and until the manufacture of sugar from the beets is handled by the grower they will never be allowed more than a living profit upon their toil. The reports of over 50 large and small factories in Germany show that to manufacture a pound of sugar from beets which are bought at a price of \$5 per ton (which is \$1 per ton more than our factories pay), and including all interest on working capital and an annual sinking fund for repairs and renovations, costs 2½ cents. Let me assume that we are able in California to extract from the beets the same percentage in sugar as is done annually by the German manufacturers, viz., 12½ per cent., not taking into consideration that our beets are richer.

A factory for the manufacture of dry white granulated and cube sugar ready to be sold to the consumer without undergoing a process of refining, with a capacity of 300 tons of beets daily:

Costs approximately	\$150,000
Building, etc.	50,000
Incidentals	50,000

Together

"Such a factory will in the 100 days of its run consume at least 30,000 tons of beets, which yield 12½ per cent. or 3,750 tons of white sugar, which I will value at 4 cents a pound (½ a cent less than the very lowest quotation in this market at any period). This is \$80 per ton for the whole 3,750 tons—\$300,000. The cost of production, according to German reports, is 2½ cents, to which I will add the cost of the entire labour, viz., 100 men for 100 days at \$2 per day, \$20,000, and the cost of fuel, viz., 3,000 tons of coal at \$6, \$18,000, giving a total cost of production of \$225,500, which, deducted from the \$300,000 valuation of the sugar produced, leaves as a profit \$74,500, or almost 30 per cent. on the invested capital, which certainly proves the possibility of overcoming the high prices for labour and fuel. While these figures show the aspect of the question from the standpoint of the manufacturer, they plainly prove how it is possible that many German factories have paid a profit annually of 30 or more per cent. of the invested capital for many years in succession.

"I was informed by Japanese of influence that they saw in the abrogation of the treaty a chance to acquire that which they have waited long and patiently for, viz., 'the ownership of the plantations.' They told me the plantations could not be cultivated at a profit except by their people, and that they will do it only for their people; in other words, they are willing to purchase them at what they are worth to-day. However, they will demand that a long lease be given to their Government of Pearl Harbour. It needs no words to paint a mental picture of what will become of these Islands when once the Japanese become the employers of help, the moneyed power, and the labour itself. As a business proposition the planters would naturally dispose of their possessions and leave the field to the undisputed influence of the subjects of the Mikado, who would be monarch of all they surveyed, and instead of the heritage of the Islands going to the American people they would go to the Japanese, 'forming a greater Japan.'

"E. L. FITZGERALD,
"Labour Commissioner."

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE UNITED STATES AND HAWAII.

London, June 17.

A treaty providing for the annexation of Hawaii to the United States has been signed at Washington, and will be submitted to the Senate forthwith.

The Japanese Government has entered a protest against the treaty.

THE ITALIAN NAVY.

Admiral Brin, Italian Minister of Marine, has proposed in the Chamber of Deputies an increase of 7,500,000 *lire* for the current year's Naval Estimates, and a sum of 10,000,000 *lire* to be spread over a term of years.

THE SUICIDE OF "BARNEY" BARNATO.

It appears that "Barney" Barnato had been suffering mentally for some months past. On the Stock Exchange the effect of his suicide is but slight. The Cape Parliament has adjourned as a mark of respect to the deceased in view of the prominent part he had taken in the affairs of South Africa.

ANNEXATION OF HAWAII.

Washington, June 17.

A Treaty of Annexation between the United States and Hawaii was signed here yesterday.

THE UNITED STATES AND HAWAII.

London, June 18.

The Hawaiian Annexation treaty has been submitted to the United States Senate.

The protest made by Japan is confined to the reservation of her rights under her existing treaty with Hawaii.

TERRIBLE EARTHQUAKE IN ASSAM.

A terrible earthquake has devastated Assam, ruining the tea plantations, and the crops of all descriptions, levelling whole towns, destroying railways, roads, and telegraphs. The mortality among the population is very great.

[Apparently this may have been simultaneous with the earthquake in Calcutta on the 12th, the interruption of communications accounting for the lateness of this report.]

AN INDIAN PUNITIVE EXPEDITION.

It has been decided, owing to trouble with the hill tribes, to send a punitive expedition to the Tochi Valley [in British Beluchistan, near the Afghan frontier].

THE RECORD REIGN.

London, June 20.

The Right Hon. A. J. Balfour moved that the Houses of Parliament attend divine service at St. Margaret's, Westminster, on Sunday, the 20th, to celebrate the 60th year of Her Majesty's reign.

Mr. William Redmond, M.P., opposed the motion, pointing out that although England had undoubtedly reaped great benefits from the reign, it was far otherwise with Ireland. Nobody replied. The motion was carried without a division.

2,300 mammoth bonfires will be lighted on Tuesday night on the various heights throughout the United Kingdom.

44,000 troops will be engaged on Tuesday in the procession or lining the route, including 1,115 representatives of the Indian and Colonial forces who will take part in the procession.

THE CELEBRATIONS IN LONDON.

London, June 21.

The Japanese Envoy, Prince Arisugawa, has arrived.

The weather has been unsettled; heavy rains have greatly marred the appearance of the decorations in the streets.

CHINESE CONCESSIONS TO FRANCE.

A convention has been signed and delivered to the French Minister in Peking, conceding fresh commercial and political advantages in the districts adjacent to Tonkin. It authorises railway extension into the interior through Kwangsi, and allows France to penetrate to Yunnan-fu; further, that French engineers may work mines in the Chinese frontier provinces.

[It is not clear whether the phrase "allows France to penetrate" has reference to railways, or merchants, or some other form of penetration.—ED. J. T.]

JUBILEE HONOURS.

London, June 22.

The following are recipients of Jubilee honours in the East:—

Grand Cross of St. Michael and St. George—Sir William Robinson, K.C.M.G., Governor of Hongkong; Mr. F. R. Saunders, C.M.G., Treasurer of Ceylon; Mr. F. A. Swettenham, C.M.G., British Resident-General, Malay States.

Commandership St. Michael and St. George—H.H. the Sultan of Johore.

Honorary Companion—Hadji Mahomed Berar of Johore.

Companionship St. Michael and St. George—Dr. Stephen Wootton Bushell, Physician at Peking; Mr. G. Jamieson, Assistant Judge and Consul at Shanghai.

PARLIAMENTARY CONGRATULATIONS.

In the House of Lords an Address of congratulation to Her Majesty was passed unanimously.

In the House of Commons a similar Address was proposed. Mr. Dillon made a speech in protest, and eventually the Dillonites left the House. Mr. Redmond then proposed an amendment, which was rejected by 436 to 7 votes. The original Address was then adopted by 459 to 44 votes.

Both houses resolved to present the address in their corporate capacity.

THE MATTING DUTY IN AMERICA.

Matting was included by the Senate in the free list by a majority of 25 to 22, after the debate of the 19th instant. However, the carpet manufacturers protesting against the decision of the Senate, it is still uncertain what steps the Deputies of the two Houses of Congress may adopt in this matter.

(GOVERNMENT DISPATCH.)

THE HAWAIIAN ANNEXATION.

Washington, June 19.

The Hawaiian Annexation Treaty was sent to the Senate for ratification on the 16th instant, accompanied by the Presidential message, and was published on the following day. The new Treaty is substantially the same as the Annexation Treaty of 1893, and consists also of seven articles. But the new and most important points are as follow:—(1) The existing treaties of Hawaii with foreign Powers will cease and determine, they being replaced by the Treaties between the United States and foreign Powers. (2) The United States are to assume liability for the Public Debt of Hawaii to the extent of \$4,000,000. (3) No allowance to be given to the Ex-Queen and Princess.

THE NEW U.S. TARIFF.

Washington, June 20.

The U.S. Senate struck out the tax on matting entirely on the 19th instant.

Washington, June 21.

The President says in his Message that the course pursued by the United States in regard to Hawaii always favoured the autonomy of that country to the exclusion of all foreign influence except that of the United States; that annexation is the inevitable consequence of the relations which have for the last three-quarters of a century been maintained between the United States and Hawaii; that their failure in 1893 may be taken as a proof of the disinterested motives of the United States, and that annexation is not a change but a consummation.

THE "HIYEI KAN."

Seattle, June 17.

The *Hiyei* weighed anchor to-day for San Francisco.

(SPECIAL TELEGRAMS TO THE "JAPAN MAIL.")

SEALING NEWS.

Hakodate, June 18.

The *Director* has arrived with 810 seal skins on board, and the *Geneva* with a catch of 389.

Hakodate, June 19.

The *C. G. Cox* has arrived and reports a catch of 1,187 skins; the *Umbriana* declares 817 skins, and the *Casco* reports 878.

H.M.S. "RAINBOW."

Hakodate, June 22.

H.M.S. *Rainbow* arrived here yesterday. ARRIVAL OF A SEALER.

Hakodate, June 23.

The sealing schooner *Sadie Turpel* has arrived in port with 648 skins.

(FROM "EL COMERCIO.")

THE POLITICAL CRISIS IN SPAIN.

Madrid, June 1.

Señor Remero Robledo (one of the late Ministers) has asked in the Cortes that all lembargoes made on property in the Philippines may be raised.

Madrid, June 2.

At five o'clock this afternoon, Canovas del Castillo went to the Palace and presented the resignation of the whole of the Conservative Government presided over by himself.

Her Majesty the Queen Regent replied to Canovas, that to-morrow she would hear the Ministers in Council, and decide in accordance with the rules of the constitution.

It is believed the solution of the political crisis, ending in the resignation of the Government, will be very difficult. The Liberals hope to occupy office.

Madrid, June 3.

Her Majesty the Queen Regent has consulted with the politicians Messrs. Elduayen and Pidal. To-morrow she will hear the opinions of Martinez-Campos, Montero Rios, the Marquis de la Vega de Armijo, the Captain General Lopez Dominguez, and the Marquis of Peña Plata (General Blanco), also Messrs. Silvela and Sagasta. The solution of the crisis is doubtful.

(FROM L'AVENIR DU TOURNI.)

FRANCE AND RUSSIA.

Paris, June 2.

President Faure's visit to Russia is postponed until the 25th of July.

THE KING OF SIAM IN EUROPE.

The King of Siam has arrived at Turin, and has visited the palace of the Duke of Gènes.

Paris, June 3.

The King has arrived at Rome, and visited the Quirinal.

SCENE IN THE CHAMBER OF DEPUTIES.

Paris, June 6.

In the course of a discussion on the strike at Grand Combe, M. Gérault-Richard, Socialist Deputy for the Seine, having insulted his colleagues, the Chamber voted his expulsion. M. Gérault-Richard refused to retire, and the soldiers in attendance were ordered to expel him.

A DESTRUCTIVE WATERSPOUT.

A waterspout which burst over Voiron (Isère) has caused damage to the extent of several millions of francs.

Paris, June 7.

Many lives were lost in the waterspout at Voiron.

THE SPANISH MINISTRY.

M. Canovas has resumed office with all his colleagues in the Ministry.

VIVE LA FRANCE!

Paris, June 8.

M. Felix Faure has been received with acclamation at St. Quentin, where he had gone to inaugurate the monument commemorating the defence of that town in 1557. At a banquet, the President of the Republic said that the people showed in 1870 that they followed the traditions of their ancestors. Then he proposed the toast of "la Patrie."

THE NEW CHINESE-BRITISH CONVENTION.

Paris, June 9.

The ratifications of the amendments on the Sino-Burmese Convention were exchanged at Peking on Saturday. China opens new commercial routes between Burma and China and

will consider the necessity for constructing railways in Yunnan which will be joined to the Burmese railways.

MONUMENT TO THE SUEZ CANAL ENGINEER.

Paris, June 10.

At the general meeting of the shareholders in the Suez Canal Company it was decided to erect a monument to M. Ferdinand de Lesseps at the entrance to the Canal at Port Said. The cost is estimated at 250,000 francs.

THE PLAGUE AT JEDDAH.

Several Indian pilgrims have been struck down by plague at Jeddah.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

SOLUTION OF PROBLEM No. 321.

WHITE.

1—Q to K Kt 8
2—Q to Q R 8
3—Q takes R mate

BLACK.

1—K takes R
2—Anything

2—R to Q 4 ch
3—Q to Kt 2 mate

1—P to Q 7
2—K takes Kt

2—R to K 5 ch
3—Q to Kt 2 mate

1—P to K 7
2—K takes Kt

Correct answers from W.H.S., J.W.E., and Omega.

SOLUTION OF PROBLEM No. 322.

WHITE.

1—B to B 4
2—Q to B 2 mate
2—R to Kt 6 mate

BLACK.

1—R takes B
1—P takes R
1—R takes Kt

2—P takes R

Correct solutions from W.H.S., and Omicron.
J.W.E.—Your answers to 317, 318 and 322 came duly to hand: but alas! they were not correct!

PROBLEM No. 325.

By K. TRAXLER.

BLACK.

White to play, and mate in three moves.

PROBLEM No. 326.

By F. W. ANDREW.

BLACK.

White to play and mate in two moves.

GAME No. 730.

GIUOCO PIANO.

The following interesting game was played between the North London and the Sydenham and Forest Hill Chess Clubs:—

White—C. W. Bowles.		Black—E. Morgan.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	21 P B4	Kt K5
2 Kt KB3	Kt QB3	22 P B5(g)	P B3
3 B B4	B B4	23 P K6	Q Q3(h)
4 P QK4	B K3	24 R Q3(i)	P Kkt4
5 P B3	Kt B3	25 Kkt K2	K R sq
6 Castles	Castles(a)	26 K R sq	K Kt2
7 P QR4	P QR3	27 Q K2	B Kt sq
8 P QR5	B R2	28 Q R5	K R2 q(j)
9 Q B2	P Q3	29 Kt K4	B B2(k)
10 Kt R3	B K3	30 Kt R6	QxQKtP
11 B Kt2(b)	BxR(c)	31 B R3	Q B5
12 KtxB	Kt KR4	32 QR Qsq	QR Ksq
13 Kt K3	Kt B5	33 Kt B7ch	K Kt sq
14 P K3	Kt K3(d)	34 Kt K3	Q R7
15 QR Kt1		35 Kt K4(l)	QxR
(e)	Kt K2	36 KtxPch	KtxKt
16 P Q4	PxP	37 QxKtP	
17 PxP	P Q4	ch	Kt Kt3
18 P K5	P QB3	38 PxKt	RxP
19 QR Qsq	Q Q2(f)	39 RxKt	RxR
20 Kt R4	Kt Kt4	40 QxR	Resigns.

NOTES.

- (a) If Kt takes P, 7—Q to Q 2, P to Q 4; 8—B to Kt 5.
 (b) To be able to force the centre by P to Q 4, and also to develop the queen's rook.
 (c) This exchange is not to Black's advantage.
 (d) If Kt checks, 15—K to Kt 2 with gain of time.
 (e) To protect the knight's pawn so as to be able to make the bishop's pawn available to support the queen's pawn.
 (f) A move such as P to B 3 would not have been amiss, though Black must be prepared, if White replies with P takes P, to retake with his pawn.
 (g) All White's movements are exceeding by well directed.
 (h) P to Kkt 4 was not to be recommended, P to B 3 was therefore the only way to stop P to B 6.
 (i) White continues with his excellent tactics; he gets his rook into play and effectually prevents either Q takes Q Kt P on account of 25—B to R 3 or Kt takes K Kt P.
 (j) The following would have led to exceedingly interesting play:—Q takes K Kt P, 29—R to B 3 (probably best), Q to B 2; 30—Kt to Kt 4, K to Kt 1; 31—R to K R 3, K to R 1, and Black's position is not by means hopeless.
 (k) Kt to Kt 1 was necessary to prevent the entry of the knight on rook sixth; the omission was fatal.
 (l) Very nice play indeed. As will be seen, White can well afford to give up this bishop, as mate then can speedily be forced.

GAME No. 731.

TWO KNIGHTS DEFENCE.

The following peculiar and hitherto unpublished game (played recently), showing how a good player can live through a bad position occurred in a match between the St. George's and the City of London Chess Club:—

White—H. A. H. Carson (City Chess Club).		Black—Carl. Chepmell (St. George's).	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	24 B Kkt3	B B sq
2 Kt KB3	Kt QB3	25 Kt K4	Q B sq
3 B B4	Kt B3	26 P QR3	P KR3
4 P Q4	KKtxP(a)	27 Q QB3	Q Kt sq
5 PxP	Kt B4	28 B R3	B Kt2(g)
6 Castles	B K2	29 KR Ksq	R B sq
7 Kt B3	Castles	30 R Q7(h)	BxKt
8 B B4	Kt K3	31 R K7(i)	B B4
9 B Kkt3	P QKt3	32 B QR4	Kt B4(k)
10 Kt K1(b)	B Kt2	33 R K8	KtxB
11 P B4	K R1(c)	34 Q K3(l)	K R2
12 P B5	B B4 ch	35 RxQ	RxR
13 K R1	Kt Q5	36 B B4	Kt K3
14 P B6	P Kt3	37 BxRP	K R Ksq
15 Q Q2	Kt K3	38 Q Bsq	K(R5) B4
16 R Q1(d)	Q Kt Q5	39 P KR4	QR Qsq
17 Q R6(e)	R Kkt sq	40 B K3	Kt K5
18 Kt Q3	B KBsq	41 B K5	
19 Q Q2	P Q4(f)	(m)	KKtxB
20 PxP.e.p.	Kt B3	42 PxKt	Kt B7 ch
21 Kt K5	BxKt	43 K Kt1(n)	RxR ch
22 BxR	Kt B3	44 QxR	R Q8
23 Q K3	Q Ksq	45 Resigns.	

NOTES.

- (a) The usual move is P takes P.
 (b) Black is rather hampered in his development, owing to the peculiar defence adopted by him. White might, perhaps, have done better in

this move with 10—Kt to Q 5, threatening Kt takes B or Kt to K 3, followed by Kt to B 5.

(c) Black must submit to the advance of the pawn, as P to K Kt 3 would only make matters worse for him.

(d) This of course is a good move as far as it goes, but it would have been more useful for White's attack on the king's side if he had played 16—Kt to K 4 in order to take off Black's bishop, seeing that R 6 and Kt 7 may be defended by that bishop. Kt to K 4 would also possibly admit of Kt to Kt 5.

(e) This is not very profitable at this stage. 17—B to B 2 might have been played here.

(f) There was hardly anything better; it was relief for the moment.

(g) The manœuvres in this game are most peculiar. Black was apparently wriggling successfully, while White did not seem to be making much headway; but in positions of this kind it is very difficult really to get out of the wood. If Black had played P to B 4, 29—Kt or B to Q 7 would have threatened him with new difficulties.

(h) This Black could not prevent.

(i) White probably made a virtue of necessity, preferring to give up a piece for the possibility of attack, so losing the exchange by 31—R takes B, Kt to B 4. It is an interesting move.

(k) Not to be outdone in generous treatment of the position, Black embarks on this venturesome and complicated course. There was no serious objection to his playing P to B 3.

(l) The play here is very interesting. We imagine, however, that White relied too much on this move, which, by threatening mate, prevents Black playing Q takes R. White probably overlooked the fact that after he had won the queen Black would have three pieces for it.

(m) It was natural for White to endeavour to protect his pawn. If he does not do so Black's three pieces should win easily, especially considering that they have been so admirably handled that White has no move for his queen.

(n) An oversight. This move precipitates the loss of the game. With 43—K to R 2, White should have been able to hold on to his game for a considerable time yet, if not even to make the better fight.

KOBÉ V. NAGASAKI.

We reprint the following from a recent issue of the *Kobe Herald*. Comment would be superfluous:—

The second game, like the first, in the match between Mr. Jordan, of Nagasaki, and the Kobe Chess Club, has resulted in a victory for the southern player, White having resigned yesterday after the thirty-third move.

GAME No. 732.

White—K. C. C.		Black—Mr. Jordan.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	18 Kt K3	Kt Q5

19 Kt Kt3	K R sq	40 R Kt8	RxP
20 QR QB	sq	41 RxP ch	K B3
		42 R R7	K K4

Black ultimately won.

NOTES.

- (a) Threatening 9—P to R 5, Kt takes P; 10—R takes Kt, B takes R; 11—P takes P, and if P takes P 12—B takes P, ch, winning; or 11..... B to K Kt 5; 12—B to R 3 with a fine attack.
 (b) As a consequence of this variation White cannot withdraw 11—B to R 4, keeping up pressure on the Kt, and compelling B back to Q 2.
 (c) He cannot allow P to B 5.
 (d) White's attack is gone; 21—P to Q 5 is answered by P to B 4.
 (e) If 23—Q takes P, Q takes Q; 24—R takes P, securing a passed pawn.
 (f) P to B 6 is answered by Q to K 3, whereupon White cannot capture the Kt, and if 26—R to K sq, then Kt to B 5 follows.
 (g) This loses another pawn, and with it the prospect of saving the game.
 (h) Letting in a little air, for White threatened if 31..... R takes P, 32—K R takes P.

MEN-OF-WAR.

Grafton (12), British cruiser, Captain E. P. Jones, 14th June.—Yokosuka.

Olympia (14), American flagship, Captain J. G. Reed, 13th June.—Target Practice.

Yorktown (6), U.S. gunboat, Com. C. H. Stockton, 7th May.—Shanghai.

LATEST COMMERCIAL.

IMPORTS.

Market generally dull with the exception of Yarns, which have given a good week's trade. Country buyers have come into the market and about 1,000 bales all kinds have been sold for delivery ahead at gradually hardening rates. The slow working of the telegraph cables to Europe has prevented still more business. Fancies and Woolens dormant.

COTTON PICKER GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds, 34 yds, 35 inches	\$2.50 to 2.80
Grey Shirtings—9 1/2 yds, 34 yds, 35 inches	2.80 to 3.30

Iron Plates, per box	1.95 to 2.00
Pig Iron, No. 3	5.70 to 5.80
Hoop Iron (1 to 1 1/2 inch)	4.80 to 5.00

KEROSENE.

Quiet market without animation. Dealers operating warily and not taking more than is absolutely necessary.

	PER GALLON.
American	\$2.60 to 2.05
Russian	2.00 to 2.05
Langkat	—

SUGAR.

Brown—No change to note in the general market. Arrivals are fairly large and prices none too strong. White pursues the even tenor of its way, holding a steady course at unchanged rates.

	PER POUND.
Brown Takao	\$3.50 to 3.55
Brown Manila	4.20 to 4.90
Brown Daiton	2.80 to 2.90
Brown Canton	3.30 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

A change has come over prospects. Telegraphic news reporting some damage to the Italian crop and a prospective out-turn there of 15 per cent. less than last year, has put heart into Japanese holders. There is not much business doing but native silk men are confident of a "big crop and good prices" anon.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BARNES, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

In certain cases, for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. "Say, I, J. C. Courten, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

月三年五十二號
西曆一千八百九十七年

IN H.B.M. COURT FOR JAPAN.

Before REGINALD A. MOWAT, Esq., Judge,
sitting with a Jury.

TUESDAY, January 5th, 1897.

THE MURDER OF W. R. H. CAREW.—FIRST-DAY'S
PROCEEDINGS.

Some time before the doors of the Court were opened this morning the approaches to the British Consulate were crowded with the jurymen who had been summoned upon this case, and by ten o'clock there was not standing room in the Court behind the rails. The Accused was provided with a seat by the side of the dock until His Lordship entered at 10.09 a.m., when she took her place in the dock. With His Lordship sat James Troup, Esq., the Assistant-Judge. At the bar sat Mr. H. C. Litchfield, Crown Prosecutor for Japan; next Mr. Hiram Shaw Wilkinson, Crown Advocate for China and Japan; and then Mr. J. P. Lowder, Counsel for the defence. The Press representatives were in their usual places, facing Counsel, their numbers being swelled by a member of the Press of Holland.

On the Court being seated,

The Clerk of Arraigns, Mr. C. D. Moss, read the following charge:—

IN HER BRITANNIC MAJESTY'S COURT FOR JAPAN,
Kingawa to wit.

HENRY CHARLES LITCHFIELD, the Crown Prosecutor in Japan for Our Lady the Queen, presents and charges that at Yokohama, Japan, Edith May Hallowell Carew, on the 22nd October, 1889, wilfully and of her malice aforethought did kill and murder one Walter Raymond Hallowell Carew against the peace of Our Lady the Queen her Crown and dignity.

The Clerk of Arraigns—How say you, are you guilty or not guilty?

The accused—I am not guilty.

Mr. Lowder—I appear on behalf of the accused, and have to make application, on the advice of her medical attendant, that she be provided with a seat during the hearing of the charge, instead of standing the whole while.

His Lordship—Certainly.

Accused was then provided with a seat within the dock, almost disappearing from sight.

Mr. H. S. Wilkinson—My lord, I appear for the Crown in this case, in company with my friend Mr. Litchfield, the Crown Prosecutor for Japan.

On the names of the Jury being called, the following were found to be absent. Messrs. H. I. Choze, H. E. Campbell, C. B. Bernard, Alan Owston, H. A. Vincent, G. K. Dinsdale, Jas. Walter, H. Moss, and H. E. Harries. Sick certificates were put in on behalf of H. A. Vincent, H. Moss, and H. E. Harries. Mr. Choze was exempted on the ground of being in Kobe.

His Lordship—The jurymen, C. B. Bernard, Alan Owston, G. K. Dinsdale, and Jas. Walter, not answering to their names, and being absent, will be fined the customary fine of \$50. Mr. Vincent, sen., who has answered to his name, and Mr. Leopold, who has also answered, are excused, having sent to the Sheriff medical certificates, and so are not available for the jury.

The Clerk of Arraigns then formally gave notice to the prisoner of her right of challenge of any of the jury as they came up to be sworn.

The Clerk of Arraigns drew out the following names:—A. H. Cole Watson, Jas. Raddigan (challenged by Mr. Lowder); R. C. K. Johnson; Duncan McLaren; H. Moss (sick certificate put in and the jurymen was exempted); C. B. Bernard (absent and fined); Joseph Brown (challenged by Mr. Lowder); William Sutter (challenged by Mr. Lowder); Andrew Patterson; C. B. Stedman.

Mr. Stedman—I have to claim abatement, sir. I think that this is the proper time for making my claim.

His Lordship—On what grounds?

Mr. Stedman—Deafness; I have a certificate from my medical man.

His Lordship—You had better produce your certificate.

Mr. Lowder—I will challenge him.

Mr. Stedman then stood aside.

The Clerk Arraigns then drew out the name of H. Tennant.

Mr. Litchfield—Let him stand aside, being a member of the Press.

The Clerk of the Court next drew out C. Sale (challenged by Mr. Lowder); F. P. Solomon

(sick certificate put in and the jurymen was exempted); Joseph Davieson.

The jury empanelled were therefore, Messrs. A. H. C. Watson, R. C. K. Johnson, D. McLaren, Andrew Patterson, and J. Davieson. They were formally sworn and charged by the Clerk of Arraigns, who had previously called for any one who knew anything about the murder with which the prisoner was charged, to come forward, as she now stood at the bar upon her deliverance. The rest of the jurymen in attendance were then dismissed, and the Court settled down to the trial proper.

On the application of Mr. Lowder, Mr. Porch, brother of the prisoner, was allowed a seat within the barrier.

Mr. Wilkinson—My Lord, and gentlemen of the jury: It is now my duty to announce to you the nature of the accusation that has been brought against the prisoner, and to briefly give you an idea of the extent of the evidence that the prosecution will lay before you in support of it. You have heard the indictment read, and therefore know that it is the great crime of wilful murder that is now alleged. The charge is that the prisoner at the bar murdered her husband by administering arsenic to him. You will also hear during the course of the trial that sugar of lead enters into the case, but the principal point is that death was the result of arsenical poisoning. The questions that you will be asked to decide is whether the deceased, Walter Raymond Hallowell Carew, died of arsenic, and whether the arsenic was administered to him by the prisoner. If you answer each of those questions in the negative then the prisoner is acquitted; if both are answered by you in the affirmative then you are bound to pass a verdict pronouncing her guilty, unless a defence, not yet disclosed, is raised that will completely lift the shadow of suspicion from off her. It is not necessary for the prosecution in matters of this case to attempt to prove malice; whether there was actual malice or not does not fall upon the Crown to prove, for in these cases—I speak under His Lordship's correction—the law imputes malice, though no evidence may be brought to prove it. In coming to a decision the duty imposed upon you, and which you have solemnly promised to perform, is to find a true verdict according to the evidence, and that means the evidence now to be adduced in Court before you. I cannot for a moment suppose, gentlemen, that you have not heard of the case or that you are ignorant of its main features, and it may be that some of you—if not all of you—have followed in detail the proceedings to which it has given rise. But I have to beseech you, gentlemen, in the interest of justice, in the interest of the prisoner as well as of the Crown—to divest your minds so far as possible of all you have heard or read of the case up to now, and to take care, whatever decision you may come to, that it is the result of a consideration of the evidence to be now brought before you, and of nothing relating to the case which you may have read, heard, or seen elsewhere. Now, as in nearly every case of this sort, the evidence by which it is sought to bring home the charge to the prisoner is circumstantial evidence. Direct evidence will be given to you to establish certain facts and you will be asked from those facts to draw certain conclusions. It will be for you, gentlemen, to determine whether the direct evidence proves the facts alleged by the witnesses. Upon this point I do not anticipate that there will be much conflict or that you will have any great difficulty in arriving at a conclusion. Your difficulty will be in considering those facts as a foundation for the conclusions you will be asked to draw. Direct evidence will be given of the death of the deceased, of the finding of arsenic in his body, and of the circumstances from which you will be asked to infer that he died of arsenic. Direct evidence will not be given of the fact of the administering of the arsenic by the prisoner. It is very seldom indeed that there are any witnesses to speak directly to the administration of poison, and the law does not require that there should be. If it did, the crime of poisoning would go practically unpunished. Direct evidence will be brought to prove that the prisoner purchased arsenic under circumstances of which there is as yet no satisfactory explanation, that she had an opportunity of administering it to the deceased,

and direct evidence will be brought of certain acts and conduct of the prisoner and of other circumstances from which you will be asked to infer that she did administer the arsenic to the deceased. You cannot consistently with your duty refuse to draw that inference, if it is the proper inference to be drawn. But the question whether it is the proper inference to draw is for you to judge and determine. It is for you to consider all the evidence presented to you, and, taking the facts proved to your satisfaction and judging as reasonable men, and as you would judge in the more important affairs of life, to say whether those facts are consistent with the prisoner's innocence. If they are not, it will be your duty, however painful it may be, to find her guilty. If there is a doubt—not a mere doubt, raised for the sake of doubting—but if there is a reasonable doubt in your minds as to what the answer ought to be, you will give the prisoner the benefit of that doubt. There is a division of the evidence to which it may be desirable I should advert. There will be presented to you the evidence of ordinary witnesses speaking as to facts to which they can directly testify, and there will be presented to you the evidence of medical men and of at least one medical man who is also a chemical expert. Most, if not all of these will state facts which have come under their cognizance and will also give their opinion either on the facts observed by themselves or on facts which may be testified to by other witnesses or on both. As to facts spoken to them as having come under their own observation, I do not anticipate that there will be any conflict. If there is a conflict in matters of opinion the burden will fall upon you to determine to which most weight ought to be given, and in coming to a conclusion upon that question, and indeed upon any question whatever, you ought to look at the evidence as a whole—to take the whole evidence in the case, and not a part merely—and upon that to come to a decision. I shall now give you a short outline of the facts which will be testified to. Some of these facts are no doubt familiar to you, but as you are to judge by the facts given in evidence, I shall state shortly what those facts will be. The prisoner was married to the deceased in 1889. The deceased was then in the Government Service in the Straits Settlements. In 1890, he resigned his appointment on account of ill-health, and came to Yokohama, where he was appointed Secretary of the Yokohama United Club, a post which he retained until the time of his death. Since their arrival here two children were born to them, a boy and a girl. These children you will hear spoken of in the evidence, and sometimes by their names. About the month of May of this year Miss Mary Esther Jacob, who had been chosen by Mrs. Carew's friends in England, came out as nursery governess to take charge of the children. Mrs. Carew's brother, Mr. Reginald Colman Porch, came out to Yokohama some time ago, and lived with his sister and brother-in-law, and of these persons the household of the deceased consisted in October last, and had so consisted of some time previous to that—that is Mr. and Mrs. Carew, the two children, Miss Jacob, and Mr. Porch. The servants were:—Rachael Greer, a Eurasian girl, who was Mrs. Carew's maid; Hanuya Asa, a Japanese girl; Ah Kwong, a young Chinese boy; Yazana the cook, besides Kuroyanagi Junyn the coolie, and a small boy who assisted in the stables. From the arrival of Mr. and Mrs. Carew in Yokohama, Dr. Wheeler was their family doctor and their regular medical attendant until the time of Mr. Carew's death on the 22nd of October last. Dr. Wheeler looked upon him as a healthy man, perhaps given to too good living, and sometimes drinking more than was good for him—but on occasions only. He complained occasionally of his liver, and Dr. Wheeler treated him for that complaint. In 1893 the deceased was suffering from stricture, and for this in that year he consulted Dr. Munro, and later on he consulted Dr. Baelz. Dr. Baelz prescribed for the deceased. This prescription, which was for a solution of belladonna and morphine, was refilled from time to time. The deceased said nothing to Dr. Wheeler about this ailment nor did he know of it or of the prescription given for it. On Saturday the 10th of October, Dr. Wheeler gave to the prisoner a prescription for Fowler's

Solution of Arsenic. This was for her own use as a tonic, and had been prescribed for her by Dr. Wheeler on three previous occasions. The prescription was for half-an-ounce of the solution, and the dose prescribed was 4 or 5 drops after meals. This prescription Dr. Wheeler will tell you was given to her on the 10th of October, at her own request. She had, however, some short time previously had a consultation with him, at which he suggested that she should take it again. Arsenic is a deadly poison, but like other deadly poisons is used medicinally. It is sometimes taken solid in the form of arsenious acid or white arsenic, and sometimes it is taken in solution. The most usual form of solution is Fowler's Solution of Arsenic, which contains one grain of white arsenic to each quarter of an ounce of solution. The medicinal dose of white arsenic is $\frac{1}{16}$ to $\frac{1}{8}$ of a grain to be taken not often than three times a day. The medicinal dose of the solution is from 2 to 8 or from 2 to 10 minims containing the same amount of white arsenic $\frac{1}{16}$ to $\frac{1}{8}$ of a grain. A single deadly dose for a man would be from two grains upwards, that is from 24 to 120 medicinal doses. Thus, from half-an-ounce of Fowler's Solution upwards would be a deadly dose. Such a dose would cause death in various periods varying according to circumstances, but the average of which may be taken at about twenty-four hours. The usual symptoms would be depression, nausea, and vomiting, intense pain in the region of the stomach, purging, straining (called tenesmus), a sense of constriction in the throat, with a feeling of dryness and burning heat, accompanied by intense thirst. Any one of these symptoms alone might be caused by other means than arsenic. A smaller dose of arsenic would produce the same symptoms, which would disappear after a lapse of some hours, but if the smaller doses were repeated before recovery the patient would probably die, and in fact, repeated small doses of arsenic would have a fatal effect if given with sufficient frequency. On Sunday, the 11th of October—that is the day after the day on which Dr. Wheeler gave to Mrs. Carew the prescription for Fowler's Solution, he saw Mr. Carew, probably at his house. Mr. Carew then complained of his liver, and Dr. Wheeler prescribed for him. This prescription with the prescription for Fowler's Solution given to Mrs. Carew the previous day were sent by Mrs. Carew that evening to Schedel's Dispensary, and the articles ordered were provided. On Tuesday, the 13th of October, Dr. Baelz's prescription was filled at Schedel's Dispensary. On Thursday, the 15th of October, the prisoner wrote to Dr. Wheeler asking him to see her husband at the Club. It appears that it is Dr. Wheeler's practice not to keep chits asking for his attendance but to destroy them either when he receives them or has attended to them, and this letter with other similar letters that will be mentioned were dealt with in accordance with his usual practice. But, I believe nothing turns upon the absence of these letters. Dr. Wheeler, in accordance with the request contained in the prisoner's letter called on Mr. Carew at the Club and advised him to confine himself to a slop diet and to drink Vichy water and milk, and nothing else, and in order that this direction might be carried out he advised him to go home and stay in the house for two or three days at the least. At this time he complained of being weak and out of sorts, and told the Doctor that his liver was bothering him, and the symptoms observed by the Doctor were in accordance with this. The doctor told him that he had been over-stimulating and, from the appearance he presented, warned him that if he did not take care he would have jaundice. Mr. Carew, acting on the advice given him, went home that day, Thursday, the 15th, and did not leave his house until he was carried from it on a stretcher on the following Thursday, the 22nd, and taken to the Naval Hospital, where he died soon after his admission. On Friday, the 16th, the day after Mr. Carew went home, Dr. Wheeler visited him. He complained of disinclination to eat and nausea, and was very drowsy and sleepy. Dr. Wheeler took that to be a liver symptom, and either that day or next gave him some podophyllin drops. This drowsiness, it may be observed, continued more or less until about Tuesday morning. On this day, Friday, Dr. Baelz's prescription was again filled at Schedel's. On Saturday, the 17th, the deceased remained in about the same condition; the irritability of the stomach had increased, and he was vomiting—a bilious-looking vomit. He was up and down during the day, sometimes in bed and sometimes in the arm-chair. He talked of going to Kamakura. The prisoner wrote to Dr. Wheeler concerning this proposal, and Dr. Wheeler saw the deceased and told him he was not fit to go. On this day the prisoner wrote to Schedel's and had the half-ounce bottle of Fowler's Solution refilled. On

Sunday, the 18th, the deceased complained of thirst, and the vomiting continued. On this day chlorodyne and sugar of lead were obtained from Maruya's in the name of Carew. Whether in the name of Mr. and Mrs. Carew, Maruya's shopman cannot say, as the paper was taken away on the 20th when the articles were paid for by a lady. This lady had not been clearly identified, but circumstances will be deposited to show it was Mrs. Carew. On Monday, the 19th, the deceased was still drowsy and irritable and complained of pain in the region of the stomach, and it was with difficulty he could be got to take food. The vomiting continued. The vomit was of a dark green, bilious-looking nature. Dr. Wheeler concluded that it was due to bile, and treated him accordingly. On this day there was purchased at Maruya's an ounce bottle of Fowler's Solution and $\frac{1}{2}$ of an ounce of sugar of lead by a lady who gave the name of Carew. In a statement made by the prisoner, and to which I shall afterwards more fully refer, the prisoner denied that she made this purchase. She denies having been down town that day, but you will have the evidence of Miss Jacob that she met her down town at the Post Office, and Maruya's assistant will say that the lady who made the purchase gave the name of Carew, and that the same lady who purchased the solution called the next day and paid for the chlorodyne and sugar of lead purchased on the 18th in the name of Carew. On Wednesday, the 20th, the vomiting still continued, and Dr. Wheeler prescribed a mixture of bismuth and hydrocyanic acid to correct it. The drowsiness had passed off, and the patient had become restless and irritable and unable to keep anything on his stomach. He had also slight diarrhoea and straining. Dr. Wheeler was not satisfied with the symptoms, and was somewhat puzzled, and proposed to the prisoner to call in Dr. Todd, to which she offered no objection. Dr. Todd visited the deceased with Dr. Wheeler in the afternoon. The patient then complained of thirst and that things hurt him when he swallowed. It was decided to treat the patient as for a severe bilious attack, and in order to secure rest a sleeping draught was ordered, but the patient would not take it, complaining of severe burning pain in his throat. He was therefore given a hypodermic injection of morphia. On that day the prisoner gave a written order for a bed-pan and an ounce of Fowler's Solution and sent it to Maruya's, and these articles were brought back by the messenger sent for them. On Wednesday, the 21st, on visiting the deceased, Dr. Wheeler found him suffering from what he considered rather acute diarrhoea. He continued to complain of straining and also complained of great pain over his stomach. While some of the purging could be accounted for by a purgative given to him the day before, it was far in excess of what could be accounted for in this way, and Dr. Wheeler was puzzled. About mid-day, Dr. Wheeler received a note from the prisoner asking that Dr. Baelz should be telegraphed for. This was done at the suggestion of Mr. Parsons, a friend of the Carews, who called to inquire for Mr. Carew and had an interview with Mr. Carew. Dr. Wheeler telegraphed as requested. Dr. Baelz replied that it was impossible for him to come down that day, and asking if the evening of the following day would do. After receiving that telegram Dr. Wheeler went to see the prisoner and also saw the deceased. He was then apparently much better. On this day the prisoner wrote an order for one ounce of Fowler's Solution to Maruya's, and sent Miss Jacob for it. Miss Jacob obtained it and handed it to the prisoner. On the same day the prisoner ordered and obtained from Schedel's half-an-ounce of Fowler's Solution. In the order for it she could not send the old bottle as it had been broken. On Thursday, the 22nd, Dr. Wheeler found his patient much worse, and he determined to try and have him admitted to the Naval Hospital. He was confirmed in his resolution by a communication made to him at Mr. Boag's funeral, that took place early in the morning of that day. Counsel then described the steps taken by Dr. Wheeler to obtain admission for his patient at the Royal Naval Hospital, after he found that Dr. Todd was away from town. Mr. Carew was admitted into the hospital in a state of collapse. Dr. May's evidence at the inquest was here read by Counsel, describing the feeble pulse, and state of collapse that he found Mr. Carew in when brought to the Hospital. Dr. May administered stimulants, brandy by the mouth and ether hypodermically, but the patient never rallied, dying at about twenty minutes or a quarter to five o'clock that afternoon. On that same 22nd of October, in the evening, Dr. Wheeler was called to the house by Mrs. Carew who said to him, "Oh, doctor, there is one thing that I think I ought to have told you before:

Walter suffered from a stricture and he used to taken arsenic for it: he said that when the pain came on that this used to give him the only relief." She further said that some days before—Dr. Wheeler is not quite certain as to the exact phrasing of the sentence—her husband had asked her to send to Maruya's for a bottle of Fowler's Solution of Arsenic and a bottle of sugar of lead, but that she could not, although she had searched for them, find the bottles. Dr. Wheeler replied, "It would have simplified matters if you had told me; it's a pity," or words to that effect. Dr. Wheeler will tell you, gentlemen, that during the whole time he treated the deceased, all the time that he knew him as the deceased's medical attendant, he never at any time knew that Mr. Carew took, or was in the habit of taking, arsenic. A question will doubtless occur to you here, gentlemen. It is, whether the theory of the prosecution is correct, and this point you will have to decide when you come to determine upon the point whether the deceased died of arsenical poisoning, as I will have to prove, or whether it was produced from other causes. Here the experience has been, as it has been in so many similar cases, that though the symptoms were puzzling, the medical attendant had no suspicion and did not assume the symptoms to be those of poisoning. As I have said, this is not the first time on record when such as been the case. The occurrence is a very usual one, and in this case a very natural one when all things are considered. After the death, a *post mortem* examination was held by Dr. Todd, Dr. May, and Dr. Wheeler—a most thorough *post mortem* examination, and as a result no organic disease was found; nothing was discovered sufficient to account for death. They did not carry their researches into the interior of the stomach and the intestines. Those parts of the body were tied up and despatched to Tokyo, where they were examined by Dr. Divers, of the Imperial University. That gentleman will be called to state what he found in the stomach and intestines. But I may state here that Dr. Divers found $\frac{1}{2}$ of a grain of arsenic in the stomach, and in his opinion that was a very large quantity. The contents of the stomach having been examined, the liver was subjected to analysis and here a quantity, a ponderable quantity, of arsenic was found. An explanation why more was not discovered is easy. It is not the arsenic that is found in the body that causes death. To produce death arsenic requires to be absorbed into the system, to be spread about the system: when this is done then it will cause death. Dr. Divers will tell you that $\frac{1}{2}$ of a grain of arsenic was a large quantity to discover and is indicative of very large quantities having been administered. For not only is there absorption in the system but there is also elimination through the organs, so that the amount of arsenic found in the body after death is often much smaller than the fatal dose. The conclusion I ask you to come to, gentlemen, is that a fatal dose was administered. If the evidence that I shall lay before you adduces that fact, then you will have to find that there was no other cause of death, that the irresistible conclusion that has to be drawn is that arsenical poisoning was what deceased died from. Then we have the probability that the arsenic was administered by the deceased, or was administered to him by some person and not known to him. I will ask you to bear in mind that arsenic is extremely depressing and the symptoms in this case show that it was administered not in one dose but in repeated doses. The direct effect of arsenic is to deprive the patient of all will or desire to administer any more of the drug to himself. It also causes the person who takes it to suffer considerable agonies of pain, pain which render it not at all likely that he would desire to take again the substance that caused it. It is not at all conceivable that the late Mr. Carew contemplated suicide—or that he would take arsenic for the purpose of committing suicide. There is a statement in the evidence that refers to this aspect of the case, which was made by the prisoner at the bar when she offered herself as a witness at the Coroner's inquest, in which she says that her husband was in the habit of taking arsenic habitually and in very considerable doses. You will have the statement read out to you and you will give it your careful consideration, and then I shall ask you whether you will, after reviewing all the other evidence that will have been given, consider her statement as at all creditable. The prisoner stated there that her husband had been in the habit of taking arsenic daily in large doses. If so, there ought to be some place where he could have obtained it. This statement of the prisoner's is contradictory in many of its parts. Counsel then read extracts from the statement of the accused made at the inquest, statements all referring to the

alleged arsenic-taking habits of her late husband, and then he pointed out that neither Dr. Wheeler, Dr. Baetz, nor Dr. Munro, had ever prescribed arsenic for him. Dr. Munro, the learned Counsel continued, will tell you that he has an impression that Mr. Carew did once mention to him that he did take, or was taking, arsenic. This was a matter that the jury would doubtless give due attention to. Other statements made by the accused at the inquest were also ambiguous in respect to the two bottles that could not be found the day after Mr. Carew's death. The statement as read might refer to the bottle of arsenical lotion for the pony or might refer to the bottle of Fowler's Solution and the bottle of sugar of lead. But although the accused stated that her husband told her that he used arsenic as an external application of the liver, medical testimony would be adduced to show that arsenic was never used for external application in cases of congested liver. On two occasions, the jury would be told, the *betto* in the Carew's employ, was supplied by Mrs. Carew with a white powder that he sprinkled on the pony's food. This may have been arsenic. Now the examination of the stomach of the deceased, showed that at one time or another a certain quantity of arsenic in its white state, as a powder, was administered to him. The prosecution could not trace that white arsenic; where it came from, or how obtained. The only explanation is that arsenic in that state was kept in the stable, for the *betto* will tell you that he obtained a white powder to sprinkle over the pony's food, and arsenic is, as we know, sometimes so used. Counsel then read further extracts from prisoner's statement at the inquest, and laid stress on the fact that she said that her husband used to keep a bottle of arsenic on the sideboard in the dining-room, although when her husband first asked for his usual dose she "went to the cupboard in the bedroom where he kept his medicines, and found there a bottle containing a few drops of arsenic." She also said, remarked Counsel for the prosecution, that a one ounce bottle of Fowler's Solution only made four or five doses for the deceased. In regard to the bottle alleged to have been kept on the sideboard, Miss Jacob would be called and she would say that she was not aware of the bottle alleged to have been kept in the room downstairs. There were bottles there, among them a bottle containing cod-liver oil for the children. The question for them to decide would be, whether it was credible that Mrs. Carew would knowingly have on the dining-room sideboard, in a place accessible to children, a place where the nurse would go to obtain cod-liver oil for her charges, a bottle of poisonous solution. Of course it might be urged that Fowler's Solution is coloured so as to render it easily recognisable, but to have arsenic standing there in such a place was most difficult to believe. But of course it was for the jury to say whether the story was credible. Then also as to the quantity which she said her husband took—a one oz. bottle only sufficing for 5 doses! Now that is really an enormous quantity: it is 90 drops, over 90 drops; while the ordinary medicinal dose is 10 drops. Evidence would be given to enable the jury to judge as to the probability of the truth of that statement. And evidence would also be given that even in cases of tolerance of poisons, an extra dose does not give immunity to the subject, but that he is quite as capable of being poisoned as other people, by taking a little more than the ordinary, or minimum, poisonous dose. Then you have the fact, gentlemen, that arsenic was purchased by the prisoner. It was obtained on her order from Schedel's on 11th of October; then the bottle was refilled on Saturday 17th; then on Monday, the 19th, an ounce of solution was purchased at Maruya's. You will be asked to say whether this was purchased by the prisoner at the bar, for although the shopmen do not positively identify her as the person who called on that day, I think that when you hear the evidence of Miss Jacob who met the prisoner at the Post Office that day, although the prisoner denies that she was down town on that date, that you can have no doubt on the matter. Then on Tuesday, the 20th, an ounce of solution was obtained from Maruya on an order given by Mrs. Carew, and that on that same day another half oz. bottle was obtained from Mr. Schedel. On that day he was asked to send a new bottle, as the old one had been broken.

Mr. Lowder—I think your dates are mixed.

Mr. Wilkinson—I am corrected by my learned friend. On the 20th nothing was obtained from Schedel's. On the 20th a one ounce bottle was obtained from Maruya's on the order of Mrs. Carew. On Wednesday, the 21st, an ounce bottle was again obtained for Mrs. Carew by Miss Jacob. This was from Maruya's. It was on that day that another $\frac{1}{2}$ oz. bottle was obtained from

Mr. Schedel's. It was the day following that that deceased died. Now, gentlemen, there is, to say the very least, a strong case of suspicion against the prisoner. I submit that the only conclusion that you can arrive at is that arsenic was used for an improper purpose and with a wilful knowledge. Counsel, referring again to statements made by prisoner before the Coroner's jury, read over the depositions regarding the purchase of the bottle of Fowler's solution and the bottle of sugar of lead, obtained by Miss Jacob, and which prisoner alleged she gave into her husband's hands sealed, and then asked the jury whether her statement in view of other contradictions could be believed. They would have to consider, when weighing the evidence, whether the poison was given to deceased or whether he took it, or whether it was given to him by prisoner herself. The evidence of the prisoner herself pointed to great criminal negligence in the matter of dealing with the arsenic: and of course in this matter also they would have to decide whether she was telling the truth when she said that she put the poisons into his hands even after he had been taken ill. According to her own statement she did this instead of telling Dr. Wheeler, and in view of that was it credible that she would ask for another medical attendant to be called in? Which of the two was the truthful statement? Counsel next read an extract from prisoner's statement in which she said that when a remark was made to her by her brother that Dr. Wheeler thought that deceased was having arsenic administered to him, "she attached little importance to the matter at the time as her husband was in the habit of taking arsenic." Then there is the first intimation that she gave to the ordinary medical attendant of the family, an attendant who had been in the habit of calling at the house not once but several times a day. You will see that it was only given after she had been informed by her brother that Dr. Wheeler knew, or thought he knew, that arsenic had been administered to her husband. Mr. Parsons, whose name has been mentioned in the extracts lately read, will tell you that on the evening of Mr. Carew's death, the prisoner expressed a wish to see Dr. Wheeler to tell him something. After a reference to the *ama* being given an order by the deceased to obtain some medicine from Maruya, a fact that the prisoner had stated she only subsequently discovered, the learned Counsel said that prisoner had testified that she afterwards found a bottle in which but 6 drops of arsenic remained. In further explanation in the course of the inquest she stated that she sent down to Maruya's for the bottle of arsenic "in order to please him." Previously she had stated that "from 9 on Wednesday night I saw he was getting worse," and yet later "still his condition did not cause me alarm": these statements seem irreconcilable. The statement that she had a piece of paper on which the order for medicine was written in her husband's handwriting was afterwards explained in this way, "The name of the medicine was not in Mr. Carew's handwriting, only the writing on the back." On November 4th prisoner tendered herself as a witness again, and then said that "Dr. Wheeler never prescribed arsenic for my husband, he prescribed me arsenic as a tonic at the boat-house." Further extracts were read at this point referring to the early married life of Mr. and Mrs. Carew, when she said that she had been in the habit of giving her husband his doses of arsenic herself; "but I do not wish to state that I have seen him taking arsenic at the house more than once a day and then as a pick-me-up after breakfast;" "during my husband's illness I never administered arsenic to him and never saw him take it." In regard to the sugar of lead, proceeded Counsel, you, gentlemen of the jury, are not required to trouble yourself much about that: it was found in the viscera certainly, but not in large quantity. It is an important element in the case, having been purchased along with the arsenic; but it is not present in sufficient quantity to cause death. The effect, however, would be to check purging: that effect it would have, and it may have delayed the purging symptoms of arsenical poisoning. That is the only point on which sugar of lead has a bearing on this case. Now there is one point, perhaps two, that will occur to you—that is, what motive could she have had for poisoning her husband? I can tell you, of course, subject to correction from his Lordship, that as a matter of law, it is not necessary to seek for any motive, assigned or proved. In one sense no motive can be found, nor need it be sought to be proved. That is judging from the statements made by and on behalf of the prisoner at the inquest. That the motive that underlies such cases as these is often of a most inadequate order, is a common experience. From a high moral point of view alone all motive must be inadequate; but the adequacy of the motive is not a question for you to consider, for I can tell you motive,

adequate or inadequate, ought not, in the light of experience, to weigh against the guilt of any party. The mere inadequacy of motive, it would appear, from the experience of those who have given themselves to crime, is no guiding factor. In the evidence given in the early proceedings of this case, the evidence proffered by and on behalf of the prisoner, was that so far as the outside public could discover, husband and wife were living together on terms of cordial affection and peace. The prisoner herself gave but one point upon which they had ever had discussion, that point was money matters. Counsel then read a long extract from the proceedings at the inquest, in which prisoner gave out her monetary means, stated the steps taken to buy a house in Yokohama, and then to purchase a partnership for her husband in a silk firm at this port. Continuing, he said—that explanation is given by prisoner of the only cause of quarrel between herself and her husband, and the impression left upon the minds of the jury then was undoubtedly that any difference there may have been between the couple had been made up. As the case stood then, there was practically no motive at all if that statement was to be taken as true? But, gentlemen, we now come to another and important episode in this case. I have mentioned the name of Miss Jacob, the nursery governess. For some seasons or other, this young lady, obtained the idea that letters coming to her, and arriving here, never reached her. In forming this opinion she may have been labouring under a misconception, or she may have not: I do not say which. At any rate she went to the waste-paper basket to look, and she did not find them. But there she found some letters in a handwriting that she recognised: that of Mr. Dickinson, who had been in the habit of frequently writing to Mrs. Carew, and whose envelopes Mrs. Carew had given to the children, or laid about, so that Miss Jacob had become familiar with the writing. Other circumstances that had occurred made her read the letters, and subsequently taking the advice of a friend, also a nursery governess, Miss Christoffel, she collected fragments of the letters. That was about the 24th September. Subsequently, on three other occasions, more fragments of letters were taken out of the waste paper basket: all previous to Mr. Carew being taken ill. After Mrs. Carew had given her evidence at the inquest these letters were produced, sewn together, and put in at the magisterial inquiry. Gentlemen, all these letters may be characterised as letters that no modest woman who still renders fealty to her husband could accept from any man whatever. I do not wish to read you those letters in their entirety: you will have an opportunity of reading them all. But one point to which these letters refers is the alleged relations existing between herself and her husband. Among the letters found in the basket was a letter addressed by Mrs. Carew to Mr. Dickinson, a letter that had evidently not reached him, but a letter couched in somewhat similar terms—it may have been a draft or a copy—as it was recognised by Mr. Dickinson as like one he had received. It begins, "Forgive me, my dear one: I always come to you in my troubles," &c. That letter was answered by Mr. Dickinson. He begins, "My poor, dear darling, I knew you would suffer from yesterday," &c., "I hope that all this constant abuse will not cause you to look upon me with other eyes than those you have now, as it is really, after all, abuse not deserved," &c., "his horrible dislike of me." Then after giving her some advice about receiving a certain lady and her chaperone, he proceeds, "Do you know anything against her," and then advises her how to act should her husband insist on his wife receiving these ladies. In reply to another letter, Mr. Dickinson writes, "Never mind my not coming in to dinner;" "I do not mind being left out of your dinner parties," etc. In another letter he refers to a divorce, and advises Mrs. Carew what steps she should take in regard to going to Mr. Litchfield for legal advice on the matter. Proceeding, Counsel said—Now, Mr. Litchfield is not at liberty to tell you what advice he gives to his clients, nor what advice they seek of him, unless they desire him to make such a statement. But I may mention, at the request of the Counsel for the defence, that prisoner never did apply to Mr. Litchfield for a divorce, or even go to him to take steps towards a divorce. You, gentlemen, will remember this when the letters are read.

His Lordship—This statement is made at the request of Mr. Lowder?

Mr. Wilkinson—It is admitted on behalf of the prosecution—

His Lordship—By the defence?

Mr. Wilkinson—It is admitted on behalf of the prosecution that prisoner did not apply for a divorce, or even take steps that way.

Mr. Lowder—And that she did not even ask for advice tending towards divorce.

Mr. Wilkinson—Quite so. In another letter to Mrs. Carew, Mr. Dickinson says, "I think he was only bluffing this morning when he spoke about going down to ask about your account." Then comes another letter advising prisoner to go and see Mr. Litchfield about a divorce, "at all risks, at all hazards—divorce," etc. Then in the letter upilon, Mr. Dickinson says, "I should like you to mention this in your letter," "all the use he has for you is your money" "he uses your worse than his servants," "will convince them that he is only a scoundrel and that a mercenary one."—[Several other extracts from the letters that appeared in the course of the magisterial enquiry were read]—Counsel continuing, said—All these letters were written by Mr. Dickinson to the prisoner about her husband. This is all I shall bother you with on this point at present, I shall dilate upon them on another occasion. These letters were all evidently written in reply to others written to him by Mrs. Carew in which she made certain statements regarding her husband; these statements originated from her. Now they must either have been true or false. She either lived in peace and comfort with her husband, or else in fear of her life if these statements are true. There you have the statements, and you will measure them carefully in determining the effect that is to be given these letters. I say that there is now supplied a motive, a motive which of course is made inadequate as it always is in all such cases. You will have to consider the question in coming to an opinion on the subject, and the alternative to believing them is that they are a concoction of lies. If you arrive at the latter conclusion, then some other matters in this case will be cleared up. In case they are written falsely then I hold that any statement made by prisoner is not entitled to much credence. One other point in the case which has an intimate bearing on the veracity of the prisoner and is also a very important one. I have gathered that some evidence was introduced to suggest that if the deceased did not die from his own hand, then the arsenic was administered by another person—that is if he died of arsenic—that it has been given to him by another and not at his own request. That I suggest is the suggestion that is made, or intended to be made on that subject: that is the conclusion the Coroner's jury were asked to draw, on the evidence given for that purpose, together with the absence of apparent motive. It may not have been stated definitely, but all the same it was suggested that the deed may have been done by the hand of a woman, Annie Luke or—

Mr. Lowder—I will say here that I did not suggest that.

Mr. Wilkinson—I will accept the word of my learned friend that that was not his intention in bringing forward his evidence regarding Annie Luke, and I accept it frankly and fully. I accept it frankly and fully, but I still think that it is possible that that might be the inference that the jury might have thought was intended to be drawn. I think it only right to say that Mr. Lowder had not an opportunity to address arguments to the Coroner and the jury. Another suggestion might have been that her existence would be the cause of uneasiness to the deceased; and this might have lead him to take the arsenic. There is another suggestion that my learned friend, if he had had the opportunity of addressing arguments at that time—I am only speaking of possible argument for that is all it goes for in all that refers to the Annie Luke episode—that the deceased made a mistake at some time in taking a dose of arsenic: that is a conclusion the jury might have drawn. But with regard to the Annie Luke episode there are some circumstances, many circumstances, that it will be necessary to bear in mind. The first point I make is to suggest that Annie Luke was created by the prisoner—in so far as her existence in Yokohama is concerned. You will have all those letters read, and so I will not detain you long over them. But I may mention that a mysterious lady is referred to on the 10th October, regatta-day, as having called at Mr. Carew's house on the Bluff and asked to see Mr. Walter Carew. Mrs. Carew, in a letter to her husband, says that this lady left a card, marked "M. J. A. L. 1888, and seemed very anxious to see Mr. Carew. Evidence will be given to show that Mrs. Carew wrote a letter on a half sheet of note paper, addressed it to Mr. Carew, and then went to the boat-house. Mr. Carew was intensely interested in the regatta, yet he left the boat-house to keep the engagement with this lady; she did not keep her appointment that day, nor the next, although Mr. Carew stayed at home for her. The card this lady is supposed to have left was shown to Miss Jacob, and was talked about in the

house, and Miss Jacob will tell you that when she saw it the card only bore the letters "M. J. 1888," the "A. L." were not on it. She feels certain of this because M. J. are her own initials, and she felt indignant at any one using them except herself, and felt uneasy about it. She can perfectly remember that "A. L." was not on the card when she saw it. A good deal of chaffing was indulged in at the house, but never since that day has Miss Jacob heard Annie Luke referred to by prisoner, until after her husband's death. Counsel then read the letter addressed to Mr. Carew signed "Annie," and also a letter addressed by Mr. Carew to Annie Luke beginning, "I feel greatly distressed about you." This was dated the 14th October, and Counsel drew attention to the fact of that being the day before that on which Mr. Carew went home to die. He then said that both Mrs. Carew's letter addressed to her husband on regatta day, and the letter signed "Annie," were written on a half sheet of note-paper of exactly the same size and shape, while both bore the same water mark, and contended that both letters had been written by one hand. Of this the jury would have an opportunity of knowing later.

His Lordship—Did you say that both were the same size?

Mr. Wilkinson—Yes, same size; same water-mark, the letters being "H.I.D.E.S." Mrs. Carew said in her statement that she received the letter addressed to her husband by "Annie," in an anonymous envelope, an envelope that she had since destroyed. Now, how on earth did that letter come to Mrs. Carew in that way? In any case, among the letters found in the waste-paper basket, was one containing an explanation. This was another letter from Mr. Dickinson to the prisoner in reply to some questions of hers. He said, "I should think that you might ask for the letters yourself," etc., and I from that ask you, gentlemen, to draw the conclusion that the letter addressed by Mr. Carew to a person alleged to be Annie Luke was obtained by prisoner from the Post Office and never came to her under an anonymous cover. She represented herself to be the person addressed, and, acting on the advice of Mr. Dickinson, she obtained the letter. The conclusion is that Annie Luke is a creation of the prisoner's; that she never existed in Yokohama; at least, whatever relation she may have had to the life of the prisoner elsewhere. Now, if you come to the conclusion that the prisoner, when making these statements to Mr. Dickinson, was not telling the truth, the motive becomes the more obscure. But it is not incumbent upon the prosecution to find a motive: our duty is to lay the facts before you. If you find that the facts leading to guilt are established then you will find the prisoner guilty. If, on the other hand, you find that the facts are inconsistent with guilt, then you will pronounce accordingly and find her not guilty. As bearing on the whole conduct of the prisoner both before and after the death of her husband, I will read you three letters written by her. In considering the case, I again remind you, you must take the whole of the evidence and then having given due weight to all the issues you will say what conclusion is to be drawn from them. These letters that I propose to read were written by prisoner subsequent to the death of the late Mr. Carew, and are addressed to Miss Jacob. Miss Jacob left Mrs. Carew's service on the 24th October, two days after Mr. Carew's death. They are addressed to "Dear Mary," at the house where she had been taken in, and are all written by Mrs. Carew. One asked that Miss Jacob would see the writer if she called; another asked her for "the sake of Edgerly and the old people at home" to see Mr. Porch when he called, "or if not for them for the sake of Marjorie and Ben;" the third was in similar terms, and referred again to the sake of the two children "if for none else," and asking Miss Jacob to see the writer before Miss Jacob's decided upon the course she took in the matter. Concluding, Mr. Wilkinson said—Gentlemen of the jury, such is the nature of the evidence I intend to lay before you. You have a long and arduous undertaking before you, but I feel that you will consider the evidence, weigh it carefully, and give it full weight, and that you will conscientiously discharge your duty as the law requires and as you have solemnly undertaken to do.

The Court resumed at 35 minutes past two o'clock.

Mr. Wilkinson—I will first call Edwin Wheeler. Edwin Wheeler, sworn, said he was a British subject, M.D., of Dublin, L.R.C.S. Edin., and L.R.C.P. Edin.—I have been practising in Yokohama considerably over twenty-two years. I knew the late Walter Raymond Hallowell Carew. I was his medical attendant. He was Secretary and Manager of the Y.U.C. He died on the 22nd Oct. last. I recognise the prisoner at the

bar as his wife. I was the regular medical attendant of the family, and have been so since they arrived, six years ago. Two children were born to them since they came to Yokohama. Mr. Carew, as I knew him, was a fairly healthy man; a man addicted to good living and given, perhaps, to taking too much, on occasions only. I was left to infer for myself what his habits were. He mentioned having been in Australia, and of having been invalidated from there for liver. He also mentioned that he had to give up the service in which he was, in the neighbourhood of Singapore. I thought at that time that he had had malaria as he mentioned quinine. In conversation that we had on occasions he said the that he had had malarial fever, as he had lived in the jungle and been in the habit of using immense doses of quinine. That is about all he mentioned.

Mr. Wilkinson—Did he ever mention to you the subject of, or about taking, arsenic?—No, never. Prior to October last he had attacks of liver. He used to complain of "his old liver troubling him." I prescribed liver tonic then; that was all I prescribed. On Sunday the 11th of October last I saw Mr. Carew. I think, on going back, that it was at his house that I saw him. He seemed weak, out of sorts; a little nervous. I prescribed some podophyllin, and some anti-pyrene and digitalis. At that time, the household consisted of Mr. and Mrs. Carew, the two children, Marjorie, and Ben; the nursery governess, Miss Jacob; a Eurasian girl, called Rachel, a Mr. Porch, brother-in-law; an *amah*, a small Chinese-bay, and I presume there was a cook, but I never saw him. I next attended Mr. Carew on Thursday, the 15th, when I got a note from Mrs. Carew asking me to look her husband up at the Club as he was not in very good health. I went down and saw Mr. Carew at the office of the Club, examined him, and had a long talk with him. He seemed rather depressed and out of sorts. I think I said to him: "You have been overstimulating a bit, your eye looks muddy, and if you don't look out you will have a bad attack of liver." I added, "you will have to keep quiet, and in order to do that, you will have to go home and remain there a few days." To make him more careful, I said, "By the look of your eye, you will have an attack of jaundice." I did this to make him follow my instructions; I thought he was on the verge of jaundice, if he did not look out. I told him to send some Vichy water up to the house, to attend to his diet, and drink nothing but Vichy water and milk. His jaundice symptoms were:—his eye was muddy; he was depressed and out of sorts, and he said his "old liver was bothering him"—that was an expression of his. He complained of a want of appetite. I said that he was to go on a general "slop-diet"—milk, dry toast, Vichy—an invalid's diet. It is not my practise to keep any chits asking for attendance; and I destroyed the chit I received from Mrs. Carew. I saw Mr. Carew, the following day, Friday, the 16th. He was in much the same state, complaining of a little nausea. I found him a little drowsy, in fact I should say, very drowsy. I thought this was due to liver symptoms. A sluggish liver often produces this condition. This drowsiness continued, off and on, till early on Tuesday morning. I told him, "Just go on with your diet, milk, Vichy, and slops." On Saturday I gave him some medicine—some tincture of podophyllin, taken from a bottle in the house. I gave it to him on sugar. I saw him twice on Saturday. When I first saw him that day, the nausea had increased and he had had a little vomiting. He did not care about eating. I saw him vomit a dark green, bilious-looking matter, after taking the dose of podophyllin: this was in my presence, I think. Mrs. Carew wrote me that day, saying that deceased wanted to go to Kamakura to stay till Monday. I went up to the house in answer to the chit, and when I saw the vomit I said, "There's no Kamakura for you; you are not in a fit state." He was up and about the house that day; sitting up in an arm-chair, going into his dressing-room. He was still drowsy and disinclined to eat. When I visited him the second time that day, in the evening, the vomiting still continued, and I ordered a mustard sinapism—a mustard plaster for the stomach. On Sunday, the 18th, I visited him again, and found that the vomiting was not so excessive. He complained of thirst—a good deal of thirst—and of dryness, and he said that when he took food it hurt his throat—constriction of the throat when swallowing. He was still drowsy, and complained of a little pain over the epigastric region. As I thought that the dose of podophyllin, that I had previously given him, had had no effect and that the tincture that was in the house might be inert, I prescribed a podophyllin mixture made from a preparation of podophyllin that was said to be soluble, and told Mrs. Carew to obtain it

from North and Rae, as that was the only store that had it.

His Lordship (to Mr. Wilkinson)—Do you ask that question?

Mr. Wilkinson—I do not wish to stop anything of witness's conversation with the deceased and Mrs. Carew.

Witness, continuing—In my recollection, Mr. Carew never complained to me of irritation of the bladder. I saw him a second time on Sunday. On Monday, the 19th, I saw him again. I think I saw him in the morning; in the afternoon, and in the evening—no, twice, before noon and after noon. He was still drowsy, but a little restless, kicking about the bed. The vomiting continued, and he complained of pain in the epigastric region, and still complained of things hurting him when he swallowed. I ordered the sinapism to be repeated; in fact I ordered repeated sinapisms on Monday. I ordered these to try and see if the counter irritation would stop the vomiting. I think on that day, also, that he had an effervescent saline draught. I think he vomited once while I was there, the same dark green matter.

What did you conclude that was due to?—I concluded that it was due to bilious attacks. He took a little food that day—a little corn-starch. I had difficulty in getting him to take food, as he complained of his throat hurting him when he swallowed. I put the vomiting down to the bilious attack and so ordered repeated sinapisms. He complained on the Monday evening of pain over the epigastric region, and of being very thirsty. I saw him four times on Tuesday, the 20th. At my first visit that day, before noon, I found the patient worse. I found that he had slight diarrhoea that morning, while the vomiting had increased. The other symptoms remained the same, and there was slight tenesmus with the diarrhoea. The drowsiness seemed to have passed off by that time, but he complained much of the other symptoms, constriction of the throat, pain of the epigastric region, etc. To try and check the excessive vomiting, I tried a bismuth mixture with hydrocyanic solution. By this time I was getting worried about the case, and I asked Mrs. Carew if she had any objection to my bringing Dr. Todd in. She said "Certainly not, bring him along." In the afternoon I drove Dr. Todd round. This may have been about three o'clock. We had a consultation over the case. The patient then complained of vomiting, purging with slight tenesmus, and pain after swallowing food. Dr. Todd suggested my trying little bits of ice to allay the thirst and relieve the dryness of the throat. He also suggested my trying some bromide and hydrate of chloral.

Mr. Lowder—I take it that Mrs. Carew was present all this time?

Witness—She was present during the consultation. Dr. Todd wished to see the vomits, but the basin had been cleaned up. I examined the motion in the bath-room and found little faecal matter, but a quantity of paper which was stained a dark, greenish black. There was very little of it, more straining than motion. I ordered the solution of bromide and a solution of hydrate of chloral. When I left with Dr. Todd I told Mrs. Carew to try and induce the patient to take some of the medicines when they arrived. On arriving at the house—on the third occasion—a little before 7 p.m., I asked Mrs. Carew about the medicine, and she said it was impossible for him to take it, he swallowed a mouthful and would take no more of it.

Mr. Wilkinson—Did you try him?—Yes, I tried him myself, but he said it was no use, he would have nothing to do with a thing that burned the throat out of him. In driving Dr. Todd home we had a conversation.

Mr. Wilkinson—Mrs. Carew was not present then, so do not tell us what was said.

Witness—Well, at Dr. Todd's suggestion, I gave the patient a hypodermic injection of hydrochlorate of morphine, $\frac{1}{2}$ of a grain—the tabloid also contained the hundredth part of a grain of atropine. The object of the hypodermic was to induce sleep and to quiet him. I happened to be dining out that night at No. 118, Bluff, when, half through dinner, a boy came and told me a lady wanted to see me. I went out and saw Mrs. Carew sitting in a *finrikisha*. This may have been about half-past nine. She said, "I'm sorry to disturb you, doctor, but Walter does not seem so well; he is muttering and seeing things." I said that this might be due to the action of the hypodermic, and as soon as the ladies rise from table I will come round. I went round a little before 11, and found the patient fairly quiet; half sleeping but still muttering.

Did he make any complaint at all then?—He only complained of the pain in the epigastric region and a pain in the back, which I took to

mean his back passage. He asked for a brandy and soda, I believe, having complained of intense thirst. That day I took away a bottle of the patient's urine. Mrs. Carew gave it to me.

Mr. Lowder—I should like your Lordship to take that last remark down.

Witness—I tested it for albumen sugar, and we—Dr. Todd and I—found a trace of albumen. I did not test it for anything else, having no other reason for so doing. I looked upon the case as a very puzzling bilious attack, up to that time. I saw him twice on Wednesday the 21st. On the morning of that day he said that he had had a bad night, and Mrs. Carew corroborated that; she said he had muttered in his sleep as in delirium.

Did you express any opinion as to what might have been the cause of that?—I said that perhaps the action of the hypodermic might have brought about these fancies. The vomiting still continued that morning. The diarrhoea was more severe and the straining was more acute; and the pain over the stomach and back continued; the throat continued to give the same symptoms; burning when anything went into the throat. He was then getting prostrated.

Were you able to account for the diarrhoea?—No, I could not; possibly the purgative of the day before might have induced a few purgings, but not to the extent from which he was suffering.

His Lordship—Had you given him a purgative the day before?

Witness—Yes, an effervescent saline draught. One or two motions might have been accounted for by the purgative. The podophyllin mixture, was a purgative, given in $\frac{1}{2}$ grain doses.

Mr. Wilkinson—Did you prescribe anything for the pain?—Yes, an outward application of tincture of podophyllin and a tincture of belladonna, and tincture of opium, making up a 6-ounce mixture. The label on this was, $\frac{1}{2}$ an ounce to be sprinkled over sponge-pilinin. At the same time I ordered a tin of peptone beef, to make light beef-tea. About mid-day I received a note from Mrs. Carew, saying that her husband was not so well, and it ran, I think, "Shall I or will you telegraph for Dr. Baelz?" I answered, I would do so, and sent the telegram immediately after tiffin. In the afternoon I got a reply. [Telegram from Dr. Baelz running, "Impossible to-day, would to-morrow evening do, Baelz," identified and put in.] I received this some time between five and six o'clock in the evening. After receiving it I went up to Mrs. Carew's house. I went up a little before dinner, and saw Mrs. Carew, giving the telegram into her own hand. She said, "We had better go upstairs and see how the patient is before we decide anything." I went upstairs and saw the patient. He seemed rather cheery and inclined to talk, and he asked me for goodness sake to give him a brandy and soda, as his throat was so dry and burning. I gave him a brandy and soda then, with a quarter of a grain of cocaine in it, this was in order to see if the cocaine would have any effect on the vomiting. I also left three cocaine tabloids with Mrs. Carew to give him during the night if his stomach was at all irritable—by irritable I mean vomiting and pain with it. I saw a bed-pan there that day, because his diarrhoea was bad. I think Mrs. Carew made a remark—"Oh, I have got a bed pan for him, doctor; that will save him getting up." The diarrhoea that morning was excessive and the tenesmus acute. The vomiting still continued. On Thursday, the 22nd, I received a letter from Mrs. Carew. This was about half-past six o'clock in the morning, and I arrived a few minutes before seven o'clock. The patient was then a great deal worse; muttering, restless, and in a half-dreamy state that was sleep yet no sleep, because you could easily waken him out of it. He was very prostrated. Mrs. Carew told me that he had a very bad night, indeed; that she had to be up the greater part of the night with him. I told her that I thought that the sleep he had been having was not proper sleep, but that he wanted rest. I administered to him a dose of hydrate of chloral then. The dose was an ounce and a half of the solution and contained fifteen grains of the hydrate of chloral. I enjoined on her not to talk with him, but if he did talk she was not to answer him. He was to be kept as quiet as possible. I told him that after Mr. Boag's funeral I should come round again.

What opinion had you now formed of the case?—All the symptoms of Wednesday and Wednesday night were very puzzling and I could not account for them. He seemed to be suffering from an irritant beyond a bilious attack and the pain over the epigastric, vomiting, diarrhoea, and straining—all the symptoms were so strange that I could not account for them; they puzzled me greatly. I did not know what to make of them, and I determined to get him into the hospital as soon as possible. At Mr. Boag's funeral a communication

was made to me. I went and had an interview with another person in connection with this communication. After that I tried to carry out my desire to get my patient into the hospital, but Dr. Todd was not in. I saw Dr. May and Mr. Consul Hall on the subject—to get permission to have him admitted into the Royal Naval Hospital immediately. I did not see any other patient, but was on my feet all the time until I obtained this permission. Before tiffin I went up to the accused's house. I saw the patient and told Mrs. Carew of my intention of having the patient taken into the hospital at once. I believe I said, "He is only going from bad to worse." He was very prostrated and all the symptoms were aggravated. I met Mr. Porch after I left the house, near Mr. Jackson's house at the top of the hill. I made a communication to him. I got permission to take Carew to the Hospital at 2 o'clock. I took a stretcher to the house immediately, and was down at the house by 2.30. Mrs. Carew met me. I went upstairs with her and found Mr. Porch there. The symptoms of the patient were now most aggravated: utterly prostrated, although when spoken to he got up on his elbow only to fall back in a tetanic spasm, and cold sweats broke out all over him. I gave him a stimulant and he rallied. I had him covered over with the blankets in which he was in, also with an eider-down quilt and some rugs, placed on the stretcher. He complained of great difficulty in breathing at this time. I, Mrs. Carew, and Mr. Porch walked along to the hospital with the stretcher; Mr. Porch and I went into the hospital with him. He was taken into the ward at once, about a minute before three, and stimulants, hypodermics, and hot water bottles were applied to him. I heard later that he died soon after I left the Hospital. I had a letter from Mrs. Carew that night. I did not get it till late, as I was out. I got round by 11 o'clock. She said, "Oh, doctor, there is a thing that I ought to have told you before; Walter suffered from a stricture, and he was in the habit of taking arsenic to relieve it," I said—

Mr. Wilkinson—Did she say anything about ordering it or where it came from?—No. I think she said "that a few days before Walter had asked her to get a bottle of Fowler's Solution of Arsenic, and a bottle of sugar of lead, but I can't find them now, though I have been looking for them." I replied at first, "It is a pity, it would have simplified matters if you had done so." When she said that she could not find them, I said, "Don't bother about it now," and I went home.

The Court at this point adjourned till 10 o'clock next morning.

WEDNESDAY, December 6th.

His Lordship took his seat in Court at 10.06 o'clock. At the opening of the proceedings, the attendance of the public was much smaller than on the previous day, but as the hours passed the Court-room became as crowded as ever, and at times the atmosphere was unpleasantly oppressive. The Assistant Judge again occupied a seat upon the bench. Dr. Eldridge was in attendance as medical expert for the defence; Dr. Tripler being retained in a similar capacity for the Crown.

Dr. Wheeler's examination was continued. Mr. Wilkinson—Did you take the patient's temperature?—Yes, generally twice, sometimes three times a day. It was always under 99° Fahr.—under the tongue.

That you would call normal?—Under the tongue anything under 99° is normal; under the armpit the normal would be 98.4° F.

Now I will ask you, Dr. Wheeler, with regard to the prescriptions, a question or two. Would you look at this prescription, it is marked Alpha, and is numbered 22,805, is that the prescription you gave for the podophyllin powders on the 11th October?—Yes.

Would you translate it please, and put it into ordinary language?—This was prescribed for Mr. Carew on Sunday, the 11th October. It reads:—podophyllin raisin, 1 grain; powder digitalis 1 grain; anti-pyrine 30 grains; divide into six powders, mix the ingredients. Directions, one every four hours.

I am now putting into your hands the prescriptions produced for the first time, and brought into Court by a chemist of North and Rae's. I do not propose to call him yet, but this witness, my Lord, can identify them. Would you, Dr. Wheeler, look at prescription No. 1,37420, this was the podophyllin mixture you ordered on the Monday?—Yes.

Will you read it?—It reads, Soluble podophyllin 3 grains; spirits of chloroform 1 drachm; tincture of orange peel 1 drachm, glycerine half an ounce; menthol 6 grains, and distilled water add to 6 ounces. Half-an-ounce once or twice daily.

Will you now read prescription No. 137437?

Does that refer to the bismuth mixture prescribed on the 20th October?—Yes. It reads, Dilute hydrocyanic acid minims 24; subgallate of bismuth $\frac{1}{2}$ a drachm, trisnate of bismuth 2 drachms; mucilage 1 ounce and a half, glycerine 2 drachms, distilled water add to 6 ounces. Directions, half an ounce every three hours.

Would you look at prescription No. 137446? Is that the prescription for bromide of potash given on the afternoon of the 20th October?—Given on the afternoon of that day. Bromide of potash 1 drachm; bromide of ammonium 1 drachm, distilled water add to 12 ounces. Directions, one-sixth part when required.

Now look at No. 137447. Was that the prescription for the chloral hydrate given on the afternoon of the 20th October?—Yes, prescribed at the same time.

Please read it.—Hydrate of chloral, 1 drachm, distilled water add to 6 ounces. Directions on the label were marked, "Solution of hydrate of chloral 10 grains to the ounce," to be signed for.

Now look at prescription dated 21.10.96.—The first part of this reads, "Send one beef peptone, one tin." The number is 137,454. Tincture of belladonna, one ounce and a half; tincture of opium add to 6 ounces: "signed," half an ounce to be sprinkled over spongea-pilulin.

Mr. Wilkinson—I think these prescriptions had now better be marked.

Witness—I recognise all these prescriptions as being in my handwriting.

Mr. Wilkinson—I will now put them in, as that would be the proper thing. The directions, Dr. Wheeler, are in your handwriting?—The whole of the prescriptions are in my handwriting. The first address is not in my handwriting, but the second and third and others are in my handwriting. The first address is in Mrs. Carew's handwriting. I told her that I wished that prescription to be made up at North and Rae's.

In which of those articles, in their raw state, would arsenic be found?—In the bismuth there is always an infinitesimal trace; arsenic is always found in bismuth.

His Lordship—In the bismuth alone?—Yes, in that alone.

Mr. Wilkinson asked for the production of exhibit M. (Dr. Baelz's prescription).

(To Dr. Wheeler)—Would you look at that and tell us generally what it is?—It contains extract of belladonna, morphine, and distilled water.

I take it that there is nothing there that contains arsenic?—Nothing.

Is there anything in either of your prescriptions that would have accounted for the symptoms shown?—No, nothing; they were given to counteract those symptoms, to counteract the symptoms indicated.

Now supposing that Dr. Baelz's prescription had been given or taken in teaspoonfuls from time to time during the early stages of Mr. Carew's illness, would it have accounted for any of the symptoms?—None of the symptoms; the belladonna would tend to cause a dry throat.

And the morphia?—Yes, the same, and also it would tend to make him drowsy.

Would it in whole or in part have accounted for the drowsiness?—I think the dose was small; but if given in repeated doses it would make a man drowsy.

Have you even heard of arsenic or sugar of lead being used as direct remedies for stricture?—No.

In the case of stricture, how would sugar of lead, be used?—The only way, if used, would be as an injection.

Sugar of lead is sometimes given internally?—Yes, it is often given to check diarrhoea, and it also has astringent properties.

If given for that purpose how would it be made up?—In the form of pills; mixed with acetate of lead.

Anything else?—Yes, it may be given with opium.

If it was given in the course of this case would it have checked the diarrhoea?—Yes. It would have checked it. And the acetate of lead, from its astringent properties, would have checked hemorrhage.

But his bowels in the early part of this case were not active?—That is so. I prescribed purgatives, podophyllin pills, saline mixtures. There was nothing that could be called diarrhoea in the early stages; not until the Tuesday morning.

Would arsenic be used in the treatment of malaria?—Yes, it is often used as an anti-periodic.

Did you ever treat him for malarial fever in Yokohama?—No. He never complained of malaria here, and I never treated him for it.

Arsenic is also used as a tonic?—Arsenic is also used as a nerve tonic. When used for that purpose it is generally made up as Fowler's Solution. The quantity of white arsenic in Fowler's Solution is 4 grains to one ounce, 1 grain to a drachm;

from 100 to 120 minims, according to different pharmacopœias. A minim may roughly be called a drop, according to the density of the fluid.

What is the usual dose of Fowler's Solution?—It ranges from 2 minims up to 10. An ordinary dose, first dose, is 4 to 5 drops, after meals, and should not be taken on an empty stomach.

Is it increased in some cases?—Yes; in obstinate cases you can increase it generally up to 10 drops; but you watch the patient and see the effects of such a large dose.

Would any precautions be taken if you prescribed to drops?—You would watch the patient and see him frequently.

In there any disease in which larger doses have been given?—In some nerve cases I have known doses given up to nearly 15 drops—in cases of epilepsy—but as that is a dangerous dose, the patient is generally kept under the eye of a medical man.

What is the colour of Fowler's Solution?—A light pink or red.

What is that caused by?—By the compound tincture of lavender; it is coloured so that it may not be mistaken for water or other bland fluid. The smell also catches the nose. Fowler's Solution may be manufactured here or imported.

What is a deadly dose?—From 2 grains upwards—that is, white arsenic. In a half ounce bottle there would be about 2 grains.

I believe you were present while the post mortem examination was being made on the body by Dr. Todd and Dr. May?—During the latter half.

Was that a thorough post mortem examination?—Yes.

Was any organic disease discovered?—There was no organic lesion sufficient to enable us to give a certificate of death from natural causes. There was no sufficient evidence to enable us to come to the conclusion that death was due to natural causes.

In what condition was the liver?—It was a small liver, smaller than a healthy liver, not more than 3 pounds in weight; a healthy liver weighs about 48 ounces. Its condition was healthy, but contracted.

And the bladder?—It was smaller than usual, the walls were thickened.

Would the stricture account for that?—Yes, the extra strain would cause that. There was a streak of blood on the walls, here and there.

Were the symptoms exhibited by Mr. Carew in his last illness, in any way consistent with arsenical poisoning?—At first the symptoms were masked a good deal; for the first few days. Taken from beginning to end they were quite consistent with arsenical poisoning; there were no symptoms inconsistent with arsenical poisoning.

Please describe the symptoms of arsenical poisoning?—After taking a dose of arsenic, a poisonous dose, you have extreme faintness, nausea, dryness of the throat, a pain in the epigastric—a burning pain in the stomach; then vomiting followed by purging, with straining. The pains in the stomach then become indescribable, excruciating, with prostration and muscular cramp, dry tongue, feeble pulse, and in some cases a suffusion of the lining membrane of the eye, with puffing of the lid, and then in some cases skin eruptions. Then towards the end utter collapse; cold sweats; difficulty of breathing, and you may or may not have tetanus. The patient is often in such a state that he cannot describe his sensations, they are indescribable.

I believe that each one of those symptoms may be caused by other things than arsenic?—Yes.

May some be absent?—Yes. Some may be masked by medicine given to counteract other symptoms.

The symptoms taken together are indicative of what?—Of arsenical poisoning.

Describe what symptoms among those just mentioned Mr. Carew did not exhibit?—The eye symptoms were absent until Wednesday, no suffusion of the membranous lining, but a slight puffiness of the eyelids. I put that down—the puffiness of the face—to be due to the straining of the vomiting.

Did you put it down now or then?—I put it down then.

What other symptoms were absent?—He had no cramp of the extremities, until he was being removed to hospital. He had no skin eruption. He had a faintness. It is very seldom that you can get escape of arsenical poisoning to come up to what you read in the text-books about arsenical poisoning; there are always some symptoms absent.

Do you know of any disease that would have caused these symptoms?—I know of no disease that would account for the symptoms shown in this case. If the symptoms had been due to disease they would have yielded to the remedies I applied—an ordinary bilious attack would have yielded.

Will you state the time when your puzzlement grew into anxiety?—On Wednesday night. Then

I grew suspicious of the patient and the people around him.

When did you form your opinion that you would get him into hospital?—On Wednesday night; I was so puzzled that I determined to get him into the hospital next morning.

When did Mrs. Carew first mention about the use of sugar-of-lead?—On the Thursday night, the day he died: that was the first intimation I received that arsenic and sugar-of-lead had been used. There was nothing that Mr. Carew ever said to me during his illness, that would lead me to suppose that he was taking arsenic, or that arsenic was being administered to him. If I had known he was having arsenic I would have had him removed days before, so that he could not have got it himself, or anybody give it to him. There had been nothing said or suggested either during the illness or afterwards, that would lead me to suppose that he contemplated suicide. He bore up remarkably well considering the great pain from which he was suffering.

I do not know whether I have asked you this; the persistence of the symptoms, what would that lead you to suppose, whether the poison was given in one dose or repeated doses?—In repeated doses. The irritation was always kept up from the commencement. There was some intermission of the symptoms, sometimes for twelve hours. This I know from his retaining barley water for that time.

Do you think it probable that a person would take a second dose of arsenic, if he knew that the effects of the first dose were as painful as those you have described as present in this case?—I don't think it likely that he would take a second dose: a man would not go on taking arsenic if he saw it gave the pain and caused the distress that I saw in this case. In regard to the urine, I found it normal, save that it had a trace of albumen. I had an interview with the prisoner at the boat-house on the 10th October. I prescribed for her some Fowler's Solution—4 or 5 drops after meals.

Mr. Wilkinson—This is Exhibit Ca; is that the prescription you gave?—Yes. It is written on the back of a programme. It is for Fowler's Solution, half an ounce.

Had you prescribed the same on previous occasions?—Yes, in 1894.

Will you state what the conversation was at the boat-house?—I think I said that she was not looking so well, and that the trip to Miyazoshi had not done her much good. She said, "No, it was beastly weather, raining all the time." Then she said, "By-the-way, I want you, Doctor, to give me that arsenic prescription you give me when I was living at No. 57, in 1894."

His Lordship—So you wrote it?—Yes.

Mr. Wilkinson—Did she say anything about quinine being no good?—She stated to me some time previously that quinine was doing her no good. So I said, "You had better go back to your arsenic again;" this was in a conversation previous to the 10th of October. On the 10th of October, when I gave her the prescription, I made no further remark, but went downstairs to see a case. After the 10th of October, Mrs. Carew never consulted me again about the taking of this Fowler's Solution. She spoke about a headache once, and I suggested that she should take anti-pyrene.

To his Lordship—From the 10th of October until the night of the day of Carew's death, arsenic was never spoken of between us.

To Mr. Wilkinson—On the Tuesday during his last illness, I asked Mrs. Carew if she had any copper pans in the kitchen. Mr. Carew answered, in the presence of Mrs. Carew and in the bed-room, "No, we have splendid utensils in the kitchen, they are all porcelain-lined." In Mrs. Carew's presence, during the consultation with Dr. Todd, I remarked that I had made this enquiry regarding copper cooking-pans. The presence of the irritation of the stomach had so puzzled me that I asked about the cooking-pans.

During Mr. Carew's illness, did you notice whether Mrs. Carew was in the bed-room very much?—She was always in attendance while I was there. I never paid a visit without seeing her in the room.

Have you ever seen any one else there?—Yes, Mr. Porch, the China boy, and Rachel, the ayah, and the servants generally.

Who did the general nursing?—Mrs. Carew. She slept in the room, and during the last days of his illness she had a bed on the floor.

Mr. Wilkinson then sat down, and Mr. Lowder rose to cross-examine at twenty minutes to twelve o'clock.

Mr. Lowder—Did you notice any hemorrhage from the bowels of the deceased during his illness?—No.

Or in the urinary organs?—Only at the post mortem was there a trace of blood on the mucous membrane of the bladder.

I suppose that sugar of lead could not have

been administered by a third person, in any quantity, without his knowing it?—He certainly would taste it. In small quantities, given in coffee or tea, it might be taken as sugar, as it is sweetish in taste, though slightly astringent.

To his Lordship—In small quantities it would not be recognised. Of course if the solution was strong he would recognise it at once.

Mr. Lowder—Taylor is the recognised authority among medical men, is he not?—Yes.

Do you agree with this statement—"Stranguary and jaundice have been noticed among the secondary symptoms of arsenical poisoning"?—Yes. I agree with that.

Do you agree with Reece, who says that jaundice is a primary symptom of both acute and chronic arsenical poisoning?—Yes.

It is possible then, that when you told Carew on the 15th of October that he might have an attack of jaundice, that he was then suffering from arsenical poisoning?—It is possible, but I have given the reason why I said so.

You say that his eye was muddy, he was depressed, out of sorts, and complained of want of appetite?—That is so.

With your present knowledge do you consider that he was then suffering from arsenical poisoning?—It is possible, but I don't think it is probable.

On Saturday, the 17th, you say Mrs. Carew wrote to you and said her husband wanted to go to Kamakura?—Yes.

Was there any talk of her accompanying him?—I think he wanted to go alone.

She also was anxious that he should have a change?—Yes.

Who applied the sinapism on the 18th?—Mrs. Carew, I think.

About what time did you see the patient on Monday?—In the forenoon.

Can you give me a more accurate answer?—I cannot remember exactly now.

Mrs. Carew was with him then?—Yes.

You ordered repeated sinapisms on Monday, was that in the morning or afternoon?—I can't say, but I ordered them to check the vomiting.

His Lordship—My impression is that it was in the morning, according to my notes.

Mr. Lowder—On Tuesday, when did you pay your first visit?—I saw him in the forenoon; it might be about 11.

Could you answer generally at about what time you paid your forenoon visits to Carew?—I can't say for certain; I can't go back now, but I know it was between breakfast and tiffin, and I think it was about 11. But I know she was always in the room expecting me.

My point is, that she never knew to an hour or half an hour when she might expect you to call?—Certainly not, the exigencies of my profession forbid it.

She made no objection to Dr. Todd being called in?—No, she said "Let him come along."

She seemed pleased?—She acquiesced.

His Lordship—Was she pleased?—I did not notice. Her husband was ill and she acquiesced in my suggestion.

Mr. Lowder—Had you noticed that she had a difficulty in getting him to take medicine?—Yes, and even to the taking of food.

I refer to medicine?—Yes, to taking anything.

Did she have to coax him to do it?—Yes.

He didn't believe in medicines, did he?—No, as a rule he didn't.

You tried to get him to take medicine yourself?—Yes, but he would only take a mouthful, then he said, "Take it away, it burns me, give me a brandy and soda."

Who helped you to administer the hypodermic injection?—Mrs. Carew.

Mrs. Carew was the cause of your fourth visit that day?—Yes, she came round to see me.

She was very anxious?—Yes, she was anxious and said her husband was seeing things.

And when you went round Mrs. Carew was still in the room with him?—Yes.

On Wednesday morning, the 21st, you saw Mrs. Carew and she told you the patient had had a bad night; did she seem anxious about him?—Yes.

You prescribed an external application, did Mrs. Carew carry out your wishes in regard to that?—Yes. I saw her apply it herself—this was at my next visit. She always carried out my instructions.

Can you remember more precisely the contents of the note that Mrs. Carew wrote you on the 21st, when she suggested calling in Dr. Baelz?—She said that her husband was not so well and she would like another opinion: she was anxious about him.

In the evening, when you took her the telegram, the patient was better, and you said that the calling in of Dr. Baelz might possibly be an unnecessary expense, or words to that effect?—My words were, "Better wait till the morning: possibly it may be an unnecessary expense."

On that same Wednesday evening, you, Mr. and Mrs. Carew, and Mr. Porch were in the room together chatting cheerily?—He asked me to give him a brandy and soda.

In fact you thought he was very much better?—There was an abatement in the symptoms.

You thought he was very much better on the Wednesday night?—I did so.

Then at what time on Wednesday night did your puzzlement grow into anxiety and cause you to begin to entertain suspicions of Carew and the people around him?—I had been thinking of the case all day and worried about it, and when a man lays down in bed he thinks more deeply, and reviewing the whole case, I became suspicious.

Had you received an anonymous letter that day before you went to bed?—I received a letter saying "three bottles of arsenic solution," nothing else, and that further worried me.

Was that that night?—No, next morning.

At what time was this?—In the morning before I went to the patient's house; after I had gone to Boag's funeral. I did not know who sent it. It was addressed to me in an envelope, it was a little piece of paper, and bore the words, "Muriya's three bottles arsenic." My boy told me that it came from No. 6.

Was this letter received before the communication was made to you at Boag's funeral or not?—After the funeral.

Who made the communication to you?—Mr. Dunlop.

He lives at No. 6?—Yes.

And the paper and the envelope that you received came from No. 6?—Yes.

His Lordship—How do you know that it came from No. 6?—My office boy told me so about 11 o'clock that morning.

Mr. Lowder—Are you acquainted with Mr. Dunlop's handwriting?—Yes, fairly well.

Can you say in whose handwriting this paper was written?—The writing on the paper was different to the address on the envelope. The address on the envelope was written, I should say, by Mr. Dunlop. That on the paper struck me as being different.

Now, it was in consequence of these communications that your suspicions were aroused and you went and saw the British Consul?—I went to Dr. May first, then I went to the British Consul, about 11 o'clock. We went up to the hospital together.

From there you went to the house of the deceased?—Yes, and saw Mrs. Carew.

And did you mention to her the suspicions you entertained?—No, I did not. I merely told her of the arrangements I had made.

Did she seem relieved at the thought that he was going into the hospital?—Not at that visit, afterwards she did. At this time she said, "Do you think it necessary?" and I made the further remark, "You cannot go on nursing him for ever." It was when I went with the stretcher that she appeared relieved.

She was tired out with her nursing?—Yes. She said, when I took the stretcher, that she was glad to get rid of the patient, so that she could get some rest herself.

She was not aware when her husband left the house for the hospital that he was dangerously ill?—She did not seem to be aware.

Do you remember her offering to kiss him as he left the house for the hospital, and a remark he made to her? I will remind you of the remark, to recall your recollection. The remark was that he had not been shaved, but when he was shaved he would allow her to kiss him?—I did not hear the words. I remember Mr. Dunlop joining us on the way to the hospital and walking with us to the gate.

Did you say anything to your patient about the suspicions you said were aroused on Wednesday?—I did not.

Did you administer any antidote?—I only gave him milk and soda: that was the only thing handy. I am speaking of an antidote?—I was going to get a strecher.

Well, now you said just now that on the Wednesday night you were puzzled, but, you did not suspect arsenical poison until after you received those communications?—I was ready to suspect everybody in and out of the house.

But when did your suspicion arise?—At night in bed.

Then when you saw Mr. Carew next morning did you ask him any question about poison?—No. Nor anybody in the house?—No. My suspicions about arsenic poisoning were not aroused until Thursday when Mr. Dunlop spoke to me.

Now entertaining these suspicions, would it not have been kinder to have obtained a statement from him as to the arsenic that was being exhibited to him?—I was too anxious to think of doing anything but getting him removed; that was the best

antidote I could think of: getting him out of the centre of danger.

Then you did not think his death imminent at that time?—Not at 20 minutes to 12.

The Court adjourned at this point until 2 o'clock, and resumed after an interval of an hour and a half, a slight delay arising through Dr. Wheeler not being in attendance until five minutes past 2 o'clock. His cross-examination by Mr. Lowder was then resumed.

Mr. Lowder—There is one question I wish to ask, Mr. Wheeler, with reference to the anonymous, unsigned, letter that arrived from No. 6. I think on a previous occasion you said this arrived on Wednesday night and not on Thursday morning?—I think you are mistaken. I am sure I received it on the Thursday morning and can bring my boy to prove the time. I received it from him as I went down the hill, after Mr. Boag's funeral and after seeing Dr. May.

Mr. Lowder then read witness's depositions at the inquest and said that probably he had been misled regarding the receipt of the letter.

His Lordship—We have it that the letter arrived after the conversation with Mr. Dunlop, is that not so?

Dr. Wheeler—Yes.

His Lordship—And that was on the day of the death?—Yes.

Mr. Lowder—Did Mrs. Carew tell you on the Wednesday night that she had administered an emetic that night?—I don't recollect.

I will recall your memory. You wanted a glass for something, and taking up one on the dressing-table you asked what had been in it, and she said that "she had given Walter some mustard and water, as he wanted to vomit?"—I don't remember seeing any mustard in a glass whatever.

You don't remember her telling you that day that she administered an emetic?—I think my memory will take me back to her telling me she had given him some hot water.

As an emetic?—I should understand it to be so.

Now, at your subsequent visit in the afternoon, did you mention the subject of arsenic to Mr. or Mrs. Carew?—I did not, but I supposed Mr. Porch had mentioned the subject of our conversation on the hill.

Did you not specifically instruct Mr. Porch not to mention the matter of your suspicions to Mrs. Carew?—It is very likely I did.

Why did you not wish Mrs. Carew to know of your suspicions?—Because I did not know how the man was getting the arsenic.

You see one single question to either one or the other at that time, I suggest to you, might have made all the difference?—It might have increased the next dose.

Such was the strength of your suspicion against the accused at that time, is that the proper inference?—I was suspicious of everyone in the house.

I should like an answer?—I did not wish any one in the house to be told.

You did not suspect Mr. Porch?—No.

Then such was the strength of your suspicion against Mrs. Carew that you did not want it mentioned to her?—Yes, if you like.

And this suspicion you had got from an anonymous letter and the communication of Mr. Dunlop?—And from looking at the symptoms as well.

Should you not, entertaining those suspicions, have put some one in charge of your patient, who was not a member of the household?—I did the best I could. I put Mr. Porch there; I put him there, as he was a semi-official member of the household.

But he was a member of the household?—I did the best I could.

His Lordship—But witness has excluded Mr. Porch from his suspicions, confining them practically to the accused.

Mr. Lowder—I do not wish to press the witness too far.

Witness continuing—I left some cocaine tablets on Tuesday with Mrs. Carew one to be taken after dinner.

Now can you give us the contents of a letter you received from Mrs. Carew on the morning of Thursday, the 22nd, about 6.30 a.m.?—My belief is that it was a message, a verbal message.

If it was a letter you do not recollect its contents?—No.

When you went you administered a dose of hydrate of chloral?—Yes, as he wanted a little sleep.

Mrs. Carew was still in attendance on her husband?—Yes.

And told you she had been up most of the night with him?—Yes, the most part of the night, as he was restless and muttering.

During the illness of the deceased had Mrs. Carew spoken to you about getting a nurse to assist her?—I think we spoke of a nurse on Wednesday evening. I think I said that she must be getting tired, but she said that she thought

she could manage to nurse Walter. If it went on much further she would have to get one.

His Lordship—The point is, did the suggestion come from her?—It came from her, certainly, in the course of conversation.

To Mr. Lowder—I do not remember her mentioning the name of Hunter. I know there is a coloured man here of that name, who carries on nursing.

Mr. Lowder—Now, after you had received either a letter or a message from Mrs. Carew and you had visited Mr. Carew, do you remember Mr. Parsons coming to see you?—Yes, a little before Mr. Boag's funeral, about 20 minutes to 9. He came to me at Mr. Boag's house.

He brought you a message from Mrs. Carew, did he not?—Yes.

Insisting on Dr. Baelz being called, was it not?—He first asked how Mr. Carew was, and I said that he was in a very weak state. Then he said, "What about Dr. Baelz coming down," and I said that he could not come down till evening.

My point is, did not Mrs. Carew send you a message showing that she was anxious about her husband?—Mr. Parsons said that Mrs. Carew was very nervous. I told him to go back and tell Mrs. Carew "not to worry, as I have just given him a dose of hydrate of chloral and I want him kept quiet." I did not use the words "I have the case well in hand."

Was not the message to Mr. Parsons of a nature to allay the anxiety of Mrs. Carew in regard to getting a second opinion?—To allay her anxiety, yes. But I did not wish to convey to him the impression that I did not think it necessary to get a second opinion. Indeed, I said, "Get Baelz by all means, but he won't get down till the evening."

You spoke this morning, Dr. Wheeler, of a conversation with Mrs. Carew with regard to her own ailments, before the 10th of October, can you recollect the date?—I think it was before she went to Miyanoshiba.

It will be shown afterwards that she went to Miyanoshiba in the 24th Sept. What was she suffering from?—Malaria generally, slight fever and neuralgia.

Mr. Wilkinson—I am prepared to admit that date—the 24th Sept.

Mr. Lowder (to Dr. Wheeler)—You then recommended her to use the arsenic again?—Yes. I said, why not go on with the old arsenic that you took in 1884.

She expressed a dislike of that arsenic did she not, and said that it depressed her?—She said, I don't care to take arsenic, I will go to Miyanoshiba instead.

Then the 10th of October was the first time you saw her after her return from Miyanoshiba?—I may have seen her before on the street; but to have conversation in regard to her illness, the 10th was the first time.

Your remark about the trip to Miyanoshiba was made on your observing the state of her health?—Yes.

Then did she not say, "I am afraid that I shall have to go back to the arsenic after all"?—I do not know if that is what she said, the suggestion did come from her. She said that the Miyanoshiba trip had done her no good, and would I give her a prescription for the old arsenic.

In answer to further questions on the point, witness said—The request arose out of the general conversation.

Then there was nothing to lead you to suppose that she wanted the arsenic for any other purpose than that for which she asked for?—Nothing whatever.

Was her husband with her at the time?—No. Mr. Dickinson was on the verandah with us at this time, my daughter, Mrs. Showler, and Miss Rice.

Did you hear anything of a mysterious lady that afternoon?—I did not hear anything of her that afternoon.

Now, so far as your observation of the case went, did the accused carry out faithfully all your orders and instructions with regard to your patient?—Certainly.

Whenever her assistance was required she was always at your service?—Yes, she was always there.

And rendered it willingly?—Most willing.

Was there anything to lead you to suppose that she was not on the most affectionate terms with her husband?—Nothing whatever.

So far as your observation goes, they were, up to the time of his death, on affectionate terms?—Always on affectionate terms.

And nothing came under your observation to lead you to suppose that she was helping to create the symptoms you were endeavouring to alleviate?—Nothing came under my observation.

You had no suspicions of her till the Thursday morning, when those communications were made to you?—None whatever.

She evinced a wifely anxiety during the sickness of her husband?—Certainly.

And that right up to the hospital steps where she was obliged to leave her husband?—Yes.

Are there any absolutely specific symptoms that unquestionably indicate arsenical poisoning?—Certainly, nausea, vomiting.

His Lordship—Do you mean to the exclusion of anything else?

Mr. Lowder—I will ask another question. Were these symptoms present in this case?—Yes; a number of them.

Are there not other irritant poisons by which the same symptoms would be produced, such as acetate of lead, nitrate of potash, antimony, oxalic acid, trytoxine?—Yes, they would produce the same symptoms. It is very difficult to distinguish between the symptoms of these poisons and the symptoms of arsenic judging by symptoms alone. Would it not be easy to make a mistake when trying to distinguish between them?—Yes; but of course there is a difference between them.

Now supposing that arsenic and sugar of lead were both exhibited to the deceased, could you say he died of one or the other?—If exhibited in large doses the lead might have produced similar symptoms. It depends upon the dose, the quantity exhibited.

His Lordship—I suppose that is a doctor's term for taken.

Mr. Lowder—I wish to use a neutral term, I do not wish to say either taken or administered.

In answer to his Lordship, witness said—It would depend upon the quantity of either poison before I could make my assertion.

Mr. Lowder—Could you say whether he could have died of both?—He could have died of both.

And they interacted one on the other?—It would depend upon the dose. It would depend entirely upon the quantity found in the intestines or the body generally.

How much of each of those two poisons, arsenic and acetate of lead would it be necessary to find in the viscera, stomach or elsewhere, to draw a conclusion one way or the other?—The quantity found in the viscera, as given by various authorities, may be more in one than in another. The quantities vary in the different cases laid down in medical works.

I wish to find out whether you can assert whether he died of either of these poisons, or of both?—Of course all the organs would be trying to excrete it.

But how much would you expect to find as a fatal quantity?—A little over $\frac{1}{2}$ a grain might be found as a general rule.

That is of arsenic?—Yes.

And of lead?—Possibly a great deal more, probably up to ten grains.

His Lordship—Have you got that point clear, Mr. Lowder?

Mr. Lowder—I am afraid I must leave the witness alone. I can not get it out of him, but will endeavour to get it from another witness.

Have you, Dr. Wheeler, ever met with patients who were in the habit of taking large doses of arsenic?—Never.

So you have had no experience?—None whatever.

Supposing, Dr. Wheeler, that the deceased was suffering from kidney disease, might not the arsenic, if taken in small doses, accumulate owing to the kidneys failing to eliminate it properly?—It would require large doses; arsenic is not a cumulative medicine.

But the kidneys principally excrete it?—Yes, but then the other organs would take up the work.

Then disease of the kidneys might account for arsenic being found in the bowels?—Yes, you may put it so.

Do you agree with this proposition: doses of arsenic, in substance or solution, have been used in a few days besides which doses of 20 or 30 drops a day are insignificant?—That is an authority that I don't agree with.

Supposing I tell you that Dr. Baelz is my authority on the point, would you still disagree with it?—I still do not agree with it.

You would not contradict it?—I am not able to contradict it.

You have had no experience?—I have had no such experience.

Assuming that the deceased at a former period of his life had taken an over dose of arsenic and nearly died from its effects, would he not have remembered the symptoms of that experience?—He ought to have remembered the symptoms if he ever took an over-dose.

And he would never have forgotten them?—It is a thing a man never forgets.

Therefore he would not be likely to take arsenic again in similar quantity?—I don't think he would.

And he would know if any one else was administering it to him?—He might suspect.

Know is my word?—He might suspect the symptoms certainly.

Mr. Lowder—That is perhaps an argument to be addressed to the jury, though I should have liked to have got an answer from the witness.

His Lordship—I think it follows.

In answer to further questions, Dr. Wheeler said that the qualitative test of urine was very simple. When testing the urine of the deceased he found albumen.

Is not albumen in urine considered the strongest test of the presence of kidney disease?—Yes.

Is not old-standing stricture and catarrh of the bladder usually followed by kidney affection?—Yes.

Mr. Lowder then resumed his seat.

Mr. Wilkinson, re-examining—Did the quantity of albumen you found lead you to suppose he was suffering from kidney disease?—I inferred it from that; and albumen is usually found in cases of arsenical poisoning.

Acute or not?—Very slight. I inferred from what I found that he was suffering from slight kidney disease. I did not myself examine the kidney: one was sent to Tokyo. Albumen is given in the note books as having been found in some cases of arsenical poison.

His Lordship—Has any of the jury any questions to ask?

Mr. Davieson—Would arsenic alone, taken by an ordinary healthy man, cause symptoms of drowsiness?—No.

Is it your opinion that podophyllin if taken alone would cause constant vomiting?—No.

Would arsenic cause the greenish black colour you found in the motion?—It is usually found in such cases. The vomit was of a lighter colour.

Mr. Andrew Patterson—Would the arsenic found, on chemical analysis, in the intestines and elsewhere, depend very much upon the amount of purging and vomiting that followed the last dose?—Yes.

It would depend upon that?—Yes.

Dr. Wheeler was then thanked, and left the Court, it being 3.30 p.m.

Dr. Howard Todd, was then sworn, and examined by Mr. Litchfield. He deposed—My name is Howard James McLeary Todd, a British subject, M.R.C.S. Lond., Staff Surgeon in the Royal Navy, at present stationed at the Royal Naval Sick-quarters at Yokohama. I remember being called in on the 20th October last, to see the late Mr. Carew, in consultation with Dr. Wheeler. I saw him at his residence, No. 159, Bluff. He was then in bed. Mrs. Carew was present, I believe, during the whole conversation. I carefully examined Mr. Carew, and from my observation I found that he was suffering from irritability of the stomach caused by some irritant and aggregated by liver disease: that was the opinion I formed. Vomiting and thirst were the only symptoms; there was no tenderness of the abdomen. I was afterwards present when Dr. Wheeler tested some urine at the hospital. There were traces of albumen, but no sugar. The urine was brought away at my suggestion, and I tested it the same day about 4 o'clock. The patient was admitted to the Sick-quarters, but I never saw him alive there. I only saw him at the *post mortem* examination. I made this *post mortem* examination 18 hours after death. The body was first examined externally, to see if there were any wounds or marks. The orifices were then examined to see if there were any symptoms of poisoning. There were no external marks, and no external symptoms of poisoning. The chest was then opened and the organs inspected *in situ*. They were afterwards removed and severally examined. The organs were in an abnormal condition: the heart and valves were healthy, to the naked eye. The abdomen was then opened and the viscera inspected *in situ*. Almost the whole of the intestinal canal was separated for further examination. Different portions were placed in glass jars. The stomach was placed in one jar; the rest of the intestines in a second.

Mr. Lowder—I understand, my Lord, that there is a report drawn up by this witness at the time, and I have no objection to it being put in.

Witness—The report just shown me is my report.

Dr. Todd read his report as follows:—

Eighteen hours after death.

The body was first examined externally for any marks of injury and the orifices to see if they contained poison.

The chest was then opened and the contents examined *in situ*. The organs were then removed and the trachea, bronchi, lungs, and larynx examined. Then the heart, its orifices, and valves and structure; then the upper part of the oesophagus was examined. The abdomen was then opened and its contents examined *in situ*. The lower part of the oesophagus, and the pyloric end of the stomach were then ligatured, removed, and placed in a glass jar. The small and large intestines were separated from their muscularies, ligatures applied and the whole intestines placed in the glass jar. The liver was then

removed, incisions being made in its substance, and the organ placed in a glass jar. (The liver was of a very firm consistence and a good deal smaller than normal, about 40 ounces). The spleen was then removed and incised, both kidneys and urethra examined and removed, left slightly larger than right kidney; one kidney placed in glass jar with liver. The empty abdominal and thoracic cavities were carefully examined. The skull-cap was removed and the brain and membrane examined *in situ*. The brain was then removed and many sections made in various directions. The arteries were not atheromatous. The base of the skull was examined and the upper part of the spinal cord. The bladder was found to be small, very contracted, and empty. Some blood clots were on the mucous membrane, which latter was much thickened. Negative symptoms not recorded.

His Lordship—This is put in at Mr. Lowder's suggestion.

Mr. Wilkinson—With his consent.

Mr. Litchfield—Did you, Dr. Todd, examine the kidneys?—I did.

In what state were they?—To the naked eye, quite healthy. I made no further inspection nor formed no further opinion, leaving the rest for chemical inspection.

Can you state your opinion of the cause of death?—I formed no opinion, from the *post mortem* examination, as to the cause of death.

You could form no opinion as to the cause of death then?—No.

What was done with the glass jars containing the intestines, etc.?—Screwed down in a box in the presence of Dr. May. Then it was locked up in the dispensary, as I had to see British Consul, in reference to not granting the death certificate. After I returned from seeing Mr. Consul Hall, the dispensary was opened. The box was sealed by me and given to one of the hospital nurses. This man is known at the hospital as Gora: the man in the corner is the man. He put it into a *jinrikisha* and went with it to the Consulate. I have been in Court while Dr. Wheeler was in Court. I observed what he said as to the symptoms displayed by his patient, Mr. Carew. I have formed an opinion—after hearing the history of the case from the 15th to the 22nd Oct., and from my own observation when in consultation with Dr. Wheeler, and at the *post mortem* examination—in regard to the case.

What opinion have you formed?—Death from irritant poisoning.

Are all the detailed symptoms compatible with death from irritant poisoning?—Yes, quite compatible.

His Lordship—I suppose that you would hardly form an opinion if it was not so.

Witness—Quite so, my Lord.

Mr. Litchfield—Do you class arsenic as one of the irritant poisons?—I do.

Are the symptoms consistent with any disease known to you?—No.

Have you formed any opinion as to what irritant poison caused death?

Mr. Lowder—I do not know that witness has sufficient data to form such an opinion.

His Lordship—He is practically placed in the position of Dr. Wheeler, having heard of all the symptoms, and I presume one doctor is quite as competent as another to form an opinion.

Mr. Litchfield—Are you able to form an opinion on this particular data, as to what this poison was?—Yes.

What poison was it?—You mean, what poison have I formed an opinion upon—arsenic.

You have heard Dr. Wheeler's evidence as to the interview with Mr. Carew on the Tuesday, on the 20th, do you confirm it?—I saw Mr. Carew at 3. I examined him carefully. His temperature was 98.8, his pulse 72 or 76; his respiration 18; his eye was slightly tinged with yellow; there was no irritation about it, and his pupils were normal and acted normally; his tongue was slightly furred; there was no sore throat; his lungs and heart sounds were normal; his liver dullness was for an inch or an inch and a quarter; there was no tenderness of the abdomen; I turned the bedclothes back, and examined his legs; there were no swellings or no cramps; his bowels were constricted. I asked to see his vomit, but it had not been kept. I asked that his vomit and motions be examined. I suggested that his urine should be examined, and his wife, on our leaving the house gave a bottle of it to Dr. Wheeler. I asked the patient what he was taking, and if he could account for his sickness. This was in the presence of Mrs. Carew. He could give no account. He was very anxious to get well and return to the Club. He gave me a negative answer in regard to a question I put as to what he had been taking to disagree with him. I have no further statement to make.

Mr. Lowder, in cross-examination—The kidneys, though apparently healthy to the naked eye, might be seriously diseased if examined under a microscope?—Not seriously; the commencement. But disease enough to interfere with his func-

tions?—Quite so; enough to interfere with his functions satisfactorily.

Disease of the bladder would cause pain in micturition?—In the majority of cases.

You state that, in your opinion, death was due to irritant poison, can you, without chemical examination state the poison?—Without chemical examination it would be surmise?

And did you surmise in what particular form it was administered?—In fluid form, I surmise this without taking in consideration what I have read in the papers.

To his Lordship—And without chemical analysis it is only surmise?

Witness—Quite so. The reason I sent the kidney to be examined was because it is an excretory organ, and for no other purpose.

Mr. Lowder—Might not one kidney be diseased without the other?—Yes, it is possible, but in very few cases.

To Mr. Wilkinson—It was not because I suspected disease that I sent the kidney to be analyzed, but because the kidney excretes irritant poisons.

All the details of the symptoms were consistent with arsenic being the poison?—Yes.

The Court rose at 4.20 p.m., and adjourned till 10 o'clock next day.

THURSDAY, Jan. 7th.

Scarcely a dozen seats were occupied by the general public when proceedings were resumed this morning. His Lordship took his seat on the Bench at 10.02 o'clock.

Percival May was the first witness called to-day. On being sworn, he said—My name is Percival Marshal Sworn, a British subject, M.R.C.S. Lond., L.R.C.P., Lond., and Surgeon in the Royal Navy, at present on duty at the Royal Naval Sick-quarters, Yokohama. I remember Mr. Carew being brought to the hospital on the 22nd October last. He was admitted between half-past two and three. He was brought in on the Hospital ambulance. Three persons came inside the Hospital gates with him. They were Mr. Porch, Mrs. Carew, and Dr. Wheeler. Mrs. Carew came as far as the office, the other two came inside the room with Mr. Carew. The patient was taken to his room as he was and put into bed at once—in the wrappings as he was in the ambulance. I examined the patient on admission to the Hospital. He was in a more or less collapsed condition. His pulse was feeble, rapid, running, and slightly irregular. He had great difficulty in getting his breath; tossing from side to side in the bed; getting up and sitting down in his endeavours. He complained of great pain in his chest at the bottom of the breast-bone, and going through to his back. He expressed it as a terrible pain. His tongue was furred and his mouth dry. He complained of constriction of his throat and of difficulty in swallowing—a choking sensation. His extremities were cold.

His Lordship—Did you give him anything?

Witness—Yes.

What about his extremities?—His hands and feet were cold.

Mr. Litchfield—Was he conscious when admitted to the hospital?—He was quite conscious, but he relapsed into a low muttering delirium, and pointed at and picked out the pattern of the bedclothes. He could be roused when spoken to and understood when we spoke to him.

What treatment did you pursue?—I administered brandy by the mouth, and brandy and ether hypodermically. He also had hot water bottles to his feet and to his stomach, and hot flannels. In my opinion this treatment—stimulants—was the one proper under the circumstances: to rally him from his collapse. He died that same afternoon.

His Lordship—At what hour?—About 20 minutes to five.

To Mr. Litchfield—He retained all that I gave him—brandy, milk, and soda-water. On the following day I assisted Dr. Todd in a *post mortem* examination of the deceased.

In what condition did you find the organs of the deceased?

His Lordship—Is this all to be gone through again?

Witness—(to Counsel)—How do you want me to reply?

Mr. Wilkinson here had a whispered conversation with his learned friend, and Mr. Litchfield then said, "Generally will do."

Witness—The organs were fairly healthy?

Have you seen Dr. Todd's report on the *post mortem*?

Yes, I agree with Dr. Todd as to the conclusions he arrived at as to the condition of the several organs. I have seen his report on the *post mortem*.

Do you agree with that report in detail and general character?—In every detail.

Witness here read the report.

Having read the report, can you say you agree with it in every detail?—Yes, in every detail.

Before, in England, did you hold any appointment at Guy's Hospital?—I was *post mortem* clerk there for three months.

Is that a major or minor appointment?—It is a minor appointment, done by the senior pupils. I do not know that any qualification is required for it, but it is always given to senior men going up for final examination. A junior man might get it.

How long have you been in the Navy?—Four years and eight months.

Then you are in your fifth year?—Yes.

When the patient was admitted into the hospital could you make any correct diagnosis of his case?—No, he was in a moribund condition; it might have been due to any cause.

You have been present in Court during Dr. Wheeler's examination and have heard all that he said?—Yes.

And you also heard what Dr. Todd said?—Yes. Now, having heard all that they said, and from the result of your own observation at the *post mortem* examination, can you now form any opinion as to the cause of death?—I should form the opinion now that he died from the effects of some irritant poison.

The symptoms are consistent with that?—They are consistent.

Taking the further assumption as a fact, taking the result of the chemical analysis, arsenic in ponderable quantity was found— $\frac{1}{6}$ grain in the liver and traces of arsenic in the contents of the stomach, with that additional information, can you form an opinion now as to what was the cause of death?—In my opinion it would be due to arsenical poisoning.

You can form an opinion with that information, as to the cause of death?—I should say arsenical poisoning, in my opinion.

Would that opinion be changed should it be found that acetate of lead or sugar of lead, were discovered in the stomach?—In my opinion, no, unless discovered in very large quantities, and even then I should place considerable doubt.

His Lordship—What do you mean by large quantities?

Mr. Litchfield—What quantity of acetate lead would be necessary?—I mean, you would have to take into account the symptoms, whether the intestinal track was stained black, or a blue lining on the gums, and his symptoms. I did not see the interior of the intestinal track, and the gums had no blue lining.

His Lordship—But we want to know if the presence of sugar of lead in the viscera would alter your opinion as to the cause of death?—On consideration, I would say that my opinion would not be altered.

Mr. Litchfield—Does the chemical action of lead differ from the chemical action of arsenic?—Yes.

Mr. Lowder, in cross-examination—Are not the symptoms of arsenical and lead poisoning practically indistinguishable?—No.

Acute lead poisoning I mean?—In all cases of irritant poisoning, you get symptoms alike, though they may differ more or less in certain cases.

Mr. Lowder repeated the question and witness said—In my opinion there ought to be no difficulty in distinguishing between them.

You have had no practical experience of acute lead poisoning?—No.

Or of arsenical?—No.

The blue line on the gums belongs more to chronic lead poisoning than to acute?—In my opinion it belongs to both, but much more to chronic.

Have you ever heard of a patient having died where he has taken both arsenic and sugar of lead?—I never heard and don't remember reading of such a case.

Then you could not say what their combined effect would be upon the patient?—No.

There was no re-examination by counsel or any questions put by the jury, the witness leaving the box at 10.40 a.m.

Arthur Hyde Lay was next sworn. He deposed—My name is Arthur Hyde Lay, and I am an assistant in H.B.M.'s Consular service, stationed at Yokohama.

Did you know the late Mr. Carew?—I did.

Was he registered as a British subject?—He was.

Under what name?—Walter Raymond Halliwell Carew.

Do you remember receiving on the 23rd of Oct. last, a box from the Naval Hospital?—I do.

About what time did you receive it?—About half-past five.

How did it come to you?—It was brought into my office by two office boys belonging to the Consulate.

When it was brought into your office how it was

fastened?—It was fastened with tape and sealed, I think.

On receipt of the box, what did you do?—I fastened it up with tape, wrote my name on an envelope and then sealed this with the Consular seal—with sealing wax.

Will you look at this paper and say whether it is in your handwriting?—It is.

And the seals?—That is the seal of the Consulate. [Envelope put in.]

How long did the box remain in your office at the Consulate?—Until next morning, at ten o'clock.

What did you do with it then?—Mr. Rentiers took charge of it and took it up to Tokyo. It was in exactly the same state when he took it as it was when I received it.

Who were the office boys who brought it to you?—Kotaro and Sataro.

Mr. Lowder had no questions to ask.

Mr. Davison—My Lord, I should like to ask the witness whether the box when it came into his possession was nailed or screwed?

Witness—It was.

John Baptiste Rentiers was sworn. He deposed—I am a British subject, and in the service of the British Consulate, Yokohama. In the month of October last, I received a box from Mr. Arthur Hyde Lay for transmission to Tokyo. On the evening of 23rd October, when the box arrived I was in the office. On the morning of the 24th, I received certain instructions from Mr. Hall, the Consul. The box was nailed and screwed and had a pink tape passed along the side with three seals. Two seals were placed on the box in my presence. They were placed on the box by Mr. Lay and myself, on the evening of the 23rd. On the 24th I took the box to Tokyo and handed it there to Dr. Divers at the University.

I went to Tokyo by the 10.45 train. I delivered the box to Dr. Divers himself. The box was in my custody the whole time from receiving it in Yokohama till delivering it to Dr. Divers. I gave it to him at a quarter to one o'clock. Dr. Divers gave me a receipt for the box. The box was in the same condition still.

No questions were put.

Mr. Uchiyama Rossetsu was then sworn in as interpreter of the Japanese language into English and English into Japanese, both sides having agreed to this.

Mr. Uchiyama stated that he was a Japanese subject. Mr. Wileman, the Court Interpreter, administered the form of oath prescribed for Japanese witnesses, reading it aloud to the two next witnesses.

Aoki Rojio, deposed—I am at present in the service of the British Consulate as an office-boy, having been in this employment since February two years ago.

On the 23rd of October, do you remember a messenger from the Naval Hospital on the Bluff bringing a box to the Consulate?—I do.

Do you know his name?—No.

Did you notice the fastenings of the box?—I did not look at the fastenings, but simply handed it to Mr. Lay.

Did you and another office-boy take the box to Mr. Lay?—Yes, immediately.

And deliver it in the same condition as it was when you first saw it?—I did.

Nishimura Sataro, the other office-boy, corroborated the evidence of the preceding witness. He knew the messenger from the Naval Hospital, but did not know his name. After taking delivery of the box he and the last witness took the box to Mr. Lay. The box was delivered in the same condition as when they received it.

A few minutes delay occurred at this point owing to the messenger from the hospital not being in immediate attendance, having come to the Court and gone away again. On his appearance, Mr. Uchiyama administered the oath to him.

Seito Monkichi deposed—I am employed at the British Naval Hospital, on the Bluff.

Are you not usually known at the Hospital as Gora?—Yes.

Were you in the employ of the Hospital on the 23rd October last?—Yes.

Do you know Dr. Todd, Surgeon at the Hospital?—I do.

Do you remember Dr. Todd giving you a box on the 23rd October for transmission to some other place?—I do remember.

Do you remember at what time in the afternoon you received that box from Dr. Todd?—It was in the evening, about 5 o'clock.

After receiving the box where did you go and what did you do with the box?—I put it into a *furikisha* and came to the British Consulate.

To whom did you deliver it?—To the two office-boys now in Court.

Did you deliver it in the same condition as you received it?—I did.

Can you remember how it was fastened?—It was sealed when Dr. Todd gave it to me, and the seals were on it when I delivered it here.

It was now 11.30 a.m., and Dr. Divers was called and examined by Mr. Wilkinson.

Edwin Divers, sworn, deposed—I am a British subject and reside in Tokyo. I am a Professor of Chemistry at the Imperial Japanese University.

What are your professional qualifications?—I am a Fellow of the Royal Society—F.R.S., and a Doctor of Medicine. Those are my principal medical and chemical qualifications. I have been a Professor of *materia medica* at the Queen's Hospital, Birmingham, for four or possibly five years. I have also been a Lecturer on Medical Jurisprudence at the Medical School at Middlesex Hospital, London. Otherwise, all my adult life, before coming to Japan, I have been connected with medical schools in one capacity or another.

Do you remember on the 24th of October last receiving a box from the hands of Mr. Rentiers?—Yes.

Would you state the condition of the box, its fastenings, and contents?—The box was apparently a new deal box, comparatively large, about 2 feet long, corresponding in other dimensions, fastened with battens; it had been screwed down, but it was tied crosswise with tape and the tape was sealed to the box by one Naval Hospital seal, and to an envelope with three seals with the British Consular seal.

His Lordship—You say, had been screwed?—It was screwed down when I received it, for the fastenings were such that it could not have been opened after being sealed down, without breaking the seals.

To Mr. Wilkinson—This is the envelope and residue of the seals, now shown me.

Now, what were the contents of the box?—The contents were three glass jars or bottles, two closed with glass stoppers, and one with cork. All were sealed down, the sealing being direct on the glass—that is, there was no cover over the stoppers and then sealed, but the seals applied direct to the glass. All three seals bore the seal of the Naval Hospital.

Will you state what were the contents of the bottles?—The bottles being transparent it was possible to see what they contained without opening. One bottle contained the stomach only, both ends securely tied. The other contained the intestines, one continuous length securely tied. The intestines began with the lower part of the gullet and ended with the upper part of the rectal bowel. The gullet was of course attached to the stomach—that is a portion of the gullet adhered to it. Excuse me, I am in error. I ought to say that the intestine began with the duodenum. Adhering or attached to this part of the intestine was a portion of the pancreas and a bit of the aortic blood vessel. Outside the bowels in the bottle was a quantity of liquid—pale red, transparent—which I shall henceforward refer to as abdominal fluid. The third bottle contained the liver and one kidney. The kidney had been bisected; the liver had been cut into, but the whole of the organs were present.

His Lordship—That is the kidney and liver?—Yes, the whole.

Mr. Wilkinson—Did you open all the bottles at once or in succession, and did you conduct your chemical analysis at one time or at different times, can you tell us?—That is a long question. I opened the bottles at different times, and set the necessary chemical operations at work. These chemical operations went on side by side as the work proceeded.

You were requested to examine the viscera for the purpose of finding a particular poison, were you not?—Yes, in the Consular letter I was so requested.

And the particular poison was?—Arsenic.

When you opened the bottles from time to time you examined the contents before submitting them to chemical analysis?—Yes, I removed the contents into porcelain dishes before commencing the analysis.

Did you see any signs of disease?—I did not.

Did they appear as the organs of a healthy human being or of a diseased person?—They appeared as the organs of a healthy human being.

How many different analysis did you make?—I analyzed the liver, that is one; the contents of the intestines two; the abdominal fluid, three; the liquid contents of the stomach, four; some specks of mineral matter removed from the stomach wall made a fifth examination.

Those white specks were discovered by you on opening the stomach?—Yes. They were laid aside for analysis, which was immediately proceeded. Poured out the contents into another dish, and then had the empty, naked stomach under in-

spection. The empty stomach was then resting on the dish.

How was the stomach, in appearance?—The stomach was healthy in appearance, presenting nothing to observation, except near the gullet opening, where I found six tiny circular greyish-white specks. These I lifted with the point of the scalpel. Beneath the spots there was no inflammation. The matter was then prepared for examination. To return to the stomach. The gullet and the stomach were slit up, and there I found two tiny angular fragments of apparently the same whitish-gray matter as the specks. These were also removed for examination: they were examined separately from the circular specks. Two-thirds of the liquid contents of the stomach itself were put together for another examination. The contents of the stomach were thin, opaque, dark grey, odourless, with many little whitish soil particles mixed through it. I now pass to the contents of the intestines. The conditions were such that I could not separate them; the whole were treated together as one matter. The contents of the intestines measured about half a pint, and were much like the stomach contents, but still thinner, perhaps; almost black in colour, free from ordinary faecal matter—free from the ordinary contents of intestines—odourless, and in fact the contents of the stomach and bowels may be described as rice-water coloured black or greyish. The duodenum, or upper end of the intestines, when opened, was healthy. The liver was cut, after having been weighed. I cut a part off and then weighed the liver. The weight of the liver is of importance in the case. It weighed a little over 3 pounds and three-quarters. It was healthy, but a small liver for a man like the deceased. The portion weighed off was about one-sixth of the whole. This was submitted to the chemical operation. The abdominal fluid was submitted to chemical operation. This fluid will have contained pancreatic secretion. The pancreas is a big organ or gland, having a function not unlike the liver—the liver being a large glandular organ. I think that is all I have to say about the condition and preparation.

I will ask you generally what substances you found in all these things?—The specks were arsenical only. All the other matters submitted to examination yielded me only arsenic and lead.

Will you state the quantities found in each?—As far as I know, I will. The quantity of white arsenic in the liver was $\frac{1}{4}$ of a grain, at least— $\frac{1}{4}$ of a grain or perhaps a little more. I certify to the minimum naturally. The arsenic found in the other parts was much less, and I did not attempt to weigh the quantities, but I must not have them called traces, for traces mean less than the quantities that I found.

His Lordship—The lead?

Witness—I did not attempt to weigh the lead. It was everywhere. The most lead I obtained was in the intestines. In connection with this I have to mention that the work carried out by me single-handed lasted from October 26th to the day of the inquest, November 1st, the Sunday, inclusive, again on November 3rd, and again on the morning of November 4th. After that I did some work after the inquest was finished, but not much, as I had other engagements, was utterly exhausted, and had a disinclination to examine the things again. I mention this because I could have gone on and have collected all the arsenic and the lead that there was to be found. But I was utterly exhausted, and had beside the conviction that I had found all that was necessary to serve the interests of justice.

His Lordship—I have it that in the liver there was $\frac{1}{4}$ of a grain of arsenic; in the other organs there was less. The lead was in less quantity than the arsenic.

Witness—Yes, that is so.

His Lordship—In all the organs, including the liver, was there less lead than arsenic?—Yes.

His Lordship—There was more lead in the contents of the bowels than there was arsenic?—Yes, at a qualitative estimation.

His Lordship—I understand that would be so.

Witness—It is very rare to have quantitative evidence certified to in cases of this kind.

Mr. Wilkinson—Now, Dr. Divers, in order to clear the matter up in the minds of the jury—you have stated that you took a ninth part of the liver and subjected that to chemical examination—in order that you may make it clear to the jury that when you say you found the sixth part of a grain of arsenic in the liver, that you mean the whole liver and not the ninth part of the liver alone, I should like you to describe the steps you took to arrive at this conclusion?—Well, we never or rarely subject the whole of an exhibit to chemical analysis. But I will say that I took the sample from the liver, an average sample, and treated that to the proper processes. From that I obtained arsenical sulphide and from that arsenic

oxide. The quantity I obtained I multiplied by nine, and the total sum comes to about a sixth of a grain.

His Lordship—That is, there was one-sixth of a grain of arsenic in the whole of the liver.

Witness—Yes. I am quite satisfied that the assumption I have made as to the quantity in the liver is correct.

To Mr. Wilkinson—It is very unusual, as I said just now, to take the whole of an exhibit and treat it to chemical analysis. Look what a position the analyst would be in were any mistake to be made. It would be a serious matter indeed if an accident happened to the whole of the exhibit.

Witness went on to describe the course he pursued, when,

Mr. Wilkinson said—What we want to know, is, as his Lordship suggests, whether or not the course you took was the regular course in such matters?—The course I took was the regular course in all such examinations.

His Lordship—Then we come back to the statement that it was the whole of the liver that contained one-sixth of a grain, and not a ninth part of the liver.

Witness—That is so.

Mr. Wilkinson—Did you take the precaution to obtain a correct analysis?—The analytical process was one that could only have erred in failing to detect the substance. I could, of course, have erred by inadvertence; by introducing arsenic, for instance, when trying to obtain it, by using dirty vessels, etc. Witness was going on to explain the process he adopted, when

Mr. Lowder interposed with—My Lord, are we to have a medical lecture?

His Lordship—I do not think it is necessary to go into this more deeply. Mr. Wilkinson might ask witness whether he took all necessary precautions.

Mr. Wilkinson—Certainly, my Lord. Dr. Divers, did you take all necessary precautions in this process to obtain a correct analysis?—Yes, I took all the precautions necessary.

His Lordship—I think that we can take that as assumed.

Witness—I would not err by blunder in such a matter.

Mr. Wilkinson—I will now call for the fender that was introduced at the inquest. Dr. Divers, you were shown this fender and inspected the stain on it. Was that stain subjected by you to analysis, and when?—Yes. It was this week, on the Monday.

You submitted a part of the stain to analysis?—Yes.

What did you find it to be?—I scraped off a part of the stain, leaving part still on the fender. I took to the laboratory the matter scraped off.

His Lordship—But what did you find it to be?—What I looked to find in that stain was Fowler's Solution of arsenic.

Mr. Wilkinson—Did you find it?—There is no Fowler's Solution, there is no arsenic on the fender where the stain is. The stain consists of urine; human urine.

Did you, on the same day examine and analyze the contents of the bottle marked "D."?—Yes.

What did you look for in it, arsenic?—Yes. I identified the contents as being Japanese Fowler's Solution of arsenic. I analyzed a quantity about the same as that still left in the bottle.

Could you state what is the generic difference between Japanese Fowler's Solution and foreign, or English, Fowler's Solution?—What I have to say now I have learnt only during the past week or ten days. Fowler's Solution of arsenic is a solution that is ordered to be made in essentially the same way everywhere in the pharmacopœs; there is no difference in the formula.

His Lordship—Is there any difference then between Japanese and foreign Fowler's solution?—Those made in Japan, to be obtained at Japanese chemists and pharmacies, differ from the British and German Fowler's Solutions in colour and smell; the colour and smell differ because of the difference of the ingredients in the colouring and flavouring matter. In the European solution the smell of lavender is a marked quality; in the Japanese solution this smell does not appear—though in the Japanese formula it is set out the same.

His Lordship—We understand, then, that there is a difference between the Japanese and the foreign?—Yes. The foreign or proper Fowler's Solution has a reddish colour that is derived from the sandal-wood used in the tincturing. This is absent in the Japanese preparation, so far as I know. The organic colouring matters are therefore different in the two.

His Lordship—I do not think we need follow it further.

Witness—But my answer is not yet complete, my distinction has yet to be drawn. It might have been said that the Japanese solution was

only the foreign solution bleached through the action of sunlight. But after a four hours' experiment in strong sunlight I found that the English solution did not bleach; that the colour was not bleached by exposure to the sun. Therefore the Japanese solution is not obtained by bleaching the foreign solution. Fowler's Solution is therefore different in the foreign making-up to that which can be got at the Japanese shops.

Mr. Wilkinson—I now show you Exhibit "L"—a bottle addressed to Carew, Esq., from the Normal Dispensary, and known in this case as Baelz's prescription?—Yes, I took a portion of its contents, about a quarter of an ounce, and submitted it to analysis.

What did you test it for?—I found it to contain foreign Fowler's Solution mixed up with other medical matter that I did not examine.

Mr. Wilkinson—I think this is a convenient opportunity to adjourn.

The Court rose for the luncheon interval. On resuming, the general public turned up in much large numbers than in the morning, and before three o'clock there was again hardly standing room.

Dr. Divers' examination was continued.

Mr. Wilkinson—The questions I have hitherto put to you, Dr. Divers, have been on matters of fact. I am now going to ask questions upon matters of opinion. From the form in which you traced the arsenic found in the liver and the other organs, are you able to find in what manner it was exhibited, taken, or administered—in what form was it given?—The fact that I found no white arsenic in the liver is against the notion that it was given in the form of white arsenic, the presumption is that it was given in the form of solution.

His Lordship—Can you state in what quantity?—My Lord, my answer is not complete to the first question. I come to the conclusion that I have just announced, my Lord, because I found so very little white arsenic in the stomach and intestines—that is an opinion, not a matter of knowledge.

His Lordship—Quite so.

Mr. Wilkinson—So much for the arsenic. Is what you have observed in the course of your examination consistent with it being administered in the form of Fowler's Solution?—Yes, that is what I meant.

With regard to the lead, can you form any opinion as to the form in which the lead was exhibited?—It was probably taken in a soluble form.

Was it consistent with its being exhibited in the form of sugar of lead?—Yes.

Now I am going to ask your opinion as to the cause of death. Can you give a definite opinion from the inspection of the organs and your analysis alone?—My own inspection?

Yes, your own inspection alone?—Yes, I am able to form an opinion.

What would that opinion be?—That death was caused by arsenic.

I believe that you have been in Court and heard Dr. Wheeler's evidence; have heard what Dr. Todd and Dr. May have said, both with regard to the symptoms and the *post mortem* examination?—I have.

Having heard that evidence, and with the further knowledge of your own chemical analysis and observation, and taking all the circumstances into consideration, have you formed a definite opinion as to the cause of death?—Yes. Poisoning by arsenic.

His Lordship—Then practically what you have heard of the evidence of the medical witnesses—Drs. Wheeler, Todd, and May—has confirmed your own opinion?—Fully confirmed it; more than confirmed it.

Mr. Wilkinson—Is any symptom that you have heard spoken of in this case inconsistent with arsenical poisoning?—Not inconsistent; but the drowsiness one would not have expected.

Is that that the drowsiness would not have been caused by the arsenic?—It is not a usual symptom of arsenic.

And you have already said that the symptoms spoken to are not inconsistent with arsenical poisoning?—Not inconsistent, beside the uncertainty as to what is meant by drowsiness.

His Lordship—That is a question of degree?

Witness—Yes. Sleepiness, or want of attention to what was going on around him. If it was sleepiness then it was hardly arsenical.

Mr. Wilkinson—From what you now know, are you able to give an opinion whether this arsenic, presuming it to have been given, was given in one dose or in repeated doses?—Yes.

From the history of the case as well as the result of your own observation and experience?—The case is clearly one in which arsenic was given repeatedly and in increasing doses. Do you want to hear my reasons why?

His Lordship—If Counsel asks you the question

you may answer him. Do you wish to have his reasons, Mr. Wilkinson?

Mr. Wilkinson—No, my Lord. (To witness)—Are you able with the data you now possess, to form an opinion whether the arsenic was administered by himself or administered by others?—To form an opinion from the whole history of the case and my own experience?

Yes.—I can form such an opinion.

What is it?—That the arsenic was assuredly not taken by the patient himself.

Is arsenic an irritant poison?—Yes.

Is it cumulative or non-cumulative?—Non-cumulative.

Will you tell the jury what that means?—When either the effect or positive presence of a medicine is greater and greater with the quantity slowly given, then it would be cumulative; cumulative in effect and substance.

His Lordship—Can you repeat that again?

Witness—When a poison is retained in the body largely, not wholly, and the effects increase with the quantity retained in the human body, then it is a cumulative poison.

Mr. Wilkinson—When solid white arsenic is given as a medicine in what form is it usually administered?—In the form of pills. White arsenic is made up into pills wrapped in different substances—inert matter; and of course it is given in solution.

What is the usual form of solution?—Fowler's Solution.

White arsenic, if exhibited in a poisonous dose or not, may be taken without being made up into pills?—Yes.

In regard to Fowler's Solution, would you state the quantity of white arsenic contained in a half ounce bottle?

His Lordship—We have that in Dr. Wheeler's evidence.

Mr. Wilkinson—Then we need not go into it again. (To witness)—What is the usual medical dose of arsenic?—One fifteenth of a grain, more or less.

What is the deadly dose of arsenic?—Two grains are generally successful—often successful.

That makes the ratio between a poisonous dose and a medical dose very large, does it not?—Yes, one in thirty.

How much does an half ounce bottle of solution contain?—About 220 drops—minims is a vague term—there may be 250 drops.

How long would a bottle last if the arsenic is given in doses of 5 drops three times a day?—Nearly 16 or 17 days.

Now I wish to ask you some questions in regard to the tolerance of poison—What is the usual experience when a dose larger than 20 or 30 drops a day is administered?—I do not follow. What is the dose you make? What dose are you taking—you have increased it to 30 drops: do so if you like.

Mr. Wilkinson—What is the usual medical dose of Fowler's Solution, taken daily?—About 5 drops 3 times a day—15 drops a day.

What is the general experience of persons taking larger doses of it?—The general experience is negative. but I am not a practising medical man.

But do men take it in larger quantities?—Yes, they can.

How much larger would you say, coming within the bounds of usual experience?—I can't say yes or no to that. If you were to attempt to give 30 grains a day you would get distinct symptoms of arsenical poisoning. I am corrected, I mean drops not grains.

Mr. Lowder—I object to witness being corrected by anyone near him.

Witness—It was not spoken directly to me.

Mr. Lowder—I am speaking to his Lordship. Witness—It was a very natural correction, the slip was obvious.

Dr. Tripler—I was speaking to Mr. Litchfield, my Lord, when I said drops.

His Lordship—You must write when you want to communicate with Mr. Litchfield, you must not speak aloud.

Witness—As I just said, such a dose as 30 drops may yet be given.

Can you not give us the largest amount that there is any experience of in which arsenic has been given in solution?—Some medical men in treating bad cases of obstinate malarial fever have given as much as 10 to 20 drops at a time, stating that in the fever such doses can be borne with impunity. The experience of others does not agree with this.

His Lordship—How much was the dose?—I presume there were several and that the arsenic was so given twice or thrice a day. Naturally a larger dose would be exceptional. The indefiniteness of my answers, my Lord, is the result of the indefiniteness of the subject.

Mr. Wilkinson—Is it the general experience of

the medical faculty that arsenic can be taken in increasing doses?—In medical practice, I am not aware of any such cases. In the treatment of exceptional and obstinate skin diseases when arsenic is given for a long period, it is not the custom to increase the dose: it is kept steady at a small quantity.

His Lordship—In short periods then, it is given in large doses; in long periods in small quantities? Witness—In medical practice? No.

Mr. Wilkinson—Does tolerance increase?—Facts are plentiful to show that in the case of some persons arsenic can be increased in quantity until large doses are taken, and yet poisoning does not result—it is thus taken with impunity. This statement refers more especially to solid white arsenic. But I have found in the records of men whom I trust, whom I know, and whose ability I trust, cases in which it is shown that in certain districts slightly arsenical waters are used with impunity, except at first, illustrating that persons can get used to it. I almost know of a case of tolerance of Fowler's Solution, because I know the person by whom it can be tolerated. But he can tolerate other poisons, and the tolerance, as I said, extends to Fowler's Solution. He is an anomalous individual, however, as is shown by his power of withstanding narcotics, powerful narcotics. I almost know of this, but I cannot consult the person.

In there any explanation of the tolerance of white arsenic?—Those persons who have made a practice of eating white arsenic take it in lumps, not powder, and avoid the use of fluids, water, and other things. I know no facts further than these.

You have spoken of the case of an anomalous person, are there any well authenticated cases?—No, I have not seen them.

Is it a usual experience, are such cases general?—I do not know of those cases.

Are they common, do you think?—I do not know of cases of persons having taken large quantities of white arsenic.

That is what I wanted to know.—I do not know of them.

Are all the symptoms of arsenical poisoning present in arsenic poisoning cases, or are some absent?—I should think there would be differences in given cases.

Well, do any two cases agree?—No, they do not; in the main characteristics they do.

Are the symptoms of poisoning by acetate of lead and arsenic similar?—In the course of the two cases there would be many things distinct, though they would have symptoms in common. The symptoms in common are few but distinct.

I was going to ask you in what they differ?—That is then, I take the two cases as distinct, one of arsenic poisoning, the other of acetate of lead?

Mr. Wilkinson—Yes. What then?—The acetate of lead would have to be administered in large doses, at least an ounce, if not it would not be satisfactory. Perhaps I ought to say an ounce and a half for a satisfactory dose—an ounce so frequently fails. That poison is freely soluble in water. In passing the mouth it would have a sweet though astringent taste—it would have an astringent action on the mouth and throat. On the other hand, the arsenic is tasteless, practically tasteless, and would pass through the throat without having any effect on the throat. I know that in the text-books you will find it stated that it will have an effect of burning, but that does not matter, for it does not. Unless the sugar of lead is made up into a bolus, to avoid the taste and contact with the mouth, it has an effect upon the mouth and throat—in the other case there would be nothing. In other things the effects will be in common. If you fill your mouth and stomach with irritant poison you must expect the common effects of irritant poisoning. Therefore if I am asked if the two poisons just mentioned have symptoms alike, I reply nothing. But in other ways, I reply that with the arsenic there will be vomiting and if a large dose of acetate of lead is taken there will be vomiting.

His Lordship—Then what is the difference? Witness—It is difficult to give a satisfactory answer, my Lord. The vomiting produced by arsenic is the most startling of its effects, the same with nausea; sugar of lead will cause nausea, sometimes more sometimes less.

His Lordship—There is always vomiting with arsenic? Witness—The vomiting is one of the marked symptoms connected with arsenic. This vomiting goes on with arsenic, with perhaps slight intermissions. In sugar of lead cases the vomiting would be much less marked.

This Lordship—Without nausea? Witness—I cannot leave that out. The arsenic in poisonous doses rapidly produces depression—inability or wish to live, or do anything. That feeling is overwhelming and distressing: depression is very much less marked with acetate of lead.

The abdominal pain that is produced in the case of lead poisoning is noticeable, but it is as marked in the lower belly as in the upper. There is constipation and dry colic. Whereas in the arsenic case there is loose colic and the belly pain is markedly in the epigastric region—in the waist—in a few hours proceeding to the back, the small of the back. And then there is this intense pain running from front to back—that is the arsenic's effect. With the lead the pain is in the belly. There comes on in the arsenic case very marked throat symptoms that are more sensational than structural—that is in the sense of great constriction in swallowing, when there is no great change in the throat, no ulceration, no white deposit. The lead may cause ulceration—the arsenic would pass over the throat surface without doing any damage. Where there has been administered a large dose of lead, or of other irritant poison, the effect is overwhelming on the patient, and there would be rapid collapse. The pain and distress of powerful diarrhoea so marked in arsenic, is quite mild in lead poisoning; in fact it is a symptom that is generally absent, and if present, of short duration. In case of arsenical poisoning there is great distress in the bowels in moving, in passing water; in lead there is nothing of the sort, so far as I know. In fact I could put all that I have just said into two or three words, by saying that arsenic is a non-corrosive poison, while acetate of lead is a corrosive—that is the difference between the two. One acts locally, the other on the nervous system, arsenic flying to the stomach and then working on the protoplasm, the germ of life. Wherever arsenic is placed it will fly to the stomach: put it on a sore on the head and down it flies; place lead there and it only affects the part. I have now described the difference between the two—arsenic and lead.

Mr. Wilkinson—Were you able from what you have heard in Court and your own observations to say whether any of the symptoms described arose from the arsenic or the lead?—You are putting the two together?

Now did those symptoms differ as between the two poisons?—I see nothing of lead poisoning in the case; except possibly the constipation at the beginning, which might have been caused by the medicines first given. In the *post mortem* examination there was no evidence that death was due to the lead. There certainly was satisfactory evidence that death was due to arsenic.

As a matter of fact, are there many cases of death by lead poisoning?—Acute or chronic?

Acute?—Quite small. Between 1890 and 1895 in Great Britain, there was not a case I think, unless one accidental. There were many cases of chronic lead poisoning, but none from acute, at least not criminally, suicidally. Sugar of lead is not an active poison.

In the case of arsenic it is the amount absorbed that kills?—Yes. That is true of non-corrosive medicines.

Among known cases, is the amount of arsenic found in the body large or small in quantity?—The cases are exceedingly few; I can't find any.

His Lordship—You can't answer.

Witness—Yes, I can give an answer, my Lord, to this question; what I found was a full and ample quantity.

Mr. Wilkinson—What did you find?—One-sixth of grain in the liver.

What would that be for the whole body?—It would give 8 grains to the whole body.

Is that a large or small quantity?—It is an ample, large, and excellent find, sufficient to cause death.

What is the largest quantity even found in a body?—Half an ounce in the stomach, not absorbed. That is, it was scraped up in lumps from that body.

The finding of $\frac{1}{2}$ of a grain in a body is full and sufficient evidence of a full poisonous dose being absorbed?—Of more than a poisonous administration: the evidence of one-sixth of a grain. That is quite enough for a poisonous dose to have been absorbed. Even if it was not all absorbed it was sufficient to cause death.

Then I may take it that you are convinced that there was sufficient evidence in what you found to prove that a poisonous dose had been taken?—Yes.

Mr. Wilkinson's then sat down and Mr. Lowder rose to cross-examine.

Mr. Lowder—I take it, Dr. Divers, that you entered into the examination of the remains taken from Mr. Carew's body with the intention of determining what was the cause of death?—Quite primarily, I think not. I was commissioned by the British Consul to look for poisons. Secondly, of course, I sought to determine the cause of death.

Then it was to support a preconceived opinion of your own that the cause of death was by arsenical poisoning?—Yes, but I object to the word

support. The Consul in his letter asked me to examine the exhibits for poisons, that is why I looked for poisons.

To ascertain if a preconceived opinion was true or not?—Yes, I think that would be fair.

In chemical analysis if substances are expected to be found they are generally found; that is you find what you are looking for and overlook other things which you were not looking for?—I agree; but not very frequently; you may overlook.

His Lordship—There is a tendency that way.

Mr. Lowder—Then it was more or less by chance that you discovered sugar of lead?—Lead, not sugar of lead—oh, dear no.

You were not looking for it?—I adopted processes that were expressly calculated to disclose lead. I could not say that it was by chance I found it. The process I adopted was calculated to find lead and other things.

His Lordship—What other things?—Arsenic, lead, antimony, copper, tin, bismuth, and others.

Mr. Lowder—What was the process you adopted?—Fresenius and von Babo.

His Lordship—Is that one process?

Witness—Yes, one process but two men.

Mr. Lowder—Does not that process require to be verified by some other process?—It requires no checking when completed. The process is essentially one for getting poisons out of animal matter. One portion of the exhibits was examined differently—the specks found in the stomach.

Now does not the process you have mentioned require to be tested by Marsh's process?—It does not.

Did you carry your process beyond the recovery of arsenic and sulphide?—Yes, here (exhibiting a small phial) is elementary arsenic got from the liver of the late Mr. Carew.

Did you examine the tissues for lead?—Yes, the tissues named in my examination-in-chief.

Did you later on conduct further researches and discover other things than those you have spoken of to the Court?—No, I did not.

Should you not have done so?—What do you mean, morally, or for this Court?

Yes.—No, certainly not, judging by all precedents known to me.

You were unassisted, I think?—Entirely.

Assistance is usually obtained in these cases?—I do not think so—sometimes it is, sometimes not—more generally not.

If you had not been so utterly exhausted, as you told us this morning, and overwhelmed with other work, you would have gone on till you discovered the full amount of the lead?—I think I should have collected all the arsenic, and collected all the lead. I found arsenic all over the place. The amount I discovered I thought was sufficient for the purposes of justice.

Did you not tell us, in a previous inquiry, that you expected to be called again to give evidence in this case?—Oh, yes, I was confident of that. It was at the inquest when I made the remark.

And yet you did not proceed further with the chemical examination?—It is possible that I should have gone on further, but I had my beautiful scientific laboratory contaminated with these things; my colleagues were annoyed, and I was glad to clear things away. I think that I should have liked to have gone on further and seen what I could have done with it.

Suppose you had been told to test for lead poisoning, would your examination have terminated where it did?—It would have terminated where it did.

Assuming that you were called on to test for lead would you have carried it no further?—If I had gone direct for lead I should have finished earlier.

In answer to further questions, witness said that he did find lead poison in the tissues.

Mr. Lowder—That is what I wanted to get at: whether in sufficient quantity to cause death, was not determined by you?—I did determine the quantity. I think I said that at the first.

You drew a distinction between a qualitative estimation and a quantitative?—I, as an experienced person, found a quantity that I estimated. I did not weigh the lead as I did the arsenic, but you can't say that I did not know the quantity of lead.

Could you, if you had gone further in your examination, have described the quantity of lead in the body of deceased?—I could have done so, I think, but it would not have been very accurate, being so small in quantity. I think I could have weighed it.

His Lordship—But you did not think it worth your while to continue it?

Witness—Not quite that. I deemed it unnecessary. In order to collect this lead I would have to go to the four vessels in which the exhibits had been placed. It would have occupied me the best part of two days to collect and purify it. Then the quantity would have been so small

support. The Consul in his letter asked me to examine the exhibits for poisons, that is why I looked for poisons.

To ascertain if a preconceived opinion was true or not?—Yes, I think that would be fair.

In chemical analysis if substances are expected to be found they are generally found; that is you find what you are looking for and overlook other things which you were not looking for?—I agree; but not very frequently; you may overlook.

His Lordship—There is a tendency that way.

Mr. Lowder—Then it was more or less by chance that you discovered sugar of lead?—Lead, not sugar of lead—oh, dear no.

You were not looking for it?—I adopted processes that were expressly calculated to disclose lead. I could not say that it was by chance I found it. The process I adopted was calculated to find lead and other things.

His Lordship—What other things?—Arsenic, lead, antimony, copper, tin, bismuth, and others.

Mr. Lowder—What was the process you adopted?—Fresenius and von Babo.

His Lordship—Is that one process?

Witness—Yes, one process but two men.

Mr. Lowder—Does not that process require to be verified by some other process?—It requires no checking when completed. The process is essentially one for getting poisons out of animal matter. One portion of the exhibits was examined differently—the specks found in the stomach.

Now does not the process you have mentioned require to be tested by Marsh's process?—It does not.

Did you carry your process beyond the recovery of arsenic and sulphide?—Yes, here (exhibiting a small phial) is elementary arsenic got from the liver of the late Mr. Carew.

Did you examine the tissues for lead?—Yes, the tissues named in my examination-in-chief.

Did you later on conduct further researches and discover other things than those you have spoken of to the Court?—No, I did not.

Should you not have done so?—What do you mean, morally, or for this Court?

Yes.—No, certainly not, judging by all precedents known to me.

You were unassisted, I think?—Entirely.

Assistance is usually obtained in these cases?—I do not think so—sometimes it is, sometimes not—more generally not.

If you had not been so utterly exhausted, as you told us this morning, and overwhelmed with other work, you would have gone on till you discovered the full amount of the lead?—I think I should have collected all the arsenic, and collected all the lead. I found arsenic all over the place. The amount I discovered I thought was sufficient for the purposes of justice.

Did you not tell us, in a previous inquiry, that you expected to be called again to give evidence in this case?—Oh, yes, I was confident of that. It was at the inquest when I made the remark.

And yet you did not proceed further with the chemical examination?—It is possible that I should have gone on further, but I had my beautiful scientific laboratory contaminated with these things; my colleagues were annoyed, and I was glad to clear things away. I think that I should have liked to have gone on further and seen what I could have done with it.

Suppose you had been told to test for lead poisoning, would your examination have terminated where it did?—It would have terminated where it did.

Assuming that you were called on to test for lead would you have carried it no further?—If I had gone direct for lead I should have finished earlier.

In answer to further questions, witness said that he did find lead poison in the tissues.

Mr. Lowder—That is what I wanted to get at: whether in sufficient quantity to cause death, was not determined by you?—I did determine the quantity. I think I said that at the first.

You drew a distinction between a qualitative estimation and a quantitative?—I, as an experienced person, found a quantity that I estimated. I did not weigh the lead as I did the arsenic, but you can't say that I did not know the quantity of lead.

Could you, if you had gone further in your examination, have described the quantity of lead in the body of deceased?—I could have done so, I think, but it would not have been very accurate, being so small in quantity. I think I could have weighed it.

His Lordship—But you did not think it worth your while to continue it?

Witness—Not quite that. I deemed it unnecessary. In order to collect this lead I would have to go to the four vessels in which the exhibits had been placed. It would have occupied me the best part of two days to collect and purify it. Then the quantity would have been so small

that it could not have been a valuable statement as to its quantity. The inquest was over of course by then. The quantity would have been so small that it would not have been very accurately determined.

His Lordship—The arsenic you say was one sixth of a grain, would it have been much less?

Witness—Much less, I expected. I can't make a positive assertion.

Mr. Lowder—Can you positively assert that lead did not contribute to the death of the deceased?—I cannot.

You cannot?—I cannot.

You have told us that there was an absence of odour when you opened the stomach?—Yes.

Would not that tend to show the absence of arsenic in the shape of Fowler's Solution?—If there had been an odour of Fowler's Solution it would have established its presence. Its absence would be worth something against the assumption.

Lawson would have a very strong scent?—No, not after the time it had been in the stomach along with the arsenic. I could not smell it in the least.

May I take it that the absence of the odour would be in favour of the assumption that death was due to white arsenic—assuming for the moment that it was due to arsenic—and not to arsenic in solution?—Oh, I could not say.

Could you say if it is a possibility?—Yes. Make it more, a likelihood.

But it would be a possibility, even a likelihood?—Yes. Let me see, the deceased died on the 22nd of October. I opened the stomach on the 26th—it had been in the body a day; we do not usually give weight to smell in these cases. But still there is the likelihood—it may pass.

Suppose that there was no evidence of Fowler's Solution being taken, would the presence of white arsenic in the gullet offer a sufficient indication of the cause of death?—No; it would be one of those doubtful cases. It was not sufficient. If I had only found that, if would not have been sufficient to enable me to determine that it was the cause of death.

It would be sufficient under the circumstances of the case to indicate the possible cause of death?—Yes.

Or likely cause?—Yes.

I suppose that the absorbed arsenic might as easily be derived from the white arsenic as from Fowler's Solution?—Yes, but there was the absence of white arsenic in the alimentary track.

Can you positively assert whether the arsenic absorbed was white arsenic or from Fowler's Solution?—No, I cannot possibly assert.

What did you do with the kidney sent you?—I saw it, examined it, and thought of analyzing it.

His Lordship—Did you not do so?

Witness—I did not.

Mr. Lowder—Should you not have done so in a case where there was suspicion of arsenic poisoning?—No. I did all that was sufficient. It was open for me as the chemist to choose what part I wished to select.

Is not disease of the kidney the result of long-standing stricture of the urethra and inflammation of the bladder?—You are asking me a question that would be answered much better by a medical practitioner. I am not a proper authority.

Then you do not wish me to ask you such questions?—Oh, you may put what questions you like. But I do not attach much importance to my answers to such questions.

Arsonic is eliminated by the kidneys?—Yes.

And supposing that owing to the disease of the kidneys that the arsenic could not be properly eliminated?—Oh, but by inspection I did not discover the kidney to be unhealthy. To all intents and purposes it was a healthy substance. It might have given off a little albumen, but otherwise it would excrete urine and its substances. It could perform its functions.

Mr. Wilkinson—I hope my Lord, that you will put that answer down.

Mr. Lowder—Can you tell us, from the result of your *post mortem* examination, and the appearances you observed, and your analysis, whether the arsenic was given in successive doses or in one dose?—Analysis can't come in at all. Yes, I would give a decided probability that it was not given in one large dose.

Will you state your reason?—The quantity of arsenic I found distributed in the body, and the small amount in the alimentary canal pointed strongly to the somewhat slow giving of arsenic—the qualification being, that a solution of arsenic taken on an empty stomach might in a single dose have produced the result I found and obtained.

We have it in evidence that the deceased died on the 22nd October, is it possible that the white arsenic you found in the *post mortem* examination might have been taken on the 19th, when the very

severe stomach irritation manifested itself?—It is possible.

In that case the specks you found would be that portion of the drugs that was unabsorbed till death?—Yes, and unpurged, unvomited, or eliminated.

His Lordship—If the drug had been taken on the 19th, would death not have taken place till the 22nd?

Witness—Death might not have resulted.

But from what you supposed was taken on the 19th?—Yes.

Mr. Lowder—I only mention this date as that on which the first severe irritation of the stomach is reported.

In view of the arsenic and lead being found in the body, would it not be possible that death was the result of their combined action?—You have asked that question before. I admitted, my Lord, that I could not deny that lead might not have contributed.

You spoke at the inquest of arsenic not being taken in large quantities save in the classic case of the Styrian peasants?—Yes.

How much can a Styrian, habitually accustomed to taking arsenic, take?—How much do we know on good authority?—well, 2, 3, 4, or 5 grains of solid arsenic, arsenic in the lump. Certain Styrians can easily take that.

Is there any reasonable objection why a European accustomed to the habitual use of arsenic, should not acquire a similar immunity?—No reason that I know of.

Can you deny this proposition—that doses of arsenic in solution or solid have been given frequently during several days besides which 20 or 30 drops are insignificant?—I can't deny that; I don't see how I could; I don't see how any man could.

Is Siesmann a good authority on medical practice?—I am not familiar with the work. I do not recognise it.

Then I won't put any questions on it to you. How do you distinguish between human urine and that of a dog?—When urine is heated with a sufficiently strong mineral acid the odour of a human or a dog is developed.

His Lordship—They are distinct odours?—Yes.

How did you find out about the fender?—By the odour alone; quite sufficient; each common animal of its kind can be diagnosed.

His Lordship—Before adjourning, there is one question I should like to ask. When you found the specks of white arsenic you say it indicated that arsenic in a solid form had been administered?—Yes.

It could not arise from the decomposition of the Fowler's Solution?—That was a subject I went into thoroughly, and I cannot derive it from the solution. I can't connect one with the other.

His Lordship—Both forms.

Witness—The two forms were not connected; in my opinion they were not, but I can't be certain.

Mr. Lowder announced that he would continue his cross-examination in the morning.

His Lordship—The Court stands adjourned till ten o'clock to-morrow.

FRIDAY, January 8th.

The trial of Mrs. Carew was resumed this morning in an almost empty Court, but again as the day proceeded the attendance increased, more particularly towards noon, and then after three o'clock in the afternoon.

Upon His Lordship taking his seat on the Bench—at 10.15 a.m., Mr. Wilkinson rose and said—My Lord, my learned friend and myself have conferred on the subject of Dr. Divers' evidence and of the difficulty of taking down what he intended to convey. I have asked Dr. Divers to look over one of the newspapers—last night's *Japan Gazette*—and see whether its report accurately conveys the evidence. He has not been able to read it all, but he has read the Supplement, which did not appear until this morning. I propose, with your Lordship's permission to ask him read that afterwards, not, of course with a view to supersede your lordship's notes.

His Lordship—But to supplement them, you mean.

Mr. Wilkinson—I will ask Dr. Divers in the afternoon if he has read the Supplement containing his evidence, but now I will ask him if he has read last night's report and if it is a fair report of his evidence. (To Dr. Divers)—Have you read this?—I have.

Is this a fair report of your evidence up to the adjournment?—This report, which I have read though carefully so far, is a verbal report of my evidence and to the best of my knowledge it is accurate, with one or two exceptions, or at any rate in one or two instances I am reported as saying what I could not mean to say because it is ab-

surd. That is with regard to the intestines and the stomach and the description of those parts.

His Lordship—Where is it, in the second, third, or fourth column?—It is in the sixth column of the paper about a third of the way down. The question asked is, "I suppose you mean the stomach and its contents?" I am made to reply—"The stomach was tied at both ends so as to confine its contents. Another contained the intestines in one continuous length securely tied, the intestines beginning with the lower part of the gullet and terminating in the upper part of the rectal bowel. I should here correct this statement. The gullet was, of course, attached to the stomach, that is to say, had a stomach adhering to it."

His Lordship—Is it the last but one column on the second page?—Yes.

What is wrong?—About six or seven lines down it says, "the gullet was of course attached to the stomach that is to say had a portion of the stomach adhering to it."

What is the wrong part?—That makes me say the gullet had a portion of the stomach adhering to it, it should be that the stomach had a portion of the gullet attached to or adhering to it.

What is the next, Dr. Divers?—Near the end of the last column the report reads, "The Judge—All this is knowledge obtained during the last ten days?"—The answer to that is "old knowledge," I do not understand that answer whether I gave it literally or not. It should read, "That is old knowledge as to the pharmacopœia."

His Lordship—I have not got it on my notes.—It is no matter one way or the other, but I have to testify to this as verbally accurate and I wish to make these corrections. The report in the *Gazette* of the 7th of my evidence is correct with the exception of that part where I am made to say, "the gullet had a portion of the stomach adhering to it," and "that is old knowledge."

How would you correct it shortly?—The stomach had a portion of the gullet adhering to it and "old knowledge as to the pharmacopœia."

His Lordship—Then the report is now correct. I understand that Dr. Divers will look at the supplement afterwards?

Mr. Wilkinson—Yes, my Lord.

Mr. Lowder—Will this apply to the questions I am about to put to him from the Supplement?

His Lordship—You cannot tell unless he has seen it.

Mr. Lowder—You said yesterday, Dr. Divers,

when asked whether you could form an opinion as to whether arsenic was exhibited in repeated and increasing doses that you could form an opinion?—Yes.

Was that a scientific opinion?—That was an opinion based on the medical history of the case, if that is what you mean by a scientific opinion. It was based upon the medical evidence, my own evidence, and the result of the *post mortem* examination. Yes, it was a scientific opinion.

Mr. Lowder—I used the word "exhibited," my Lord, because I have another question to put as to the word administered and it is used in contrast. You also said, Dr. Divers, you were able to form an opinion as to whether it was taken by the patient or administered to the patient?—I don't remember saying so, but I do say it.

Is that also a scientific opinion?—Yes.

Now I am asking you the question, are you able to form an opinion as to whether the sugar of lead was exhibited in repeated and increasing doses?—I should form an opinion as to its being exhibited in repeated doses, but I have nothing before me to guide me as to increasing doses.

In repeated but not increasing doses, that is your opinion?—I don't know anything about it. I can't testify as to whether it was exhibited in increasing doses or not.

Will you tell me your opinion now as to whether sugar of lead was given in repeated doses but in larger or smaller doses?—I can not say.

His Lordship—You can say nothing as to whether the doses were increased or not?—No.

Mr. Lowder—Now as to the sugar of lead. Can you form an opinion as to whether it was taken by the patient or administered to the patient?—Not a scientific opinion, I think, upon that point. That is, from the scientific side of the question I don't think so.

Can it have been administered to the patient in a very large quantity without the patient knowing it, tasting it?—Will you do something toward settling the quantity? Will you settle it, or shall I settle it?

Assume two or three drachms as a fatal dose?—Two or three drachms of acetate of lead, you will assume that as a fatal dose? I don't agree.

You don't agree?—No, I don't agree that that is a fatal dose.

Then you don't agree with me?—No.

I will put my question to you in this way. Could two or three drachms have been administered to

the patient without his tasting it?—Yes and no. I must explain that question. Without his recognising it, yes it can. Without his tasting it, probably no. The patient is a patient; he is ill. A sick man who is taking medicines with a strong flavour like chloral, which has a strong taste, and all those other medicines that have been mentioned, would hardly detect it unless the quantity was large. The dry throat he was complaining of would mask the effects of such a small dose, and would naturally mask the taste.

His Lordship—It could easily be taken under all these circumstances without being tasted?—Without being recognized, I object to "taste." If that is what Counsel means, I can't answer. I mean that he would not recognise the sugar of lead.

Mr. Lowder—But it would taste?—Yes, it would taste: it would produce a taste, but that does not mean that it would have been recognised by the patient.

His Lordship—It is well to have the point cleared up. It could have been taken without being noticed?

Mr. Lowder—It would have a decided taste, a taste recognisable by the patient?—It might be apparent. It would probably have a taste to the patient.

You have said that arsenic is tasteless?—Yes. Do not eminent authorities differ on the subject?—They do not on the general subject. The books are clear upon it. You will find, I know, in some text-books that arsenic produces a burning taste. I do not agree with them. You must give my answers a rational interpretation.

Is not Orphila a good authority?—Yes, he is an ancient author.

His Lordship—Do you mean that he is no longer an authority?

Witness—He is an old authority, a French doctor of high repute who said that arsenic had been found all over the body. It has since been found that this was not so: the point has been demonstrated. So Orphila is now longer an authority, further experience having tested the point.

In answer to His Lordship, witness said—Fowler's Solution was first introduced as tasteless aque drops, yet it has a taste certainly, but taking the words rationally it has no taste: that is how I want you to take the answer from me.

Mr. Lowder—I think you said, Dr. Divers, that the process employed by you to test for arsenic was such that you could not err in obtaining the arsenic if it was there?—The process could not err. I might err as an incompetent person.

I suppose that I may take it that you might err by not finding all the lead?—That I might fail as a worker; not the process. The process can not be reflected upon.

His Lordship—Then when you speak of not erring you mean the process?—Yes.

That the process is infallibly correct?—Yes, practically infallible.

In answer to further questions, Dr. Divers said—No bottles other than those that I referred to yesterday, have been submitted to me for examination by the prosecution. I have only examined the three bottles and the remains of the deceased. I have not examined any tins of beef tea.

Mr. Lowder—I am much obliged to you.

Re-examined by Mr. Wilkinson, Dr. Divers said—My reasons for saying that my opinion delivered yesterday was a scientific one in regard to the poison being administered in several and increasing doses were these:—As to the symptoms that I heard described by the medical attendants—there was the gradual development of the symptoms with the occasional intermission, the severity of the symptoms developed in intensity toward the close. These seemed to me to point very clearly to repeated and increasing doses. If, as suggested in the examination, the poison was administered in the form of white arsenic shortly before death—a day or so before—one would have expected to have found more in the stomach and bowels. This is quite a small point. If the poison in any form, as Fowler's Solution, had been given in one dose, a day before death, I should hardly have found so much absorbed arsenic, so much widely distributed arsenic—these are medical opinions. If the arsenic had been administered at an early date—

Mr. Lowder objected to these answers being elicited in re-examination.

Mr. Wilkinson—These are the questions I was stopped asking in the examination-in-chief.

His Honour thought the questions should be put, and Mr. Lowder would then have the opportunity of re-cross-examining.

Mr. Lowder said that he was not prepared to cross examine on the point.

Mr. Wilkinson said that his learned friend would have every opportunity of cross-examining

again. Still he was prepared to stop the questions at once if his learned friend objected.

Mr. Lowder did object and stated his reason. Mr. Wilkinson—Then I will stop the questions there, my Lord.

His Lordship—I will state that the objection is taken and disallowed.

Witness, continuing—Sugar of lead might be mistaken for sugar in tea or coffee, but it would make the appearance of tea or coffee very queer; the appearance of milk would also be changed by it.

Mr. Lowder—May I suggest a question through the Court? When a person is not accustomed to taking sugar in tea or coffee, would he notice the presence of sugar of lead if it was placed in either fluid?—A moderate quantity of sugar of lead would not taste sweet, but a larger quantity would be noticed in tea or coffee by a person who did not take sugar in tea or coffee.

To Mr. Wilkinson—I did not find any evidence of lead poisoning in the body of the deceased. In the parts that I examined I would have expected, if there had been lead poisoning, to find contracted intestines, with a bluish colour; and I should have expected to find whitish lead compounds in quantities; but I found the intestines perfectly healthy. I did find some lead substances in the intestines, but in minute quantity. In my opinion the lead found in the body did not contribute to the death in any appreciable way.

Mr. Lowder objected to several questions that Mr. Wilkinson was about to put to the witness, and in reply Mr. Wilkinson said that he did not wish to press his questions unnecessarily.

His Honour thought that there was a good deal to be cleared up in regard to the lead, but the witness had stated that he had had no previous experience with lead poisoning.

Witness—The absence of gastritis does not militate against the opinion that death was due to arsenical poisoning; but rather the other way. My opinion as to the cause of death would not be altered in the slightest even if it had been established beyond a shadow of doubt that the deceased was an arsenic-eater.

His Lordship—I have no questions to ask you, Dr. Divers, neither have the jury.

Neil Gordon Munro, M.B., C.M., Edin., was then sworn. In answer to Mr. Litchfield, he said—I am a medical practitioner in Yokohama. I knew the late Mr. Carew and attended him professionally in the year 1895. I did not prescribe arsenic on that occasion.

His Lordship—Is this necessary?

Mr. Wilkinson—Yes, my Lord, in reference to other evidence that will be coming before you later.

Witness—From 1893 till the time of his death, I have never prescribed arsenic for him.

Mr. Litchfield—Do you know of his taking arsenic?—Of my own knowledge I do not.

You had a conversation with him once?—Yes.

Mr. Wilkinson—My learned friend agrees, my Lord, that this is quite necessary.

Witness—I think this conversation was in the Spring, 1893. To the best of my knowledge and belief—of course I can not swear positively—Mr. Carew stated to me that he took arsenic on account of his complaint. And I believe he stated to me that it relieved the pain of his complaint—his stricture. I was surprised to hear this, and could not explain it when he asked me. This conversation took place over three years ago, but in my own mind I can recollect that it was to this effect.

Mr. Lowder, cross-examining—Was it a very severe stricture?—Yes, a very severe stricture. I could not pass the smallest instrument.

Was there any other complication?—Not at that time.

Any complaint later on?—I think later he had slight catarrh of the bladder; some months later. I treated him for that complaint.

Now I am obliged to ask this question. Did you treat him for anything else?—Yes.

Will you state what that was?—I treated him afterwards, yes.

Am I to answer this question my Lord?

His Lordship—Yes.

Witness—He came and consulted me afterwards for an attack of gonorrhoea. I treated him for that; the bladder trouble was after this. I had no reason for disbelieving when he said that he used arsenic for his stricture, because I know that malaria does complicate stricture most extraordinarily.

Malaria would aggravate the pain of stricture?—It might aggravate the stricture and so aggravate the pain.

And in that way arsenic might give relief?—Yes.

Was the stricture ever cured?—A stricture can very rarely be cured; but it was cured to such an extent that I could pass a large instrument. But I can not say whether his stricture was cured. I

think it hardly likely, from what I saw of it that it could be cured.

To His Lordship—A stricture is a constriction of a passage; and the general experience is that it returns. The old saying is, my Lord, once a stricture always a stricture. This is in consequence of the inflammation that arises, weakening the tissues and thus affording a return of the malady. I am speaking from general cases. This was a very bad case, and I had considerable trouble with it.

To Mr. Lowder—The presence of the pain would undoubtedly cause pain in passing water; and so would inflammation of the bladder—very much so. This pain in micturition is also a symptom of arsenical poisoning: it is called also strangury. This pain—caused by arsenic—could easily be mistaken by the sufferer for that caused by stricture or inflammation of the bladder.

If the deceased took arsenic hoping to relieve the pain he suffered from the bladder, he might unwittingly be increasing the pain from which he suffered?—He might be increasing it; he might even be bringing it about, I should think.

And finding no alleviation, he might be led to taking larger doses?—It is certainly possible; but I could not state for certainty.

No questions were put by the jury.

Adam Rankin Gibson Clark, a British subject, was next sworn and said—I am a qualified chemist, and manager of North and Roe, Ltd., Chemists and Druggists, 79, Yokohama. I have been employed by them between five and six years. I have been acting manager, and was confirmed manager in July last, I believe. I produce our prescription book. I recognise the prescription Nos. 137,420, 137,437, 137,446, 137,447, 137,444. They are prescriptions made for Dr. Wheeler. One—137,437—contains bismuth, and the bottle produced is the bottle. The drugs used in these prescriptions were pure. The prescription just mentioned was made up on the 20th October. Bismuth sometime contains arsenic as an impurity. I believe most bismuth found now is practically pure, and at best contains but a trace, owing to the better manner of refining employed. The British pharmacopoeia demands that bismuth should be free from arsenic. I believe in the old days, a $\frac{1}{2}$ of grain has been found in the ounce Troy. Supposing the old impurity to be still present there would be in that bottle $\frac{1}{2}$ of a grain of arsenic at a maximum, at a minimum $\frac{1}{16}$. Three doses are gone out of the bottle, and in those doses would have been the $\frac{64}{100}$ part of a grain had the old impurity been present. I have reason to believe that there is no impurity in that mixture at all. Except the prescriptions produced, these were the only ones made up by us for the Carew family up to the 23rd October last. We had no open ledger account for the Carew family in 1895—there may have been cash sales. There could have been no cash sales of arsenic to them, else the entry must have found its way to the poison ledger. I have searched the poison ledger as far back as 1893. [Ledger produced.] There is no entry of a cash sale to the Carew family of any arsenic, including Fowler's Solution, since July 1891. I have searched the ledger back to January, 1894, for credit sales, and find no entry for any sale of arsenic to the Carew family—Fowler's Solution included. Sales of poisons are entered in the poisons ledger when not ordered over the signature of a properly qualified medical man. There are two other foreign chemists in the town—Messrs. Brett & Co., Ltd., and Mr. Schedel. There are no others. Mr. Lowder had no questions to put.

Frederick William Thomas, Manager of Messrs. Brett & Co., Ltd., a British subject, and a qualified chemist, sworn, deposed—I have been manager of Brett & Co., since January, 1896. I have searched the ledger accounts and other books for sales of arsenic to Mr. Carew or other members of the family as far back as 1893, and through 1894, 1895, 1896. I have found such entries on three occasions, in Oct. 1894 and in December, 1894. I have brought the prescriptions. They are dated 8th Oct., 12th Oct., and 22nd Dec., 1894. The numbers are 25,016, 25,035, and 25,388. In the first there is 50 drops of Fowler's Solution in a 12 oz. bottle with other things; the directions were, "a twelfth part three times a day." The next reads, "Mrs. Carew, mitte lig. Fowleri, $\frac{1}{2}$ oz. 5 drops twice daily after food, E.W." The first prescription was also for Mrs. Carew. The third was a 6 oz. mixture, containing " $\frac{1}{2}$ drachm of Fowler's Solution; a twelfth part after food." With the exception of these prescriptions, I have found no record of the sale of any arsenic to the Carew family either by cash sales or credit, during the years 1894, 1895, 1896—on this point I am positive. Cash sales would be entered in the poisons book; the prescriptions would be placed in the prescrip-

tion book. I received a chit from Mrs. Carew on the 21st of October, 1896.

Have you it with you?—I have. I read "Messrs. Brett & Co. Please send 1 doz. soda water to No. 169, Bluff. E. M. H. Carew." To the best of my belief I think the order was brought by Miss Jacobs.

Mr. Lowder—You have made some experiments, at my request, with sugar of lead?—I have.

Now sugar of lead when mixed with soda water, the quantity being 1 grain, gave it a milky appearance, did it not?—Slightly milky.

Two grains gave a slight taste?—Yes.

And three grains gave a marked change both in taste and appearance?—That is so.

Now, in a tumbler of soda and milk—

His Lordship—When did you do this?—Three weeks ago.

Mr. Lordship—Now, you experimented with a tumbler of soda and milk, two grains altered both taste and appearance?—Yes.

And three grains produced a marked change that could not escape attention?—Yes, in taste. Now in half a pint of barley-water, 2 grains gave a disagreeable, sweet lead—metallic—taste.

His Lordship—Was it disagreeable?—It was a sweet metallic taste.

Mr. Lowder—It is a question of taste, my Lord.

Now four grains in half a pint of corn-flour and half a pint of beef-tea gave a pronounced taste?—Yes.

Now 2 grains in half a pint of lime-squash slightly altered the appearance, and 5 grains made it taste disagreeable?—Yes.

Now, I suppose if Mrs. Carew had come to you in October last, and referred to Fowler's Solution supplied in 1894, without a medical certificate, you might have given her a 3oz. bottle?—I might have done so.

Mr. Wilkinson—You have a paper with the details of the experiments?

Mr. Lowder—I can give you a copy.

Mr. Wilkinson—I have no questions.

The Court then adjourned for lunch.

On the Court resuming at two o'clock,

Dr. Divers said that he had looked through the supplement of the *Gazette* as directed, and he had found a few corrections to make. It was hardly to be wondered at that in the cross-examination some little errors had occurred. Still except for small trivialities of expression here and there, he was prepared to take the report as his own evidence, with the corrections he had made. Dr. Divers then handed the corrected paper to the Bench. The alterations were mostly corrections in phraseology, and supplying of omissions.

In answer to the Bench, Dr. Divers said that the evidence as corrected was his evidence as he wished it to appear.

Mr. Lowder said he distinctly heard witness use one of the phrases he now corrected—"Inability to live"—this Dr. Divers had altered into "Inability to think."

His Lordship—Yes, he alters it—corrects it now. He also makes a long correction in regard to the quantity of arsenic found establishing the evidence of how much arsenic may have been in the body. He also says, "that my colleagues had to be considered"—in regard to clearing up the laboratory, that is what he meant to convey. The corrected report was then marked and put in as an exhibit.

Joseph Schedel was next called and sworn. He said—I am a German subject. I am a chemist and druggist carrying on business at No. 77, Yokohama. I have carried on business for 5 years on my own account. For some time past Mr. and Mrs. Carew have been customers of mine.

Will you look at this piece of paper and say if it is a prescription?

His Lordship—What is its mark?

Mr. Litchfield—Exhibit countersigned "J.T."

Witness—It reads "Mittelig. Fowler's 3oz."

Is that a prescription made up in your store?—

Yes.

In whose handwriting?—Dr. Wheeler's.

What is the number?—22,876. That is in my assistant's handwriting.

What is it for?—For 3oz of Fowler's Solution—

"four or five drops in water after meals." The

date is 11th Oct., 1896.

Was that supplied by you to Mrs. Carew?—

Yes.

Was that prescription ever repeated?—Yes.

His Lordship—Was that the prescription on the programme?

Mr. Wilkinson—Yes.

Was it ever repeated?—Yes.

Mr. Litchfield—In whose handwriting is this

paper?—Mrs. Carew's.

His Lordship—What is the mark on that?

Mr. Wilkinson—Psi.

Mr. Litchfield—Does it read thusly, "Normal

Dispensary, please send one bottle quinine; and

refill the two accompanying bottle and tin. E. M. H. Carew, 169, Bluff, 17.10.96."—That is in the accused's handwriting. The rest is in another hand. There is first a number in blue pencil referring to the arsenic drops, No. 22,876, this is made by myself.

Upon that, what did you supply?—I refilled the bottle with Fowler's Solution of arsenic— $\frac{1}{4}$ an ounce; and also I gave a bottle of quinine and refilled the tin with salicylic dusting powder.

At the back of this and pinned to it, is there a document which you recognise?—Yes.

Exhibit Cc. was then presented to witness?—I recognise this paper.

Whose handwriting is it in?—Mrs. Carew's. It reads, "Normal Dispensary. Please send a small bottle of Fowler's Solution of arsenic the same as before. I cannot send the old bottle as it has been broken. E. M. H. Carew, 169 Bluff, 21.10."

His Lordship—Nothing else?—No.

Mr. Litchfield—The figures 22,876?—Refer to the original prescription.

I am showing you exhibit I.—the broken bottle—does that bear your label?—Yes.

How does it read?—"Carew, Esq., 4 to 5 drops in water after meals, 22,876." This is all.

Can you say when the medicine contained in that broken bottle was supplied?—I can't say.

His Lordship—Of course it was after the 11th of October?—Yes.

Mr. Wilkinson—When was the first prescription made up?—After the 11th October.

His Lordship—Was it paid for?—Not at the time.

But if you refer to your books?—Then I can tell. Mr. Litchfield—Here is exhibit J. P.—R reads "W. R. Carew, Esq., four to five drops after meals, 22,876, 21st, 10th, 1896."

That is dated?—Yes.

The number on this refers to what?—To the original prescription of Dr. Wheeler's.

What is inside it?—It has the colour and flavour of Fowler's Solution—a smell of lavender.

Besides that prescription which you have spoken to, can you say whether you have supplied arsenic in any form to Mr. and Mrs. Carew during the past three years?—No. The only arsenic I supplied to them was from the 10th of October to the 21st of 1896. I never supplied them with any other in any shape or form, either in powder or otherwise.

What are the papers you have in your hand?—Prescriptions.

His Lordship—How are they marked?—Double alpha, double beta, double gamma, double delta.

Mr. Litchfield—These are marked double delta?

—This is a bundle of prescription for medicines and drugs supplied to the Carew family, in the month of October, 1896.

Which of them contains, if any do contain, directions for the supply of arsenic?—The one numbered 22,876, already referred to, supplied on the 11th October, the second is the arsenic supplied on the 17th October.

Is that a prescription?—A chit from Mrs. Carew.

That has already been referred to, and refers to exhibit psi?—Yes. It is an order, not a prescription.

Will you read it?—"Normal Dispensary—

Mr. Wilkinson—Your Lordship already has it.

Witness—There is another one, that is on the 21st October.

Beside these three—which we have already had—are there any others in that bundle that refer to arsenic?—No.

I now put a bundle into your hands, a bundle marked beta-beta, will you look through those and see if any have reference to the exhibition of arsenic?—They commence on the 31st July, 1896, up till 11th Sept., 1896, and none refer to arsenic. The bundle contains no prescription or memo. that refers to arsenic in any shape or form.

I put into your hands a bundle marked gamma, with one particular prescription marked omega, on a particular date?—I recognise this as another parcel of prescriptions beginning on the 28th February, and running to the 20th October, 1896.

Will you look through and see if any refer to arsenic?—This bundle contains one prescription for Mrs. Carew containing liq. Fowleri. It is a prescription by Dr. Wheeler.

What is its date?—Tenth of October, 1895.

Its number?—16,195. One of the ingredients is liq. Fowleri.

Whose prescription is that?—Dr. Wheeler's.

After that do you find any?—No more; none.

I put into your hands a bundle marked alpha-alpha?—I recognise these.

What is the date of the first?—The twenty-first

January, 1896, closing with the 20th June, 1896.

Arsonic is not contained in any of them.

Mr. Lowder—I wish to show one of these papers

to my client, in order to ascertain a date?

His Lordship—Certainly.

Mr. Litchfield—Do those four bundles contain

prescriptions for the Carew family or its members?

—Yes.

I put in your hands a bundle marked gamma

gamma, what are those?—It commences in July,

1893, ending with the 25th November, 1893.

Look through them and specify by whom they

are made and for whom?—The first is prescribed

by Dr. Munro and is for Mr. Carew; the second is

also by Dr. Munro for Mr. Carew; the third is

the same; the fourth the same; the fifth also; the

sixth the same; the seventh the same; the eighth

the same; the ninth is chit by Mr. Carew himself.

What does it say?—Y.U.C. Normal Dispensary:

Kindly replenish the enclosed box, and oblige yours

W. H. R. Carew, 10th Nov. '93." The 10th is an

order from Dr. Munro to me to send something to

Mr. Carew. The next is a chit by Mr. Carew

himself:—"V.U.C. Normal Dispensary: kindly

replenish, 11th Nov., '93." The next is a similar

chit; this is all.

Do any of these prescriptions contain arsenic?—

No.

Exhibit M.—"Dr. Baelz's prescription"—was

now handed to Counsel.

Mr. Litchfield—Can you tell me if the original

of this is in existence?—No, it is no longer in ex-

istence. This is a copy of a prescription made by

Dr. Baelz.

Now you are asked have you the original?—It

is no longer in existence, so far as I know.

Do you know why the copy was made?—I do

not know.

By whom is it written?—By my assistant, Mr.

Vollbehr.

Did you send it out to anybody?—I did not

send it out.

Do you recognise this?—This is a letter in the

handwriting of Mrs. Carew, addressed to the

Normal Dispensary. "Mr. Schedel. Please send

one tin of Calvert's carbolio tooth-powder; one

bottle of glycerine and cucumber, and have you

got a prescription written by Dr. Baelz, for Mr.

Carew in the summer of last year? I have not

got it, and so if you remember the date will you

kindly make it up and send to Mr. Carew." This

is dated the 10th March, 1894.

In consequence of this did you have the pres-

cription made up?—My assistant made it up. I

did not see the letter then.

Do you recognise this exhibit?—Yes, it is a

bottle that came from my store.

And the label?—Yes, also.

How does it read?—"Carew Esq., a teaspoon-

ful as directed, No. 13,934."—No date.

His Lordship—That is the bottle referring to

that prescription?

Mr. Wilkinson—Yes, my Lord.

Mr. Litchfield—Can you say if you have sup-

plied Mr. or Mrs. Carew with medicine made up

in accordance with one prescription of Dr. Baelz

on more than the occasion?—Yes, more than once.

How many times can you remember?—Twice

in 1895, and four times in 1896.

And the last time in 1896?—Twice in October.

If I remember right, on the 13th and 16th.

Is exhibit Ca. in your handwriting?—Yes.

What is the date of it?—13th October, 1896.

Looking at that memorandum, what could you

say as to the refilling of a bottle?—That the bottle

was refilled.

On that date?—Yes. The date was 13.10.96.

In your store, where is the arsenic kept?—It is

kept in a poison case under lock and key, and

quite in another part of the store from the dispen-

sing counter.

Can any of your assistants get at the poison

without your knowledge?—The key is kept in a

box, and whoever is on duty will know where the

key is used.

Would a medicine made up in accordance with

Dr. Baelz's prescription contain arsenic?—No, it

did not contain arsenic.

What is this?—This is a memo., in the hand-

writing of one of my assistants.

Mr. Lowder, in cross examination—Now, I hand

your exhibit alpha-alpha.

His Lordship—Has the witness been asked if

these bundles contain all the prescriptions he can

find that refer to drugs and medicine supplied to

the Carews.

Witness—These five bundles contain all the

prescriptions made up by me for the Carews, and

all the memos. that have ever passed between me

and the Carew family since 1893; and only one con-

tains arsenic in any form besides those mentioned.

His Lordship—I want to know, out of all these

prescriptions how many times arsenic has

been supplied?—Four times; the first to Mrs.

Carew on the 10th October 1895; the next 11th October 1896, $\frac{1}{2}$ oz. of Fowler's Solution; the next was the 17th October, the same; and the last on the 21st, the same.

Mr. Lowder—Have you got alpha-alpha?—Yes.

On the 15th January, 1896, you prescribed powders for a dog and a pony at Mrs. Carew's request?—Yes.

Just read it out?—It is addressed, "Mr. Schedel. As the powders you sent me had such a wonderful effect on the dog I want to give some of the same kind to a small pony that is suffering from rheumatism. I suppose they would want to be rather larger doses. I am much obliged to you for what you have already done," etc.

In the same bundle is there not an order for the same powders on the 16th March?—Yes.

And on it is written "for a pony" is it not?—Yes. The box was asked to be refilled.

Did you furnish Mrs. Carew on that date with powders for a pony?—Yes.

Now on the 26th June, 1896, you furnished some embrocation for a horse, did you not?—Yes, a bottle of embrocation for a horse.

Now look at omega, under date 4th March, is that meant for 1895?—Yes, for 1895.

That is an order for nitre and bicarbonate of potash?—Yes.

For a pony?—Yes.

In Mrs. Carew's handwriting?—Yes.

Now on the 8th June, 1895, what is that?—Dry ointment. Mrs. Carew wrote it, and part reads that she wanted the ointment "to put on an open sore at the side of a horse's mouth; caused by the rough treatment of natives by a rope, and has been a running sore. I tried boracic acid but it made it worse, E.M.H. Carew." I supplied dermatol and vaseline.

In all those medicines furnished was there any arsenic?—No.

Can you recollect whether you supplied Mrs. Carew with powders for the pony in August or September, 1896?—I can't recollect. I supplied them in 1895.

There was no arsenic in them?—No.

On the 12th October you will find an order for Mrs. Seigel's Syrup?—Yes.

On the 13th Oct. 1896 you find an order for Dr. Baelz's mixture?—Yes.

And on the 16th the same?—Yes.

Mr. Wilkinson—Was there any possibility that in any bottles of Dr. Baelz's mixture that any arsenic could have been put in at your store?—The possibility is entirely precluded.

Mr. Wilkinson—About to-morrow, my Lord; it is Saturday.

His Lordship—I am prepared to go on. What does Counsel for the defence say?

Mr. Lowder—I think, my Lord, that my client would like a rest to-morrow.

His Lordship—What do the jury say?

Mr. Davison—I think, my Lord, that it is a question for yourself and the Counsel to decide.

His Lordship—I am ready to go on, but Counsel for the defence says that his client should have a rest.

Mr. Wilkinson—I think so, too, my Lord.

His Lordship—Very well, then we will rise at half-past twelve and try and get as much done as possible in the morning.

The Court was then adjourned till to o'clock next morning.

SATURDAY, January 9th.

The attendance of the public was again very scanty when the Court resumed at 10.15 a.m. Among those present within the barrier to-day were Mr. Consul John Carey Hall, and Mr. Consul Longford.

Mr. Wilkinson—I regret, my Lord, that I have to take a part of my evidence a little out of order. I now call Mr. John Carey Hall.

Mr. John Carey Hall—I am prepared to take a conscientious affirmation, not an oath.

His Honour—I will send for the necessary form.

Mr. Wilkinson—In the meantime I may explain to your Lordship the object of introducing this evidence; it is for the purpose of producing the statement made by the prisoner before the Coroner's inquest; and in support of my right to prove it, I refer your Lordship to *Wakley v. Cooke*. I will hand the cases to your Lordship.

His Lordship—Very well.

Mr. Wilkinson—In the first instance, I will show you what are the duties of a Coroner in cases where a witness is under suspicion (19 *Law Journal*, p. 91), and I refer to page 93, where the judgment is given by Baron Parke. The Lord Chief Baron had directed the jury that it was the common practice of coroners not to examine parties whose evidence might incriminate themselves, and as far as his experience went he believed this to be so. Learned Counsel then quoted the judgment in this case,

—*Wakley v. Cooke*, 19. L.J. Exc. pp. 91-93. The judgment proceeds:—"Now if the Chief Baron had used this language, it does not follow that it would have amounted to misdirection, in point of law, but in fact he did not use the language, but told the jury that the practise of excluding certain parties had been adopted by the Coroner for Middlesex in previous cases. Now it was impossible to say that this act of Mr. Wakley was committed for the purpose of raising an imputation of murder against the parties who were so excluded. Without doubt the practise is incorrect and would be discontinued for the future. It is manifestly contrary to law. It is not right to assume that any man is guilty, and on that account to exclude him from giving evidence before the Coroner."—So much for the duties of a coroner. Then I will refer your Lordship to *Regina against Ed. Cooke*.

His Lordship—That I am familiar with.

Mr. Wilkinson—You will find it in 42 *Law Journal*, Privy Council Cases, page 45, and there Sir R. T. Collyer delivered the judgment of their Lordships. It refers specially to the case of *Regina against Sarah Chesham*, quoted by Russell on "Crime." It reads:—"Where a prisoner was indicted for administering poison with intent to murder, the coroner stated that he had held an inquest on his body, which was adjourned, and that the prisoner was present as a witness on the second occasion: no charge at that time had been made against her. She made a statement on oath that the coroner took down in writing."

Lord Chief Justice Campbell, after consulting Baron Paice, admitted the statement. "His Lordship referred to that with approval and proceeded from these cases," to which others might be added. "It results, in their Lordship's opinion, that the depositions on oath of a witness legally taken can be advanced against him should he be subsequently tried on a criminal charge except so much of them as consists of answers to which he has objected as tending to criminate him, but which he has improperly been compelled to answer. The exception depends upon the principle *nemo tenetur se ipsum accusare*, but does not apply to answers given without objection, those answers being voluntarily." Mr. Wilkinson (to witness)—Your name is John Carey Hall?—Yes.

His Lordship—I understand you desire to make an affirmation, and not take an oath. It is my duty to ask you whether it is because you have no religious opinions at all, or whether it is that the taking of an oath is contrary to your religious opinions?—The taking of an oath is contrary to my religious opinions.

The witness then took the form of affirmation prescribed in such cases.

Mr. Wilkinson—In the month of October last and up to a date subsequent to the 6th November, were you Her Majesty's Consul officiating at Yokohama and Acting Assistant-Judge of this Court?—I was.

You are now Her Majesty's Consul at?—At Hyogo and Osaka.

Then I need not ask you whether you are a British subject?—I am.

In your capacity of Acting Assistant-Judge, you acted as Coroner?—I did.

And held an enquiry on view of the body of the late Walter Raymond Hollowell Carew?—I did.

That enquiry began on the 24th October and continued till the 6th November, both dates inclusive?—It did.

I believe that the prisoner at the bar gave evidence at the inquest?—She did.

Was that evidence given voluntarily, entirely voluntarily?—It was.

Were any of the answers elicited by questions to which she made any objections whatever?—None.

Was the prisoner at the bar present during the whole of the inquest, or was she absent at any period, and if so, when?—She was present at the whole of the inquest held at the Royal Naval Hospital in the morning; she was absent when Miss Jacobs gave her evidence held in this Court in the afternoon, and during part of the time when her brother, Mr. Porch, was giving his evidence, entering the Court just as he was finishing his evidence, to the best of my recollection.

His Lordship—That was on the 24th of October?—Yes. She was absent during Miss Jacob's examination and part of her brother's.

To Mr. Wilkinson—The inquest was opened at the Royal Naval Sick-quarters, usually known as the Royal Naval Hospital, Yokohama, on Saturday, the 24th October.

You produce the inquest-book?—Yes.

You are able to say, by reference to that book, that Dr. Wheeler, Dr. May, and Dr. Todd were examined at the first sitting?—They were.

To his Lordship—The inquest was adjourned

after the taking of Dr. Todd's evidence, after the taking of a formal requisition from the jury.

To Mr. Wilkinson—Miss Jacob and Mr. Porch were the first two witnesses taken in the afternoon.

After Mr. Porch's examination was concluded, whose evidence was next taken?—Mrs. Carew's.

Before I ask you to read that evidence, I will ask you another question. The enquiry was adjourned from the Royal Naval Hospital to this Court-room, was it not?—Yes.

And all subsequent proceedings, or sittings, were held in this room?—They were.

I believe Mr. Lowder appeared to watch the proceeding on behalf of prisoner?—He said that he appeared to watch the case on behalf of Mrs. Carew.

I will refer to the prisoner as Mrs. Carew afterwards?—Mr. Lowder appeared either while Miss Jacob or Mr. Porch were giving their evidence. He said, "I appear to watch the case on behalf of Mrs. Carew," and subsequently he informed me, "I have not yet been instructed in the case," this was when I gave him an opportunity to put questions to the witnesses.

Was he present during all the subsequent proceedings of the inquest?—He was.

Was any charge made against Mrs. Carew until after the conclusion of the inquest?—No charge was made against Mrs. Carew until after the inquest was over.

Now, as you have told us, after the examination of Miss Jacob and Mr. Porch had concluded, Mrs. Carew gave evidence: I shall ask you to read that evidence.

Mr. Wilkinson (to His Lordship) I propose now, that Mr. Hall should read the evidence. I suppose you have no objection to the putting of the printed copy into the hands of the jury.

His Lordship—What does Counsel for the defence say?

Mr. Lowder—I have no objection.

His Lordship—It would be the most convenient way, I think, because if all this statement is read to the jury I fear that they will not retain any clear or adequate idea of the whole of it.

Mr. Lowder—The only part that I object to is the last paragraph.

His Lordship—That does not form part of her statement and can be struck out.

The jury were then supplied with copies of the printed statement.

Mr. Hall then read the statement as given by Mrs. Carew at the inquest from beginning to end, being asked questions here and there.

Mr. Hall, reading—*Edith May Hollowell Carew, sworn*—My husband had been ailing for some weeks past, but was not taken really ill till last Thursday, when he came home and said that Dr. Wheeler had ordered him to take Vichy-water, to regulate his diet, and to keep as quiet as possible. He had had several attacks of liver within the last eight years and I never thought anything of it. He didn't get any better on Saturday or Sunday. On Saturday he expressed a wish to go to Kamakura till Monday. I wrote to Dr. Wheeler and asked him if he could do so. Dr. Wheeler, after seeing him on Saturday, said he was afraid of his increasing the chill on his liver and advised him not to go. He didn't get any better, and in fact, became worse, and I had on Monday to send twice for the doctor, also on Tuesday. At 11 o'clock on Tuesday, Dr. Wheeler asked me if I had any objection to his calling in Dr. Todd as he would like to consult him on the case. Dr. Todd gave the evidence this morning which I entirely agree with. I was present at the consultation. Dr. Wheeler told me that afternoon that my husband was to have nothing but milk and soda and no stimulants. I cannot recollect whether it was before Dr. Todd's visit or after that my husband expressed a wish that he should be given his usual dose of arsenic. I may state that he has been in the habit of taking arsenic in small quantities for some time. I don't wish to state exactly how long because I don't know—some months. I told him that as Dr. Wheeler was treating him, I thought it would be better not to take any medicine on his own account. However, he insisted and begged me to give him some, and I went to the cupboard where he kept his medicine and only found an empty, or almost empty, bottle. I remonstrated with him a good deal on taking arsenic. Especially in his then state. He then told me that when I was in England in '93, he had been obliged to consult Dr. Munro, and later Dr. Baelz, upon a disease which he did not wish to mention to Dr. Wheeler. I do not know whether Dr. Munro prescribed for him at that time, but later Dr. Baelz did, and I have had his prescription made up for him from time to time. He told me that when he was suffering in such a way arsenic was the only thing that gave him any relief. On Tuesday evening he gave me a slip of paper, which I

have, on which was written 1 bottle Fowler's Solution of Arsenic, 1 bottle Sugar of Lead. I told him at the time that I should not send for the things, but if I did eventually I should tell Dr. Wheeler. On Wednesday he again spoke to me of the great pain he was in, and told me that if I did not get him the medicine he would get it himself by other means. I wrote out on another piece of paper the order he had given me and gave it to my governess and asked her to get it for me. When she returned with the bottles I gave them to my husband, sealed in the paper in which they were received, and told him that I should not allow him any of the mixture at the time, as he was taking medicine from Dr. Wheeler. Within a short time I thought he was not so well, and wrote to Dr. Wheeler telling him I should like to see Dr. Baelz. Dr. Wheeler gave Dr. Baelz's reply in his evidence this morning. He came to see my husband again about 6.30 or 7, and after seeing him, said he thought he was slightly better as he was retaining his food, but that as he had such a restless night he thought it advisable to give him a hypodermic and left with me two or three cocaine tablets, one of which he told me to give him in a little milk, soda, and brandy, about eight o'clock. During Mr. Carew's illness we experienced great difficulty in getting him to take any medicine. Several times I had to try various means of getting him to take it. I mixed it up in barley water, in milk, and lime-squash. Since Thursday morning I gave him no medicine. The hypodermic Dr. Wheeler gave him did not have the desired effect. Towards nine o'clock he became delirious and very excitable. Dr. Wheeler had told me he was dining out that night, so I went round to the house where he was and told him that my husband was very excited and unable to sleep. I was absent from the house about half an hour. When I returned my husband was asleep and apparently quite quiet. Dr. Wheeler came about eleven that night and seemed to think he was better. He slept only a very short time, and was very restless and complained of great thirst. Dr. Todd had advised my giving him at short intervals small pieces of ice. He complained of great pains in his back and side, and I called up the servants and had the fire lighted and applied hot-water bottles to his feet and side, as I saw that his temperature was very low. At five Thursday morning I did not like certain symptoms which I saw, and I sent for Dr. Wheeler. He came at seven and gave my husband a cocaine tablet with a little brandy, milk, and soda and a draught of hydrate of chloral to send him to sleep, which had no effect. A night I felt so anxious that I wrote to Mr. Parsons, who came round shortly afterwards. I told him that I did not share Dr. Wheeler's opinion as to the satisfactory progress of the case and that I insisted on having some other opinion. Mr. Parsons promised to see Dr. Wheeler at once. He saw Dr. Wheeler and came back within a quarter of an hour. His words to me were: "Do not alarm yourself unnecessarily. Dr. Wheeler says he is quite competent of his case."

Mr. Wilkinson—Should not that word "competent" be "confident"?—No, competent. I recollect that perfectly well.

Witness reading—From nine on Wednesday night my husband was never conscious for more than a few moments at a time, and I saw he was getting weaker. Dr. Wheeler came again about twelve. He just looked at my husband, who was more or less unconscious at the time, and said, "I have arranged to have him taken to the hospital; he is only going from bad to worse." During Thursday I gave him some beef tea, some milk and soda with a little brandy, according to Dr. Wheeler's instructions. On my going up to his room after tiffin he was complaining of great pain in his chest and of feeling very sick, but being unable to be so. As I thought at the time it might be indigestion, I gave him a little hot water, but it had very little effect. Dr. Wheeler arrived about this time and he was taken to hospital, as this morning's evidence has told you. He was perfectly conscious when he left the house, and although I knew at the time he was admitted into the hospital, he was seriously ill, I had no idea of there being any imminent danger. Several people whom I saw I told I thought he was going on all right, and it was a great shock to me to learn at five o'clock that he had passed away. Earlier in the day my brother told me that Dr. Wheeler thought or knew that he was taking arsenic. I attached little importance to his remarks at the time, as knowing from past experience that my husband had been in the habit of taking arsenic, it never occurred to me to be of any importance. After I had heard of his death and had been told that a *post mortem* would be held, I remembered the fact that he had ordered, and that I had given him, a bottle of sugar of lead. I went upstairs and opened the drawer where he had put the bottles when

I gave them to him and found both bottles missing. I at once set for Wheeler, but he did not come till eleven. I told him of the facts of obtaining and giving the bottles, but he didn't, at the time, say anything beyond:—It is a pity I had not known sooner. However, the *post-mortem* will decide everything to-morrow. I subsequently ascertained that on or about the 20th Mr. Carew gave a written order to my *amah* and she sent it to Maruya's and the medicine was delivered to him. Last night I thought it necessary to make a thorough search for the missing bottles and, after a good deal of trouble, I found them at back of the table, on the floor, which stood by the corner of his bed. Without measuring I should say that there are about six to eight drops of arsenic left in the bottle and about half the bottle of sugar of lead. At the time he ordered the arsenic through me, when he ordered the sugar of lead I told him there was a small quantity in a bottle in the stable which had been used some time ago as a lotion for my pony, and I asked him what he wished to do with it. He told me that some years previously he had used it with great effect as an external application for congestion of the liver, and I never thought of either of the two bottles until yesterday. I should like to contradict the statement made by Dr. Wheeler this morning that Mr. Carew was invalided from the Straits on account of malarial fever; to my knowledge he has never had it. He was obliged to leave the Straits on account of nervous depression arising from climate and over-work. My husband and I did not always live on affectionate terms. Have had unpleasant discussions lately on a certain point.

Mr. Wilkinson—I must now interrupt you. Can you say whether any of the answers that follow were given in answer to questions put by the jury?—At the conclusion of Mrs. Carew's statement one or two of the jurymen put questions to her. I myself abstained from putting any questions to her.

And did Mr. Lowder have an opportunity of putting any questions?—Mr. Lowder had an opportunity: I asked him if he wanted to put questions to the witnesses, and he asked what questions he liked.

His Lordship—Do the questions appear on the record?

Mr. Wilkinson—No, my Lord. It is suggested by Mr. Lowder, Mr. Hall, that that part of the statement beginning, "When I sent for the arsenic," and running on to "I don't think Dr. Wheeler had any suspicion that he was taking arsenic," was elicited in answer to questions by jurymen?

Witness (to his Lordship)—My procedure was to let her own Counsel put questions first to her. The majority of the questions were put by the Counsel for the accused.

During the first day?—Yes. The majority of the questions were put by her own Counsel, and I did not give the jurymen an opportunity of doing so until after he had finished.

His Lordship—Did they never interpellate any questions?

Witness—If they interpellated I allowed them. But it was after Mr. Lowder had finished his questioning that I formally invited them to put questions. I myself abstained from asking her any questions.

Now you are asked to state whether the statement beginning, "When I sent for the arsenic," and running down to "I do not think Dr. Wheeler had any suspicion that he was taking arsenic"—was in answer to questions put by the jury?—I believe that was in answer to questions put by Mr. Lowder. But I have not read that yet.

In answer to Mr. Wilkinson, witness said—I mean when I say that the majority of the questions were put by Mr. Lowder, that he put the majority of the questions to all the witnesses, not to Mrs. Carew alone. He put such questions as he thought fit. I refrained from putting any questions to Mrs. Carew.

His Lordship—Then I have it that the suggestion that the statement beginning, "When I sent for the arsenic," etc., down to the "any suspicion he was taking arsenic," was elicited by questions put by the jury, is correct?—I believe that they were put by the jury. I remember Mr. Lowder sitting down at the place where the words, "we had unpleasant discussions lately on a certain point" occur.

Reading resumed—When I sent for the arsenic I didn't think he would take it or that it was absolutely necessary. I did it to please him. When the note was sent, I did not think he was very ill, and knowing he had been in the habit of taking arsenic I didn't think it would do him any harm. I was not deeply anxious about him at the time. He did not become seriously ill till Thursday. It would have been wiser to have told the doctor. I don't think Dr. Wheeler had any suspicion he was taking arsenic. I have a slip of

paper written by my husband in pencil, which I can produce. I gave the bottles sealed to Mr. Carew, and I didn't see them again till afterwards. It is not true that I purchased any medicine myself at Maruya's. I didn't awake to the fact that Mr. Carew was so ill till Thursday because he was walking about that day and seemed no worse than he had been on previous attacks of liver: in fact, he had rallied so much on Wednesday night that when Dr. Wheeler came to see him, my brother, Dr. Wheeler, my husband, and myself were talking and laughing over very trivial matters.

(Signed) EDITH MAY HALLOWELL CAREW.

(Signed) J. C. HALL, Coroner.

Adjourned till Monday, Nov. 2nd, at 10.30 a.m.

(Signed) J. C. HALL, Coroner.

Mr. Wilkinson—Was this evidence read over to Mrs. Carew and signed by her in your presence?—It was.

His Lordship—Was it read over to her that day?—Yes, it was read over to her that day.

Mr. Wilkinson—That is her signature and your signature?—Yes. They are hers and mine.

That evidence was given on the Saturday, Oct. 24th?—Yes.

And then the enquiry was adjourned until Monday, the 2nd of November?—Yes.

Did she give evidence that day?—No, she gave no evidence that day.

Then the inquest was adjourned again till Wednesday, the 4th Nov.?—Yes.

On Monday, the 2nd Nov., when you resumed the inquiry, I believe Mr. Lowder appeared and applied to you to allow prisoner to be recalled and give further evidence, and he applied that she should be allowed to make her statement before that of any other witness?—He did.

I believe you suggested that it would be more desirable that she should give her evidence after the other witnesses had given theirs, and declined to hear her?—In that order: until after some other witnesses. I declined to hear her in that order for reasons that I then stated.

And I believe that Mr. Lowder, on that occasion, said that he appeared with Mr. Walford on behalf of Mrs. Carew?—He did.

And that Mr. Lowder and Mr. Walford appeared on her behalf and were present during the rest of the proceedings during the inquest?—They did. Mr. Litchfield, on that occasion, also stated that he appeared on behalf of the Crown.

And during the remainder of the inquest, Mr. Lowder put questions to most of the witnesses, he had an opportunity of putting questions to them?—Yes, he did; he had.

Now I propose to prove some exhibits in proper order.

Was there a witness examined during the enquiry called Hayashi Shishichiro?—There was.

Was such a witness examined on the second of November?—He was.

Did he produce exhibit A?—He did. It is a paper—a prescription. It was produced by Mr. Litchfield and shown to witness.

Would you please read that?—"Mr. Maruya."

His Lordship interrupted.

Mr. Wilkinson—I cannot now have the exhibit read, as it was produced by Mr. Litchfield and shown to the witness Hayashi.

Witness—This paper is exhibit A, was so marked by me, and is the exhibit referred to as exhibit A. There was also a certain witness examined called Joseph Schedel?—There was.

He produced?—A list, five bundles of prescriptions, and one small paper.

Would you look at them in the order in which they are marked, would you look at exhibit B?—That is an envelope.

Are those the exhibits marked C?—Those are the exhibits put in that day.

Will you state what your marking of the exhibits is?—The mark on the envelope is "Carew Inquest, Exhibit B." This contains exhibits Ca, Cb, Co, and is afterwards countersigned.

Will you look for exhibit Ca?—There it is.

That is correct?—Yes, correct.

Those marked with particular letters are those that were read and put in at the inquest?—Yes.

The envelope was marked as being a convenient way of keeping the exhibits together.

His Lordship—Can this not be got over by proving the custody of the documents from the time they were produced at the inquest till they were produced before the magistrate, and then till they were shown to Mr. Schedel?

Mr. Wilkinson—Yes, my Lord, but I wish to avoid any mistakes.

Witness—I recognise Ca and Cc, as being marked in my own handwriting.

Is this Cb?—Yes.

Those three exhibits, Ca, Cb, and Cc, were specially referred to at the inquest?—They were, and were especially marked in my handwriting.

Do those 5 bundles appear to be the same as those put in, so far as you know?—They are. And this list, marked Cb-b, is that the one put in?—Yes.

From the 2nd of Nov. on which these two witnesses with others were examined—

His Lordship—One moment, the small paper?

Mr. Wilkinson—Yes. Can you remember whether this M, is the piece of paper referred to by him in his evidence?—This is the small piece of paper shown to Dr. Baelz and recognised by him as a copy of his prescription.

Mr. Wilkinson—My learned friend suggests that this piece of paper was one produced by him and shown to the witness Schedel?—Yes. I believe it was.

After this the enquiry was adjourned till Wednesday, the 4th November?—It was.

On Wednesday, the 4th November, I believe that Mrs. Carew was the first examined?—No.

His Lordship—Was she the second?—No.

Mr. Wilkinson—There were three witnesses examined before her?—I consider only two, as I did not examine the small Chinese boy. Then she gave further evidence tendered by her own counsel.

With reference to your putting questions to Mrs. Carew, it appears that "the Court" put a question to her, did you ask her a question that day?—Yes. Before she began her statement I asked her if Dr. Wheeler had ever prescribed arsenic to her husband in any shape or form, and then she answered, and after that she went on with her statement. I think I then asked her, "Under what circumstances did you obtain Dr. Wheeler's prescription," she answered that, and then proceeded with her own statement, beginning, "I should like to state a conversation," etc.

Mr. Wilkinson—Will you read on please.

Witness resumed—Wednesday, November 4th, 1896. Edith May Halliwell Carew:—By the Court—Dr. Wheeler never prescribed arsenic for my late husband as far as I am aware. Dr. Wheeler prescribed for me for malarial fever on October 10th at the boat-house, and it was under these circumstances that the first bottle of arsenic who obtained from Schedel. I should like to state a conversation which took place the week before between Dr. Wheeler and myself with reference to my fever. I have no recollection of the date: it must have been the first week in October that I told Dr. Wheeler I was suffering again from malaria, that the large doses of quinine which I had been taking, and was taking at the time, had lost their effect, and I should like him to prescribe for me again. He then suggested my going on with the arsenic which he had prescribed for me, and which I had taken regularly for three months in October, November, and December, 1894. During that conversation I told him that I did not think myself that the arsenic agreed with me, although it undoubtedly benefited the malaria. I cannot remember that very much more was said then. But on the 10th October, at the boat-house, Dr. Wheeler said he was sorry to see that I had not got much benefit from my visit to Miyanosita. I am not prepared to state whether the suggestion came from Dr. Wheeler or myself that he should then and there write me a prescription of the same kind as that I had taken on previous occasions. He tore a piece of paper off the regatta programme and wrote the prescription which was produced in Court on Monday. I myself did not take the prescription to the Normal Dispensary, as the day on which the prescription was made up was Sunday, but I quite see how the mistake occurred in Mr. Carew's name being on the label, for I sent my own prescription on Sunday with a prescription written by Dr. Wheeler for Mr. Carew, on that evening.* The words, "on that evening" were added by the witness's desire when her evidence was read over to her on the 5th November. To Mr. Lowder:—On the 24th, when I came to this Court, I had come straight from the funeral of my husband. I had not heard Miss Jacob's evidence, and I was then unaware that any suspicion had been directed against myself in connection with my husband's death. On ascertaining that fact I asked you to write to the Coroner to be allowed to supplement my evidence. When I said at the first sitting of the Inquest that he told me he had been obliged to consult other doctors while I was at home, I should have said "again." The reason he then mentioned it was because he feared that during his illness I should tell Dr. Wheeler of the fact. On the 20th, when my husband had a conversation with me and gave me the piece of paper, I remonstrated with him a great deal. In the evening I recollect writing to Maruya's for a bed-pan. I cannot say that I have any recollection whatever of writing for the arsenic, but I must have done so, as my writing is conclusive evidence. The amah brought me on Tues-

day night the parcel which was received from Maruya's. She gave it me as Dr. Wheeler and I were leaving the bedroom, and I told her to put it on the chair in the passage upstairs. The bed-pan was not taken out of its wrapping till the following morning. I am positive that I had no idea that arsenic had come into the house that night, because I have no knowledge whatever of ever seeing the bottle which is said to have contained arsenic. I wrote a chit to Maruya's shortly after I sent for the bed-pan for a bottle of chlorodyne. The certain point on which I said my husband and I had lately had unpleasant discussions was money matters. I have of my own £500 per annum, and have had ever since my marriage, that is, £100 allowed me by father and £400 of my own. This money has been sent out to me yearly, arriving in June and December. Up till last June the bills were made out in Mr. Carew's name. Last June a remittance of £400 arrived, I have reason to suppose, as usual. Prior to last June my husband had kept the sum at his own account and, up till about a year and a half ago, he would give me money when I required it. But at my suggestion he opened an account for me at the Chartered Bank. Besides giving me a monthly allowance for household expenses he would, on receipt of the half-yearly remittance from England, deposit a sum in my name varying from five to eight hundred dollars, or more or less what I asked for. The remainder was understood to be used by him at his own discretion. The arrangement about the bank began one and a half years ago, and went on till June last. Last July I first spoke to my husband on the matter of the remittance and expressed surprise that the money which I knew had been sent from England, had not yet arrived. I do not remember his answer at the time, but, on my repeating it some days after, he told me the money had come, but that he was then unable to let me have any. I repeatedly had to ask him to explain why he had such an immediate want for that money, but as he could give me no satisfactory answer, I was obliged to make other arrangements respecting the way in which the remittance was to be sent out from home. First of all I consulted Mr. Dickinson, a friend of the family, as to the best way I could do so, my object being to have the control of remittances in my own hand, and as Mr. Dickinson knew and had always known more about my affairs than most people here, he wrote home for me sometime during the summer and subsequently advised me to go and tell Mr. Jackson of the bank of my wishes and to get him to help me in the matter, which he did. That was absolutely the only controversy I had with my husband. It made no difference whatever in our marital relations. My husband had no private fortune. Recently he expressed a wish to me to buy a house. I agreed that it would be desirable, with the consent I should first have to get from my father. I wrote to my father for it. He wrote to me to the effect he would be willing to let me have £2,000 to invest in house property if Mr. Carew would give a satisfactory report on the house, also provided the title deeds should be made out in my name. Upon that I entered into negotiations through Mr. Biad for the purchase of a house, with the result that he arranged a purchase of \$13,000. The bargain has only been relinquished in consequence of my husband's death. My husband was the manager of Yokohama United Club. He recently expressed a wish to give up this post and go into business; this was some eight or nine months ago. He asked me to help him. At that time he had no special line of business in view. He had repeatedly expressed his wish to me and others that he could leave the Club and go into business in Yokohama. I wrote to England to an uncle of mine, who is also one of my trustees, and asked him if I could realize a sum of money which I have in my own right to enable Mr. Carew to go into business. His reply was that he thought it was not advisable to realize any of my money, but there was no harm in telling me he had left me money in his will, and that if it would be any service to enable Mr. Carew to go into business and provided he (my uncle) approved of the investment he was willing to advance the money at once. The sum was not definitely stated, but would be roughly from £8,000 to £10,000. Mr. Carew at once made enquiries and finally decided he would like to go into a silk firm here. But for my husband's death he would have done so to the full amount of what my uncle was prepared to advance. I have every reason to believe that arrangement was settled. As the head of the firm was not in Yokohama, it was necessary to write to him; his reply had not been received, but his agent or partner here fully approved. I was married in the early part of 1889. My parents did not approve. After my marriage my husband and I lived together on terms of affection till the time he died. Nothing whatever

occurred to create dissension except what I have mentioned. I was always very frank with him and he with me on all subjects. Soon after our marriage he mentioned to me the name of Annie Luke. She resided in the West of England. I in Somersetshire, she in Devonshire, I believe. At that time he told me very little about her, beyond that he had seen a great deal of her. The conversation at the time made so little impression on me. As far as I can remember he gave me to understand he had been amusing himself with her prior to marrying me. This aroused no feeling of jealousy in my mind, and we never mentioned her name between us again till quite recently—last month. He also told me that prior to his marriage he had begotten children, who were still alive. For one of these children I provided support. That did not create any dissension or any jealousy in my mind. I should like to add that the circumstance of which Mr. Lowder is speaking was in the Native States of Singapore, and I never knew of this till some four months after my marriage. Soon after our marriage I learned that my husband was in the habit of taking arsenic—about nine months after. We were then residing at a place called Sungai Ujong in the Native States. I have no idea why he took it. He had suffered from ill-health for a great number of years, which illness obliged him to leave the Straits fifteen months after my going there with him. He was in the Government employment and would have been entitled to a pension if he had remained another eleven months. He had to leave in consequence of illness. The illness was called nervous depression but his illness more or less had puzzled his medical attendants, but they put it down entirely to the climate. As he has very rarely suffered from the same complaint since he left, I imagine that to have been the cause. I know arsenic had been prescribed for him in the Straits by the head doctor of the Singapore hospital; I think Dr. Simon by name. I have no recollection of the prescribed dose, but, on his return from Singapore, I should suppose he was taking four or five drops three times a day. I have no reason to suppose at the time he was taking more. From that time, periodically, till the day of his death he took arsenic without its being prescribed for him. He was most unwilling to call in a doctor when unwell. With the exception of his having been obliged to consult Dr. Munro and Dr. Baelz he has never consulted any doctor since his arrival in Japan without my sending for the doctor myself. I sent for Dr. Wheeler on the occasion of his last illness. I wrote early on the morning of the 15th. I am most positive he would not have done so otherwise. I wrote and asked the doctor to go and see him in the Club, which he did. With reference to medicines prescribed by doctors, he has frequently told me that he never had, and never would believe in, doctors. He was in the habit of at various times trying a good many patent medicines on his own account. Shortly before his last illness he was taking Mother Siegel's Syrup. I was frequently in the habit—every day during the early part of our married life—of giving my husband doses of arsenic: I always measured it out in drops. Latterly he has always helped himself, except in the Straits, where I gave him the arsenic myself. Latterly he would use arsenic without measuring it; has been in the habit of doing so for some time. It was such a habit of his to take arsenic as a pick-me-up that he would pour a small quantity out, add water and drink it.* * When the evidence was read over to the witness on November 5th, she desired to add at this point:—"But I do not wish to say that I have ever seen him take it in the house more than once a day, which was always after breakfast."

Mr. Wilkinson—This part of Mrs. Carew's evidence was read over to her on the following day, was it not?—Yes.

And the words marked with * were added at her request?—Yes.

His Lordship—Is not this a suitable opportunity to adjourn? I am willing to go on in the afternoon, if you wish, but it is now nearly half-past twelve o'clock.

Mr. Wilkinson—I was about to suggest it, my Lord, as I shall now have to introduce further exhibits, and those will take some time.

His Lordship—Then you will mark the sentence where we break off. The jury had better not read any further.

Mr. Davieson—I think if we leave our copies in Court, marked, it will be at right.

His Lordship—Yes, they will be safe there.

Mr. Wilkinson—Then Mr. Hall, we will not go on any further to-day.

His Lordship—The Court now adjourns till Monday at 10 o'clock in the forenoon.

MONDAY, January 11th.

His Lordship took his seat at twenty-five minutes past ten. The Court Room was then quite full, and many spectators had to content themselves with standing room. The audience was by far the largest since the first day of the proceedings.

Mr. Wilkinson called Mr. John Carey Hall, who continued to read the evidence given by Mrs. Carey at the Coroner's Inquest.

He always kept a small bottle on the dining-room sideboard. Bottle produced (Exhibit D) and recognised by witness.

The bottle Exhibit D was shown to the witness and he recognised it as the bottle produced at the Inquest.

Witness, continuing, read:—There has never been any label on it. Latterly he used to take it directly after breakfast, consisting generally of egg-nog. I have made an experiment with one ounce bottle by filling it with water and pouring it out drop by drop, and I have found one ounce bottle would contain for him about five doses. On the last occasion I was giving evidence, I spoke of three bottles, two behind the bed and one where my husband kept his medicines. (Three bottles produced.) First labelled sugar of lead, Z.P. Maruya & Co., Dispensing Chemists, Bentendori (Exhibit E.). The second, 1 oz. Fowler's Solution of Arsenic, Z.P. Maruya & Co., Dispensing Chemists, Bentendori (Exhibit F.).

[Exhibit G. here was handed in.]

(Signed) "J. C. H." I recognise the exhibits produced. Exhibit E. is first labelled sugar of lead, then Z.P. Maruya & Co. Exhibit F. is labelled, 1 oz. Fowler's solution of arsenic. Exhibit G. bears a label in writing Fowler's Solution, Poison. There is no name on the label.

Mr. Wilkinson here took the bottle and examined it.

Mr. Hall, continuing, read:—Bottle found where my husband used to keep his medicines, produced and recognised. Another bottle found in small cupboard produced and recognised. (Exhibit H.) Cork of Exhibit H is said to show same mark as Exhibit F, bearing Maruya's label. I have no knowledge of the purchase of the chloral hydrate; have never seen it or similar bottles in the house before.

Exhibit H. was then produced and recognised by Mr. Hall. Chloral hydrate, with a Japanese label containing Japanese characters.

By the Court—Where it says "Cork of exhibit it said to show the same mark as exhibit F." that is not the witness's statement is it?

Mr. Hall—It was taken down as a remark from her Counsel.

Mr. Hall, continuing, read:—The prescription sent to Schedel's is dated October 11th prescription 22875. I recognize it as the prescription I sent that day with the other 622876. The address on the back is in my handwriting. The date was put in afterwards, but was not dated at the time. I never noticed that fact till I heard it in Court on Monday. (Exhibit I, original bottle sent to me on 11th October. It was addressed to my husband.) Exhibit I is one of the bottles I sent to be refilled on the 17th. It is addressed to my husband. It is the same as that in reference to which I wrote to Schedel on the 21st, saying that the old bottle was broken and asking to have it refilled. Exhibit J is the bottle I then got. Exhibit I was shown to Mr. Hall, who recognised it as the bottle produced at the Inquest bearing label, Normal Dispensary, Yokohama, 77, Main Street, Carey Esq., 5 drops in water after meals, and labelled below in large letters poison. I see it is numbered 22876 on the bottle 22875 in my notes.

The Court—It is the one of which she says "The prescription sent to Schedel on the 17th, the address on the back is in my handwriting."

Mr. Wilkinson—Mr. Moss, will you please produce prescription 22875.

The Court—That is the prescription for the podophylin powders on the 11th October.

Mr. Wilkinson here presented prescriptions 22875 and 22876 to Mr. Hall, and said: you have suggested that there is the possibility of a mistake in your notes. Whichever number is taken the statement would be correct. Can you say from seeing them which was referred to?

Mr. Hall—It is evident that there is a *lapsus penae* in my notes.

Mr. Wilkinson—I would suggest that your notes are quite correct. The prescription sent to Schedel's was dated 11th October.

The Court—I have only yet seen exhibit alpha. Mr. Wilkinson—There is the prescription C. A. with it, and the prescription written on the back of the programme by Dr. Wheeler. After it 22875, is that it? There is the address on the back of 22875, and there it none on the back of 22876.

Mr. Hall—That is what is referred to.

Mr. Wilkinson—Then 22875 is correct.

The Court—I recognise that alpha was not produced at the Inquest.

Mr. Wilkinson—It was shown and referred to as the prescription 22875. It was sent with 22876. There is a little confusion about the date on which it was sent.

The Court—The prescription for the arsenic was not dated nor even signed.

Mr. Wilkinson—It was initialled.

The Court—The date was not put in nor the name for whom it was supplied. The date was put in afterwards by the chemist. That is exhibit G.A., Dr. Wheeler's prescription for Mrs. Carey. Mr. Wilkinson—Perhaps Mr. Hall had better say that?

Wilkinson (to Mr. Hall)—You will see there the words that "the date was put in afterwards, but it was not dated at the time." Up till this you had been speaking of 22875, and it seems clear, upon looking at it, that the absence of date is upon exhibit C.A., Dr. Wheeler's prescription, and that is the one which is referred to as having been dated afterwards.

The Court—Mr. Wilkinson, that is not quite so. Mr. Wilkinson here asked Mr. Moss to hand him the list of exhibits put in at the inquest. The list of exhibits was handed to him and he read exhibit I, the original bottle.

The Court—What was exhibit I, what did it contain?

Mr. Wilkinson—The label reads "4 or 5 drops after meals." It was the prescription Exhibit C. A. for Mrs. Carey, see 490 (Exhibit I, original bottle sent to me on the 11th October. It was addressed to my husband).

His Lordship (to the jury)—That you will understand, gentlemen, is the first prescription for Fowler's Solution. It was written on the 10th and obtained on the 11th October.

His Lordship (to Mr. Wilkinson)—Is there anything written on exhibit J?

Mr. Wilkinson—Yes, My Lord. Four or five drops after meals. No. 22876. 22/10/96.

His Lordship—The number is the number of the original prescription.

Witness continued reading—I keep my medicines in a small cabinet which stands on the mantel-shelf in my bedroom. That fender was in my bedroom; the stain is the stain caused by the bottle breaking. (Fender, Exhibit K.) The bottle broke shortly after it came. The stain was rubbed over by the servants (Mr. Lowder applies that the stain be analyzed).

His Lordship—That in parenthesis (Mr. Lowder applies that the stain be analyzed) is put in as a remark from Mr. Lowder.

Witness—Yes, My Lord—I thought no more about the broken bottle till you made enquiries.

Mr. Wilkinson—I presume that is in reply to Mr. Lowder.

Witness—All this part of the evidence is elicited in reply to questions put by Mr. Lowder.

Continuing, he read—It was discovered yesterday morning by the ayah, Hanayya Asa. She said she could not find it as it had been thrown away some days before; but as she had swept up the broken glass, I knew she would know where to find it. The bottle was found in an ash heap, she tells me, behind the servants' quarters.

His Lordship here suggested that witness should recognise the fender. [Exhibit K.]

Witness, having identified the fender as the one produced at the inquest, continued reading—I handed you just before coming into Court the bottle (Exhibit L.). It is said to be made from Dr. Baelz's prescription for my husband. The bottle is from Schedel's dispensary and bears the number 13934. I think the original of Exhibit M. is not among Schedel's papers because Mr. Carey lost it and had to go to Mr. Schedel to procure the copy which Mr. Lowder has handed into Court.

Witness recognised the bottle produced and marked as exhibit L, after which Mr. Wilkinson examined it and read the label. "Normal Dispensary, Carey, Esq. 4 or 5 drops as directed." Mr. Hall also identified the paper produced [Exhibit M.] as the one produced at the Inquest, and then continued reading.

NORMAL DISPENSARY.

JOS. SCHADEL, Pharmaceutical Chemist,
77, Main Street, Yokohama.

Normal Dispensary.

13934.

J. SCHADEL, Yokohama.

Extr.-belladonnae	0.3
Morph.-aur	0.3
Aq.-dest	30.0
Sir-simpl	10.0

Dose one teaspoonful as directed.

Mr. Carey.

I got the bottle in the drawer of the cupboard where my husband kept his medicine. That was situated on a chest of drawers in his dressing-room, which was really a verandah leading out of our bedroom, and was used by him as a dressing-room. My medicine was kept in one place and his in another; but since his illness I have bottles

of medicine kept in my place on account of their size. I wish you to hand that bottle in, because, having smelt it, I believe it to contain arsenic.

Mr. Wilkinson—The bottle referred to is Exhibit M. I take it?

Witness—Yes.

His Lordship—Exhibit M. is a prescription. The Exhibit referred to is L.

Witness—Yes, my Lord. It is exhibit L., the bottle containing medicine, Dr. Baelz's prescription is M.

Mr. Wilkinson—If your Lordship will refer to Dr. Divers' evidence you will see that that is the bottle from which he took a part and examined it.

Witness here said that he recognised that the contents of the bottle had greatly diminished since it was presented to him at the Inquest.

His Lordship searched his notes and read from Dr. Divers' evidence, "I took half an ounce," etc., etc., and reminded the jury that that was the bottle from which it had been taken.

Witness continued reading—I call to mind the 10th October, Saturday, the Regatta Day. It was a very wet afternoon. I remember a visitor coming to my house that afternoon at about two o'clock. I was sitting in the dining-room writing and heard the China boy saying "arimasen, no have got," to an apparent summons. Thinking that he was making a mistake, I myself went to the door and saw there a lady who, to me, was an apparent stranger. She saw me and then came into the hall and said, "Are you Mrs. Carey?" I said, "Yes," and she then said she wished to see Mr. Walter Carey. I said I was very sorry he was not at home, but that if she would give me her name or card and tell me her business, I would tell Mr. Carey. She said she must and would see him herself. If she could not do so that afternoon it must be the following morning. She refused to tell me anything further beyond giving me a card. (Card produced, marked Exhibit N.)

M. J.

A. L. 1888!!

She produced this card from a bag. She was slight, tall, but so very heavily veiled that I am not at all prepared to describe her features. The only conversation between us was in the hall. She struck me as fair, rather than dark. If I were to see her again, I could not recognize her by her features; I shouldn't like to say I could. To my own knowledge I have never seen Annie Luke referred to this morning. After this conversation I wrote a letter to my husband, which I afterwards discovered among his papers.

The Card was recognised by witness, then examined by all the Counsel present and afterwards, at the request of the Court, was produced to the jury for their inspection and examination.

Witness was next handed a letter [Exhibit O] which he identified as the one produced, at the Inquest, and, in answer to Mr. Wilkinson, stated that when first handed in the parts missing had then been torn off. He then read it, as follows:—

(Letter handed in Exhibit O.) Dearest Walter,—A most mysterious (lady?) came here just now and asked to see Mr. Walter Carey. I told her you were not in, when she said she would call again early this evening, about 4.30, as she must see you. She would give me no name nor any reason for her visit. She came about ten minutes ago (2 o'clock) and seemed much distressed at not finding you in. I pro— (here a bit of the letter is torn off) to let you know, and said you would be back— (the letter is again torn here). She said "this afternoon or to-morrow morning I must see him." I shall go round to Mrs. Walter's about the tennis cakes. I think it too wet to go down to the boat-house, but may come if it clears. Will you be back to see your "Woman in Black?" If not, what message shall I tell Rachel to give her. Enclosed is her card.

Saturday. Yours, EDITH.

The letter was then handed to his Lordship who asked if Counsel had seen it. They replied in the affirmative, but Mr. Wilkinson asked to be again allowed to see it to correct some words which differed in the printed copy. This having been done the letter was handed to the jury.

His Lordship (to Mr. Wilkinson)—Is this one of the letters you referred to in your opening address?

Mr. Wilkinson—Yes, my Lord.

The Court—And the other in marked Exhibit P.

His Lordship—What was the Monday week? That would mean the second Monday following the time she was speaking of—at the boat club—Not the Monday back from the time she was giving her evidence, would it not?

Witness—Yes, my Lord.

Continuing, he said, I recognise exhibit P, and read it as follows:—

I must see you, why have you done nothing

since you got my two cards, or perhaps she never let you get them. I cannot meet her again, she makes me mad when I think of what I might have done for you. I cannot give you any address. I am living wherever I can find shelter, but you can find and help me if you will, as I know you will for the sake of old times.

ANNIE.

His Lordship—Have Counsel read this?

Mr. Wilkinson—Yes, my Lord.

His Lordship (to Mr. Moss)—You will put that letter (Exhibit P.) into the hands of the jury after they have finished reading the first letter.

Witness continuing, said—I recognise the envelope here produced marked

Urgent;

W. R. H. CAREW, Esq.

No. 5,

United Club,

or The Boat-house.

and continued reading—I went to the boat-house that afternoon. There I saw Dr. Wheeler, and he gave me that prescription. I met my husband at the boat-house. I mentioned before a number of people there the visit of that lady and he was subject to much chaff on that account. I asked him if he were going up to keep his appointment at 4.30. He told me he had replied to my note, and said he would be back at 4.30. I remained at the boat-house myself for two hours, and was subsequently given to understand that the lady did not keep her appointment. The following day being Sunday, as was the custom, the nursery governess and children and my brother lunched together with us. The conversation, quite the reverse from serious, turned on the lady. At that time I was under the impression that the lady was more or less of a myth and that she had no business with my husband. This joking allusion to the lady went on till Monday week, when my husband told me something definite about her. After my husband's death found a letter (Exhibit P.) of the contents of which I had no knowledge till after my husband's death.

I also recognise the envelope which reads—

Private.

WALTER CAREW, Esquire,

United Club,

No. 5, Yokohama.

Mr. Wilkinson—With regard to that envelope, I am now going to ask you a question of your own knowledge on looking at it. Looking at that envelope and the Japanese post-mark and something which you can see upon it, can you make out the date upon it?—After closely examining it through a powerful glass, the date is *ni fu hu nen, jūgatsu jiu san nichi*, and apparently there is half a character which I take to be *ho* that would mean, "fifth delivery," which would correspond to some hour of delivery.

Will you please look at the slip attached to the envelope?—It is very thin paper and very indistinct. It is evidently the same day and apparently by the same delivery time—tenth month 13th day—but the character for delivery is illegible and the *Adna* is blurred by a black pencil mark which has hidden the date, so that I could not say. It looks more like *mi*, but it may be *mi* or *yo*.

It is the 13th, is it not?—Yes. The date on the post-mark is the same as the stamp on the tag, but I cannot say as to the delivery mark.

His Lordship here suggested that it might be read by some means or other, as it was visible.

Mr. Wilkinson—Yes, My Lord.

Witness, in answer to Mr. Wilkinson, continued—The name on the tag, is 5 *ban*, United Club, Carew. There is another label underneath, and that I will not undertake to read. It is written in the grass character, and very rapidly. I take the meaning of it to be that knowing of a mistake in the address the letter was not at first delivered, and then was given the correct address at the Club.

His Lordship—Before you proceed, I understand you to say that on the slip attached the year is clear and the date is clear but the delivery time is not?

Witness—Yes, my Lord. Continuing, he read—My husband did not come home to dinner on Tuesday, 13th, he dined at the Club. He came home about a quarter to two. I think he was not quite sober. On the 16th or 17th I received a letter addressed in my husband's handwriting to Miss Annie Luke, Post Office, Yokohama. I have not got that envelope. I destroyed it. The letter is in my husband's handwriting. (Letter produced, Exhibit Q 1). The note came to me anonymously. The note and envelope are both in my husband's handwriting.

His Lordship—Where the witness says, "I have not got that envelope," I understand that to be the envelope in which the letter was.

Witness—Yes, my Lord.

His Lordship (to Jury)—You will understand that, Gentlemen of the Jury.

Witness was handed the letter [Exhibit Q 1] and the envelope, which he recognised, and then proceeded to read them:—

I feel greatly distressed about you, and ever since I got your card last Saturday have been endeavouring to find you. I wish to, and will, help you if I can only find you. Meet me this evening at 5.30 p.m. on the Bund, opposite the Club Hotel. W. Wednesday, 14th October.

Miss ANNIE LUKE,

Post Office, Yokohama.

Mr. Wilkinson—Would you look at the post-mark on that?—This is much more illegible than the previous one.

Yes, except one part which I think you will find clear. I think the date is clear?—It is not clear, I cannot read it—(after having looked at it through a powerful glass)—It might be the 13th, but I would not say.

Mr. Lowder suggested that it was the 14th.

Mr. Wilkinson—I accept that suggestion.

His Lordship (to the Jury)—You do not wish to see the envelope? You have seen the letter.

The jury intimated that they did not wish to see it.

Witness proceeded reading, after having recognised exhibits R 1, and R 2:—

The letter, Exhibit R 1, is in my husband's writing, and was brought to my house by a *Huriki* man. It is now in the same condition as it then was.

The envelope, in a different writing, is marked
Yokohama United Club,

15—10, 1876.

Dear —t.
Many thanks for your chit I am feeling a little better, but at—seed—m—thanks—ing on He—to my—talked—rot—at my being—age of—indic. and ha—nocked me—off all d—except vichy water, a—high I have ordered—sent to the house. I have b—ffered \$13,000 down for the h—ncor heard not—at. Fearfully—ies, &c., &c. W.

His Lordship—May the jury look at the rendering of this letter?

Mr. Wilkinson—Yes, later on.

His Lordship—May it be read to them now?

Mr. Wilkinson—Yes, my Lord.

The Court referred the jury to page 18.

DEAREST EDITH—Many thanks for your chit. I am feeling a little better but still very seedy; many thanks for sending old Wheeler. He came to my office and talked a lot of rot about my being on the verge of jaundice and has knocked off all drinks except Vichy Water, one dozen of which I have ordered to be sent to the house. I have offered \$13,000 down for the house. The last sentence should be "fearfully busy over the lotteries. W."

I tore the chit up after reading it and put it in my waste-paper basket. On the 19th, I received this piece of paper in this condition and in this envelope.

His Lordship—She says, "I tore the chit up after reading it and put it in my waste-paper basket. On the 19th I received this piece of paper in this condition and in this envelope you have in your hand." I have noticed that in the mutilated copy there is a — before the to. I do not see how dearest could come in there.

Mr. Lowder—My Lord, it might have been Dearest without the Edith.

Witness resumed reading—

Mrs. Carew,

No. 169, bluff.

A letter left on Mrs. Carew's doorstep on 29th October, S 1. Envelope marked S 2.

beware—dare to speak one word of the truth and you shall never leave Japan alive.

Mrs. Carew.

No. 196, bluff.

Yokohama.

Mr. Wilkinson—Was that stated to have been left on her doorstep, by Mrs. Carew?

Witness—Yes, in answer to a question by her counsel.

His Lordship—The witness would not say "Mrs. Carew" when speaking of herself.

His Lordship (to Mr. Lowder)—It was a letter put into her hand by you?

My Lowder—Yes, my Lord.

Witness, after having recognised Exhibits T 1 and T 2, continued reading—A letter, post-mark November 1, received on November 1st, T 1. Envelope, T 2.

I have done what I can for you, true I have made you suffer, but I have written to Mr. Hall and to Mr. Lowder. Yokohama will be troubled no more by A.L.

Mrs. CAREW,

Envelope

No. 169, Bluff,

Yokohama.

Mr. Wilkinson—Did Mrs. Carew state that she received it on Nov. 1?

Witness—The statement was either made by her, or by her counsel and assented to by her.

Mr. Wilkinson—At the top of page 13 it reads:—

"Mr. Lowder suggests all these letters are in the same handwriting."

His Lordship—That is meant for Exhibits P. and S 1 and 2, is it not?

Mr. Wilkinson—Yes, my Lord. P. and S 1 and 2 and T. 1 and 2.

Mr. Lowder—It might have referred to the whole of them, my Lord, because I was about to put in the whole of them.

His Lordship—How far do you mean?

Mr. Lowder—P. S. and T. and the next two.

His Lordship—Some of these letters intervene between two of Mr. Carew's.

Mr. Lowder—Yes, my Lord.

Mr. Wilkinson—At my learned friend's request I ask Mr. Hall to give evidence that Exhibits U 1 and U 2 were handed in by Mr. Lowder as having been received by him.

Witness—I will look at the other exhibits first. After having done so, he answered, Yes; they were. Afterwards the documents were sworn to by Mr. Lowder. Reading:—Mr. Lowder suggested that they be read next.

Witness, having recognised the Exhibit, then read:—Letter, addressed to Mr. Lowder, dated 29th October, Exhibit U 1. Envelope, U 2.

Mr. Lowder, I do not know you, probably have never seen you, but I gathered from Saturday's papers that you will be acting on behalf of the wife of the man who was to me the world and more than the world. Dead men tell no tales; no, nor dead women either, for I am going to join him. Do you know what waiting means for long weary years. I have watched and waited, watched till I knew he would grow tired of her, that silly little fool, and then I came to him. What is the result. We, between us, electrify Japan. I have never professed to be a good woman but, for the sake of a few lines, I do not see why I should let a silly innocent woman be condemned for what she knows anything about, and for which when you get this, no one on this earth could enlighten her. She is a silly fool, otherwise she would not have treated the last two weeks as she has done. By the time you get this I shall be well on my "way" (P) to join him, my twin soul. You may call this what you like, but I think deep down in my heart I write this for the sake of the boy who is so like his father let his mother take heed that he enter not into temptation. I shall write to the Coroner.

29th October.

A.L.

LOWDER, Esquire,

Wright's Hotel, Yokohama.

Mr. Wilkinson—With regard to the next letter: it was put in at Mr. Lowder's request, was it not [Exhibits V 1 and V 2]?

Witness—Yes, I had no intention of putting it before the jury until I had Mr. Lowder's request.

Mr. Wilkinson—You received this [Exhibits V 1 and V 2] did you not?

Witness—Yes, I found the envelope one morning on my desk. It had come in the usual course of delivery.

The letter reads:—Letter addressed to the Coroner, dated 29th October, marked Exhibit V 1, Envelope V 2.

Mr. Hall—I have just finished a letter to Mr. Lowder so cannot begin this to you in quite the same way. Shall I begin it with the truest and wisest saying on this earth, "woman is at the bottom of everything," in this case it is so, for between us we have bamboozled the lot of you—1, the chemist, 2, the doctor, and last but not least that fool his wife. I stop here because my last act on earth shall be a merciful one, and as I am going to join him my twin soul, I will exonerate that little fool from any share in helping us to meet each other. I have done my work well, and am taking good care to escape the lot of you, and the law. My 2 letters will not be posted till Sunday morning when I shall be—?

The world will call me mad. I am, however, sane enough in what I have done and what I am going to do and sane enough to accomplish my end—that as we were divided in life we were not in death. I wonder whether out of all this community there is one who can sympathize with one who goes out to meet her maker.

A. L.

29 October.

HALL, Esquire,

The Coroner,

The English Court,

Envelope.

No. 171, Yokohama.

Mr. Wilkinson here requested to see the envelope and the letter. They were handed to him, and he examined them.

Mr. Lowder, in answer to the Court, said he did not wish to see them.

Adjourned for tiffin.

On resuming at 2 o'clock, Mr. Consul Hall's evidence was continued. For the first time during the trial, two strange ladies were present during the hearing.

Mr. Wilkinson—You are down to V2, I believe, Mr. Hall, and you resume, "I have given you every instruction," etc. That refers to Mr. Lowder, I presume?—Yes.

Reading resumed—I have given you every instruction to find the woman passing under the name of Annie Luke. On Thursday, 13th, my husband came home at two o'clock and never left the house again. He was then complaining of liver. I wrote to Dr. Wheeler at breakfast time that morning because Mr. Carew had not been able to come to the race-course with me as usual, and was ailing. I don't think he was expecting a long illness from liver. On Friday, 16th, he seemed rather worse, but was walking about the house as usual; he did not go to the office. From Friday morning till Tuesday night (30th) he was unable to retain any food. Dr. Wheeler went to see my husband at the Club on the 15th. I am not certain if he came on Friday or not. I wrote to him again early on the 17th. Dr. Wheeler said my husband could go to Kamakura, but he would come and see him, which he did on Saturday morning, when he advised him to remain in Yokohama, lest he might increase the chill the Doctor thought he was suffering from. On that day also he could keep nothing down for five minutes even. I attached no significance at all that day to those symptoms. On Sunday I did think the medicine Dr. Wheeler had prescribed was not benefitting him at all and was possibly the cause of the sickness he had. On the 17th I went to Maruya's shop in person. I bought one tin of antipyrine, I did not pay for. The witness on Monday served me I am positive.

His Lordship—Did we get the name of that witness?

Mr. Wilkinson—I believe it was Hayashi Shishichiro. (To witness)—Will you refer to your notes and see if that witness is not Hayashi Shishichiro, see if you can identify him?—Was this on the 26th October?

Mr. Wilkinson—No, on the 2nd November.

Witness—Hayashi was called that day.

Was there any other witness from Maruya's that day?—No, I believe not. I will look. On that day the Maruya's shopman and Rachel Greer were called.

Mr. Lowder—I will suggest, my Lord, that there was only one of Maruya's shopmen examined that day, and his name was Hayashi Shishichiro.

His Lordship—That was all on Monday?

Mr. Lowder—That is my suggestion.

His Lordship—Yes.

Reading resumed—On or about the 17th I had received an anonymous letter. I did not mention it to my husband at the time, because Dr. Wheeler told me he was to be kept as quiet as possible and must sleep. On the 18th I went to Church in the afternoon. I learnt some time afterwards that my husband had ordered the amah to go to Maruya's for something. On my way back from Church I went to tell Dr. Wheeler I could not account for what I considered the curious nature of Mr. Carew's illness. He was not there, so I sent a note round about 6 p.m., when Dr. Wheeler came. I think Dr. Wheeler told me then said that the medicine he had ordered for Mr. Carew was not sufficiently strong to carry off the effects of the illness from which, on Friday night or Saturday night, Dr. Wheeler told me Mr. Carew was suffering. Dr. Wheeler on that occasion told me he considered it was a slight chill on the liver, seriously aggravated by an excessive use of alcohol, and gave me to believe that his course of treatment was to enable Mr. Carew to throw off all such effects, and his words to me were, "After this Carew will be in better health than he has been for years." He also told me to try and argue seriously with Mr. Carew as to the very serious effects the use of alcohol was having on his constitution.

On Monday, 19th, I did not go to Maruya's and order a bottle of arsenic and sugar of lead. I know absolutely nothing about them having been ordered that day. I have never signed a chit, "Mrs. Carew." I always sign as I did on the chit produced in Court on Monday. Only in the very early morning, when I left for the race course, did I leave the house that day. I returned about 7.30. Nearly all the morning was taken up by the usual Monday house duties, which are always carried out by me. I did not leave the house on Monday, and invite examination as to

what I did all day. I don't remember that anything special occurred on Monday evening as regards my husband's illness except that he was very restless. During the middle of the night he spoke to me of the girl who calls herself "Annie Luke." He expressed to me a very great wish to see her, and, without telling me very much, led me to believe he had treated her very badly, and told me he must in some way make amends. I purposely refrained from telling him I had in my possession an anonymous letter, as on that Monday he seemed to me not so well. I did not wish to worry him in any way, but I told him we would discuss the matter more fully when he was better. I made no objection to his making amends. The whole of the conversation, however, did not last more than ten minutes, because I did not see that such a discussion could be finished in a short time. He did not say he had led her to believe he would marry her. He only gave me to understand that in some way he had behaved very badly to her, all of which had occurred previous to our marriage. He did not tell me, nor did I ask him if he had met her on the 14th. I told him I knew he had been in correspondence with her, only in a general way. On the afternoon of Tuesday, the 20th, when my brother had come back from the office, I was called downstairs to see a visitor, and Mr. Carew, who was then more or less wandering, seemed to believe the lady who had been to see me was Annie Luke. Seeing this, I said, "I have had a visitor; guess who it is." He said, "Annie." I said, "Yes, she has been here. I have had a long talk with her and am going to look after her." This was of course absolutely untrue, as I said it to pacify him. He never mentioned the matter again in my hearing. My brother was then present. On Tuesday, 20th, in the morning my husband was, I thought, weak and we were quite unable to stop the sickness. At Dr. Wheeler's suggestion (he came about 11.30 a.m.) I agreed that Dr. Todd should come round and see the patient. I can recollect nothing further that took place at the consultation than that which I gave in my previous evidence. Dr. Wheeler came round again at about 6.30, and as he had been unable to get any sleep and as the sickness had apparently not decreased, he and I gave Mr. Carew a hypodermic injection, which unfortunately had the very reverse of the desired effect. He became very excitable, thought he saw insects and animals crawling over his bed, which alarmed me more or less, so that I decided to go and see Dr. Wheeler myself as I knew he was dining out. Dr. Wheeler came back again about 11.30 and said when I gave him my message, "Don't be alarmed, it is the effect of my hypodermic." I requested him to come round later, which he did about 11.30. I think I was absent from the house about forty minutes. That was the only evening I went out for the doctor. Very early in the morning, about 4 a.m., a few hours after the doctor had left, the effects of the hypodermic having worn off, Mr. Carew became very weak, and I had to call the servants up to have the fire lighted and get hot water. Dr. Wheeler came on Wednesday morning and didn't seem to think that there was anything at all serious, but as I had never seen such symptoms before I wrote to Dr. Wheeler at tiffin-time asking him to send for Dr. Baelz. About that time, within an hour, I handed him the sealed parcels from Maruya's. Mr. Parsons came in the morning and asked how Mr. Carew was, and said he thought it would be a good plan for Dr. Wheeler to consult Dr. Baelz. Dr. Wheeler came again in the evening, gave me Dr. Baelz's reply, telegraphic. [Exhibit W put in.]

His Lordship—Wait a moment, let me see it?

Witness—I recognise the telegram now handed to me as exhibit W.

To Doctor Wheeler.

Date 21-10-96. Time 4.7 p.m.

Impossible to-day would to-morrow evening do.

Baelz.

Reading resumed—After seeing Mr. Carew Dr. Wheeler said he is so much better that I see no occasion to send for Baelz. I think in this case it will be a needless expense; let us wait and see how he is to-morrow, as he has retained his food since noon yesterday, he is decidedly better. He passed a very restless night, however. I had to call the servants up and apply hot bottles to his feet and side to keep him warm, and sent off again for Dr. Wheeler at five o'clock on Thursday morning. My brother and Dr. Wheeler were in the room. Mr. Carew had had been sitting up, but was then in bed. I considered Dr. Wheeler so casual as to the patient's condition on Thursday morning that at eight o'clock I wrote to Mr. Parsons. I sent a messenger at five; he came at seven. At eight I wrote to Mr. Parsons and told him that I did not wish to be anxious without cause, and told Mr. Parsons that probably he could get the truth from Dr.

Wheeler as to whether he considered Mr. Carew seriously ill or not, as I gather from Dr. Wheeler that there was no cause for any alarm. I told Mr. Parsons to again tell Dr. Wheeler that I must insist upon his sending for Dr. Baelz. I gave Mr. Parsons's reply at my last evidence. Dr. Wheeler came again at half-past eleven. He did not go to the bedside, but said, "I have made arrangements to remove him to the English Hospital; he is only going from bad to worse." I at once asked him if he considered Mr. Carew was in a serious condition. He gave me no reply whatever, but walked out at the door. Dr. Wheeler came at half-past two, bringing a stretcher from the hospital. Mr. Carew had some beef tea and corn flour for tiffin, but seemed to collapse almost immediately afterwards. He was taken to the hospital by Dr. Wheeler and my brother about three o'clock. I went as far as the hospital gates, walking by his side. I met Dr. May at the gates and told him I understood there was a rule prohibiting any lady going into the hospital, but I hoped that Dr. Todd would allow me to go in that evening to see my husband. Dr. May told me he was not in a position to accede to my request, but promised to write and let me know either how my husband was or whether I could go and see him. It was a very great relief to me after five days nursing to know that my patient was off my hands, and I never for one moment realised even at the last that there was any serious danger and it was a most terrible shock to me to receive Dr. May's communication at half-past five in the evening. During my husband's illness, I never administered arsenic to him or sugar of lead, nor saw him take either. That is the piece of paper (Exhibit X.)

Witness then read—1 bottle. Fowler's Solution of Arsenic.

1 Bottle. Sugar of Lead,
On reverse side of
piece of paper.

Which date I left M.

On the night of Friday the 9th inst. the latter eventually arrives at the Y.U. Club.

This delay in transmission caused me the greatest possible inconvenience, &c.

Witness—I recognise the paper now shown me as exhibit X.

His Lordship—You say that is the piece of paper: what piece of paper?

Mr. Wilkinson (to witness)—Would you refer to the end of Mrs. Carew's statement on Nov. 2nd?—I think Mrs. Carew was not examined on Nov. 2nd.

Then it must have been on Oct. 24th?—"I have a piece of paper written by my husband which I can produce."

Is this exhibit the piece of paper that you believe her to have referred to on Oct. 24th?—Yes.

His Lordship—Now let me see it.

His Lordship—It seems to me that what occurs on the back is the draft of a letter and is of no importance.

Mr. Lowder—I shall probably have to make a point of that, after all.

His Lordship—Very well. I did not want to elicit anything. I only wanted to make it clear, because if it did not enter the case the jury need not read it.

Mr. Lowder—It may enter the case.

Reading resumed—The name of the medicine is not in Mr. Carew's handwriting. The writing on the back is in his writing. I do not know in whose hand the name is written. I should like to say I understood Mr. Lowder to ask me whether I had that paper in my possession, not to imply that it was in my husband's handwriting. That on the back refers to a letter that was addressed to the postmaster, referring to a letter addressed to me at Miyanoshta, where I was September 26th to the Friday following. The letter was written, I believe, after my husband's return from Miyanoshta, so that it must have been written after the 2nd Oct. Sugar of lead was purchased in June or July for external application, to be applied to the pony; it has never been used since that date as far as I know. That liniment to which he (the betto) referred this morning was Elliman's Embrocation, I went up to Miyanoshta on September 26th with my nursery governess and two children, followed in the evening by Mr. Carew and my brother. The two latter returned to Yokohama on the 28th. I had an appointment with Mr. Carew the following Saturday, so returned to Yokohama Friday night. Mr. Carew went up alone to Miyanoshta on Saturday, my brother and I being left alone. Since a certain date, which Mr. Schedel gave you in Court, Dr. Wheeler's prescriptions have always been made up by Schedel. I send occasionally to North and Rae. On the 20th, the whole day, my husband was in a condition to walk about. He did not go into the nursery. He could

have if he wanted.* * (Interrupted in order to allow Dr. Diver's evidence to be taken.)

Thursday, November 5th, 1896.

Edith May Hallowell Carew, recalled—To Mr. Lowder—I went with a friend of mine lately to Maruya to endeavour to obtain information. I was unable to. To the Court—I am afraid I can give you no definite information as to where my husband got the arsenic he has supposed to be in the habit of using. I would like to add "on that evening." But I do not wish to say I have ever seen him take it in the house more than once a day, which was always after breakfast.

(Signed) EDITH M. H. CAREW.
(Signed) J. C. HALL,
Coroner.

(On adjournment from November 5th.)

Edith May Hallowell Carew, recalled—I wish to supplement my evidence, especially with regard to the letter received by me on 17th October (Exhibit R.), because since the letter passed from my possession into your hands and since reading the newspaper report, I have been able to identify this chit as one written by Mr. Carew to myself, and which was received by me on 15th October. Early on the morning of the 15th I wrote to Dr. Wheeler to the effect that I wished him to call at the office and see Mr. Carew, because Mr. Carew himself declined to speak to Dr. Wheeler about his illness. About 10 a.m. that day I wrote to Mr. Carew and my messenger brought back this chit, which should read:—

"Dearest Edith,

"Many thanks for your chit. I am feeling a little better but still very seedy; many thanks for sending old Wheeler. He came to my office and talked a lot of rot about my being on the verge of jaundice and has knocked off all drinks except Vichy Water, one dozen of which I have ordered to be sent to the house. I have offered \$13,000 down for the house."

The last sentence should be "fearfully busy over the lotteries. W." I tore the chit up after reading it and put it in my waste-paper basket. On the 19th I received this piece of paper in this condition and in this envelope.

His Lordship—That piece of paper is exhibit R?—Yes, the torn one.

Reading resumed—At that time, and as I had received a letter from Mr. Carew addressed to Miss Annie Luke in an envelope written in the same handwriting as the one now produced, I jumped to the conclusion this letter was sent to me with the same subject as the first sent—to cause jealousy. In the state it was then received in it did not produce any impression on my mind, as I had not remembered nor in any way connected it with the chit sent to me on the 15th. Who took the pieces from the basket and who sent them to me I have no idea. It was yesterday I found I had been under a misapprehension regarding the letter. It had been in Mr. Lowder's possession some days, and till I saw it more clearly produced in the newspaper I never recognised what I know now to be a fact, that I received that letter myself.

(Signed) EDITH M. H. CAREW.
(Signed) J. C. HALL, Coroner.

Mr. Wilkinson—That is all I propose to ask, Mr. Hall.

His Lordship—It is suggested that exhibit A should be shown the witness for identification.

Mr. Wilkinson—I think your Lordship has a note that witness said this exhibit was produced on Nov. 2nd and shown to the witness Hayashi Shishichiro.

His Lordship—Who said that?

Mr. Wilkinson—Mr. Hall. It has not yet been read, my Lord. It was not part of Mrs. Carew's evidence.

Mr. Lowder, in cross-examination—On the morning of the 22nd a communication was made to you by Dr. Wheeler with reference to the condition of Mr. Carew, was there not?—Yes.

About what time was it made?—I think shortly before 11 o'clock.

In consequence of this communication you went immediately to the Royal Naval Hospital to arrange for Mr. Carew's admission?—I had no power to arrange for his admission. I could but see if it was not possible to have him admitted.

Was the communication made to you of such a nature as to arouse your suspicion that the deceased had been poisoned by some person?—It was sufficient to arouse my suspicion that the deceased had been poisoned by some one: whom, I did not know.

Were your suspicions not aroused in regard to any particular individual?—I cannot answer in the affirmative. I suspected Mrs. Carew for a reason that has not been stated.

For a reason that had been stated by Dr. Wheeler?—Not entirely by that.

Will you tell us how your suspicions were aroused?—On the 17th October I met Mrs. Carew walking up from the native town—I and my wife were walking down to the native town—and I stopped and spoke to Mrs. Carew upon a certain matter—a matter entirely apart, the lawn tennis grounds—and I was impressed by her manner.

By her manner?—She seemed to be labouring under strong mental excitement. She seemed very much pre-occupied: her brows were drawn. I put it down at the time to her anxiety for her husband's illness. I had just heard that he was ailing. When Dr. Wheeler made his communication to me it at once suggested an entirely different aspect to account for Mrs. Carew's singularity at that time.

Your suspicions having been aroused by the communication made to you by Dr. Wheeler on the 22nd, did it not occur to you that it might be well to see Mr. Carew yourself and question him yourself?—I understood from Dr. Wheeler that Mr. Carew's condition was very critical, and that Dr. Wheeler's own suggestion was the best to act upon—to urge forward as quickly as possible his admittance to the hospital. I should have considered it a waste of valuable time to have taken any other course but what I did.

Having been to the Naval Hospital, were you not on your way to Mr. Carew's place of abode—from the Consulate?—Yes, I was well on my way to Mr. Carew's house, undoubtedly.

After finishing your business at the Naval Hospital did it not occur to you, under the circumstances, that it might be as well to take his dying depositions?—It did not. I did not think then that he was dying. I thought I should save his life by urging forward his immediate admission to the hospital. I had to find out Dr. Wheeler and tell him the result of my negotiations.

Was it not Mrs. Carew herself that told you on the 17th that her husband was ill?—She did not refer to her husband. I spoke to her of my own accord.

You had heard of the illness elsewhere?—Yes, I heard it quite casually elsewhere.

Mr. Wilkinson had no re-examination. Hayashi Shishichiro, was then called and cautioned:—

You are a Japanese subject?—I am, and in the employ of Maruya and Company, druggists, Bentendori, Yokohama?—Yes.

And this place is also a book-store?—Yes.

Do you attend to the sale of drugs?—Yes.

Do you remember, on the 18th October last, supplying one bottle of chlorodyne and one bottle of sugar of lead?—Yes.

You are shown exhibit E. (bottle Maruya sugar of lead). Can you recognise that bottle, or can you say whether it was similar?—As we sell them always in the same kind of phials, there is nothing to say when this was sold.

But was the sugar of lead sold in a similar bottle?—Yes.

To whom did you supply these two bottles?—To a *shirikisha* man, who brought a writing.

What has become of that writing, is it in existence or not?—It is not in existence, so far—

Do you know what became of it?—On the 26th October, a person came to buy Fowler's Solution and chloral, and as that person paid for the former medicines, the writing was returned to her.

Was there anything else paid for, and if so, what, on the 26th?—Yes; anti-pyrene, which had been delivered as the 7th of October; then the sugar of lead and chlorodyne.

Do you know the amount that was paid for them?—Altogether \$2.65—that included also the Fowler's Solution and chloral.

Have your book or memorandum to which you can refer and state that you are correct in saying that the anti-pyrene was supplied on the 7th October?—I have.

Will you refer to it.

Witness, after referring to his book, said—It was on the 8th October.

Are you quite sure about that?—

Mr. Lowder—My Lord, the witness has not stated that he has made an entry in the book.

Mr. Wilkinson—Do you make entries in this book?—We all do.

Is any particular mark put in the book to show who make the entries?—Sometimes the writer of an entry puts initials on the top, and sometimes not.

Well, will you look at this entry of anti-pyrene and see if you put your initials there?—The entry has been struck out, obliterated, and cancelled.

Looking at the book, are you able to say, or if not able to say, say so, when that date was?

Mr. Lowder—I object to the form of the question.

His Lordship—I think we are trying to lead up to the date.

Mr. Wilkinson said he did not wish to put

leading questions on any point of importance; but this was a matter where there was no disagreement. In this case the witness has corrected himself in regard to the date, 7th or 8th.

Mr. Wilkinson withdrew the question.

Mr. Lowder—It is so easy to find who obliterated the entry.

Mr. Wilkinson—Do you know who obliterated the entry?—I do not know.

His Lordship—You will understand, Mr. Lowder, that all I wanted to know was whether the cancelled entry referred to the anti-pyrene.

Mr. Lowder—Quite so, my Lord. I only objected to the form of the question put by the prosecution.

Mr. Wilkinson—Will you turn up the 18th of October and then hand the book to me?—Here it is.

What was the name on the paper that was returned on the 20th. I am speaking of the paper first mentioned?—I cannot say, for certain; I believe that it might be the name of the wife.

But we have had no name?—It was Carew, I am quite certain that name was there, but whether it was Mr. or Mrs. I can't say.

Now the person who came on the 20th—was it a man or a woman?—A woman.

Can you tell us what kind of a woman, Japanese or foreign?—Foreign.

Would you be able to recognise her again?—I can't say that I could.

Well, can you describe her?—She was not a tall woman; not stout.

Can you give any more particular description or not?

His Lordship—Has he been asked the question before?

Mr. Wilkinson—Yes, but I do not lead further. If, on looking back, he can give a further description let him say so, if not, let him say so?—I cannot say more.

Did she give you any paper for the Fowler's Solution or the bottle of chloral?—She did not.

His Lordship—Of course she paid for them?—Witness—Yes.

Mr. Wilkinson—At the time what name did you understand the lady to bear?

Mr. Lowder—I object.

His Lordship—What has he said: he knows that she was not tall nor stout, what name could he expect her to bear from that?

Mr. Wilkinson—Quite so, by Lord. I have not lead up to quite where I wanted. Did she give any paper with the name of the medicine that she obtained on the 20th; I believe I have asked that before.

Mr. Lowder—I believe his answer is no.

Mr. Wilkinson—He is my witness, and I wish to treat him as such, but if you think the point is clear, I will not go forward.

Witness—The woman did not present nor did she give me a paper at that time.

Mr. Wilkinson—Then that is clear. Have you ever been under a different impression with regard to when that Fowler's Solution was supplied?—I have been.

Mr. Lowder—I should only object if this question is pushed too far.

Mr. Wilkinson—What was that impression.

Mr. Lowder—I object to this on the ground that the question does not embrace the chloral.

Mr. Wilkinson—I will put a question to embrace that.

In answer to the repeated question, witness said—I formally made the statement simply from memory, and I then stated that the Fowler's Solution and chloral had been supplied on the 19th. I find that these two articles were sold on the 20th; and that the sugar of lead was a mistake altogether.

When did you discover this mistake?—I discovered my mistake after the former Court had finished—the magistrate's enquiry.

Did you communicate the discovery of your mistake to Mr. Litchfield?—No, I did not.

Do you mean that you never spoke afterwards?

Mr. Lowder—I think I must object to that.

His Lordship—It is explaining what the witness should have said.

Mr. Wilkinson—I do not press the question, my Lord.

Do you remember on the 20th, also supplying more Fowler's Solution?—I do remember.

Did you supply anything else with Fowler's Solution?—A bed-pan.

To whom did you give it?—A man like a *jirikishaman*.

Did he bring any order with him for it?—He did, a written order.

Do you think you would recognise it again?—I think I would.

You are shown exhibit A?—I recognise this to be the order. It reads:—Maruya, please give bearer one bottle Fowler's Solution; one bed-pan, and oblige E.M.H.C."

Did you see the articles given to the man?—Yes, I saw them given to him by the apprentice. What was his name?—Yamada Masakichi. His Lordship—What was the date of the order?—Mr. Wilkinson—20.10 (to witness)—Do you remember, on the 21st, supplying Fowler's Solution?—Yes.

To whom did you supply it?—To a foreign woman.

Do you know who this foreign woman was?—I think Miss Jacob.

Did she bring any paper with her?—She did.

Do you know what has happened to that paper?—May I look at the book?

Can you tell us what became of the paper the *jinrikisha* man brought, and the paper Miss Jacob's brought?—This—A—was given back to the person on the 24th, who came to pay for what was ordered.

Who paid for it on the 24th?—Miss Jacob and another woman who was with her.

Now, on the 21st, what was it you supplied—how much Fowler's Solution—or anything else?—I supplied sugar of lead to Miss Jacob as well as Fowler's Solution.

Was it a large or small bottle?—A small bottle.

Can you say how much that is, an oz., $\frac{1}{2}$ oz., or $\frac{1}{4}$?—Without weighing it, I can not say positively, but roughly between half and three-quarters of an ounce.

And how much Fowler's Solution?—One ounce. Was it the same quantity or a different quantity that you supplied on the other occasions?—It was all the same size.

Was what was bought by Miss Jacob on the 21st—sugar of lead, and Fowler's Solution—paid for at the time or was it not?—I believe it may have been paid for, but I am not certain, I should have to look at my book.

Can you remember what was on the paper?—Both Fowler's Solution and sugar of lead.

Can you say what became of it or not?—If she paid cash it is very likely that she took the paper away.

Are entries made in your book of all sales—cash and credit?—Yes.

Have you got a bottle of Fowler's Solution with you?—Yes.

That is an ounce bottle?—Yes.

Is that the colour and the smell of the usual Japanese Fowler's Solution?—Yes.

You had better smell it now?—Yes, I am sure. Mr. Wilkinson—I want this to be put in as an exhibit.

What is this Japanese Fowler's Solution flavoured with?—I do not know.

Mr. Lowder—I should like the jury to smell the bottle for themselves.

Mr. Wilkinson—Do you recognise exhibit F as a bottle supplied from your store?—I do.

That has Maruya's name on it?—Yes.

Can you recognise this bottle?—Yes, it comes from our store.

I should like you to see bottle of chloral, exhibit H. Did that come from your store?—Yes.

Would that or a similar bottle be the small bottle of chloral that you refer to?—Yes; this is the one that we sold.

Would you look at the cork in the bottle marked H.—is that yours or not?—Yes, it is ours.

Mr. Wilkinson—My learned friend suggests that his cross-examination of the witness will take some time, and it is now past four o'clock. I have also an application to make for a certain reason. I apply to your Lordship for an adjournment over to-morrow.

His Lordship—What has Counsel for the defence to say?

Mr. Lowder—The communication made to me is of such a nature that I feel that I cannot object.

His Lordship (to the jury)—Gentlemen, I can but accede to this request. I very much regret having to keep you so long from your ordinary avocations and homes. I will do all I can for you, and I will grant you exemption from jury service for this year, next year, and to the end of 1899—by which time I suppose you will be entirely exempt from service in this Court. The Court now adjourns till Wednesday at 10 o'clock.

THE CHARGE AGAINST MISS MARY ESTHER JACOB.

In H.B.M. Court for Japan, on Monday morning, before James Troup, Esq., Assistant-Judge, Miss Mary Esther Jacob, late nursery governess in the service of Mrs. Carew, was brought up on a warrant charged with the murder of Mr. Walter Raymond Hollowell Carew on the 22nd October last. Despite the early hour, 8.45 a.m., a good many people were present in Court.

On the Assistant-Judge taking his seat, Mr. George Hodges read the following:—

Regina on the prosecution of John Frederick Lowder versus Mary Esther Jacob charges on oath that she on the 22nd October, did murder one Walter Raymond Hollowell Carew.

His Honour—Do you appear in person, Mr. Lowder?

Mr. Lowder—I appear in person, not professionally, but as a member of this community who considers it his duty to prefer this charge.

Mr. Scidmore—I appear in the interest of the prisoner.

Mr. Litchfield—Although this case is not instituted in this Court by the Crown, I appear to watch the case on behalf of the Crown.

Mr. Lowder—May it please the Court, I will at once proceed to lay before your Honour an outline of the evidence I intend to lead. The accused entered the employment of Mr. and Mrs. Carew in the capacity of nursery governess in the early spring of 1895, and she remained in that service until the 24th October, 1896. Mr. Carew died on the 22nd October, 1896, after an illness of about a week's duration, and in consequence of the rise of a suspicion that his death was due to arsenical poisoning, an inquest was held into the cause of the death, in the course of which evidence was given that tended to throw suspicion upon Mrs. Carew, the result of which is that she is now undergoing trial on the charge of having murdered her husband. At the inquest held on the 24th October the accused gave evidence. Subsequently two letters were produced and read in Court. One was written by Mrs. Carew, and was addressed to her husband "W. R. H. Carew, Esq., No. 5, United Club, or the Boat-house." The letter was dated Saturday and ran—

Dearest Walter,—A most mysterious (lady?) came here just now and asked to see Mr. Walter Carew. I told her you were not in, when she said she would call again early this evening, about 4.30, as she must see you. She would give me no name, nor any reason for her visit. She came about ten minutes ago (2 o'clock) and seemed most distressed at not finding you in. I pro—(here a bit of the letter is torn off) to let you know and said you be—(the letter is again torn here) then. She said "this after—or to-morrow morning I must see him." I shall go round to Mrs. Walter's about the tennis cakes at any event. I think it too wet to go down to the Boat-house but may come if it clears. Will you be back to see you "Woman in black?" If not, what message shall I tell Rachel to give her. Enclosed is her card.

Saturday. Yours, EDITH.

His Honour—What date was that? Mr. Lowder—Saturday, but I will prove that the date was the 10th October. On the 13th October a letter signed "Annie" arrived for Mr. Carew. This letter Mrs. Carew afterwards found among her husband's effects. It reads:—

I must see you, why have you done nothing since you got my two cards, or perhaps she never let you get them. I cannot meet her again, she makes me mad when I think of what I might have done for you. I cannot give you any address; I am living wherever I can find shelter but you can find and help me if you will, as I know you will, for the sake of old times.

Now on the 24th October the inquest was opened. Mrs. Carew gave evidence, and at that time no assistance was rendered her by Counsel, though afterwards Counsel was instructed to appear on her behalf. She did not hear the evidence of the accused, Miss Mary Esther Jacob, and did not know that any suspicion had been attached to her of poisoning her husband. On the 29th of October an anonymous letter was left on Mrs. Carew's doorstep. The letter ran:—

beware dare to speak one word of the truth and you shall never leave Japan alive.

That letter, though addressed to Mrs. Carew, 169, Bluff, was not signed, but the handwriting appears to be in the same hand as that which wrote the letter signed "Annie." On the 1st of Nov. three other letters were received—the writer of these letters appears to have been overcome with remorse for the injury she had done, because on that day three letters were received all signed A. L. One was addressed to Mrs. Carew; one to myself; and one to Mr. Hall, the British Consul. Mr. Lowder at this point read the letters, which were as follow:—The first was to Mrs. Carew:—

I have done what I can for you, true I made you suffer, but I have written to Mr. Hall and to Mr. Lowder. Yokohama will be troubled no more by

A. L. Mr. Lowder—I do not know you, probably have never seen you, but I gathered from Saturday's papers that you will be acting on behalf of the wife of the man who was to me the world and more than the world. Dead

men tell no tales; no, nor dead women either, for I am going to join him. Do you know what waiting means for 8 long weary years. I have watched and waited. Watched till I knew he would grow tired of her, that silly little fool. And then I came to him. What is the result. We between us electrify Japan. I have never professed to be a good woman, but for the sake of a few lines, I do not see why I should let a silly innocent woman be condemned for what she knows nothing about, and for what she never will know anything about, and for which when you get this no one on this earth could enlighten her. She is a silly fool, otherwise she would not have treated the last two weeks as she has done. By the time you get this I shall be well on my "way" (?) to join him, my twin soul. You may call this what you like, but I think deep down in my heart I write this for the sake of the boy who is so like his father. Let his mother take heed that he enter not into temptation.

I shall write to the Coroner.

29th October.

Hall, Esq.,

The Coroner,

The English Court, No. 171, Yokohama.

Mr. Hall,—I have just finished a letter to Mr. Lowder, so cannot begin this to you in quite the same way. Shall I begin it with the truest and wisest saying on this earth "woman is at the bottom of everything," in this case it is so. For, between us we have bamboozled the lot of you—I, the chemist, the doctor, and last but not least that fool his wife. I stop here because my last act on earth shall be a merciful one, and as I am going to join him, my twin soul, I will exonerate that little fool from any share in helping us to meet each other. I have done my work well, and am taking good care to escape the lot of you and the law. My 2 letters will not be posted till Sunday morning when I shall be—? The world will call me mad; I am, however sane enough for what I am going to do, I am sane enough to accomplish my end. That as we were divided in life we were not in death. I wonder whether if out of all this community there is one who can sympathise with me who goes out to meet her maker.

26 October

A. L.

On the 6th November the inquest was concluded. On the 7th I caused an advertisement to be inserted in the local public prints in which a reward was offered for the discovery of the writer or writers of these letters, suspicion having been entertained that Mrs. Carew had written them. That advertisement continued to appear up till the 11th of November, perhaps longer, but certainly on the 11th of November I received another letter. It ran:—

Mr. Lowder, It never occurred to you did it that "my way" to join him might be by the French mail, it never occurred to you did it that I can disguise myself as well as my name, it never occurred to you did it that you never could and never would find me. Who am I and what is my name, eh? Is it A. L. or M. J. or was I during my stay in Yokohama passing under some other name, eh

A. L.

—Lowder, Esq.,

Wright's Hotel,

Yokohama.

Mr. Litchfield—What date was that?

Mr. Lowder—The date of November 11th. There is no date on the letter, but the post-mark bears date of November 11th, and I will prove that I received it that day. Now on the 25th October the accused wrote to Mrs. Carew, in reply to a request from Mrs. Carew, and I shall put this in, not so much for the importance of the matter it contains, but to show the handwriting in which it is written.

(The letter, which was dated Sunday October 25th, and began "Dear Mrs. Carew," said in reply to the note that the writer had received from Mr. Lowder that evening, that she regarded her engagement in Mrs. Carew's employ to be at an end. If Mrs. Carew had any questions to ask, the writer would answer them if put through Mr. Lowder, Mrs. Carew's Counsel. In reply to the message sent her by Mr. Lowder, asking her to take Mrs. Carew's children to Kamakura for a week, the writer said she did not intend to leave Yokohama at present, but if Mrs. Carew would send them to her "here," it would make her very happy to have them with her. The letter was signed "yours truly, Mary E. Jacob.")

There is also another letter written by the accused on the 7th Feb. 1895 to the mother of Mrs. Carew in Devonshire; this also I shall put in for the sake of the handwriting. I shall submit to your Honour that after a careful inspection of these various letters you will find that in the letter of the 11th November, more particularly, the word Lowder can not be distinguished from the word

Lowder used no less than three times in the letter of October 25th. I shall prove by Mr. Porch, brother of Mrs. Carew, the finding in the nursery used by the accused when in the employ of the Carew family, of a birthday book in which is written "M. E. J. June 28, 1894," and that between the leaves of that book, he discovered, a few days ago—last Friday, I think—this piece of paper.

M. J. Regular. M. J. 1888.
My own Dearest Walter.
D.D.D.D.
Jacob.

The first M. J. is written in italic capitals; the other M. J. is in printed capitals.—I will ask you to compare the M. J. on the card with the M. J. on this paper. After the M. J. comes the word "regular"—what that means I cannot say—and then A.L.—the letter A being written as a big small a, the upstroke being brought down and round; under this are the words "Dearest Walter," and then "my own." Counsel then said that he would ask his honour to compare the second A.L. on the paper with the L in the letter received on the 2nd Nov. He also would ask His Honour to compare the first A.L. with the A.L. signed to the letters received by Mrs. Carew, himself, and Mr. Hall. He also asked for a comparison of Jacob with the signature of the letters written on the 25th October, and the conclusion he would draw from the whole was that they were written by one and the same hand. Moreover, both the L's were identical with L. in Lowder, used three times in the letters. The words "dearest Walter" were evidently in imitation of the handwriting of Mrs. Carew. Two other pieces of paper were picked up in the nursery, the writer of which had evidently been practising the copying of the handwriting of Mrs. Carew, for on one Edith was written, then Mrs. Carew, Dickinson, E.E.E., and the word Carew several times. Counsel contended that these papers would establish the fact that the handwriting of the copyist and the handwriting of Mrs. Carew, when taken together, would show that there was absolutely no distinction between them. Next, I shall produce a leaf from the chit-book of Mrs. Hutchison, showing the receipt of two letters addressed to Mrs. Carew at her house; one was received and receipted for by Mrs. Carew as follows:—"Ansd. E.H.C.," the other was signed by "M.J. for E.H.C.," and it will be submitted that the writing of the two receipts are almost identical. Another slip containing Mrs. Carew's initials will also be submitted for comparison. The fact that the letter signed "Annie" and the letter signed "Edith" were both on the same size note-paper and bore the same water-mark—I gather this is so although I have not examined them, but it has been so stated—goes to prove that those two letters were written from the same house; but the other letters were written from a different house and consequently on different paper. Miss Jacob had left Mrs. Carew's house on the 24th October, and that was a fact to be borne in mind. Before leaving the question of handwriting, Mr. Lowder pointed out other singularities that he had found in the letters, the formation of *ls*, like an old-fashioned long *s*, the *gh*'s formation that he submitted were all characteristic of the letters written by accused. The "Beware" letter, he said, resembled the handwriting of the accused. The formation of the *d*'s he said was also a characteristic of all the letters of A.L. and the accused; while the *er* was throughout almost undisguised. Now there was in the employ of Mrs. Carew, an Eurasian maid called Rachel Grear. Rachel, in August, last first saw Mary Jacob copying and practising Mrs. Carew's handwriting. The first time she saw her doing so she was using ink; on all other occasions it was with a pencil. The second time Jacob was thus employed she had evidently been writing letters. The letter she had been writing was laid on one side and she was copying some writing of Mrs. Carew's written across a half sheet of paper. The third time she was similarly employed she was at the table with some work beside her. She was writing with a copy before her. All three occasions were before the 26th Sept, 1896, on which date Mrs. Carew, with her husband and children, went to Miyanoshiba. Soon after their return from Miyanoshiba early in October, Rachel remembers seeing Jacob at work with a copy. The last time Rachel saw her was one evening as she was passing through the nursery—to go to a small dressing-room adjoining. Jacob was at the table with an envelope before her on which she was writing. In passing, Rachel read Edith— and below again Edith—. The Edith she read, but not the following words, and noticed that the writing was just like Mrs. Carew's. Jacob was doing this without any writing as a copy before her; on this occasion she was not practising. On coming out of the dressing-room Ra-

chel saw Jacob in the act of putting the envelope away into a little leather bag. Rachel says the envelope was a size larger than any used by Mrs. Carew. On the following afternoon Rachel had occasion to again go into the dressing-room. Jacob was at the table with the same litter bag near her. Rachel noticed her tear an envelope across and put it into the bag mentioned. As she came out of the dressing-room Jacob said "Rachel, come here; I want to show you something." She went to the bag and brought one-half of the envelope she had torn across and said, "See what Mrs. Carew does in mischief." She then got out the other half and pieced them together. Rachel recognised the envelope she had seen her writing the previous evening. She read "Edith—Dickinson, Edith—Easton, Edith—Carew." Rachel thinks there may have been another name and cannot state the order they were in. Jacob continued, "She has written this to see which she loves best. It is just like Mrs. Carew's handwriting; it must be her writing; you must think it her writing. What fun it would be to show it to Mr. Carew." The conclusion that I shall ask your Honour to draw from the whole is that the accused, Mary Jacob, is the writer of the A.L. letters. In that case she stands self-convicted of the murder of Mr. Carew. I forgot to mention that I have received a telegram from England giving in detail her history and character, and this may mean that it will be necessary to obtain the examination of some witnesses from England. There is nothing, I admit, in the evidence so far put in that she was acquainted with Annie Luke, but she may have heard her name from the deceased, her relations with whom were of a naturally intimate nature. On the other hand, she may have known of her existence before leaving England, as she came from the same part of the country as Annie Luke. Such is the evidence I propose to submit to you in reference to this charge. I shall now call witnesses.

Mrs. Emma Mary Hutchison, sworn.
You are a British subject, I think?—Yes.
I hand you this piece of paper and ask you whether this is a leaf from your chit-book?—It is.
Are you well acquainted with the handwriting of Mrs. Carew?—I am.

With her signature and also with her initials?—Yes.
Now look at the "Ansd. E.H.C.," in whose handwriting is that?—Mrs. Carew's.

What have you to say about the handwriting of the letters "M.J. for E.H.C.," appearing two lines below?—I think they are so much alike that they are undistinguishable. They are almost undistinguishable from the E.H.C. above.

Can you recall on what date the letter which is acknowledged by "M.J. for E.H.C.," was written?—It was written by me about 4 o'clock on the afternoon of the 23rd October last.

The day after Mrs. Carew's death?—Yes.
It was a letter of condolence, was it not?—Yes, to Mrs. Carew.

By whom was it sent?—By my *betto*.
Have you since timed him to ascertain how long he would take to go from your house to the house where Mrs. Carew was then living?—Yes.

You did not tell him you were doing so?—No, I sent him with another chit.

And you were at the house formerly occupied by Mrs. Carew when your chit arrived?—I was.

And how long did he take?—He took an hour and a minute to go, and he returned from Mrs. Carew's house in just under three-quarters of an hour. That is the actual time he spent on the road in returning.

Mr. Lowder—I will put in that leaf.
His Honour—Mark it with a large A, Mr. Moss.

Exhibit A.
Mrs. Carew and E.H.C.
Mrs. Carew. M. J. for E.H.C.

Mr. Lowder—I hand you a small piece of paper on which are the initials E.H.C., in whose handwriting do you consider it to be?—Mrs. Carew's.

Exhibit B.
I read out E.H.C.

Mr. Scidmore had no questions to put.
His Honour—We have still ten minutes, Mr. Lowder.

Mr. Lowder—I call Mr. Porch.
Reginald Culmore Porch, sworn.

You are the brother of Mrs. Carew?—Yes.
You occupy the house she formerly lived in before her commitment for trial?—Yes.

I hand you a letter dated Oct. 25th, No. 2, Bluff, and ask you in whose handwriting it is?—Miss Jacob's. It is signed by her.

Exhibit handed in and was marked large C.
I hand you another letter, dated 7th February, 1895, in whose handwriting is that?—In the handwriting of the accused.

Handed in and marked.
I hand you a birthday book and ask you where

you found it?—I found it in the nursery about the 2nd of January.

The nursery occupied by the accused when she was in the house?—Yes.

On what date?—The first or second of this month. I found it on a box which contained children's toys. I brought it down to the dining-room, and on Friday evening last, I opened this box and found a piece of paper inside it.

Is that the piece of paper you found?—Yes, this is the same piece of paper.

Exhibit F.
M. J. Regular. M. J. 1888.
My own Dearest Walter.
D.D.D.D.
Jacob.

Mr. Lowder—I am afraid I cannot carry the case further than this this morning. I ask that the accused be remanded till such time as the Court finds it convenient to sit again.

His Honour—I think I cannot remand for—
Mr. Lowder—I should like a remand for a week. I am engaged, as your Honour knows, in the defence of Mrs. Carew, and my time is more than fully occupied, the Court sitting *de die in diem*.

Mr. Scidmore—I think in the interests of my client that a long adjournment would be most undesirable. This is a serious charge, and it ought to be examined at once.
His Honour—The machinery of the Court is of course occupied by the trial before His Lordship, but I would not purpose a long remand. I think I can only give till to-morrow morning—not shorter than to-morrow. At 8.45 a.m. I shall be ready to proceed.

Mr. Lowder—I shall endeavour to proceed then.
His Honour—You have not finished Mr. Porch's evidence?

Mr. Lowder—No, sir.
His Honour—Then the Court adjourns till to-morrow morning.

TUESDAY, Jan. 12th.

The Court-room quickly filled this morning upon the doors being opened at a quarter to nine o'clock despite the heavy snow storm, when Miss Mary Esther Jacob was brought up, on remand, and further evidence was lead in support of the charge of murder preferred against her.

Mr. Lowder again appeared in person in support of the charge; Mr. G. H. Scidmore representing the prisoner; and Mr. H. C. Litchfield, watching for the Crown.

His Honour—Will you proceed with Mr. Porch's evidence?

Mr. Scidmore—Before the proceedings begin this morning, I have to apply that my client be allowed to sit during the rest of the hearing, as to stand will be seriously injurious to her.

His Honour—By all means.
Mr. Scidmore—I have now to apply on her behalf that she be allowed bail.

His Honour—That will be heard when the Court rises. It is not necessary at the moment.

Mr. Scidmore—Very good, your Honour.

Mr. Lowder—I have to apply to introduce Mr. Uchiyama Rossetsu as an interpreter of the Japanese language into English and English into Japanese.

Mr. Scidmore—I have no objection.
His Honour—Counsel being agreed, the Court agrees to his introduction.

Mr. Lowder—I have now to apply for permission not to continue Mr. Porch's evidence, but to introduce Mr. Geo. Hodges, so that his evidence may be introduced at this point.

His Honour—Very well.
George Hodges was sworn.

His Honour—Your official title is Constable-jailer?—Yes, your Honour.

Mr. Lowder—You arrested the accused by virtue of an order issued by this Court, did you not?

—I did.
When was that?—About 2.15 p.m., on Sunday.

That is the day before yesterday?—Yes, the day before yesterday.

Where was she then residing?—At No. 2, Bluff.

You were furnished with a search warrant and directed to search for papers and writings?—I was.

His Honour—For writings?—Yes, written matter.

Mr. Lowder—You found a box containing papers and writing?—I did.

I am about to hand to you a letter, a very short one, that reads,

Dear Mary,
The Mail has only just been delivered. These are the only letters for you.
Yours, E.M.H. Carew.
169, Bluff, 28th Oct.

Did you find that letter?—I did, with its envelope in a box in Miss Jacob's room.

[Exhibit put in.]

Did you also find this receipt:—

Miss Jacob, one cover two enclosures.

M. E. J.

The receipt was signed in pencil, M. E. J. I recognise that paper. I found it in her room. I would not like to swear that I found it in the box. I found papers, letters, and written matter in other parts—every part—of the room, and put all into a box as I found them.

I now hand you a letter purporting to be addressed from "Strathalgin, Battleborough," bearing date October 1, 1896, and beginning "Dear Mrs. Carew," and signed "E. Jacob;" do you recognise that?—Yes, I recognise that as being found in the room.

His Honour—Do you wish that read, Mr. Lowder?

Mr. Lowder—The contents are of no importance. I only wish to draw attention to its being found in the possession of the accused, and its date, October 1st, 1896. I have no objection to its being read, of course: shall I read it?

His Honour—You only wished to prove that a letter addressed to Mrs. Carew was found in the possession of accused?

Mr. Lowder—Yes, that is all, beside the date.

His Honour—Very well.

Mr. Lowder (to witness)—Did you also find a letter reading, "No. 2, Bluff," dated, "Monday, October 26th '96," and proceeding as follows:—

Dear Mrs. CAREW,

Will you tell one of your servants to let the *finrikisha* man have my two boxes, and will you also take my banjo and photo, of my home from the wall in my room and send them to me, at the same time.

This was not signed—did you find that paper?—Yes.

Now I hand you a similar piece of paper—a letter containing almost identical terms, only it is signed M. E. Jacob; with it is an envelope addressed to "Mrs. Carew, 169, Bluff;" do you remember finding these papers?—I do not remember seeing but one of these papers. I remember the subject to which the two papers refer, but I do not remember finding two such papers.

His Honour—Which do you swear to?—The one with the peculiar K—the other one I do not remember to have seen.

What do you mean by the other one—the one last put in?—Yes.

His Honour—Then you are not prepared to swear to this?—I do not remember having seen the two pieces of paper; I do not remember finding two pieces of paper referring to one subject.

Mr. Lowder—I shall offer myself as a witness afterwards.

His Honour—Then I return you this last paper, Mr. Lowder.

Mr. Lowder (to witness)—Now, did you find these two letters (showing papers) both dated October 26th, and both addressed from No. 2, Bluff, and both reading:—

Dear Mrs. Carew,

On examining the package you sent me this morning I found four articles which do not belong to me, and I therefore return them by bearer.

Yours truly,

M. E. JACOB.

Can you tell me if you found those two?—I remember the subject most distinctly, on reading the note, but I cannot remember that there were two notes on the same subject. I can't remember finding two letters on the same subject, and I cannot say which of these two papers I saw. I remember reading the note.

His Honour—I suppose, Mr. Lowder, that you will put them in later?

Mr. Lowder—I wish your Honour to take witness's answer.

Witness, repeating—I remember the contents of these two notes, but I can't recollect seeing two notes on the same subject.

Mr. Lowder—My suggestion is, your Honour, that one is the draft of the other. (To witness)—I hand you a piece of paper, addressed "Miss Jacob, care of Mrs. Carew, 169, Bluff": was that found among the accused's papers—I can't recognise it at all.

Now I hand you another letter that reads:—

Dear Mary,

Tell Rachel that I am not coming back to tiffin so don't wait for me. I have too much shopping to do for an old—(Counsel interrupting)—I suppose that means Singapore—friend.

E. M. H. CAREW.

Did you see that?—Yes, I saw that.

You handed me the box with all the papers it contained fastened and sealed with your seal, did

you not?—I did. It was tied up and sealed with the Consular seal.

That was in accordance with instructions received from your superior officer?—Yes, it was.

And you informed me that I was at liberty to break the seal and examine the documents?—I did. That is all I have to ask you.

Mr. Scidmore—And since that time the box and its contents have remained where?—I presume with Mr. Lowder; in Mr. Lowder's possession. The last time I saw the box it was in his possession.

Beside the documents put in this morning, to which you have just sworn, were there other papers in the box?—There were.

Many?—A good many. I found a large number in the box, and some on a writing-table or desk. The box containing the largest number, I used it for the rest as I found them.

And all the documents have been delivered to Mr. Lowder?—They have.

When you entered Miss Jacob's room for the purpose of searching it on Sunday, how did she conduct herself?—I told Miss Jacob's my business. She, of course, expressed—

His Honour—That was when you went to the house?

Witness—When I went to the house I asked Miss Brittan to let me see Miss Jacob in her own room, and she (Miss Jacob) did not know my errand until I reached her room. I read the warrant to her. Her manner was, of course, troubled,—her demeanour exhibited considerable symptoms of trouble.

Mr. Scidmore—Did you inform her that you had power to search her room?—I did.

Which you proceeded to do?—Yes.

During which the prisoner appeared to be desirous of giving you every possible assistance in your search?—Yes, certainly.

And she called your attention to some things she thought you might have overlooked?—She did. She assisted me in the search practically.

From her manner did you gather that it was her desire to make a thorough and complete search for all you were sent for?—Yes.

That is all I have to ask you.

His Honour—When did you find the box: at what o'clock, when you searched her room?—I found it when I went to search the room, probably a few minutes after. It may have been between 2.15 p.m. and 2.30 p.m.

It was described to you as a cabinet, was it not?—Yes.

By your instructions?—I was specially instructed in them to search for a cabinet.

Did you not report to the Court that you could not find a cabinet?—I did so report to the Court.

Then you submitted the box to this Court, at what time?—The following morning, Monday, at 8.45 a.m.

Did you deliver it in the Court?—Yes, just as the Court was commencing its sitting on Monday morning.

You examined the contents of the box?—Yes.

During the day?—Yes. I examined the papers in the box rather hurriedly on Sunday in Miss Jacob's room; and then went through them more thoroughly in the Consulate during yesterday.

In the Consulate, you say?—Yes.

At what time did you deliver it to Mr. Lowder, do you recollect?—I should say it was about 4.20 p.m. or 4.30 p.m., perhaps later; I was very busy at the time.

His Honour (to Mr. Lowder)—I think Mr. Lowder, you had better return the box to the officer of the Court, there has been a little misunderstanding.

Mr. Lowder—I brought it to Court this morning for that very purpose. I took it into the Registry, and there it is now. I brought it into the Registry to give it up to Mr. Hodges, but could not find him.

His Honour—In whose custody is it?—I placed it in the Registry, thinking it would be safe there. In whose custody?—No one's. Shall I go and fetch it myself?

It should be produced in Court, and the best way would be for you to place it direct in the Officer's hands.

Mr. Lowder then left the Court and proceeded to the Registry. He returned within a few moments, carrying a box.

His Honour—The best plan would be, Mr. Lowder, for you to go into the witness box at once and identify the box. Is it sealed or is it tied?

Mr. Lowder—It is tied by me.

Mr. Lowder was accordingly sworn.

His Honour (to witness)—I think before going further perhaps you will give evidence in regard to this box and these papers, and afterwards resume it in regard to other matters.

Mr. Lowder then proceeded:—Yesterday afternoon, between four and five o'clock, I asked Mr. Hodges whether he had permission to let me take the box referred to in his evidence for the purpose

of examining the contents. He replied that I might do so, and observing that it was sealed with a seal—sealing wax—I asked if I might break it, and he said I might. I took that box and deposited it in the room which I occupy at Wright's Hotel. Leaving it there I asked a friend of mine if he would come and assist me in looking over the contents of the box. He returned with me to the Hotel, and I called his particular attention to the seal and to the fact that it was intact. I broke the seal and removed the tape in his presence, and we together made an examination of the contents of the box. After he had left, the box and I also remained in the room I have referred to and I did not leave the room—leave the Hotel—till it was time to come into Court this morning. The papers, which I showed to Mr. Hodges, I locked up in this tin box which is here by my side. The papers which Mr. Hodges did not recollect as having seen in the box were taken by me from the box, and I will now prove them. I wish to be clearly understood by your Honour, that these particular papers which I showed to Mr. Hodges were never out of my possession after I took them from the box. I did not leave the hotel till it was time to appear in this Court this morning, and I brought the box with me to the Court as far as the Registry. I went altogether three times into Mr. Hodges' room for the purpose of returning it to him, but not finding him and it being time to appear here in this Court Room, I deposited it on a table in the Registry in view of Mr. Wileman, an officer of this Court. I have just now returned to the Registry where I found the box in the place where I had deposited it, and I have no doubt that the bow in the tape with which the box is tied, is the bow tied by myself. I have absolutely no reason to believe that the box has been opened since I tied it up. I now return the box into Court.

His Honour—Will you take charge of it, Mr. Moss?

Mr. Moss took charge of the box.

Mr. Lowder—I should be pleased if Mr. Hodges would look thoroughly through the contents of the box and see if the exhibits are in the same condition as when he gave it to me. I produce a letter dated Monday, October 26th, written from No. 2, Bluff. Its terms are identical or almost identical with exhibit J. I am putting it in. The letter itself when I found it was not in the envelope which I produce, but was in juxtaposition to it.

The Exhibit was here handed in and marked N, and the envelope N, 1.

Mr. Lowder—I think you have it that I found it in the box to which I have referred? I also produce another piece of paper which I found in the box. Miss Jacob, *c/o* Mr. Carew, 169, Bluff, Yokohama. There is another address on the back. "Den hier B. J. Wisman." I am not reading that for any purposes of mine, but because I am putting the paper in.

The paper was then put in and marked O. Mr. Lowder here requested Mr. Moss to hand him Exhibit W and W 2, of the A.L. series.

His Honour—Is that in the request?

Mr. Lowder—Yes. It is a letter addressed to me and which I wish to prove.

His Honour—It will be simply marked Carew Inquest, Exhibit W.

The Exhibit was handed to Mr. Lowder, who said—I recognise this letter as a letter received by me on the first of November last. I recognise this envelope marked W 2, as the envelope in which I received the letter.

His Honour—Show me the envelope. The envelope was handed to his Honour and then the documents were put in.

Mr. Lowder—I produce now a letter with its envelope which I received on the 11th November last. It is addressed—Lowder, Esquire, Wright's Hotel, Yokohama. It is the letter which reads as follows:—

Mr. Lowder—It never occurred to you did it, that "my way" to join him might be by the French mail, it never occurred to you did it, that I can disguise myself as well as my name, it never occurred to you did it that you never could and never would find me. Who am I and what is my name, eh? Is it A.L. or M.J. or was I during my stay in Yokohama passing under some other name, eh?

—I.OWDER, Esquire,

Wright's Hotel, Yokohama.

The letter was put in and marked P.

Mr. Lowder, continuing, said—On the 7th November last I offered a reward by public advertisement in the local newspapers of \$100, which was subsequently increased to \$500, in the following terms, the advertisement remaining in the papers certainly for one week. Possibly more.

\$100 REWARD.

The above reward will be paid by the undersigned for the identification, by specimens of hand-

writing or otherwise, of the writer, or, if more than one, of the writers or any one of them, of the undermentioned missives:—

- 1.—A letter, undated, signed "Annie," and its envelope, addressed Private, Walter Carew, Esq., Nov. 5, United Club, Yokohama, bearing post mark and tags dated the 13th October, 1896.
- 2.—The address on an envelope, undated, containing a mutilated letter dated the 15th October, 1896, in the handwriting of the late W. R. H. Carew.
- 3.—A letter, undated and unsigned, and its envelope, addressed to Mrs. Carew, 169, Bluff, left at that address on the 20th October, 1896.
- 4.—A letter signed A. L., with its envelope addressed Mrs. Carew, 169, Bluff, Yokohama, bearing post-mark 1st November, 1896.
- 5.—A letter dated 29th October, 1896, signed A. L., with its envelope addressed to Mr. Lowder bearing post-mark 1st November, 1896.
- 6.—A letter dated 29th October, 1896, signed A. L., with its envelope addressed to Mr. Hall, bearing post-mark 1st November, 1896.

No. 28, Yokohama,
7th November, 1896.

1w.

Mr. Scidmore had no questions to put. His Honour read over the evidence he had taken down, and it was signed by Mr. Lowder.

John Carey Hall, having affirmed, was examined by Mr. Lowder—I was Her Majesty's Consul Officiating at Kanagawa in the month of October last. As Coroner I held an Inquest in October and November last on the body of the late Walter Raymond Halliwell Carew. I recognise the letter and envelope now shown to me as having been delivered to me on Sunday morning, the first November last in the Consulate office (Envelope marked V 2.). The Inquest was held on the 24th Oct., and 2nd, 4th, 5th, and 6th November. The accused gave evidence at that Inquest. I read over her evidence to her and she signed it.

Mr. Lowder here asked for the Coroner's Book, in order that the witness might recognise the signature.

Witness, having examined the book, said—This is the accused's signature. It is written, Mary Esther Jacob.

Mr. Hall's evidence was read over to him by his Honour and he signed it.

Edith May Halliwell Carew, having been sworn, was next called—Mr. Lowder requested Mr. Moss to produce the following of the Carew Inquest Exhibits:—N, O, P, S. 1, and S. 2. T1. and T2.

Witness, in answer to Mr. Lowder, said—I recollect on the 10th October last a visitor coming to my house at 169, Bluff. She asked for my husband, who was not in. She gave me a card. The card [Exhibit N.] here shown to me is the card she gave me. I wrote a letter to my husband, enclosing that card to him almost immediately after I had received it. [Exhibit O] here shown to me is the letter I wrote to him with the card. I found this letter and its envelope [Exhibit P.] among my husband's papers after his death. I had not seen it before that time.

Mr. Lowder—I am showing to you exhibits S. 1. and S. 2. Is that a letter received by you on the 29th October last? It is the letter:—"Beware, dare to speak one word of the truth and you shall never leave Japan alive." Is that the letter?

Witness—Yes, that is the letter, and the envelope, I think. It was on the 29th October last. It did not come through the post. It was handed to me by one of the servants who told me it had been found by my own *finrikisha* coolie on the mat at the front door.

His Honour—You said on the door-step.
Witness—Yes. The mat is at the top of the steps in front of the door.

Mr. Lowder—Is the letter and envelope marked T. 1. and T. 2. a letter and its envelope received by you through the post on the 1st November last?

Witness—Yes. It was on Sunday.

Mr. Lowder here asked to have the exhibits put before him and then showed to witness a letter and envelope dated the 28th October, written by her to the accused. [Exhibit G. and G. 1.] The letter was as follows:—"The mail was only delivered this morning. These are the only letters which came for you."

Witness, after having read the letter, said—Yes, that letter was written by me. I have no recollection of how many letters came for Miss Jacob on the 28th October, or of any letters having come for her. Letters must have come for her by that mail, but I have no recollection of them.

Witness, continuing, said—I sent the Exhibit H. here produced to me, with the letter G. and envelope G. 1. It is in the form of a receipt and

reads:—"One cover and two enclosures." The form of receipt came back to me signed. I never returned that receipt to the accused.

Mr. Scidmore requested to see the form of receipt.

Mr. Lowder next handed to witness Exhibit I. which read as follows:—

Strathlyn's, Balinsbro', Oct. 1st, 1896.

DEAR MRS. CAREW,—I thank you for your kind interest in Kate, who will, I think, be quite willing to leave England for Japan as soon as she hears definitely there is a situation ready for her which promises anything like the happiness Mary is now enjoying. We are very pleased to hear she is so well and happy, and that she is giving you satisfaction, and must thank you for all your great kindness to her, and also for the photo's which she has sent me. Mr. Porch and her nieces were here yesterday, they kindly brought us the little presents Mary sent. We shall indeed look forward to the great pleasure of making the acquaintance of Mary's little charges.

Believe me, your's truly,

E. JACOB.

Mr. Lowder—Did you ever get that letter?
Witness—Never.

Did you ever write to a person named E. Jacob?
I wrote some months back to Miss Jacob's aunt, as she was anxious that Miss Jacob's sister should come out here; but I never got any reply. I presume that that is a reply to my letter. It certainly reads as such, for she alludes to certain things of which I made mention in my letter to her.

Mr. Lowder—I now hand you exhibit M.; it is a letter dated from No. 2, Bluff, Monday, October 26th, 1896.

"Dear Mrs. Carew—Will you tell one of your servants to let the *finrikisha* man have my two boxes and also to take my banjo and the photo of my home from the wall in my room and send them to me at the same time."

[This letter is not signed.]

Witness—I recollect receiving a letter in the words now read to me, but I cannot say that this letter shown to me is the one I actually received. I did not return the letter I actually received to Miss Jacob. Certainly not. I returned the boxes and the banjo. I saw that they left the house. I have no recollection about the photograph, but I suppose it went. I put the letter she wrote to me in the waste-paper basket.

Mr. Lowder—Please take the last exhibit [N.] in your hand again and tell me whose handwriting it is?

Witness, after having examined it—It is Miss Jacob's handwriting. Certainly.

Mr. Lowder—I now hand to you exhibit J. and ask you in whose handwriting that is?

Witness (to Mr. Lowder)—Am I to say what I know or what I think?

Mr. Lowder—Do you recognise the handwriting?

Witness—I think it is Miss Jacob's. It is the same as the other one. That is, the wording is the same. I did not receive both of them.

Mr. Lowder—I am now handing you exhibits K. and L.:

"Dear Mrs. Carew—On examining the packages you sent me this morning, I found four articles which do not belong to me, and I therefore return them per bearer."

Will you say whose handwriting that is?

Witness—I can't swear to having received either of these pieces of paper, but I recollect having received a letter from Miss Jacob containing the same words or meaning as these two pieces of paper.

Mr. Scidmore asked for the exhibit, and showed them to the accused.

Witness, continuing, said—I do not remember what I did with the letter. I remember receiving it in the dining-room and putting it down on the table.

Mr. Lowder—You were rather careless about leaving papers about, were you not?

Witness—Very.

Mr. Lowder—I show you exhibit I. and ask you in whose handwriting you consider that to be?

Witness—I don't know, but I should think it might be in Miss Jacob's handwriting, but it is not her ordinary handwriting.

Mr. Lowder—Will you look at exhibit N.?

Witness, after examining it—It is my own handwriting.

Mr. Lowder—On the fourth line from the bottom of Exhibit A. [a sheet of a chit book] is there a shortened word "answd," with the initial E. H. C. after it?

Witness—Yes, in my own handwriting.

Mr. Lowder—On the second line from the bottom do you notice M. J. for E. H. C.?

Witness—Yes. I did not write them. They resemble mine so much that had I not known

that I was not in the house at the time I should certainly have been obliged to admit I had written them. I remember the 23rd October, the day after my husband's death. I remained at home until a little after half-past four. When I left the house I was in company with another lady. Mary Jacob was in the house. She was giving the children their tea. I received many letters of condolence that day, and one from Mrs. Hutchison. It was on my return to the house at about a quarter or half-past five that I found it waiting for me among other chits which had come. There was one other chit.

Mr. Lowder suggested to his Honour that, it being 12 o'clock, it would be a convenient time to adjourn, and asked that Mrs. Carew might be allowed to leave the Court at once as she had not yet had her breakfast.

His Honour intimated that Mrs. Carew might leave the Court at once.

Mr. Scidmore rose and asked for bail on behalf of the accused, Miss Jacob. If it would be more convenient to his Honour, however, he would not make his application until the afternoon sitting.

His Honour—I think it will be better to take it now Mr. Scidmore. You will be aware that it is not competent for the Assistant Judge to grant bail on this charge. The application will have to be made to the Judge in Chambers.

If you will look at Rule 3 you will find it reads:—"A person charged with murder can be admitted to bail by the Judge only." I therefore refer you to the Judge in Chambers.

The Court then adjourned for tiffin.

The Court resumed at two o'clock.

His Honour announced that Mr. Wileman would act as Clerk of the Court. He had charge of all the exhibits.

Mrs. Carew re-entered the box, and her examination by Mr. Lowder was continued.

I hand the witness exhibit B; it is simply initialed "E. H. C." and ask if it is in her handwriting?—To the best of my knowledge, it is.

I hand the witness exhibit F., and ask her if she wrote any part of it?—No, I have never seen this paper before.

You will find there the word's "Dearest Walter," do they resemble your handwriting?—The "Walter" does a little bit, but not the "Dearest."

His Honour—You say the word Walter?—It resembles mine a little bit; not the "Dearest."

Mr. Lowder—Are those a "A.L.'s" in your handwriting?—None of this paper in my handwriting.

Do you know in whose it is?—No.

I hand you now two other pieces of paper—these have not been proved—and ask you to say whether they are in your handwriting?

His Honour—They have not been proved?

Mr. Lowder—They will be proved by a witness who will come in later.

His Honour—How shall we mark them?

Mr. Lowder—Perhaps you Honour will earmark them.

Witness—None of these pieces of paper are in my handwriting.

Mr. Lowder—Is there any resemblance?—Yes, there is a great resemblance in the writing to mine: in fact a very great resemblance.

Mr. Lowder—I will prove these presently. (To the witness)—I show you exhibits C. and D., and ask you in whose handwriting they are? They are two letters, one addressed to Mrs. Porch, on the 7th Feb. 1895, the other to Mrs. Carew, 25th Oct., 1896—both were proved by Mr. Porch as being in the handwriting of Miss Jacob?—I think that in the letter addressed to Mrs. Porch, my mother, there is a mistake, the 1895 should be, I think, 1896. Both of these letters are in Miss Jacob's handwriting.

When did Mary Jacob enter your service?—To the best of my recollection, about the middle of May—I can't give a more exact date—about the middle of May, 1896.

Then that clears up the mistake.

Witness—She arrived in Yokohama about the middle of May, 1896.

And when did she leave your service?—On the 24th October, 1896.

Was she fond of reading novels—reading generally?—Yes, I think so.

His Honour—Which do you answer?—I think she was fond of reading novels.

Where were your books kept?—In the dining room.

On shelves accessible to her?—Yes.

Do you remember Mr. Dickinson lending you a book called the "Play Actress"?—Yes.

That was some time in the month of October last, was it not—somewhere about then?—I think it was about the end of September.

Mr. Scidmore—I think the form of the questions should be slightly altered.

Did you read it then?—No. I did not read it through, I glanced through it and found that I had already read it.

Do you remember whether at that time it was recalled to your memory that one of the chapters was headed the "Woman in Black," or the "Lady in Black"?—No, the first time that it was recalled to my memory was when Mr. Litchfield referred to it during the course of the preliminary enquiry.

Did it remain accessible to the accused during the time it remained in your house?—Yes, it was in the dining-room all the time.

Whether she read it you do not know?—I have no idea.

I hand you a book called "A Romance of Two Worlds," by Marie Corelli, and ask you if that was on the shelves in your dining-room?—It was. It was accessible to anybody.

Whether the accused has read it or not you are not prepared to say?—I have no idea.

Mr. Lowder—I wish to call your Honour's attention to some passages that I will read on pages 262, 263, and 265. The first reads, "Azul looked tenderly upon me and said," &c.

Mr. Lowder then read the passage, that refers to the "passing of the Great Circle" into the world beyond, and the words "twin soul" occurs in the course of the extract; while in the extract from p. 266, occurred the words, "He is thine own twin soul Azul, and will you then let him fall from thee when a word or a sign might save him."

[Volume put in marked.]

Had you any reason from anything that came under your own observation to suspect any impropriety between accused and your husband?—Absolutely nothing.

Mr. Lowder then resumed his seat.

Mr. Scidmore—Mrs. Carew, you are now being tried before H.B.M. Court on the charge of the murder of your late husband?—That is so.

Mr. Lowder is your Counsel in that trial?—He is.

Where were you born?—At Langport, in Somersetshire.

In England?—Oh, yes. Langport is a few miles from Glastonbury.

Do you know whether Miss Jacob is from the same neighbourhood or not?—She comes from a place about 2½ miles.

Your birth-place?—No, I understood you to be speaking of where I came from. She comes from a place about 15 miles from the place where I was born.

Do you know her family?—Personally, no. I know of them very well.

Did you meet her before she came to Japan?—No, I did not; by that answer, I mean not to my knowledge.

Did you meet her aunt?—Never; no.

When were you married to Mr. Carew?—In 1889.

Where?—At Glastonbury.

In Somersetshire?—Yes.

After your marriage with Mr. Carew, how long did you remain at Glastonbury?—About two hours, I think.

And you left there with him?—Yes.

Where did you go?—You mean that day?

Yes.—To a place called Lynton, for our honeymoon.

How long did you remain at Lynton?—I think it was eight or nine days.

And from there, where did you go?—To a place near Taunton, my uncle's place—a place called Treborough; it is about 14 miles from Taunton.

How long did you remain there?—Three days, I think. It might have been two—I know it was not more than three days.

Then where did you go?—To Exmouth then, to stay with Mr. Carew's father and mother.

How long did you remain at Exmouth?—I think it was about a week. Yes, a week.

And then where did you go?—We went back to Glastonbury: to my own home.

How long did you remain there?—I really can't remember exactly—four or five days—under a week. It is so long ago that I can't remember as to the exact number of days.

Then where did you go?—To London.

How long did you remain in London?—One night.

Then where did you go?—To Singapore.

At Singapore, what was your husband's occupation?—He had no occupation in Singapore.

How long did you remain in Singapore?—About three or four days, waiting for a steamer.

Then where did you go?—To a place called Singei Ujong, a place on the Malay coast; it is one of the protected native States.

At Singei Ujong, your husband entered on the duties of an official, I believe?—He did.

In what capacity?—For the first three months he was Treasurer in the Colonial Service; that

was his proper appointment; and after that time he was appointed Acting-Resident.

How long did he hold that appointment?—Until he was obliged to leave: until June, 1890.

He was obliged to leave on account of ill-health.

During this time, while he was suffering from ill-health you assisted him materially did you not, in his official duties?—I, never! No, never.

Not in official writing?—No, never.

Did you ever write letters for him, either official or other?—Never. I never helped him in any official capacity whatever.

His duties included frequently the issue of orders in writing to subordinate officials, did they not?—All his orders to subordinates were printed. They were the ordinary printed official Government orders, and he had to sign his name to them. They principally consisted of Government leases.

His Honour—Leases of land?—Yes.

Mr. Scidmore—These orders to subordinate officials were always signed by him?—Yes, always: they would have to be.

Did you ever at any time during his illness at his request or by his orders, sign any official orders for him?—During which illness?

This illness in the Straits?—I never signed his name to official documents.

You are positive?—Yes. Because he would have to put the official seal on these papers over his own signature.

Did you ever given any verbal, or written orders to his subordinate officers?—Yes, verbally, a good many. By that I mean the servants and messengers: I may have done so in the Straits. Of course I mean at his instigation.

Mr. Lowder—Conveyed them for him.

His Honour—During his illness you mean?

Witness—If you can give me a date?

Mr. Scidmore—When he was Acting-Resident?

—Yes. I remember giving orders to the Sikh policemen who were on duty.

But never any orders in writing?—No.

After leaving this place, where did you go?—We went to Singapore.

How long did you remain at Singapore?—About a fortnight, I think.

And from there, where did you go?—From there we went to Hongkong.

How long did you remain at Hongkong?—Two or three days.

Where did you stop at Hongkong?—I think it was the Hongkong Hotel—an hotel quite near the wharf. I can't swear to the name of it.

How long did you remain there?—Three days.

What was the condition of Mr. Carew's health at that time?—Very bad.

What was the nature of his ailment?—Well, the doctors could not readily define his complaint or ailment. But they said it was nervous depression—that was what was stated to me.

Do you remember the name of the doctor at Hongkong?—We had no medical man in Hongkong. We had a doctor in Singapore—two.

Can you give me their names?—Dr. Muggleston and Dr. Simon.

When he was Acting-Resident, did he have a regular medical attendant?—Yes.

Who was he?—Dr. Travers.

Where did you go when you left Hongkong?—To a place near Kobe; I have forgotten the name of it for the moment. Oh, Takaradzuka.

How long did you remain in Kobe and its neighbourhood?—I think about three weeks.

Did Mr. Carew have any medical attendant during those three weeks?—I had a medical attendant, but I am not certain whether he consulted one or not. No, he had none. I think not.

He was very, very much better then.

What was the name of your medical attendant there?—Dr. Moore Graham.

At the end of those three weeks?—We came to Yokohama.

Where you have since resided?—With the exception of one year.

Where did you reside in that year?—At Dzusli.

What year was that?—1892, I think.

What was the condition of Mr. Carew's death on arriving here?—From Kobe?

Yes.—Oh, he was apparently quite well—that is in 1890.

Thereafter, when did he have his first attack of illness of which he made complaint?—He has been in a chronic state of having "liver" since we married. He has had no serious illness ever since we have been in Yokohama. He has not been seriously ill since he was ill at the Straits. He has been what the doctors called the other day "out of sorts."

Can you give me the names of his medical attendants in Yokohama?—Dr. Wheeler, Dr. Munro, Dr. Baetz, and Dr. Simon, two, then he was up here in 1893—before I went to England.

Dr. Simon prescribed for him, but I think it was not for anything except his usual attack of liver.

I do not wish to be positive about it, as I have only just recollected it.

Had Dr. Simon ever treated him before this?—Yes, many times. He is the head doctor in the Singapore Hospital.

When did you leave Yokohama for England?—In March, 1893.

And when did you return?—In December of the same year.

Mr. Carew remained here?—Yes.

When did you first occupy the house, 169, Bluff?—On the 5th April, 1895. We went into the house then.

When did Miss Jacob arrive and enter your service?—I have already answered that question. To the best of my knowledge it was the 13th or 15th of May, 1896. I am not at all sure of the date.

For what reason and under what circumstances was she engaged?—She was engaged to come out as a nursery governess. The circumstances were, so far as I know these. She was engaged through my mother and father because they knew her family. I do not think that they knew her family personally at that time. I do not think that they knew her personally then; I do not fancy so.

Had you previously written to your parents requesting that they should send out a governess to your children?—No, I had not previously written to them. The suggestion came from my mother, and then I subsequently quite approved of their suggestion.

Did you state to your mother any requirements of age and acquisitions of the person required?—No, I left that to my mother. I told her I wanted a nursery governess, and I presumed that she would understand what a nursery-governess was.

Was the girl called Rachel Greer in your employ at the time of the arrival of Miss Jacob?—Yes.

How did you obtain the services of this girl, Rachel Greer?—From Miss Crosby.

Miss Crosby is the Principal of the Girl's Missionary School, Yokohama?—I believe so.

Do you know how long Rachel Greer had been in this school?—She did not come direct to me from No. 212; she came from a Mission School, I think, in Tokyo. Miss Crosby saw my advertisement that appeared in the paper, I think.

After she joined your household, what duties did you assign to her?—Shortly after her arrival, I found that she was practically useless and I gave her notice to leave, but as I had some relatives coming out to me just at that time, I said she might stay on and help generally in the house. The day after they left I had some trouble with my boy, who left, and from that day to this the girl known as Rachel Greer has helped generally in the house, principally as house amah and table amah.

She reads and speaks English?—Yes, she can read and speak English. I can't say that she is very proficient at it. She can speak it a little.

Can she write it?—I have never seen her writing. She may be able, but I do not know if she can write.

When did your brother arrive in Yokohama?—March, I think.

In '96?—Oh, yes, sometime in March, 1896.

And he has resided in your house ever since?—Yes.

What has been his employment during that time?—For a short time he was in Samuel Samuel's, for about four or five months; the rest of the time he has done nothing.

Was his employment with Samuel Samuel's, shortly after his arrival or recently?—It was from about the middle of May, until the 22nd October 1896—he can give you the date better than I can.

At the time of the death of your husband, your household was composed of whom?—Myself, my brother, Miss Jacob, my two children, the Eurasian girl, Rachel; a small China-boy, Ah Kwong; a small amah, who waited upon the upstairs part of the house, a coolie and a cook—I don't know their names; and a betto—he did not live in the house—he lived in the betto's quarters.

You have spoken of a strange visitor who came to your house on the 10th October?—Yes.

Who was in the house at the time of this?—As far as I know, everybody I have just named.

Where did you receive the visitor?—I hear talking in the hall and went out to see her.

You met her in the hall?—Yes. I went hall on hearing voices and saw her there.

At this time where was Rachel Greer?—I think I did not know where she was.

Was she in the house?—Yes. I have since.

Where was Miss Jacob?—I believe, with the children.

Describe the appearance of the visitor?—I should think, of slight build.

Could you estimate her age?—Absolutely not. She was very thickly veiled. I should not think that she was very old.

How close did you stand to her?—Rather closer than I am to you. Well, I went right close up to her when she handed me the card.

Was the light strong or dim?—Dim. It was a very wet afternoon for one thing; and at the best of times there is never much light there.

How was she dressed?—She was dressed all in black—that I know. At the time she gave me the impression of a person in disguise. See had a cloak, I think.

Did she wear gloves?—She had gloves on. Were the gloves kid or cloth?—I could not tell in that light; I have no recollection. At that time it was such a very trivial matter to me—most trivial.

What was their colour—black, also?—I really could not tell you. I do not know.

His Honour—Were they black?—I really could not tell you, Mr. Frop.

Mr. Scidmore—What kind of goods was her dress made of?—I have no idea. She may not have had a dress on at all, only a cloak, as far I recollect.

Do you remember the cloak?—No, I can't say. All I remember is that a lady came into the hall dressed all in black—whether she had a cloak or jacket, I do not know—more than that I can not say, I did not take much notice of her.

Did you notice whether her clothes were those of a poor person or a person in easy circumstances?—I should say of a person in easy circumstances, but I don't know whether my answer is worth much.

Did her general air and manner indicate to you her station in life?—I should say that she was a lady; she gave me that impression at the time.

She seemed easy and collected?—Perfectly.

Was this impression confirmed by the tones of her voice and her accent?—Yes. What struck me more than anything else was her great anxiety.

Anxiety about what?—About the questions that already have been put in Court; the questions she put to me, and that she must and would see Mr. Carew.

Repeat the conversation that took place between you?—She said, "Are you Mrs. Carew?" And when I replied in the affirmative, she said, "I want to see Mr. Walter Carew, is he at home," or "is he in?"—I forget which. I said—

Mr. Lowder—Does your Honour intend sitting much later: it is now past 4 o'clock, and my learned friend says his cross-examination will last a long time yet?

His Honour—I should like to go on to the finish, but if the cross-examination is very long then we had better go on to a convenient place where we can break off. At the end of this conversation for instance.

Mr. Scidmore—Very well.

Witness—I said, "I am very sorry Mr. Carew is not at home, but if you will tell me the nature of your business, or leave a message with me, I will tell, or give it to, Mr. Carew on his return." She declined to give me the reason for her visit. She said, "I am sorry I cannot tell you why I wish to see Mr. Carew, but I must see him"—must or will see him, I forget which it was. She seemed in such evident anxiety that I promised to let Mr. Carew know, and told her that possibly he would be back by half-past four o'clock. She then told me that she either must see him that afternoon or the following morning. She gave a card which I sent down in my letter to Mr. Carew.

After handing you the card did she say anything more?—She handed me the card in the middle of the conversation.

With what did the conversation terminate?—I think it was that she must see him that afternoon or to-morrow morning.

And then she left?—Oh, yes.

You saw her leave?—I saw her leave the front

When she left the premises did you notice in direction she turned, to right or left?—She had turned to the left as the right goes now. I did not see her leave the premises, I only

reach the high road?—I did not see her the premises.

Did she leave the house or before she arrived—

hear the noise of a *fiurikisha* or other?—No. It is not probable that I should

hear a noise on such an afternoon. Besides, thinking anything about it.

Did you notice anything in her manner, dress, or voice that sounded or appeared

in any way?—No; absolutely

her natural voice, I do not know her

Was she mumbling?—No.

Was it clear?—Yes.

Was she feigning or attempting to disguise her voice?—It might have been, but it did not strike me so at the time.

Mr. Scidmore—I think, your Honour, that this is a convenient time, it terminates one chapter of the cross-examination.

His Honour—I purpose adjourning till half-past ten to-morrow, if that will suit your convenience. Your application, Mr. Scidmore takes place in chambers.

Mr. Scidmore's application for bail was heard in Chambers and acceded to, bail being accepted from the accused and two sureties, Mr. W. W. Till and Mr. F. S. James. The amount was not stated.

WEDNESDAY, Jan. 13th.

This case, adjourned from the previous day till 10.30 this morning, was called on at 10.15 a.m., instead.

His Honour said that he purposed making a long adjournment of the case—till Monday, January 25th, at 10 o'clock in the forenoon. Have you anything to say Mr. Lowder?

Mr. Lowder—No, sir.

Mr. Scidmore?—No, sir.

The accused then retired into the body of the Court and preparations were made for the trial of Mrs. Carew before the Judge.

Before R. A. MOWAT, Esq., Judge, sitting with a Jury.

The hearing of the charge against Miss Jacob having been adjourned by the Assistant-Judge, the Court room filled rapidly, and when his Lordship took his seat at 10.35, it was so full that one half of the spectators had to stand. Mrs. Carew looked particularly worn-out and haggard.

Hayashi Shishichiro was called, but did not respond to his name.

His Lordship—Was he here at ten o'clock?

Mr. Wilkinson—He was warned to be here, my Lord, and I had every reason to believe he was coming. I will send for him.

His Lordship (to Mr. Kircher)—I think you could go down and bring him. (To Mr. Wilkinson)—Have you any other witness?

Mr. Wilkinson—I am very sorry, my Lord, but I have not any other witness at the moment in the Court-room.

His Lordship (to Mr. Wilkinson)—We must depart from the general order when necessary.

Mr. Wilkinson—I am quite prepared to do that, my Lord.

His Lordship—Is there no witness near at hand you could call?

Mr. Wilkinson—I will get a witness in five minutes, and perhaps your Lordship will wait and see if Hayashi turns up.

His Lordship—Is Mr. Porch a witness?

Mr. Wilkinson—Not my witness, my Lord. I will get Mr. Wileman to come in so that we may go on.

His Lordship—Do you think we could sit a little longer?

Mr. Wilkinson—On the contrary, my Lord. I should prefer not to sit too long.

His Lordship—I am very much concerned about the Jury.

Mr. Wilkinson—So am I, my Lord.

His Lordship (to the Jury)—Gentlemen, we are all very sorry, but there is so much evidence to be given; and the case is of such gravity, that we have to take so much formal evidence which takes a great time to prepare. I trust, however, that counsel will expedite matters as far as they can.

Alfred Ernest Wileman, having been sworn, said—I am the Acting Registrar of this Court. I attended an adjourned inquest on the body of the late Walter Raymond Hallowell Carew. I attended it at this Court, but not at the Royal Naval Hospital.

His Lordship—That would be on Monday, the 2nd November.

Witness—Yes, my Lord; and I attended throughout the rest of the proceedings.

Mr. Wilkinson—The first exhibit was put in on that date, were you present during the putting in of all the exhibits during that case?

Witness—I was. During the inquest all the exhibits were in my custody, and in fact up till the magisterial enquiry commenced. They were then divided, and those used at the Inquest were kept by me in my custody, and as the exhibits were required for the magisterial enquiry they were delivered by me up to Mr. Moss.

Mr. Wilkinson—Except during the time those exhibits were in the custody of Mr. Moss, were they in the custody of anyone else?

Witness—No.

Mr. Wilkinson—Have any, and if so which, of the exhibits, during the time they were in your custody, been diminished or altered?

His Lordship—We had better have the list of the exhibits.

The list was here handed to the witness.

His Lordship—That is a list of the exhibits made by you, is it not?

Witness—Yes, my Lord; and after perusing the list he continued—Exhibit L (a bottle), had the rim of its neck broken. The rim only was broken off. It fell out of the safe as I was removing it. I immediately picked it up and wrapped it round with the cotton wool as you now see it.

Mr. Wilkinson—My Lord, Exhibit L is Dr. Baelz's prescription.

Mr. Wilkinson (to witness)—Was there anything added to it by reason of that?

Witness—No, certainly not.

Mr. Wilkinson—Or any possibility of its receiving anything else?

Witness—I should say certainly not. Witness (to the Court)—It fell, and I immediately picked it up and tied it with cotton wool as it now appears.

Mr. Wilkinson—Were you aware that Dr. Divers took a portion of the exhibits, and were you present when he took them?

Witness—Yes. He took a portion of exhibit D. That is the bottle now presented to me from which he took it. He took half of it. He specially mentioned that he was going to take half. It was on the afternoon of January 4th.

Mr. Wilkinson—Any others.

Witness—He took a portion of the exhibit Z just produced, but I cannot say exactly how much. He also took some scrapings from the fender, but I was not present at the time.

Mr. Wilkinson—You were not there. Do you know of any subsequent taking of scrapings from the fender?

Witness—Yes. Mr. Thomas took some of the scrapings from the fender. I took a memo. of the date and time; it is in my safe.

Witness left the Court for the purpose of getting the memo. and on returning said, it was on the morning of the 8th January at 10.45.

Mr. Wilkinson—Has there been any other thing taken from the exhibits.

Witness—That is all, to the best of my knowledge and belief.

Mr. Lowder had no questions to put to the witness.

Hayashi Shichiro, cross-examined by Mr. Lowder, said—I gave evidence in this Court on the 2nd November last, my evidence was then read over to me and I signed it. I was asked whether I sold arsenic on the 19th, 20th, and 21st of October. I answered that I had, and I said I had sold an ounce of arsenic on each occasion. I said that the purchaser of arsenic on the 19th was a foreign woman. I was asked if it was Mrs. Carew, and having looked at her I said I could not say. I said that she also purchased sugar of lead on that day. On looking at Mrs. Carew, I said that she had been to the shop.

A long discussion here took place as to the wording of the question put to the witness on the 2nd November, and his Lordship read over his notes of the evidence witness had then given in which he said, "She wrote at the shop the names of the medicines."

His Lordship (to Mr. Lowder)—Shall I ask the witness if he said they were written there?

Mr. Lowder—I should be glad if your Lordship would do so.

Witness—On that occasion I did say that she wrote it there in my presence.

Witness continuing, in answer to Mr. Lowder—I said on that occasion that she had come to buy medicines, but I do not recognise her as the person who came on the 19th, I could not say she was not, she must have been the same person who came from Mr. Carew's house.

His Lordship referring to his notes, said to Mr. Lowder—I have this only, "Medicines were not paid for at the time. There was no prescription. It was written by her at the shop." Do you wish me to say anything else?

Mr. Lowder—No; that is quite sufficient.

His Lordship—I shall not refer to this again unless I have it in my notes.

Mr. Lowder—Then perhaps you might ask, my Lord, "Did you say that the medicines were not paid for at the time?"

His Lordship (to witness)—You said that the medicines were not paid for at the time and that there was no prescription?—Yes.

Mr. Lowder, continuing—What became of the piece of writing?

Witness—I was asked what became of the piece of writing, and I answered that when the woman came to pay on the 20th, it was returned to her.

Mr. Lowder—I am suggesting to witness that he said he tore it up.

Mr. Uchiyama, the Interpreter—He says now that he thinks he gave it back to the woman on the 20th, when she paid for the medicine.

His Lordship—He says, "a woman." Was it the same woman?

Witness—Yes. It was the same woman.

His Lordship (to Mr. Lowder)—Do you want to ask a question about his saying he tore it up?

Mr. Lowder—I should like to ask if he did not say he tore it up.

Witness—It might be that I said so, but I do not recollect.

Mr. Lowder—You state that on the 19th Oct., you sold arsenic to a foreign woman, and you also sold sugar of lead?

Witness—I did say so.

His Lordship—I have that down already, Mr. Lowder.

Mr. Lowder—I beg your pardon.

Continuing, Mr. Lowder said to witness—You were asked if three separate persons came on the three occasions on which you sold arsenic?

Witness—I said that three different persons come on the three different days.

His Lordship—The one who came on the first day he says he did not know her face; she might have come again on the third occasion.

Mr. Uchiyama—That is what he intended to say.

Mr. Lowder—I would ask your Lordship to take a note of that answer.

His Lordship (after having taken down the note, said to Mr. Lowder)—Have I any evidence who did go on the 20th? I mean a person identified.

Mr. Wilkinson—No person was identified. I would ask your Lordship to again read through the evidence on that occasion and the examination-in-chief.

His Lordship read—A person came on the 20th—a foreign woman—I cannot say that I could identify her. She was neither tall nor stout.

Witness—A *jinrikisha*-man came on the second day.

His Lordship—He said in his examination-in-chief that he had made a mistake as to the 19th. That the person to whom he supplied the medicine came on the 20th and not on the 19th, and that she was neither tall nor stout. This, then, would refer to the 21st?

Witness—There were three occasions when the medicine was called for, but only two days. They were on the 20th and the 21st October, and on each occasion it was a foreign woman. On the 20th there also came a *jinrikisha*-man.

His Lordship—Then a foreign woman came on two occasions, and you could not say whether it was the same woman or not?

Witness—Yes.

His Lordship—And it might be she who came on the 21st?

Witness—I could not say.

Mr. Lowder questioned witness as to his having sold sugar of lead on the 19th, and his Lordship referred to his notes and had them translated to witness. "I certainly sold sugar of lead on the 19th, because I have looked up my day-book and found that it was so."

Mr. Lowder (to witness)—You also said it was the same person who paid for the medicine on the 19th who paid for it on the 20th?

Witness—I did say so.

Mr. Lowder—You now think you were mistaken in saying that the lady came on the 19th?

Witness—Yes, because she came on the 20th.

Mr. Lowder—At what time on the 20th?

Witness—In the forenoon. I cannot tell more correctly from memory, but have a book which might give me a better idea. (Having looked at the book, witness replied)—I should say at about 11 o'clock in the forenoon. At any rate, it was before mid-day.

Mr. Lowder—You were examined again on the 14th November last, and you said you sold arsenic and sugar of lead to a foreign woman on the 19th October, and you were asked to look at Mrs. Carew, and after having looked at her you replied, "I do not recollect whether the person in Court is the person who came."

Witness—I did say so.

Mr. Lowder—Will you look at Mrs. Carew now, and say whether you recognise her as the person who came to your shop on the 19th, 20th, and 21st?

His Lordship—As a fact no one came on the 19th. It might be on either of these two occasions when he sold arsenic to a foreign woman.

Mr. Lowder to witness—Do you recognise her as the person who came on the 20th or the 21st October?

Witness—I do not recognise her as the person who came on the 20th, on the 21st Miss Jacob came.

Mr. Lowder—Do you remember a foreign gentleman coming to you on the 26th November to ask you to look at your books with reference to the sale of arsenic on the 19th and 20th October?

Witness—I remember a foreign gentleman com-

ing in the way you say, but I cannot say if it was the 26th November.

Mr. Lowder—You referred to your books and told him, did you not, that the purchase on the 19th and the payment on the 20th were both made about noon but rather before than after.

Witness—I cannot remember that I did.

Mr. Lowder—Would you give up a piece of paper containing an order for medicine to any person who came to your shop to pay for that medicine?

Witness—That would depend upon whether the person asked me for it or not.

Mr. Lowder—I am supposing that she asked you for it?

Witness—Yes, if she asked for it. Here witness was shown a small bottle, Exhibit H. and, in reply to Mr. Lowder, said that was the bottle I sold on the 20th.

Mr. Lowder—Did you say it was, or it might have been?

Witness—I said it was the bottle, and I now say so. There is no mark on the bottle to show that it was sold on the 20th October. I only know it from the fact that that kind of medicine was not sold to anyone else.

Mr. Lowder—How did you know Miss Jacob's face so well? Had you seen her on many occasions?

Witness—I have not seen her frequently, and I did not know her name when she came on the 21st. But when she came on the 24th with another woman, we had a long conversation together. From that time dates my knowledge of who she is.

His Lordship—When did you get her name?

Witness—I did not then know her name, however. I did not know it until I heard it here in Court on the first occasion I was examined.

Mr. Lowder—Had Mrs. Carew been to your shop frequently previous to the 20th October?

Witness—I cannot really say.

Re-examined by Mr. Wilkinson—The lady who came on the 24th, whom you afterwards knew to be Miss Jacob, you knew to be the same lady who came on the 21st, I take it?

Witness—I think it might have been the same woman from the fact that when she came on the 24th she stated that she wished to pay for the purchases she made on the 21st.

Mr. Wilkinson (to his Lordship)—I propose to put the following question: Did we not hear him say on this occasion here that "the purchase of the 21st was paid for at the time?"

His Lordship—He said, "I believe they were paid for at the time," and the word *believe* is underlined in my notes.

Mr. Lowder here objected to any further examination on the point in re-examination.

Mr. Wilkinson put the question in another form and Mr. Lowder again objected.

His Lordship—I think it quite within my right to ask any question which is obscure; and sometimes Counsel, instead of putting questions, might ask me to elicit answers.

Mr. Lowder—Quite so, my Lord, but that was not the course.

Mr. Wilkinson—Precisely so, my Lord.

His Lordship—But only, please, if it is a matter of importance, because time is taken up in this way, and loss of time is a great consideration with the jury.

Mr. Wilkinson—I believe, my Lord, witness wishes to correct his last answer where he says "I believe the lady who came on the 24th," etc.

His Lordship asked witness if he understood what was being read.

Witness replied in the affirmative, and said that was what he wanted to correct.

Continuing, he said—I wish to correct the statement so far, that the lady paid cash for the purchase on the 21st, but left the order or writing, and when she came on the 24th she asked me to give her back the writing.

His Lordship—And that was all she came for?

Witness—When she came on the 24th she asked for it back, at the same time she paid for the arsenic and bed-pan which had been taken by the *jinrikisha* man.

Mr. Wilkinson was about to put another question to the witness, when Mr. Lowder rose and said he must object to any further questions being put to the witness on this subject, unless his Lordship wished.

Mr. Wilkinson did not press the question farther, but continued—Have you any doubt at the present moment as to whether arsenic and chlorodyne were purchased on the 19th or 20th October?

His Lordship—He has said so.

Mr. Wilkinson—There was a large cross examination upon that question, and I think it is now time to put the question clearly.

His Lordship—I have that down, and Mr. Lowder did not attempt to shake that.

Mr. Wilkinson—Twice before witness has said

he was mistaken, and I only wish him to now state that he is quite satisfied.

His Lordship—I think that is legitimate enough.

Witness—There is no mistake that I supplied them on the 20th October.

His Lordship (to Mr. Lowder)—Now that I have put these questions I think I should allow you to ask questions on the points elicited.

Mr. Lowder thanked his Lordship and then consulted his client. On returning, he said he did not wish to put any further questions.

Mr. Davison, one of the jurymen, asked the witness if he could explain the reason for the erasure, or striking out, of a sale of arsenic in his sales' book. Upon it being pointed out that the erasure was not a sale of arsenic but of antipyrine the matter dropped, and the Court adjourned for tiffin.

The Court resumed at 2.08 o'clock, when Harry Vansittart Dickinson was called and sworn. In answer to Mr. Wilkinson, he deposed:—

You are a British subject?—Yes.

A clerk in the H. & S. Bank in Yokohama?—Yes.

You are now resident in Yokohama?—Yes.

How long have you been residing here?—I came here in January, 1890.

And you have been resident here all that time?—The whole of that time with the exception of 4 months in Kobe.

When was that?—In 1890.

In October last, where were you staying?—At 160, Bluff.

From what date?—I went there just at the end of Sept., and I think the last night I slept at Mrs. Jackson's was on Friday, the 16th of October. That was the last night that I slept there.

And I believe about that time you went to Kobe?—Yes, I went to Kobe on Sunday.

That was the?—The 18th October.

And returned?—Reaching here on Monday, the 23rd.

Were you a friend of Mrs. Carew?—Yes.

The prisoner at bar?—Yes.

Had you been on friendly terms with Mr. Carew?—Yes, I have always been on friendly terms with him, with the exception of the period some years ago, when we had a serious quarrel, that has long since been made up.

To the Judge—The quarrel was in 1893, but it had long since been made up.

Mr. Wilkinson—While you were staying at No. 160, Bluff, were you in correspondence with Mrs. Carew?—Yes.

Would you call it frequent correspondence?—Yes, frequent.

Mr. Wilkinson—(to the Clerk of the Court) Exhibit iota, please. (To the witness)—Did you receive letters from Mrs. Carew as well as write to her?—Yes. I wrote to her as often as I heard from her. I received letters from her as often as I wrote them.

Is that letter in your handwriting?—Yes.

To whom was it addressed?—Mrs. Carew.

As to the reading of these, my Lord, will the Clerk of the Court read them?

His Lordship—What would be the most convenient way?

Mr. Moss—I can read them, but with difficulty.

His Lordship—What do you say, Mr. Lowder?

Mr. Lowder—I have nothing to say.

Witness (beginning to read)—"You ask me, dearest, to take time over answering your letter, and in the same breath to give you an answer at tiffin. An office."

Mr. Lowder—The copy I have is different to that.

Mr. Wilkinson—I understand, from that remark, my Lord, that witness is supplying words that he thinks ought have been in the original.

Witness—Yes, that is what I am doing.

His Lordship—Do not do that.

Mr. Lowder—I should prefer to have an officer of the Court read them.

His Lordship—Very well.

Mr. Moss then began to read the letter, but had not gone far, when

His Lordship said—We shall not make much progress this way.

Mr. Lowder—But the witness himself has been interpolating words.

His Lordship—Well, he will not do so any more. Witness then read the letter as follows:—

You ask me, dearest, to take time over answering your letter and in the same breath to give it you at tiffin. An office on a mail day with all its interruptions, is not an easy place, and—do not know as I begin the—how—when I shall end. What do you—ant me to say? It is impossible to go back to the old footing. He has altered all that, and if you were a free woman I would ask you to come to me. You know this, Long ago, when I

first knew you, something of a passion for you would now and then come over me and envy of the man who had you, and now when you are thoroughly estranged and have come to me for help what I had easily checked before has risen again with a strength that is multiplied a thousand-fold by the knowledge that now you love me.

Dearest, the scene of last night shall not take place again. We cannot help now, I think, loving. I know it is wrong, but you are not to blame, I think, so much as I, but for other sakes that ours—grosser sin shall be avoided. Can—* * * go on as we are? I do not see * * * can help it. I went into all this * * * beginning only with the honest int—* * * aiding you and cheering up for * * * and you enjoyed my coming. When I found your life so dear and empty of happiness that should have been yours, my heart bled for you, and I knew * * * excuse anything you might do. It * * * a pity darling, then, akin to love, and now I love you. I know that if you were free I would take you and keep you while * * * lasted and therefore I know that—*

His Lordship—I think the letter should be shown to the jury, and they will then appreciate the difficulty there is in reading the letter. I think Counsel have seen it.

Mr. Wilkinson—Yes, my Lord. (To witness)—Part of that letter is destroyed, torn off?—Yes. Can you supply the blank before—ice?—Yes, office.

Can you supply the blank before—interruptions?—Yes, in.

Mr. Lowder—I would suggest that if the witness does not remember the words, but is only supplying them by guess work, then I must object to the question.

Witness—I certainly remember the blanks or missing words in those two particular instances.

His Lordship—I do not know, Mr. Wilkinson, whether you intend to go through all the letters in the same way?

Mr. Wilkinson—Yes, my Lord.

His Lordship—Don't you think the jury can supply these words?

Mr. Wilkinson—I think that a few minutes will suffice to fill the blanks. (To the witness)—Unless you can supply these words from recollection, then you must not answer me. With that warning you will proceed.

Witness then supplied some blanks, but as to other he could not answer.

Mr. Wilkinson—In that letter you begin "You ask me, dearest, to take time"—had you received a letter from Mrs. Carew?—Yes.

What has become of that letter?—I destroyed it.

Was any part of this letter suggested by any part of the letter that you destroyed?—The opening of the letter would be suggested. I can not recollect what she wrote to me.

A little further down you say "he has altered all that." To whom does that he refer?—To her husband.

Does that refer to something of your own knowledge?—Well, it referred to nothing of my own knowledge.

Was it anything communicated to you, and by whom?—It referred to our relations with each other—our friendship. This would mean, before I wrote this letter, our friendship had been of the usual nature; now that she had told me all she had concerning her husband it altered our relations.

It refers to something Mrs. Carew had told you about her husband—Yes, about her husband generally, his treatment of her, etc.

To his Lordship—Before I wrote this letter our relations had been of an ordinary character.

Mr. Wilkinson—Will you state what Mrs. Carew told you, about her husband's treatment?—Mrs. Carew told me she was exceedingly unhappy: that her husband had ill-treated her in a great many different ways—that is generally what she told me. I know it now to be all untrue.

Was that letter written in honest belief that what she told you was true?—Certainly, I honestly believed her then.

What does this refer to—"Dearest, what took place last night shall not occur again"?—To an affectionate passage between myself and Mrs. Carew.

What does this passage refer to, "When I found your life so dear and empty"?—To his general and horrible ill-treatment of her.

Did you witness any ill-treatment yourself?—No, I have never seen any ill-treatment of her by Mr. Carew.

Exhibit upslon—Might I before passing away from exhibit iota, ask you one question; could you fix the time when that letter was written?—I can't fix it exactly, but it would be the last week in September.

Mr. Wilkinson—I don't think I want upslon, it is another I want to show the witness.

His Lordship—What are the opening words? Mr. Wilkinson—"Looks back to;" it is very much torn.

His Lordship—That is here. I would suggest that the witness read it over first. Then, Mr. Lowder, I would suggest that the witness supply the words as he goes along.

Mr. Lowder—I suggest that it will be guess-work, not memory.

His Lordship—That is what I thought myself.

Mr. Lowder—I object to the words being supplied in that way by witness. He is not my witness, and I don't think he should be asked to supply the blanks.

His Lordship—Then I think that we shall get on faster, if he reads the letters as they are.

Mr. Wilkinson—I do not press the point, but I suggest that anything written and then destroyed can be supplied from memory.

Witness then read:—

looks back any to can write to me

But come down to come about 2.3

goes up to-day we can have a I am still staying at the Jack's but have told them not to expect to tiffin as I wished to look out you down here. If you write me a it will be all right to send it the Bank as I shall leave instructions. Your letter reached this morning. Should I alte ind about tiffin I shall t see you. Why do you this. You did not come : I want so much t ay stop down here and 2.6 train too the cricket field follow I must is there

to meet you *wet or fine* hanks for *Jude*. I send the "Play-actress" H.

I will give you the Play-actress when I see you. His Lordship—Is that your initial?—Yes, H. V.D. I think.

Mr. Wilkinson—"The Play Actress" is a novel, is it not?—Yes.

Did you give it to Mrs. Carew?—I can't recollect, but I think I did.

Does that enable you to fix the date in any way?—I think it must be about the 3rd October. I can't be positive.

Exhibit ro—would you look over that letter and say in whose handwriting it is?—I believe it is in Mrs. Carew's handwriting.

His Lordship—Is it?—It is in Mrs. Carew's handwriting.

Mr. Lowder—Before the witness reads that letter, I should like this question to be put to him: Whether he received that letter or not?

Mr. Wilkinson—He has not read it.

His Lordship—He has seen sufficient of it now.

Mr. Lowder—I simply want yes or no.

Witness—I think not.

Mr. Wilkinson—Did you receive a letter in the substance of that letter?—Yes.

Mr. Lowder—I object; I do not think that even if the witness received a letter and is then asked to look at another, though in similar terms, that he can swear to the destroyed letter. I say that he can't revive his memory of the letter.

His Lordship—But you must give him an opportunity of seeing what the contents of the letter are.

Mr. Lowder—My point is that the questions can not be put to him in the examination-in-chief; the suggestion must arise from him. My objection is that the witness may not refresh his memory by referring to that piece of paper, in regard to one letter or to any number of letters.

Mr. Wilkinson—My learned friend's objection would be very pertinent if the letter was written by the witness; but the letter is sworn to as being in the handwriting of Mrs. Carew and can be read at once, I submit. If my learned friend says it cannot, then I will speak to you upon it.

His Lordship—I think the witness can be examined upon it.

Mr. Lowder—Will your Lordship take a note of my objection?

His Lordship—Yes.

Witness then read

Forgive me, my dear. I always come to you in my trouble, there is not mu—the matter but I should like (or ask) your advice on a matter which must—early to-morrow.—is so far quite indifferent as to yesterday beyond calling you a few inelegant names. He is seedy, Miyanoshta did not suit him in more ways than one.

His Lordship—I think before the witness goes further that he has seen enough of it to be asked if he received a letter in those terms.

Mr. Wilkinson—That is the question, Mr. Lowder objected to.

Mr. Lowder—I do object.

Mr. Wilkinson—Did you receive a letter like that or in similar terms?—Yes, I do remember receiving one like this or one couched in similar terms.

What has become of it?—I destroyed it.

His Lordship—Do I understand that you destroyed all her letters?—Yes, I destroyed all her letters.

Mr. Wilkinson—The rest of the letter presents a difficulty. Names are mentioned there that I do not wish to have dragged in; not that I wish to hide anything.

Mr. Lowder said, in answer to his Lordship, he still objected to the way in which the witness's memory had been refreshed, but he did not propose to argue the question further.

Mr. Wilkinson—With regard to the rest of the letter, I am prepared to receive any suggestion from your Lordship.

His Lordship—I have no suggestion to make.

What has Mr. Lowder to say?

Mr. Lowder—Nothing, my Lord.

His Lordship—The jury must see it.

Mr. Wilkinson—The jury will see the letter, and will see all of it. But I suppose it cannot be helped. Did you, Mr. Dickinson, receive a letter in which the subsequent things are referred to?—Yes.

Witness then read:—

Miss Bolitho was not *—wing to the rains. She was * to leave us or get down * Ikao. She however is—Yokohama on Wed. and he asked—* and—chaperon—companion to dinner here Wed—the same evening. Can I refuse to meet them or keep quiet by remaining passive. I rather think the latter, it will give him less of a handle to bully me. To add to the situation it would be nice to have you here on that evening: how wo—you like it? I have n't—

Mr. Wilkinson—Would you look at exhibit epsilon; who are the he and him in that letter—to whom did you think they referred to?—To her husband.

Witness, reading:—

I cannot go to bed, my sweet, without writing a line which I shall deliver if I can before I go down. Thank you for letter of to-day: I could not answer it as I stopped your coolie as he left the house and merely wrote an acknowledgement. My poor dear darling—I knew you would suffer for yesterday, but it revealed to me more than ever, dearest, how much I loved you and how much you have become to me. I shall hope always that all this constant abuse of me will never cause you to look at me with other eyes than those you have now, although I feel you think much too highly of me I feel so sure of your strength and steadfastness. And it is really after all abuse that is not deserved. I think he must think you care for me (without an idea that I know and return your affection) and though he probably does not know the extent you have gone, he cannot but feel he has lost you and that you would if you could come to me. This must, I think, account a good deal for his horrible dislike of me. You know, dearest, in one way I care nothing for it. If I had you for my own I would laugh at his hatred. But I always do feel it badly in another way that even he—much as I despise and loath him—should have this hatred of me. It's very childish, but I cannot get over the feeling. But I would not give you up for all the hatred of the whole clan and family of C—'s. I love you utterly, my dear one, and the remembrance of yesterday will be ever with me. I have been thinking much about your probably having to meet this woman. I wish for your sake that you could refuse to, but have come to think that you cannot well do so. Do you know anything against her? If not you should meet her I think. It would bring you endless bullying, refusing, and I want that to be avoided as far as possible. If you refuse, refuse on the ground that he has insulted you before others and you do not wish for a repetition—refuse first on these grounds and after that on account of his relation to her. That is to say if you refuse at all. But I think you will have to stay and entertain her. If you cannot do it, ask Mrs. Jackson if you may come in here to dinner; it would make her think, but there is no woman you could trust more than her.

You refer there to your letter of to-day, what

letter was that?—I think that must have been the letter that I have just read, the one from her.

This is a letter you wrote to her in response to one received from her?—Yes.

And you think that that is the letter in response to the letter just read?—Yes.

And the references to "him"?—Her husband.

And the "her"?—The lady invited to dinner.

Who?—Miss Bolitho.

When you say, "I knew you would have to suffer," to what did you refer?—We had been out riding the day before, and she said her husband would be angry; and in the letter she said that he was.

In the letter you refer "to constant abuse from him" by whom?—By Mr. Carew.

Had you heard any abuse yourself?—No. I believe it not to be the case.

From what source of information did you derive the statement that there was constant abuse of you?—From Mrs. Carew.

The expression "horrible dislike"—have you the same or a different explanation?—No, the same explanation.

When you say "much as you despise and loathe him," had you expressed it to him?—No, my feelings towards him had been aroused by what Mrs. Carew had told me. I had never exhibited any such feelings to him.

When you say, "the remembrance of yesterday will be ever with me"?—That simply referred to the ride that we had together—nothing else.

You say, "I have been thinking much about your having to meet this woman, I wish for your sake that you could avoid it"—was the ground of this wish from something that came within your own knowledge?—No.

From what source did you get that knowledge?—From Mrs. Carew.

"It would bring you endless bullying"?—By her husband.

Why did you think there would be bullying?—It was suggested to me in a letter by her in the first place. I understood from her that she was always being bullied by him.

How did you understand that?—From Mrs. Carew herself.

"Refuse first on these grounds, and * * * if not, on the grounds of his relation to her," did that arise from your own knowledge, and if so, whence did this knowledge arise?—From Mrs. Carew.

Is this exhibit a letter written by you?—Yes.

And addressed to Mrs. Carew?—Yes.

There was one letter read of Mrs. Carew, to you, were all the others addressed by you to Mrs. Carew?—Yes.

Witness then read—

Never mind my coming in to dinner. I shan't feel hurt if I am left out of your parties. Nothing he can do will hurt my feelings now. It is worse for you than me to hear all his abuse. I am only afraid that he may say something rude to me before others, and I shan't sit quietly under that. Only you would be treated worse than ever if we came to an open row again. I will leave the office early before twelve and come straight down. If you care to take a stroll along the road to me, if not wet, well and good. I shall—the office at a quarter to twelve. I tear the half sheet off and jot down points *re* your will. Are you coming to the Bank to-morrow? Good-night, sweet, and take care of yourself.

Yours always, dear, H.
I would go and see Litchfield sometime before he gets into a busy season. Tear all this up when you have taken a note of it—The notes *re* the will I mean. Of course you destroy letters.

To whom does "he" refer to there?—To Mr. Carew, the husband.

And his abuse?—Again his abuse of myself.

When you speak of "coming to an open row again," to what does that refer?—To the quarrel I have already mentioned.

I think that you said that was the only quarrel between you?—Yes. We of course had little differences, but no quarrel. I should like to alter that statement about the date of the quarrel; Mrs. Carew was home in 1893, so I think it was in 1894.

You speak of, "I jot down points *re* your will," to whom do you refer?—Mrs. Carew's will.

Can you fix any dates—can you fix the date of the letter you are going to read now, approximately?—Yes: this was written by me to Mrs. Carew about the 8th or 9th October.

Witness read—

I think he was only bluffing this morning when he spoke about going in to ask—your *n/c*. Can you send me a line *re* your note to Litchfield to me—Jackson's by the messenger? I want to know if you arranged an interview.
H.

To-morrow and Friday are both likely to be mail days so do not miss to-day if possible.

Witness—This letter must have been written on Wednesday.

The note to Litchfield, that you speak of there, had you seen it?—I had only heard of it.

By letter or by?—I cannot say.

Exhibits sigma, upsilon, and ki—Would you look at those three and see if they form part of one letter or not?—I think they are all portions of one letter written by me to Mrs. Carew.

Would you read them now?
Witness read—

Grown tired of you is good, but not to my thinking strong enough. However, you will know best what you can write. I call his treatment of you brutal. Not stand much in the way of your going home, I am not sure of this. When he finds his money supplies ceasing, I think he will object.

Ask Litchfield on Monday if in the event of your getting away with or without his consent if he can force you to return to him, and if you find he has such a power then I should tell Mr. L. the real state of affairs, how it is impossible for you to really live with him as a wife and your real wishes on the subject. *That any wire they might send you would make arrangements about.* Can you do this? when you next write say that if they wire they must address fully Mrs. Carew, 169, Bluff, Yokohama. It would only cost 10/- or 12/- more and the expense is nothing when compared with the importance of your receiving the message. Otherwise I can think of nothing that I wished you to write about.

I hope you said the £100 which Carew had written for was done absolutely without your authority, and that to say it was for you was simply a falsehood. It is obtaining money under false pretences, and I should like you to refer to this in your next letter and say that any money he asks for of yours is deserving only of one name. I know you have said this less mildly, but there is no harm in impressing them with the importance of it. If you succeed in thoroughly impressing them with the fact that all the use he now has for you is your money—otherwise he is thoroughly tired of you and is treating you worse than any of his servants—they will wake up to the fact of his being a scoundrel and a mercenary one.

What do the words "Grown tired of you," refer to?—These were my comments on a letter which she told me she had written home, and of which she professed to send me a skeleton or outline.

And "grown tired of you," referred to whom?—That he had grown tired of her.

I put the same question to you, "his treatment," to what does "his" refer to?—Mr. Carew.

And what treatment?—His treatment of Mrs. Carew.

And where did you hear of this?—From Mrs. Carew.

And when you refer to "ask Litchfield on Monday," to what do you refer?—I think that referred to a wish of Mrs. Carew to go home. I wished it, and urged it.

Why?—Because I thought if she went home and returned in a year or two, she would find her home happier.

"Any wire they might send"—to whom do "they" refer to?—Her people at home.

And what "wire"?—I cannot quite recollect, but I believe she was expecting a wire from home.

And referring to "the £100 which Mr. Carew had written for," was that of your own knowledge?—No, Mrs. Carew had told me of this.

You say, "if you succeed in thoroughly impressing them that he is tired of you and that the only use he has for you is for your money"—to whom do you refer?—That refers to Mr. Carew. I never saw any ill-treatment of Mrs. Carew by him.

You say, "a scoundrel and a mercenary one"—to whom do you refer?—A mercenary one because I understood he was endeavouring to get control of all her money. I understood that from her.

Mr. Wilkinson—It is now just 4 o'clock, my Lord, and it is getting dark.

His Lordship—I understand you ask to adjourn. The Court will adjourn till to-morrow at 10 a.m.

THURSDAY, January 14th.

Proceedings were resumed this morning at 10.05 a.m. There was but a scanty attendance of the general public, the snow-storm undoubtedly being the cause of this, but later the room again became over-crowded, and especially in the afternoon, when even standing room was at a premium. Mr. Dickinson reentered the box.

Mr. Wilkinson—Here is exhibit pi—would you read that please?

Witness reading:—

I will come to church with Mrs. Jackson and we will all walk up together if possible.

Is that letter in your handwriting?—Yes.

To whom was it written?—To Mrs. Carew.

Would you look at exhibit omicron: would you read that?

Witness reading—"Say you do not know"—I can't read it.

That letter was written by you to Mrs. Carew?—Yes.

Mr. Moss here handed witness a powerful glass, and he proceeded to read:—

Say you do not know in the least about what steps he will take to get your money, but that it is your wish that none of yours be any more sent out to him on any account.

Mr. Wilkinson—Is there any other words legible?—Yes.

Witness—

Ask Litchfield to hurry up with the will, * do not over hurry him and tell him you want a copy and that the original is to go home.

"Him" there refers to?—In the first part "he" and "him" refers to Mr. Carew.

In the latter part it does not?—No.

To Mr. Litchfield?—Yes.

His Lordship—It refers to Mr. Litchfield, of course.

Mr. Wilkinson—I hand you exhibit tau: would you read that please?

Witness read:—

You have not said * £150 you drew he is doing his very * out of you by both threats and cajolery.

Note 2.

Re your suggestion that the Bank would wire out the credit or permission for you to draw on your father. This can of course be done easily enough, but it would be necessary to instruct the Bank (and in writing) that you have written to your father to this effect and that in the event of any such credit coming out from our London office either by wire or letter care is to be taken that the advice be sent to you and not to your husband. Such a letter would be best addressed privately.

Here a note was brought into Court, and Mr. Wilkinson asked permission to hand it to Mr. Dickinson—it had nothing to do with the case, but asked for some keys.

His Lordship and Counsel having read the chit, Mr. Dickinson read it and sent an answer from the Court.

Mr. Wilkinson—After the word "privately" there is a piece torn off?—Yes.

And the next word is—"Jackson."

* Jackson you should ask him to treat the request in all confidence. I will draw up a letter for you before I go to Kobe.

Can you fix the date of this letter?—I can't fix it, but probably it was during the week before I left for Kobe.

Which you have mentioned was Sunday the?—Sunday, the 18th October.

That last letter was a letter written by you, I believe?—Yes.

This letter, kappa; was that a letter written by you and to whom?—Yes, to Mrs. Carew.

Witness read:—

I should think you might ask for the letters. I should do so without hesitation. Ask L if you like, but I should go and do it. I think I will come up as arranged to the house, if I see the usual signal. I could also look in after tiffin perhaps, though I am not certain *re* this. I should go and ask for the letters, taking care, however, no strangers are near you.

His Lordship—Is there nothing more?

Mr. Wilkinson—Yes, the letter H.

His Lordship (to witness)—Please raise your voice.

Mr. Wilkinson—My learned friend suggests that there is no s after the word "letters,"—used twice—and I ask witness to look again and tell us whether there is any s there?—I think it is letters in the first case, but it might easily be a badly written s or the tail of the r drawn out. I can't really recollect.

And does the same apply to the "letters" at the end?—I think there is less likelihood of there being an s after the last one.

What was the letter or letters referred to there?—It was either a letter or letters that Mrs. Carew had said her husband had written to some one care of the post office.

Did Mrs. Carew say who that person was?—Mrs. Carew said the letter was addressed to A. L. and M. J.

His Lordship—Do you mean one letter to A. L. and one to M. J. P.—I understood that the whole address was A. L. M. J., whether there was one or many.

Mr. Wilkinson—Did she say why she wanted them?—No. She merely asks this question, can she go and get them.

Was that in her letter?—Yes.

What has become of that letter?—I destroyed it. All her letters I destroyed; I never kept any of them.

Was there anything in her letter that made you so urgent in repeating it twice—as to the contents of the letter, etc.?—No. I had no idea of the contents of the letter. I merely told her to go and get it as she seemed anxious to get it.

Where was she to go to?—To the post office.

Was that the query in her letter?—Yes.

And you put in "taking care no strangers are near you"—to whom do you refer there that makes you put in such a remark?—The word stranger would refer to the person to whom the letter was addressed—A. L. M. J.—that was the person I referred to; I thought that in the event of her being there for the letter she would notice.

What do you mean by the "if I see the usual signal"?—Mrs. Carew used to hang up a handkerchief in a certain window, that I could see from the house where I was staying at, and from the road, and it was to let me know whether I could go in and see her.

His Lordship—It meant that you could come in and see her?—Yes.

Mr. Wilkinson—Can you fix any date when that letter was probably written?—Probably it was written after the 10th, probably on the 12th.

Is that letter, etc., in your handwriting, and to whom was it written?—To Mrs. Carew.

Will you read it please?

Witness read:—

It will be necessary to be quite in accord with each other, on broad questions we must be able to answer alike. You first wrote to me about the money—writing to the man you could best entrust with some of your unhappiness. Money was a necessity, and it was a very natural thing to come to me about it. This of course led to my advising you how to get it, and as the money proved a source of much anxiety to yourself on account of its attempts to get it, I often saw you at your house. If ever questioned re meeting on the hills, we must admit it of course, as our meetings were for the purpose of talking generally over what was the best course to take as regards yourself. We met on no particular hills, mind, and never mention the fortifications—it is too near the cottage, and if possible that should be kept out of it. We sometimes rode and sometimes walked. But our Hill meetings have been so infrequent that it should be difficult to make any point against you.

Our meeting places for the one or two occasions when we did meet must be the Tea-house near the steep hill or by the Race Course.

We have rested of course it was easier to talk matters over thus, but as often as not did not rest. The reason of our secret meeting was the double one of the (1) necessity of keeping the money matters from your husband (2) our mutual dislike of each other. We have met as friends, and I am and have been always a good friend and nothing more, and the sense that you had some one here whom (to some small extent) you could take into your confidence was a great comfort to you.

Mr. Wilkinson—Whom do "each other" and "our mutual dislike of each other" refer to?—Mr. Carew and myself.

Witness then read:—

I know nothing of the legal proceedings. You can say of course I recommended going to a lawyer in case your husband proved too difficult to manage about the money.

Now will you look at this fragment; does that follow on—is it a part of the same letter or memorandum?—I think most probably it does.

Well, read it.

Witness read:—

Nothing more. As regards the not having taken proceedings before of course say you hoped things would improve. They have got worse, however, hence your compulsion.

Your note with the cap has disturbed me very much, it makes me dread to think of what you may be subjected to; please be so careful not to drive him into any violent act. He shall be punished, but that would be but a small compensation for any harm done you.

You must tell L about last night, and say that you really cannot say when you may be compelled to leave him from fear of personal

violence. Ask his advice as to what you can do if you should ever get frightened. It will cause him to hurry up with the case any way. It is quite clear to me now. At all risks, at all hazards, Divorce. Your personal safety is of more importance to us all than any scandals, and then you have your children. If you succeed in proving the necessity for divorce you will have no trouble in convincing the Court of the unfitness of your husband to have the care of the children. You will then always have the comfortable feeling of having done rightly by the two little beings for whose lives you are responsible. Now and always I will help you in all things if you want me, as I know you do, and be with you while I may. Keep up your heart, my dear one, and do not give in now under his cruelty and coarseness. If you are offered personal violence you must appeal to your brother and servants for immediate help, and go to your lawyer for further guidance. Send for me whenever you may need me. Burn all this when you have read it and learnt the early part.

His Lordship—That is all part of one letter?—Yes.

Mr. Wilkinson—With reference to that last part, "If you succeed in proving the necessity for divorce, you will, I think, have no trouble in convincing the Court of the unfitness of your husband to have the care of the children"—with regard to that, did she ever tell you that she had had interviews with Mr. Litchfield on the subject of divorce?—Yes.

What did she say?—She gave me accounts of two interviews that she said she had had.

Can you tell us what that conversation was?—At the first she said that Mr. Litchfield seemed very unsympathetic and not inclined to take it up; but offered his services as a mediator. On the second occasion she said Mr. Litchfield had said that if she could prove one-half of what she alleged she had ample grounds for divorce.

Was that letter written by you when you were animated by the expressions and terms used in it—honestly animated by the expressions and terms used in it?—Yes, certainly. That letter was written in the middle of the last week, when I believed she had seen Mr. Litchfield.

His Lordship—What last week?—The week before I went to Kobe—the week ending the 17th of October.

Mr. Wilkinson—And you went to Kobe on the Sunday?—Yes.

And those beliefs were entertained from something communicated to you by whom?—Both communicated and told me by Mrs. Carew.

When you say communicated you mean wrote to you?—Yes.

You refer to a note "with a cap," can you explain that circumstance?—I had been dining with Mrs. Carew and her brother, and when I went away I took a wrong cap. When I found my mistake, I wrote Mrs. Carew asking for my cap, and it drew forth the letter just read.

Mr. Wilkinson—I am requested by my learned friend to make an admission, my Lord.

His Lordship—Wait a moment, then I will hear it.

Mr. Wilkinson—In theta there is an expression, "If you succeed in proving the necessity for a divorce," etc. I am asked by my learned friend to admit, that Mrs. Carew never applied to Mr. Litchfield on that subject at all; and in response to that request I make the admission: she never applied to him either with regard to the divorce or to the unfitness of Mrs. Carew's husband to have the care of the children.

His Lordship—It is an allied question.

Mr. Wilkinson—Does, "your note with the cap," assist you to fix the date?—It was either the 13th or 14th, that the letter with the cap came. It was answered probably the same day.

I hand you lammas: will you read it—was it written by you and to whom?—To Mrs. Carew.

Witness read:—

I love you. I think of you always. I cannot give you up now. Time, separation, circumstances may in the future change us. Let us wait for the—to develop—and decide these things for—

It is 12 and—I must go on the Hill and I cannot decide say we meet all as friends leave it for me to decide. It were to part altogether, but it can not sweet, and I do not wish it. Let us talk it out again, not write, for I cannot write any more.

Mr. Wilkinson—I now hand you phi:

His Lordship—That is the last?

Mr. Wilkinson—Yes, my lord.

Witness read:—

You write * suggested?—ush to come in if I may for a— shall walk down to the J's, stable— * * for you at the window of your vera— that or the old signal. H.V.D.

The old signal there is the same as that referred to previously?—Yes.

Now with the exception of the one letter, which you stated was in Mrs. Carew's handwriting, were all those other letters, letters written by you to Mrs. Carew?—Yes.

You left for Kobe on Sunday, the 18th?—I did. Were you anxious at that time for any one and if so, for whom?—I was of course feeling very anxious for Mrs. Carew.

On what grounds?—On the grounds—I thought her home was not a safe one for her. She had lead me to suppose that at any moment some violence would be done to her by her husband, and I was afraid for her.

When you were in Kobe did you receive any communications from Mrs. Carew?—I received some letters and telegrams.

One telegram?—No, two.

Mr. Wilkinson—I have now to ask the Court whether it will be convenient here to state what steps I have taken, by application to this Court, to secure the proof of that telegram. I wish to prove the telegram, and the question is whether this would be a convenient opportunity to show what application I have made?

His Lordship—You must follow your own idea, especially as I do not know what your application is.

Mr. Wilkinson (to witness)—What were in those Kobe letters—were they destroyed?—Yes. I could not possibly tell you what was in the letters, they were on ordinary subjects, general subjects.

Can you tell us the dates?—All were written in that week.

His Lordship—The part of the week while you were in Kobe?—Yes.

To Mr. Wilkinson—She wrote on Sunday, and I think she wrote on Monday—I am not sure of Monday—but she wrote on Tuesday, I think.

His Lordship—At the most, there were two letters?—Yes.

You said some letters and two telegrams, and it looks as though there were more?—I do not recollect more than two.

Mr. Wilkinson—Do you know the dates of those telegrams?—Yes, on Wednesday, the 21st Oct. Both telegrams were received on the 21st.

You have an envelope, have you not, from Mrs. Carew?—Yes.

How did it come that you had it?—I used the envelope to put into a window to prevent it from rattling.

His Lordship—Did you receive it from the accused?—Yes.

Mr. Lowder, addressing His Lordship, said:—I should like to ask permission, my Lord, for Dr. Eldridge to weigh the sugar of lead left in the small bottle now in Court. It is Exhibit E.

His Lordship—What I have in my notes about Exhibit E is:—

"Three bottles produced, first labelled sugar of lead, Z. P. Maruya & Co. dispensing Chemists, Bentendori [Exhibit E]."

Mr. Lowder—That is so my Lord, I only want the small bottle mentioned in the Exhibit. The bottle was then handed to Mr. Lowder, and his Lordship asked if there was anything in it?

Mr. Lowder—Yes, my Lord, there is. I will hand the bottle to Dr. Eldridge and he will weigh the contents here in the Court.

Mr. Wilkinson (to witness)—Do you remember the Regatta Day?

Witness—It was on the 10th October.

Mr. Wilkinson—When did you see Mrs. Carew on that day.

Witness—I saw Mrs. Carew just before tiffin, and also at the boat-house.

Mr. Wilkinson—The only questions that I have now to put to witness is upon the subject of these telegrams. I have made an application to this Court for the production of the originals, but they have not been produced, and I wish to prove that they cannot be produced. I think, perhaps, it might be better to prove that at the beginning of the next sitting, and I should like to know if it will be convenient to do so, or whether I shall proceed now.

Mr. Wilkinson, after consulting with Mr. Lowder, addressed the Court again—My learned friend has intimated his desire that the whole of the witness's evidence may be concluded before the cross-examination is commenced.

Mr. Litchfield at this point went out to fetch Mr. James Troup, H.B.M. Consul at Yokohama, and Mr. Lowder returned to the custody of the Court the bottle containing the sugar of lead which Dr. Eldridge had weighed.

Mr. Wilkinson—I might mention, my Lord, the point of law upon which I intend to rely. I

may state that I have applied to the Court and Consulate for the production of all telegrams which passed between Mr. Dickinson and Mrs. Carew between the 10th and 18th of October last, and I think it will be proved in the usual way.

After quoting the principle of the law of evidence underlying the subject, Mr. Wilkinson said—This however is anomalous of course, because it is an application made to foreign authorities over which this Court has no control, although it is sitting in the same country, and the person who produces it could not be subpoenaed by this Court in the ordinary way, and the only application which can be made is an application of a diplomatic character requesting that they may be produced. I understand that there is a legal difficulty in producing them on account of the Japanese law on the subject. But the grounds on which I ask that secondary evidence of the contents of the telegrams may be given are that it will appear to be in the possession or power of a stranger not legally bound to produce it, the stranger being the Minister having control of posts and telegraphs, and that he refuses to produce it.

His Lordship—What is he called?

Mr. Wilkinson—The Minister of Ways and Communications. He refuses to produce it after being requested, through the usual diplomatic channel, to do so. Another ground would be that it is in a country in which telegrams are not allowed to be removed; that is that they are under a jurisdiction from which they are not allowed to be moved. I refer your Lordship to Steven's Digest of the Law on Evidence, 93rd Edition, page 77, paragraphs B. and D.

His Lordship—You have named the two grounds you have stated here?

Mr. Wilkinson—Yes, my Lord.

Mr. Troup was here called—and, being sworn, said—My name is James Troup. I am Her Majesty's Consul at Yokohama.

Mr. Wilkinson—Do you remember an application being made to you by Mr. Litchfield, the Crown Prosecutor, to obtain information concerning the production of all telegrams passing between Mrs. Carew in Yokohama and Mr. Dickinson in Kobe, between the 18th and 22nd October last?

Witness—I do.

Mr. Wilkinson—From the Japanese Authorities concerned?

Witness—Yes. I believe the Post and Telegraph Office.

Mr. Wilkinson—It is a fact, is it not, that all telegrams sent from Yokohama to Kobe must be put in at a Japanese telegraph office?

Witness—Yes. I am aware that all telegrams pass in that way. I made application to the Director of Posts and Telegraphs. I saw him first personally, and then on the 28th December. I made an official written application to him [application read]. Before receiving a written reply, I had a verbal communication through an officer of the Posts and Telegraphs Office to the effect that the telegrams could not be produced and that the Director was consulting his Department whether he might be at liberty to produce them. Afterwards I received a written communication on the 6th January to the same effect [reply read].

Mr. Wilkinson—Was the attempt to obtain the telegrams carried further?

Witness—It was. Subsequently I took the method which is usual in the cases of obtaining evidence, and I applied to the Prefect of Kanagawa. I applied both verbally and in writing. I applied verbally and was told the information could not be obtained; then I applied in writing. I did this for the purpose of a record because I knew by the verbal communication what the written answer would be. I wrote on the 7th January and received an answer on the 9th of January. [Both letters were here read.]

Mr. Wilkinson—Did you make any farther attempt?

Witness—I made two further attempts. I transmitted an application to the President of the Yokohama Saibansho and I also saw him personally twice. He said he would apply to have telegrams produced in his Court under Rule 113 of the Criminal Code, and then he would supply this Court with their contents.

His Lordship—What is 113 of the Criminal Code?

Mr. Wilkinson—I do not know, my Lord.

Witness—I think I can tell you. It is to the effect that postal and telegraphic matter in the hands of the post and telegraph office may be used by officials of that department on application of *un fuge d'Instruction* in the Japanese Court. The President of the Yokohama Saibansho informed me that he would and could have the telegram produced to him and would inform this Court of its contents, but that he could not order or procure the production of the original in this Court.

Mr. Wilkinson—Then did you make any further application?

Witness—I applied to Her Majesty's Minister [application read]. There had been an application before this, but this is the official application. All the letters were to the effect that nothing could be done to obtain the production of the telegram save in the way laid down by Japanese law.

After further discussion on the matter, His Lordship asked Mr. Lowder what he had to say.

Mr. Lowder—I cannot oppose the principle on which the application was made, but from what has transpired the only person who can prove that telegram is the President of the Yokohama Court.

His Lordship—I do not quite gather from that that he could.

Mr. Lowder—The evidence of the witness is "that he would and could, if desired, have the telegram produced in his Court." If my learned friend chooses to prove the telegram in that way I shall have no objection, but if he proposes to prove it in any other way I shall object because I think that is the best and only proper way.

After a good deal further discussion upon the point, Mr. Wilkinson asked the witness whether the course he had stated was still available or not.

Witness—I think the President is prepared to require the production of the telegram in his own Court and then he will inform this Court of its contents. At the last interview I had with him, which is quite recently, he said if he could be of any further assistance, he would be pleased.

Mr. Wilkinson—Even if the evidence were forthcoming, I would hesitate in tendering it in that form because it is not sworn evidence. It is a copy and no one would come into this Court and swear if that is a true copy.

His Lordship—Would that satisfy Mr. Lowder if Judge Akiyama would inform this Court of the contents of the telegram?

Mr. Lowder—It would not be satisfactory to me. I should require an opportunity of cross-examining Judge Akiyama.

Mr. Wilkinson—I think that Judge Akiyama would not attend in this Court to state the contents. His Lordship—Why not? I should not object to go to Judge Akiyama's Court to prove a document.

Mr. Wilkinson—Perhaps, my Lord, you will ask Mr. Troup if that was his intention.

Mr. Troup—No, I did not understand that he would produce it in this Court, but that he would send an officer to state its contents.

After further discussion on the point his Lordship said he would consider the matter and give his decision after tiffin.

The Court then adjourned for tiffin.

The Court resumed at 2 o'clock.

Mr. Wilkinson—I call Mr. Dickinson again.

The Usher—He is not present.

Mr. Wilkinson—I am sorry, my Lord, I understood he was present.

At this point Mr. Dickinson entered the Court. Mr. Wilkinson—With regard to my application in reference to the telegrams, I do not think that I have led up to them, beyond the receipt of the telegrams. The question I am going to ask witness requires but yes or no. It is: whether he subsequently had a conversation with Mrs. Carew with reference to the subject of the telegrams: yes or no?—Yes.

Mr. Wilkinson—That is all I have to ask on that point.

His Lordship—Was that after you returned from Kobe?—Yes.

His Lordship (to Mr. Lowder)—In reference to the discussion before lunch, have you any authorities to give me?

Mr. Lowder—No, my Lord.

His Lordship then quoted Taylor on "Evidence," and next "Wills on Evidence," as to the "the law not recognising any degrees in secondary evidence." Phipson on "Evidence" was also quoted, page 377. His Lordship said that the best possible course should be followed in the matter: to see whether the Chief of the Yokohama Court, if requested, would ask for the production of the copy of the telegram and then certify to it; or order an official of his Court to produce the telegram here. That is my suggestion, I hope Counsel can see their way to act on it.

Mr. Wilkinson said he would do so. (To witness)—These letters that you read to-day—what was your impression with regard to them—at the time of the inquest, did you know that they were in existence?—At the time of the inquest I did not know of their existence.

What was your impression in regard to them?—I was under the impression that Mrs. Carew had burnt all my letters as she received them.

Had you any conversation with her on the subject of the burning of them or destruction of them?—No, not as to their destruction. I ex-

pressed my surprise to Mrs. Carew when they were produced.

Did you ever ask her if they were destroyed?—Yes, she always said that she had destroyed them all.

You were speaking of conversations?—Yes. While the correspondence was going on she said that she always destroyed them. I said to her after the inquest, after some had been discovered, I understand that you have been putting my letters into the waste paper basket. She said had she had burnt all the compromising letters.

Did you subsequently receive a letter from her about these letters?—Yes.

Did you destroy that?—Yes.

Will you state as clearly as you can the substance of it?—My recollection is not clear; but she first expressed regret as to their not being destroyed, and then hinted that they had not all been written to her.

You stated to-day that they were all written by you—are you quite positive on the point?—Yes, all the letters shown to me yesterday and to-day were written by me to her.

I think you said that the letters received in Kobe were not on anything particular?—On general topics. In one she incidentally mentioned that her husband was ill—she did not lay particular stress on it.

Can your tax you memory in regard to the date?—I received it on Wednesday.

Mr. Wilkinson—That is all I have to ask.

In answer to His Lordship, Mr. Lowder said he would put the words of the telegram, of which so much had been heard, into the witness's mouth.

Mr. Lowder (to witness)—I suggest to you that the words of the telegram that you received in Kobe were these?—"When do you return have sent Baelz most serious"?—No, I do not think so: they were not those words.

You told us this morning—

His Lordship—You understand, Mr. Lowder, that the examination-in-chief is suspended, the evidence of the telegrams is to be taken later.

Mr. Wilkinson—That is so, my Lord.

Mr. Lowder—So I understand. (To witness)—Can you tell me what you think were the words of that telegram?—"When do you return Baelz says most serious"—or very serious, as far as I recollect. When did you receive that telegram?—On the Wednesday afternoon, after the cricket match was finished, between 2 and 3 o'clock.

You told us this morning that Mrs. Carew—

His Lordship—Just a moment, was this the first of the telegrams?—Yes, the first.

Mr. Lowder—You told us this morning that you advised Mrs. Carew to go to the post office for a letter bearing the address A.L.M.J.—I said she asked my advice about going there.

Did she tell you that she had not obtained that letter?—Yes.

Did she tell you she had gone to get it at her husband's desire or at his request?—No.

Now the recommendation as to obtaining a divorce originated with yourself, did it not?—Yes, it originated with myself.

Was that advice given with an ultimate view of a marriage between yourself and Mrs. Carew?—No. It was given because I thought—I had been lead to believe by Mrs. Carew—that there was so much ill-treatment and cruelty at home that I believed that it was unsafe for her to live longer with him.

A marriage between you and herself was never alluded to in any shape or form?—That is so.

You are not in a position to marry, even if you wished?—No.

His Lordship—Pecuniarily?

Mr. Lowder—No, it is one of the rules of the Bank?—It is understood to be a rule. No one under the rank of an accountant can marry without permission.

And that permission would only be given in case that you had sufficient provision to marry upon?—Yes, that permission would not be given if I had not sufficient means.

Was that known to Mrs. Carew?—It is generally known. I have no recollection of specially telling her, but it is a thing generally known and probably it was known to her.

You said that you remember the regatta-day, 16th October, do you remember seeing Mrs. Carew that day at the boat-house?—Yes.

Did she mention receiving a mysterious visitor that day?—Yes.

Did she mention it to others?—Not in my hearing.

Did she not mention it to her husband?—No, not in my hearing.

After your return from Kobe, did you see her?—Yes.

Shortly after her husband's death?—Yes.

You returned on the Friday?—Yes.

Did her husband's death appear to have shocked

her?—She appeared quite dazed at the time I saw her—that was the day after the death.

Do you remember having a conversation with Mr. Carew, sometime ago, about his taking arsenic?—The only time I recollect talking to Mr. Carew about arsenic was many years ago—

His Lordship—What do you mean by many years? Just now you said many, and it turned out to be two years. This was after 1890, I presume?—I think it was in 1891. Mr. Carew told me that once, while living in the Straits, he nearly died from the effects of an accidental overdose of arsenic.

Mr. Lowder—I do not wish to unnecessarily mention names, my Lord, but I will ask you, was there not an intimate friend of the family who used to be called "the ferret," by Mr. and Mrs. Carew?—I believe there was: I know there was.

He was so nicknamed by Mr. Carew himself?—I could not say that: it was their nickname for him. He was on very intimate terms with the accused, was he not?—I think so.

There was another gentleman called the "ice-cream vendor" or the "organ-grinder"?—I know of the "organ-grinder."

He was also on very intimate terms with accused?—Yes.

Your nick-name was "the youth," was it not?—Mr. Carew used to call me "youth," but not latterly.

The deceased allowed his wife the greatest latitude, I believe?—Certainly, I can say he did. I mean in the selection of her male friends?—Yes.

He was fond of sailing, she of riding?—Yes. She generally rode with her male friends?—She often rode with them.

I think you testified on a former occasion that on the day of the funeral, you were standing in Water-street, near the Club gates?—Yes.

There were some signs of the funeral about?—Yes: there were some stands of flowers being carried in and set up near the billiard-room.

And you saw a woman standing there?—Yes, near the Water-street entrance of the Club. As a matter of fact, I was walking in Water-street and was near the gate.

Will you describe her appearance: how was she dressed?—I described her at the inquest, and my recollection will not serve me now, beside the fact that she was quietly dressed.

Mr. Lowder (in answer to His Lordship)—I will put the words into his mouth, if you wish.

His Lordship, however, read the description of the woman as given at the inquest by Mr. Dickinson, and afterwards was requested by Counsel to make a note of it upon the record.

His Lordship—That description is correct?—That is correct.

Mr. Lowder—I put into the hands of the witness a letter, dated the 24th July, 1896, and ask whether it is in the handwriting of the accused?—Yes, this is in the accused's handwriting.

Mr. Lowder—I propose to read the letter.

MY OWN DARLING,
Your first letter from Nikko arrived last evening, the second from Chusenji early this a.m. I know your short cut and sympathise with you. The girls and I came down that way on our return. I am so glad Mr. L is up at the lake. It will be nice for you. You do not say how long you proposed remaining. I fancy Chusenji will be more to your taste; Yumoto ought to be the coolest, though. We are having real summer weather now; hot as anything. I send you the *Gazette* and *Lloyds*. I shan't write after to-morrow as you might not get the letter. Last night we got much mixed and muddled. Reggie dined at the Club with Mr. Dickinson and came home at one o'clock.

I was having my solitary dinner when the front door bell rang; Rachel answered it, and after much palaver came back saying a very dark big *dannasan* had come asking for Mr. Carew. Rachel said Mr. Carew was gone to Nikko, whereupon the unknown man vanished into the night—ten minutes after, more ringing, more mysterious conversation between Rachel and somebody—so I went boldly out and did not say your money or your life but "Hallo, Mr. Storer, what are you doing here?"

You remember Mr. Storer of the *Palinurus* who came up one night and dined with us at No. 57. He is on the *Prometheus*. He came up to see us, and on Rachel telling him you had gone to Nikko he went up to the Police Station and asked which house Nikko was? And eventually came back here to say he could not find Nikko! I packed him off, then and there, as I was alone, but he is coming up to-day to-morrow [Saturday].

Half an hour after this excitement Ah Kwong comes in to say the *Sendo* wanted to see me. I had visions of shipwreck, etc., but had him in, when he said, "where is the letter for the young *dannasan*," I really thought the old man was a raving lunatic—I told him I knew nothing of any letter and advised him to go home and go to sleep. I spoke to Reggie at breakfast this morning and he said that though he and Mr. Dickinson had been out on the *Cocktail* they never even spoke to the *Sendo* and *sayonaray* him when they left the boat at 7.45. More mysteries? At 10.10 I went up to bed having deposited the key under the door mat for Reggie—(first of all I must tell you that Ben and Marjorie are taking it in turn to sleep with me while father is away) I opened the door, when suddenly there was a squeal and the door stuck, there if you please was your son and he lying just inside the door like a little dog. I picked him up and put him to bed—10 minutes after, bump right through the curtain on to the floor and so on right through the night. Once he crawled under the bed and there I found him at 5 a.m. No more Ben for me during the hot weather. Mary says he is so restless that he constantly tries to throw himself out of his cot. This is not much of a letter but it will be something to read. I think you dated your letter wrongly from Chusenji. [23] it should have been the [22nd] Rachel has gone into the country to return to-morrow bringing her young sister with her. I went for such a long ride yesterday up to the old Down racecourse, Babel was angelic, and I did enjoy it so—I never met a soul. To-day R and I are to dine at 7.15, meet Mr. Dickinson outside the Club at 8.30, and go to some entertainment with him in Theatre Street. Too hot I think—well, good bye old Best. Always with fond love from pussy.

Your ever loving wife,
EDITH.
I presume I had better put this in when I open my case?

His Lordship—You can put it in provisionally. Mr. Lowder (to witness)—You knew that Mr. Carew was up at Nikko at the time?—Yes, I recognise many incidents in that letter.

Do you know whether the accused was up at Miyanoshta on the 28th Sept. last?—Yes, they went up together.

Will you take this letter and tell me if this letter is in the handwriting of the accused?—Yes.

The whole of it with the exception of the date?—Yes.

I shall have to prove the date later, my Lord.

Fujiya Hotel, Miyanoshta,

MY DEAREST,
Yamaguchi has just been to me about Ah Kwong not having a passport. He says it will be all right if I can give him one before I leave. Can you speak to Rachel or your clerk about it and send it me up. I hope you and Reggie got down all right. I gave your slippers and a pair of R's socks. I am sorry we are left behind. It has been an awfully dreary dismal day here, rain, rain, rain, thick fog, most depressing. I feel awfully seedy, and wish I was back in Yokohama. I think the way we parted this morning had something to do with my depression. I hope you feel bright and cheerful, also that you have lost your indigestion; there is the dinner bell, so I must go. I will write again to-morrow.

Good-night and good-bye from your loving wife,
EDITH.

Was the accused also at Miyanoshta on the 30th Sept. last?—Yes.

Is this letter in her handwriting, with the exception of the date?—Yes, that is in the accused's handwriting.

Fujiya Hotel, Miyanoshta,
10 a.m.

DEAREST BOY,
Your letter of Tuesday arrived this morning during breakfast. I don't understand it very well. You are surprised I did not send you a note with the slippers. I wrote to you on Monday, did you not receive the letter yesterday? You left here at 5.30 a.m. on Monday. I sent the slippers by the—who left here at 9.30, four hours after you left. I do not see why I should be expected to write. Yesterday I went to Hakone, I walked there and back. As we did not get in until late I did not write. To-day is nasty, cold, raw, and intensely gloomy. I thank you very much for all the information about the house. It certainly does not sound a good investment. \$15,000 is not exorbitant for 169, I quite concur in all you say on that score and will discuss it with you on Sat. I am to meet you, am I not, at

Mr. —'s house at 11? I am most sorry to hear you were not feeling well. I am not much better yet, but of course the change must be doing me good. M and B flourish. On second thoughts why don't you ask for a holiday on Sat. come up here on Friday evening. I will walk down to Yumoto, to meet you and we will walk up together. Then you will get all Sat. and Sunday here and we can get a better chat. I can see the house alone if you think it necessary, but I certainly should not think of buying it after what you told me about the wall. I'll think this over. I want you. I think something is the matter with me. I feel so awfully wretched, and if it were not for the children you would see me in Yokohama to-night. Send a telegram in case letters miscarry and I will be down at Yumoto to meet the tram that you came by before, on Friday next. You will do this because I ask you, if you love me. We are going to walk to Kiga now if it does not rain.

Good-bye, husband mine,
Your loving little wife,
EDITH.

Mr. Wilkinson—I have no re-examination. His Lordship—Can you tell me the hour you returned from Kobe?—I saw Mrs. Carew at 6 o'clock. Is that the time you refer when you say she was dazed?—Yes.

Mr. Patterson (one of the jurymen)—Your Honour, the witness has testified that he had a serious quarrel with Mr. Carew in the year 1894, does he remember what it was about?

His Lordship (to witness)—Do you remember what was the cause?—Yes.

And what about?—Yes. Mr. Patterson—Had it reference to the witness's relations with the accused?

Witness—None, whatever.

Elsa Christoffel was next called and sworn.

Mr. Wilkinson—I believe you are a Swiss citizen?—Yes, I am a Swiss.

And you are a nurse?—I am living here as a nurse.

I believe at No. 6, Bund, to Mrs. Dunlop's children?—Yes.

What time did you arrive in Yokohama?—I think about the last of November, 1894.

Have you been a friend of Miss Jacob?—Yes, I have.

Witness here broke into tears, but declined a chair offered by the Judge.

How long have you been a friend of hers?—About July, when she saw me coming from the children's service.

Were you very intimate with her?—Yes.

You remember receiving from Miss Jacob some fragments of paper?—Oh, yes, I remember.

Can you fix the time approximately?—I think the first lot was on the 25th September, the night before she went to Miyanoshta.

And when did you receive the last of them, do you think?—I could not tell for sure, but about the middle of October, I should say. It must have been the middle of October—it might be the 16th, but I am not sure.

In how many lots?—I think about 4 lots, but I am not sure.

Did you stitch them together?—Yes, I did.

Would you recognise the fragments if you saw them?—If I saw the letters again I would recognise them, of course I would.

Is this, theta, one?—Yes.

Lambda?—Yes.

Psi?—Yes.

Eta?—Yes.

Kappa?—Yes.

Tau?—Yes.

Omicron?—Yes.

Phi?—Yes.

Ki?—Yes.

Upsilon?—Yes.

Sigma?—Yes.

Mu?—Yes.

Zeta?—Yes.

Rho?—Yes.

Epsilon?—Yes.

Nu?—Yes.

Iota?—Yes.

You recognise all those?—Yes, as pieces that I stitched together.

Were there any other fragments?—Yes, there were.

What were they?—There were two little fragments of envelopes. May I explain about them?

His Lordship—Are they to be used?

Mr. Wilkinson—Yes. (To witness)—Are these the two fragments?—Yes. When I gave up the fragments I took them out of my push-bag, and I thought they had all been given up, but afterwards at home I found these two fragments in my box.

His Lordship—Are they of importance?
Mr. Wilkinson—Yes.
His Lordship—Well, to whom did she give up the first fragments?

Witness—To the Crown Prosecutor, Mr. Litchfield. I found these two fragments after returning from his office: when I received them I do not know but these fragments I did not want to give up.

Had you had them before this—when did you find them?—Not until long after I had given up the others.

Were all the fragments given up at the same time?—No, on two occasions.

When you gave up the fragments on the second occasion did you believe you had given them all up?—Yes, I did believe I had given everything up. I was perfectly sure of this at that time: I did not know that I had these pieces in my box. I went on living, thinking that I had given them all to Mr. Litchfield.

You got all these from Miss Jacob?—Yes. I thought I had given them all to Mr. Litchfield, I afterwards made a search and found these two bits in my box.

How did you come to find them, did you look for them specially?—Yes.

Had you reason to believe then, from something you heard, either in this Court or outside, that you had not given them all up?—Yes.

On making search where did you find them?—In my box.

Having found them, what did you do?—I went the same evening to Mr. Litchfield and gave them up.

What date was that?—I can't remember.

Can you fit it approximately—how many days was it ago?—I can't recollect.

I do not want the exact day?—I can't recollect, really.

Those (holding papers up) are the two fragments you speak of?—Yes.

Can you explain how it was that these two fragments remained behind when you gave up the rest of the fragments?—I did not intend to give them up, but not finding them in the bag when I returned from Mr. Litchfield's, I thought that I had given them up to him before. When I returned from Mr. Litchfield's I searched my bag and found they were not there; later I heard that they were talking as though I had given them up.

His Lordship—And subsequently looked for them, where?—In my big box, and I found them there. I discovered that I had more pieces on the 8th November. I did not count the papers when I received them from my friend, and did not count the number when I sewed them together. I found these only a few days ago.

Then you knew of their existence?—Yes. May I explain: when I received the pieces from my friend, I put them all into a cabin box and kept them there until I sewed them together: but I do not recollect when I received these two pieces. I did not want to give these pieces up at first, but afterwards I was asked for them, and then I gave them up.

The elucidation of the point caused some laughter in Court, Counsel and Bench trying their best to get straight answers to their questions, but it was long before the solution was clear.

Mr. Wilkinson—Have you any more fragments?—I have nothing more left.

Do you remember after the death of Mr. Carew, going with Miss Jacob to Maruya's store?—Yes.

Do you remember obtaining a paper there?—Yes, I do.

Was this it (exhibit A)—would you recognise it?—Yes, I believe so.

Is this the paper?—Yes.

Was this what you asked for?—No: it was another paper that we asked for.

And you got this one?—Yes.

Mr. Wilkinson—That is all I have to ask.

Mr. Lowder—I shall not be able to conclude my cross-examination to-day.

Mr. Wilkinson—It is nearly 4 o'clock.

His Lordship—I think it would be better for you to begin and get through as much as you can.

Mr. Lowder (to witness)—When did these last two fragments come into your possession?—I think it must have been on the third occasion in October, but I not sure of the date.

What makes you recollect them so well?—Because I gave them back to my friend, and said that I would not put them amongst the letters.

When did you give them to Miss Jacob?—In October, but I cannot give any date.

When did they come back into your possession?—I cannot say because I had three batches in my possession before stitching them.

But when did you get them back?—After the late Mr. Carew's death.

When was that?—I think it must have been on the evening of the 24th October.

And you kept them until a few days ago?—

They were in my possession until a few days ago, yes.

You did not intend to give them up?—No. Why not?—I thought they were too incriminating, that is why I did not want to give them up: but I had to give them up.

I show you exhibit R 1—(the pasted letter)—is that some of your work?—No, sir; I sewed letters together, I never pasted letters. I only sewed letters in Yokohama. I have never had these pieces in my hands before.

Did you have in all the scraps of paper that came into your possession, scraps only in Mr. Dickinson's handwriting and Mrs. Carew's?—Yes, as far as I know.

All the scraps delivered to you were in two handwritings?—Yes.

Look at exhibit R 2, and tell me whose writing it is in?—I do not know. I only know one handwriting in Yokohama, and that is my friend's.

Do you know that (showing a large piece of note paper) handwriting?

His Lordship—Is this something different?

Mr. Lowder—Yes, my Lord.

Witness (smiling)—This is my handwriting.

Mr. Lowder—Will you read it?

Witness (with a face wreathed in smiles) read:—why! o! why will you go down that hill to-night for your own sake—keep away from that place—laugh—call this the produce of a mad-woman I dare say she has gone mad or she would not humiliate herself down to the dust—for a man—was alone my friend shall never know anything about this Sunday night.

His Lordship, not catching all that was read, had the last three lines repeated, and then remarked—Nothing turns on this, I suppose?

Mr. Lowder—I am not suggesting that this witness wrote the A.L. letters.

I show the witness exhibit V 1, one of the A.L. series, the letter addressed to Mr. Hall, and ask her to look at the capital letter I throughout that letter—do you think it a good imitation of how you write your letter I?—I think this was a very good imitation of mine; but mine was written on the 25th October.

This letter you say was written on the 25th October?—Yes.

It was addressed to a gentleman anonymously?—It was not written anonymously.

But it was not signed?—No.

It was written to a gentleman of this community—I shall not mention his name—whom you did not know?—Yes.

And was addressed to him at the Yokohama United Club, was it not?—Yes.

"The produce of a mad-woman I daresay she has gone mad or she would not humiliate herself down to the dust"—to whom does that refer?—Myself.

"My friend shall never know anything about this," who was your friend?—Miss Jacob.

On exhibit epsilon, is a mark in blue pencil, R. 22. Oct., in whose handwriting is that?—It was made by Mr. Dunlop.

And when was it put there?—On the 22nd October, when I gave three of the letters into Mr. Dunlop's hands.

What does the R mean?—I do not know: perhaps received.

Mr. Dunlop told you to put them into the fire, did he not?—He may have said—

Did he?—I must remember; Mr. and Mrs. Dunlop were much against me—

Answer the question?—I can't say yes or no.

Mr. Lowder—I have not yet finished my cross-examination, my Lord.

His Lordship—The Court will rise now.

The Court then adjourned till 10 o'clock next morning.

FRIDAY, January 15th.

At the beginning of to-day's sitting very few people were in Court, but before 11 o'clock the room was again packed to overflowing. Mrs. Carew looked very ill, and completely exhausted.

Miss Christoffel at once entered the witness-box, and her cross-examination by Mr. Lowder was continued.

When you attended to give evidence before the Magistrate you went away from the Court to bring back the remainder of the letters in your possession?—Yes, and I brought them back.

And then Mr. Litchfield asked you if those you had brought were all?—Yes.

Having asked you if these were all, did he put them to you one by one and ask you if you could recognise them?—Yes.

Now the two fragments you produced yesterday were not sewn together as the others were?—No.

Did it occur to you that in keeping back these two pieces you were misleading Mr. Litchfield?—I did not think I was misleading him. I never

took an account of what papers I had in my hands; personally I had no interest in them.

His Lordship—Counsel has pointed out that the others were stitched together, but these were not.

Witness—I quite understand that, but I cannot remember why.

His Lordship—He put the question that he (Mr. Litchfield) put them into your hands one by one, and asked if you did not mislead Mr. Litchfield by not putting in these two which were unstitched?

Witness—I forgot about those fragments. I have a very bad memory.

Mr. Lowder—Did you tell Miss Jacob that you knew how to piece letters together?—No, sir. I found that out myself.

Have you ever before been engaged upon the work?—Never in my life. I did not do it for myself.

Mr. Litchfield here entered the Court.

Mr. Lowder—Did she ask you to do it for her?

Witness—No. I offered to do it.

You advised her to collect these scraps?—I did, sir.

Why did you do that?—I can only repeat what I said before.

His Lordship—These gentlemen—the jury—do not know what you said before.

Witness—In case it should be known that people went down to No. 169, not in the form of house friends, possibly a false stain might be brought up against my friend. In that case these letters should be a written proof to the contrary.

Mr. Lowder—That would be only as regards Mr. Dickinson, I presume?—It would not be evidence if I should say anything more.

His Lordship (to witness)—You must answer the question. I think you had better answer anything Mr. Lowder puts to you; he is the judge of what information he requires to elicit from you.

Mr. Lowder put the question again and witness answered—I cannot say, yes.

Mr. Lowder—That is your answer?—Yes.

Did you think that your friend's character stood in need of any such protection?—I thought it, yes.

His Lordship—Perhaps you do not quite understand the question. Just repeat it again Mr. Lowder.

Mr. Lowder repeated the question and witness then said she did not quite understand it. She was not English; she was Swiss.

His Lordship—You said you wanted to prevent a false stain on the character of your friend, and Mr. Lowder asks if the character of your friend needed such protection?

Witness—No, my friend's character did not require it.

His Lordship—I thought you did not quite understand the question.

Mr. Lowder (referring to the anonymous letter of yesterday)—What did you mean when you wrote, "I was alone; my friend shall never know anything about this": had Miss Jacob shown any liking for the gentleman?—No, she greatly disliked the person I wrote that letter to.

Why did you think it necessary to tell him that your friend should never know?—That refers more to myself. I did not want my friend to know that I had written to a man of whom I did not know anything of his past or present or anything about him.

Are you in the habit of writing anonymous letters?—No, that was the first one.

Did you write an anonymous slip to Dr. Wheeler on the morning of the 22nd October?—I wrote one word on that slip. It was "Maruya." The slip was not sent by me.

Did you not write more than one word?—No.

What did you intend the word "Maruya" to convey to Dr. Wheeler's mind?—I did not know the slip was to go to Dr. Wheeler.

To whom did you give the slip?—To the person who produced it to me.

Who was that: tell me his name?—It was Mr. Dunlop.

What did you intend the word "Maruya" to convey to Mr. Dunlop?—I was asked by Mr. Dunlop for the name of the chemist from whom arsenic was procured.

On the morning of the 21st October you met Miss Jacob on her return?—I did not meet Miss Jacob in the morning, I met her in the afternoon of the 21st.

At what time?—It must have been between two and three.

Did she tell you what Maruya's shopman had said to her?—Yes.

Did she mention any dates as having been told to her by the shopman?—I cannot tell. She might have done so, but I cannot tell for certain.

She told you about the purchase of arsenic?—Yes.

And had you then any suspicion in your mind from what she told you?—I had.

Did you then mention these suspicions to any one at all?—No.

Don't you think it would at least have been kind to have mentioned your suspicions to the person against whom you entertained them?—I should have done so if I had been in the house.

Do you not know, now that I remind you, that between two and three o'clock on the afternoon of the 21st, Miss Jacob was with the children at their dancing lesson?—Yes, that is where I met her.

Re-examined by Mr. Wilkinson—To whom was that letter addressed?—To Mr. Norman Walter. That letter was written on Sunday night, the 25th October?—Yes.

Mr. Wilkinson, reading—"Why did you go down that hill for your own sake?" what hill was that?—It was the hill reaching from No. 160 down No. 169.

Had you seen him go down that hill?—Yes. Just state the circumstances. What time was it?—It was about ten o'clock at night on Sunday, the 25th October.

How did you happen to be there at that time of night?—I was delivering a note written by Miss Jacob to Mrs. Carew.

Did you take it yourself to the house?—No, I stopped at the top of the hill and sent my two *jinrikisha*-men to deliver the letter.

Had they come back when you saw Mr. Walter?—No, they were down at the house when he passed. You say, "Keep away from that place?" what place do you mean?—No. 169.

Did you speak to Mr. Walter at the time?—No, I have never spoken to him.

His Lordship—You were asked if you spoke to him at the time, and you answered that you never spoke to him at any time.

Witness—No, I have never spoken to him.

Mr. Wilkinson—When you say, "Call this the product of a mad woman," who do you refer to there?—To myself.

Mr. Wilkinson, reading, "I dare say she has gone mad," did you feel like that at the time?—I felt that I was doing something that I hardly believed I could do: I mean in writing that note.

Mr. Wilkinson here asked for the exhibit epsilon. (To witness)—You have been asked about showing this to Mr. Dunlop. Do you remember what time?—It was the Thursday morning, the 22nd October, the day of the funeral.

You have just answered that you put one word on the memo. shown to Mr. Dunlop. Was this letter shown to you before you put that word on the memo?—Yes, the letter was shown to me before I put the word "Maruya" on the memo.

By a Juror (Mr. Davison)—I would like to ask whether the witness can tell the date when she discovered the two scraps of paper?

Witness—I do not remember.

Mr. Davison—I mean the date she discovered them in her box?

Witness—It was some day last week that I discovered them in my box.

Mr. Davison—And who was the person that commanded her to give them up?

Witness—I took them to Mr. Litchfield, and he kept them.

Mr. Davison—Then Mr. Litchfield took them of you?—Yes.

By another Juror (Mr. Patterson)—Witness speaks to carrying a letter from Miss Jacob to Mrs. Carew on the evening of the 25th October. Does she know the contents of this letter?

Witness—It has been read out in Court, my Lord.

His Lordship—Do not answer that it has been read out in Court. Please answer the question. Do you know the contents of the letter?

Witness—Yes, my Lord.

Mr. Patterson—Did you write the letter or Miss Jacob?

Witness—Miss Jacob wrote the letter. I helped her; that is, I dictated some of it to her.

Mr. Lowder had no further questions to put to witness, but stated to the Court that the letter would be put in in the course of the proceedings.

Charles Davis Moss, being sworn, said—I am Clerk of this Court. I received from Mr. Wilman all the exhibits in the Carew inquest. I was present in Court most of the time that Mr. Wilman was giving his evidence.

Can you say whether any of those exhibits have diminished since they have been in your possession?—Dr. Divers took some scrapings from the fender, exhibit K, also part of the contents from two bottles. They are exhibits L and D. I remember the breaking of this bottle.

Were you present at the time?—I was present at the time.

Was it possible for any foreign ingredient to have entered the bottle at that time?—It was not possible for any foreign ingredient to get into the bottle at that time. With those exceptions, the exhibits have not suffered any diminution or increase

while they were in my custody, and they have never been out of my custody since I received them except when they were in the custody of Mr. Wilman. I was present at the preliminary examination of the prisoner in this Court. I remember the papers Mr. Dickinson identified being brought into Court. I do not remember the day. I can fix the day from the notes made by the Assistant Judge. From a note on the documents I now see it was on the 13th November.

Did any exhibit at any time leave your possession?—I missed one for a time [Exhibit epsilon.]

What were the circumstances?—The circumstances were that counsel for the accused wished to see all exhibits.

Mr. Wilkinson—At the time there was two counsel for the accused, Mr. Lowder and Mr. Walford?

Witness—Yes, I handed them to Mr. Walford. He examined them, sitting there [pointing to a place which Mr. Lowder occupies now] and returned them to me. I asked, "Are they all here?" He said, "I believe so, but you had better see." I examined them carefully then, and found one missing. I reported the matter to the Assistant Judge who was taking the examination. He questioned me on the subject, and the matter then dropped until the Court rose.

Mr. Wilkinson—Where was the accused sitting then?

Witness—At the right of Mr. Walford.

Mr. Wilkinson—When did you next get that exhibit?

Witness—About one o'clock on the same day. The Court in the meantime had adjourned until Monday. This occurred on Saturday. I received it back from the Assistant-Judge, Mr. Troup.

Ando Mosaburo, a *jinrikisha* coolie, was next called and cautioned by Mr. Uchiyama Rossetsu, the Interpreter, in the prescribed form.

Mr. Wilkinson—You are a Japanese subject?—Yes.

What is your occupation?—I am a *jinrikisha* coolie.

Where do you live?—At Honmoku.

Do you remember in the month of October last taking a note to Maruya's?—Yes, I do.

What Maruya was it—the book-store, the drug-store, or any other store?—The drug-store.

Where?—In Bentendori.

From whom did you receive that letter?—I received it from the Eurasian female servant of Mrs. Carew.

What was the number of the house where you received it?—I did not receive it at the house. I received it somewhere else. I received it near the *jinrikisha* station.

Did you take that letter given to you by the servant to Maruya's?—Yes.

Can you, from your own recollection, say the exact date of the month, or not?—I do recollect, it was on the 20th October.

Do you remember what time of day it was?—I got it about 6 o'clock, or a quarter past six.

And you took it down to Maruya's, and did you get anything on presenting that note?—Yes.

Would you describe, as nearly as you can recollect, what it was?—It was a round thing that had a handle.

About what size?—About a foot in diameter.

His Lordship—That is the article mentioned in exhibit A.

Mr. Wilkinson—Yes, my Lord. (To the witness)—Did you receive anything else?—Yes, a small bottle.

What did you do with them?—I took them to the house, Mrs. Carew's house, and gave them to the same servant.

What was the number of the house?—Bluff, 169.

Are you sure that you gave them both to the same woman?—Yes, quite sure.

Did you ever go to Maruya's on any other occasion with a message from No. 169?—No, this was the only occasion.

Mr. Wilkinson—That is all I have to ask.

Mr. Lowder had no question to ask.

Mr. Wilkinson—Call Yamada from Maruya's. The Usher—I have called him, but he is not present.

Mr. Litchfield—He was here a few minutes ago. His Lordship—Call his name again.

Mr. Uchiyama Rossetsu left the Court and returned with the missing witness within a minute.

Yamada Ma-akichi was then cautioned in the usual form by the Interpreter.

Mr. Wilkinson—You are a Japanese subject?—Yes.

And in the employ of Maruya's?—Yes.

Do you remember the giving of a bed-pan and a bottle to a coolie on the 20th October, for No. 169, Bluff?—I do.

What was the other thing you gave?—A bottle of Fowler's Solution of Arsenic.

Do you know the size?—A one-ounce bottle. Did you hand them to the coolie yourself?—I did.

In the rough cash sales book, who writes in the sales?—It is entered by the person who makes the sale.

Will you show me the rough cash-sales book of October last?—Here it is (producing a Japanese account book).

Just turn up the 20th October there?—Here is the page.

Can you tell by whom this item—an entry on the 20th, I am trying to avoid pointing out too clearly, for fear my learned friend makes valid and proper objection, my Lord, I am pointing out the entry to him. (To Witness)—Can you say whose handwriting that is?—Yes, I think it is made by a man named Wada.

His Lordship—Does he state that that entry was made on the 20th October?—

Mr. Wilkinson asked the question.

Witness—Yes. I am not sure, but I think this entry is in Wada's handwriting.

Where is Wada?—In the country—in the interior.

When does he return?—On Monday next.

His Lordship—Wait a moment, Mr. Wilkinson, I know that you understand Japanese, and read it, but the Court must have the words interpreted.

Mr. Wilkinson—I beg your pardon, I quite forgot.

Mr. Lowder—What are these erasures?

His Lordship—On the same page?

Mr. Wilkinson—Yes, my Lord.

Witness—The book is divided into two parts, and refer to medicines the accounts of which are made up, the other to those that are not made up.

His Lordship—Is that all?

Witness—I believe the erasures belong or relate to the upper entries of a different class.

Mr. Lowder—I believe the erasures extend to the lower part, somewhat?—Yes, they do, somewhat, but I cannot explain that.

Can you absolutely say that they do not refer to the lower part?—I cannot say that.

And you cannot say what has been obliterated?—I cannot read it.

Mr. Wilkinson—Is there another book into which these entries are transferred from day to day?—Yes.

Would you show me the book into which this entry is transferred?—Here it is.

What does this character relate to?—These are the prices.

And this?—To the cost prices.

Mr. A. H. Cole Watson (one the jury)—I should like to ask the witness one question; at what time of the day did you deliver these articles?—I cannot say to the hour, but it was after the lights were lit.

Mr. James Troup, H.B.M. Consul and Assistant-Judge, then entered the box again.

Mr. Wilkinson—You took the preliminary examination of the accused in this case?—Yes.

Do you remember an incident that occurred on Saturday, Nov. 14th—do you remember your attention being called to the absence of one of the exhibits?—I do remember my attention being called to the absence of one of the exhibits. On referring to the record, I find that this was on Saturday, the 14th November.

Mr. Lowder—My Lord, may I ask again for the bottle, exhibit E, to show to Dr. Eldridge?

His Lordship—Certainly.

Mr. Wilkinson—I believe Mr. Lowder and Mr. Walford then represented the accused, and that the accused was sitting beside Mr. Walford?—That was so.

When it was reported to you that the exhibit was missing, what did you do?—The incident was reported to me by Mr. Moss, Clerk of the Court. I asked him to make sure whether he had not got it, and then I asked him to whom he had given it. He said to Mr. Walford. I asked him if he was sure that he had given it to Mr. Walford, and he said that he had given all the series of exhibits to Mr. Walford. I then asked an explanation of Mr. Walford. Mr. Walford said that the exhibits had been on the table before him, and had been looked at by himself, and Mr. Lowder, I believe, and also by the accused; that he had put them back into the envelope, but without checking them with the list, and had returned them to Mr. Moss. I subsequently requested all who were sitting at the Counsel's table to make sure if the exhibit was not there; I also requested the gentlemen of the press to make search on the reporters' table. I then requested the Usher of the Court to close the door and prevent any person from leaving the Court, and went on with the evidence. At the close of the sitting, I requested all persons behind the barrier to leave the Court, which they

did. I then asked Mr. Porch, who was sitting inside the barrier, if he had any knowledge of the exhibit, and on his answering in the negative I told him that he might leave the Court. I believe I then asked Counsel to make a search once more among their papers, and on their doing so, and receiving their replies, I said that they might leave the Court. I again asked the gentlemen of the Press the same question and they replied in the same way. Then they were allowed to leave the Court. There was thus left in the Court, the accused, the usher in charge of the accused, myself, and the Clerk of the Court. I went into my private room, and I requested—

Mr. Wilkinson—That was not in the presence of the accused?

Witness—No, it was not.

Mr. Wilkinson—I believe you eventually had Mrs. Hodges to search the accused?—I did.

I believe Mrs. Hodges was not in the Government service?—She is not in Government service, but when I employed her I looked upon her as in the employ of the Court.

Could you have got any one else, any other responsible person?—I knew of nobody else I could get.

It was necessary to do it?—It was necessary that the search should be continued. For the time being, Mrs. Hodges was looked on by me as in the employ of the Court. She acted under my instructions.

That is to say owing to a special occasion—she had not been in the service of the Court?—She has never been employed by the Court.

His Lordship—She did it rather as a favour?

Witness—Yes. I requested her to proceed with the search, and she acted under my orders.

Mr. Wilkinson—To oblige you it was done?—Yes.

You may continue with your statement—what did you do next in Court?—I did not enter the Court-room again that day.

Mr. Wilkinson—Did not Mrs. Hodges return the exhibit to you—hand it to you?—Yes, she did. She gave me exhibit zeta. (Looking at the Court-record)—No, I am wrong, it was epsilon.

His Lordship—Was this shortly after?—Yes.

Mr. Wilkinson—I suppose you would recognise the exhibit again?—Yes.

Is it (showing epsilon) in any different condition to when you then saw it?—I recognise no difference in its appearance.

Mr. Wilkinson—I have to ask Mr. Troup some questions on another branch, but it will not be convenient to put them now. I am not prepared with another witness at the moment. Mrs. Hodges, I understand, can not attend till 2 o'clock.

His Lordship—Mr. Troup can easily be got at when you require him.

Mr. Wilkinson—Quite so, my Lord. It is now twelve o'clock.

His Lordship—Then we will adjourn till half-past one?

Mr. Wilkinson—No, my Lord, till 2 o'clock.

His Lordship—Very well.

The Court then rose for lunch.

On resuming at 2 o'clock,

Mrs. Martha Hodges entered the box.

Mr. Wilkinson—I believe, at the request of Mr. Troup, the Assistant Judge of this Court, that on Saturday 14th Nov., you searched the prisoner at the Bar for a paper?—Yes.

You are a British subject?—Yes.

And wife of Mr. George Hodges, Constable-jailer of this Court?—Yes.

Will you state what happened on that day, as far as you recollect?—When I first came into the Court-room, I examined Mrs. Carew's clothes, but could not find the paper on her. After that Mrs. Carew picked up a paper from the floor and put it in the cuff of her sleeve.

Did you observe that?—I asked her what she had, she said nothing. I then asked her to allow me to see, which she did, and there I found the document in her cuff.

His Lordship—And there you found the document?—Yes.

Mr. Wilkinson—Would you recognise it again?—I don't think I should. It was a letter sewn in the centre. I gave it immediately after to Mr. Troup.

Was it like this (epsilon shown)?—Yes.

Mr. Wilkinson—I want now to call Mr. Troup. I propose to examine you, Mr. Troup, on the subject of the charge preferred against Miss Mary Esther Jacob, by John Frederick Lowder, and will ask you to read the evidence of the accused as then given. I believe that you are having it printed.

Mr. Troup—I am not.

But I believe that it is so?—Yes.

I propose, my lord, that we pursue the same course as before, that is to give the jury printed copies of this statement.

His Lordship—They have not yet been received. Can you lead other evidence?

Mr. Wilkinson—Yes. (To witness)—You received a sworn information on Sunday last by John Frederick Lowder against Miss Mary Esther Jacob?—I did.

For the murder of Walter Raymond Hallowell Carew?—I did.

Upon that sworn information you issued a warrant?—I did.

On that warrant she was arrested on that day?—She was. It was reported to me late on the afternoon of that day.

That was the 10th of January?—Yes.

She was brought up for examination on Monday morning?—On Monday morning, the 11th January. It lasted that morning from 8.45 to 9.50 a.m. or thereabouts.

And the examination was adjourned until Tuesday, the 12th?—Yes, until the next day at 8.45 a.m.

During that day the prisoner at the bar was examined as a witness?—She was.

By whom was she called?—She was called by Mr. Lowder.

In the examination that you then took down in writing is there anything containing an answer to any question objected to by her?—No.

Was her statement entirely voluntarily—voluntarily given?—Yes.

Mr. Wilkinson (to Mr. Moss)—I want all the exhibits in that case.

Witness—The case lasted all day, and other witnesses were examined as well.

His Lordship—When was it adjourned? I am asking this, Mr. Wilkinson, to show the jury why it was that I could not sit that day.

Witness—It was adjourned at noon on Tuesday till 2 o'clock, and then from that day till the following day at 10.30.

Very well, it was then adjourned from Wednesday?—Yes; there was no evidence taken that day—and then adjourned until Monday, the 25th January, at 10 o'clock in the morning.

Mr. Wilkinson—I now ask you, Mr. Troup, to read out the evidence. (To the Bench)—I have another witness if there is a possibility of the printed copies not turning up?

His Lordship thought it was not possible for the printed copies to be ready, the revise was only passed at 12.30 that day.

Mr. Troup (to Mr. Wilkinson)—I have before me the notes of the evidence that was given by the accused on Tuesday.

His Lordship—Well, will you read them?

Mr. Wilkinson—I find, my Lord, that there is reference to the exhibits, N., O., P., S1., S2., T1., T2., of the Carew inquest, being produced?

Witness—That is so, I recognise them.

His Lordship—Don't you think that it would be as well to ask witness at this moment whether the accused was bailed out?

Mr. Wilkinson—Yes, my Lord, but I did not feel at liberty to ask it.

His Lordship—What have you to say, Mr. Lowder?

Mr. Lowder—I have nothing to say. I think it only right and proper that such a question should be asked.

His Lordship—Then I will ask it.

Witness (in answer to the Bench)—She was admitted to and released on bail at the close of the sitting on Tuesday afternoon.

Witness then read his notes of Mrs. Carew's evidence given at the magisterial examination of Miss Jacob on Tuesday, and identified all the letters and notes put in that day. These exhibits now received numbers running from 19 upwards.

Mr. Lowder—I think, my Lord, that all these exhibits should be photographed, as the other series have been. It will be so convenient when we come to argue on them, and my learned friend agrees.

His Lordship—Very well, the Chief Clerk shall see to it.

Mr. Lowder—If he would be so good.

His Lordship—He will be so instructed.

Mr. Wilkinson (at the close of the reading, to witness)—I ask you to identify the exhibits as they were put in. The first was put in by Mr. Geo. Hodges, I believe.

Witness—The first exhibit—A—was proved by Mrs. Hutchison—it was brought into Court by Mr. Lowder.

Mr. Wilkinson—There was a witness, Mr. Reginald Colmore Porch, did he produce E.?—He proved exhibit E. Mr. Lowder produced and proved P. and Pt. and I identify them—these are now numbered 38 and 39. No. 37 is the old Exhibit E. No. 40, was handed in by Mr. Lowder. Other exhibits were handed in and identified.

Mr. Wilkinson—Will you state in the first instance, the names of the witness who brought them

into the Court?—My first witness was Mrs. Emma Mary Hutchison, who proved Exhibit A.

Witness then proved the rest of the exhibits serially and they were entered on the record.

Mr. Wilkinson—That is all I have to ask you.

His Lordship—Are you prepared with another witness? It is nearly 4 o'clock.

Mr. Wilkinson—I am not prepared with a witness.

His Lordship—Then—

Mr. Lowder—Before you adjourn, my Lord, I have one request to make. I am called upon to defend a prisoner in this Court to-morrow, my Lord: a prisoner who is unable to obtain another Counsel, and I have had no opportunity even to read my brief. The case is set down to be called upon at 1.30 p.m. I am very loathe to make this application, but the case is a criminal case, and I hope the jury, as I know you will, my Lord, take this circumstance into consideration. I apply that there be no hearing of this present trial to-morrow morning.

His Lordship—Gentlemen of the jury, you have heard what Mr. Lowder has said. I am sure he regrets that he has to make such a request, and would not have done so had he not had to defend a prisoner to-morrow. It is a very proper application.

The jury signified their acquiescence with his Lordship.

His Lordship—Mr. Wilkinson, have you anything to say?

Mr. Wilkinson—I have no objection.

His Lordship—Then we will resume this trial at 10 o'clock on Monday.

MONDAY, January 18TH.

The Court resumed at a few minutes past ten o'clock, when his Lordship took his seat on the Bench. The attendance of the general public was smaller than on any previous day of the trial, but the morning was wet, with frequent showers of sleet and icy-cold rain, and this may have had some effect. The accused was looking much brighter than on Friday, the two complete days' rest having been of undoubted benefit, but her face was sadly drawn and haggard, and once or twice she broke into quiet tears. The jury also looked the brighter and brisker for their "constitutional" of the previous day, when they made a complete circuit of the Bluff and New Road. During most of Monday, Mr. G. H. Scidmore had a seat at the barrister's table; but Mr. Litchfield was a fitful visitor during the morning sitting. Her Britannic Majesty's Minister, Sir Ernest Satow, K.C.M.G., entered the Court at 10.15 a.m., and was invited to take a seat on the Bench until he entered the witness-box.

Before His Lordship entered the Court he kindly afforded an interview to the representatives of the *Japan Mail*, the *Japan Gazette*, and the *Japan Herald*, and assured them that he wished to give the journalists who attended his Court every facility in their work: he had been totally unaware that they had been caused inconvenience during the past two weeks. His Lordship then entertained some suggestions of the Press as to leave of entrance and exit at suitable times, and a working arrangement was eventually come to, in conjunction with the Clerk of the Court (Mr. C. D. Moss).

On his Lordship taking his seat, he pointed out to Mr. Lowder that when cross-examining Miss Christoffel he made a reference to the Exhibit D1, where she said "that" I think the letter "I" in that letter is a good imitation of the "I" in exhibit 18. Exhibit D1 could not be the exhibit referred to.

Mr. Wilkinson—What she was shown was probably—

Mr. Lowder—It was the letter to me, signed A.L.

Mr. Wilkinson—That is Exhibit W1.

His Lordship—Again, on the Inquest print page 18, you will notice that at line 1021, she received R, on October 17th, a letter about 10.45, she says she received on the 19th.

Mr. Wilkinson—I think that is—

His Lordship—We cannot make that clear at the moment (after referring to the Inquest Book). It is one or the other date, but it cannot be both. I have a note of Mr. Schedel's evidence on the 8th in which he says Ga is in my handwriting. It is the prescription 22896. I cannot understand how that could be in his handwriting because it is Dr. Wheeler's prescription.

Mr. Lowder—I think, my Lord, he said that the date only was in his handwriting.

His Lordship—I see; he put upon it 11/10/96 22896. The latter is the number of the prescription for Mr. Carew, so his answer refers to only part of the exhibit.

His Lordship—Is Maruya's shopman to be called?

Mr. Wilkinson—I think one of them should be called.

His Lordship—I think it should be the same

man. He had better bring the Credit Sales Book; in fact he had better bring all the books with him.

Mr. Wilkinson—Here asked the Clerk of the Court for the exhibits in the Jacob case.

Mr. Wilkinson—Your Lordship will remember that letters to Mr. Lowder were referred to in that evidence, and we must have the primary evidence of the receipt of those. I am now going to ask Mr. Lowder what he has to say with regard to the receipt of those letters.

Mr. Wilkinson—Here handed to Mr. Lowder exhibits 38 and 39.

Mr. Lowder—My Lord, I do not wish to take objection at this particular moment, or to make objection to giving evidence myself, but I have to take objection that Mr. Litchfield undertook to furnish me with the names of the witnesses who are to be called. Now it seems to me that this case is unnecessarily expanding, and although I do not object to my own evidence being taken, I do object to witnesses being called whose depositions have not been received.

His Lordship—That is, further witnesses?

Mr. Lowder—Yes; it puts me in this position that I do not know the nature of the evidence the witness is called to give.

Mr. Wilkinson—I would ask Mr. Lowder now to be sworn.

Mr. Lowder—I would ask, my Lord, to be allowed to give my evidence in the place I am now in at the Bar.

Mr. Wilkinson—Here handed Mr. Lowder exhibits U1 and T2, and said—That letter is addressed to you, Mr. Lowder. Will you state where you received it and the circumstances and the time at which you received it?

Mr. Lowder—I received it on the 1st November last. It was handed to me in the street by a messenger who stated that he came from Wright's Hotel, and had been looking for me.

Mr. Wilkinson—It came through the post, so far as I can see?

Mr. Lowder—It has a stamp on it, but it was handed to me by the messenger.

Mr. Wilkinson—Perhaps you will be good enough to tell us the date of it?

Mr. Lowder—Tenth month, first day; I cannot be sure whether it is the tenth or the eleventh month. I think without doubt it is the first day. At any rate, I received it on the 1st November.

His Lordship—Did you say it was the tenth month or the eleventh month?

Mr. Lowder—I think it is the eleventh.

Mr. Wilkinson—I think it is the eleventh, my Lord. That letter (produced) came in that envelope to you, did it not Mr. Lowder?

Mr. Lowder—Yes, it did.

Mr. Wilkinson—Looking at those exhibits [P and P1], are you able to say whether you received this or not [exhibits 38 and 39]?

Mr. Lowder—I did, and I made a memo. on the envelope at the time that I received it at 5.30 p.m. on the 11th November last, and it was Wright's Hotel. I made a translation of the post marks at the time. It bears the post mark 11th November, and it was sent out for delivery at 1 p.m. on that day. There is a mark on the stamp to that effect.

Mr. Wilkinson—You received the letter numbered 39, and that envelope was unbroken when you received it?

Mr. Lowder—Yes.

His Lordship—May I look at the envelope?

(Envelope handed to his Lordship.)

Mr. Wilkinson—That letter which you see now (letter handed to witness) Mr. Lowder, is addressed to Miss Jacob, c/o J. F. Lowder, Esq. Is that letter in the prisoner's handwriting?

Mr. Lowder—Yes. [Letter numbered 41.]

Mr. Wilkinson—Do you know why it was forwarded to Miss Jacob?—When I say open, I mean that it came without any envelope and merely folded.

His Lordship—There is no date to it?

Mr. Lowder—I think it must have been the 24th or 25th October.

His Lordship—The 24th was on a Saturday.

Mr. Lowder—It must have been, I think, on Sunday morning the 25th October.

His Lordship—Let the letter be read.

Mr. Lowder read:—

"Dear MARY,

Before you finally decide on what you intend doing, it is Mr. Porch's wish as well as my own that you come round to see us. I have no wish or intention to ask you to remain here against your will, but there are several questions it is my duty to ask you. I must ask you therefore to be good enough to come round here some time this evening. I shall not detain you for any length of time.

Yours truly,

E. M. H. CAREW."

Mr. Wilkinson—I now propose calling Sir Ernest Mason Satow.

Witness having been sworn, Mr. Lowder rose and said—I must now take the objection which I said I must take just now.

His Lordship—You have had no explanation of the nature of the evidence to be given.

Mr. Wilkinson—All I would propose to do would be to prove the receipt of the letter.

His Lordship—You had better not say what it is, if I cannot allow it to go to the jury.

Mr. Wilkinson—What I was going to say is that the letter should not be given to the jury now, but that it would be identified, and, if Mr. Lowder thinks it desirable, that cross-examination should take place. Then Sir Ernest should be asked to attend again to answer such questions as might be necessary on the subject.

Mr. Lowder—I object to the admission of the evidence, as it was not stated in the opening by my learned friend, and it takes me entirely by surprise.

His Lordship—I must take a note of that. Mr. Wilkinson, have you any cases to refer me to?

Mr. Wilkinson—No, my Lord. I was not prepared.

Mr. Lowder—I have not.

His Lordship—I should like some authorities; and I would suggest to you, Mr. Lowder, whether the mere form of evidence of the receipt of the letter should not go into.

Mr. Lowder—The mere receipt of the letter I have no objection to, so long as the letter is not shown to your Lordship or the jury.

His Lordship—I will take that, and then I will give you the authorities I have on the subject.

Sir Ernest Satow, in reply to Mr. Wilkinson, said—My name is Ernest Mason Satow. I am Her Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan. I received the envelope now shown to me. It was unopened when I received it. I opened it. There was a letter inside the envelope. I am not acquainted with any person bearing the name that is on that letter. (Name not given.)

Mr. Lowder rose and said—My Lord, I think I would interpose an objection.

His Lordship—Then I will deal with the question.

Mr. Wilkinson (to the Court)—The question now is, how should this exhibit be marked?

His Lordship—I think it will do if Mr. Lowder marks it and it is kept down there on the table. I do not want to see it, neither do the jury. You will produce the letter if it can be taken in evidence. His Lordship then cited *Regina v. Stiginam* 10 Cox, Criminal Cases 553, also *Regina v. Grenhill*, the former in 1867 and the latter in 1870, and said he should be glad if Counsel would furnish him with later authorities should they be able to find them.

Mr. Wilkinson—I am now going to call another witness of which my learned friend has not had full notice, but he received an intimation. (To Mr. Lowder)—You received notice to produce all letters written by Mrs. Tocque to Mrs. Carew?

Mr. Lowder—Yes, I have. I received that late last night.

Mr. Wilkinson—I propose to call Mrs. Tocque, not for the purpose of proving the contents of the letters, but to prove them.

Mr. Lowder—I object.

Mr. Wilkinson—I am going to call another witness of which he has not had notice, but it arises out of his own cross-examination.

Mr. Lowder—I object to that on another ground, because this witness to be called to add to, explain, or contradict evidence brought out in cross-examination.

His Lordship (to Mr. Wilkinson)—Can you show the evidence to Mr. Lowder? If so, he will read it and say if he will admit it.

Mr. Wilkinson handed to Mr. Lowder a document, and after reading it Mr. Lowder objected to the receipt of that evidence.

His Lordship asked Mr. Wilkinson if he had any other witnesses he could go on with, because, if so, to proceed, and he would deal with the point in dispute afterwards.

Mr. Wilkinson—Yes, my Lord, I will call Mr. Mason.

Mr. Lowder—I make the same objection. I have no knowledge of Mr. Mason's evidence.

His Lordship—What is he to be called for?

Mr. Wilkinson—On the comparison of the handwriting.

Mr. Lowder—I have had no notice. It was not in the opening.

Mr. Wilkinson—I said that in the opening? and I said that the writing of the Annie Luke letters would be shown from evidence to be Mrs. Carew's.

His Lordship—Is this an expert?

Mr. Wilkinson—He is an expert.

His Lordship—If Mr. Lowder takes the same

objection that he has not had notice of an expert being called you must be prepared to prove that there are experts to be offered.

Mr. Lowder—I understood my learned friend to say, "you will be called to see that the A.L. letters are in the writing of Mrs. Carew," but he did not state the nature of the evidence to be called.

After further discussion, his Lordship asked Mr. Lowder if he still objected, and, on his replying in the affirmative, the Court pointed out that the letters were being photographed, but that it would be first necessary to decide whether the witness was an expert or not.

Mr. Wilkinson—Yes, my Lord.

His Lordship—In the absence of any professional expert, as I might call him, I think the jury are able to form as good an opinion as any one.

Mr. Wilkinson—I think I shall be able to satisfy your Lordship of his right to be considered an expert.

Here a discussion took place between Counsel and the Court respecting the authorities, and Mr. Lowder said it was not just and fair that he should be stopped in the middle of the case with this question to be decided. If he had been furnished with the evidence to be adduced he could not have taken this objection.

His Lordship (to Mr. Lowder)—Have you any late works on Criminal Practise?

Mr. Lowder—I regret, my Lord, that I have not any books with me at the moment.

His Lordship—My Archibald is not later than 1878.

Mr. Lowder—I only took my objection from general knowledge, or what I supposed to be general knowledge, on criminal practise.

His Lordship then read the observation of Mr. Justice Wills upon the point of admitting evidence notice of which has not been supplied to the counsel for the defence—that such practise laid that evidence open to severe comment.

Mr. Wilkinson—I have to acknowledge having laid myself open to that observation.

His Lordship—That is the least you can escape with.

Mr. Wilkinson—If I were in my learned friend's place, I should urge the same objection, and urge it perhaps more strongly than he has done.

His Lordship—The observation as regards the evidence would be made to the jury.

Mr. Wilkinson—Quite so, my Lord. I am unwilling to say anything in exculpation, but to express my regret in the matter.

His Lordship—In such a case as this, the gentlemen of the jury will understand the gravity of the question of introducing evidence. (To Mr. Wilkinson)—Have you any witness ready?

Mr. Wilkinson—I have sent for one; my Japanese witnesses are not present, neither is the Interpreter.

Mr. Lowder—I would suggest that the prosecution proceed with their case.

His Lordship—I thought a witness had been sent for by arrangement.

Mr. Lowder—I have made no agreement of the kind. Perhaps it will be as well, in order not to waste any more time, if your Lordship would find out if Mr. Mason is an expert.

His Lordship—Very well; the other question is held over.

William Benjamin Mason, who took the oath in the Scott's fashion: with uplifted right hand and repeating the solemn formula after the Judge, was then called. He said:—I am a British subject, resident in Tokyo, and instructor in English at the Higher Middle School there. I was employed for seven years in the British Post and Telegraph Department, in England, and for sixteen years in the Post and Telegraph Department in Japan.

Have been a teacher of handwriting for some years?—I have taught English handwriting to Japanese students for three or four years.

Have you made a study of the peculiarities of handwriting?—I have, I made it a private study for many years.

And during that time have you been in the habit of comparing handwritings?—I have.

Mr. Lowder—You are one of the chess editors of the *Japan Mail*, are you not?—Not at present. But you have been?—Yes.

Do you remember during the time you were chess editor of the *Japan Mail*, receiving, for the space of one year, correct solutions of chess problems appearing in that paper from a person signing himself only by a letter?—What kind of letter?

I think it was a Greek letter?—I do, but the letter was not written in Greek.

But do you remember?—Yes, I know what you are referring to. It was not a Greek letter.

No, then what was it?—The word Scacchi—an Italian word.

His Lordship—Yes, meaning chess.
Mr. Lowder—And this was in the handwriting of some one whom you did not know?—Yes, at the time.

You told me at the time that you thought it was myself, until I denied it?—I did.

You are acquainted with my handwriting, and not with Scacchi?—Yes, very slightly.

Did you not tell me that you had shown this handwriting to others and all were of opinion that I was Scacchi?—I do not remember that I made such a statement. I will tell you what the real statement was, if necessary.

His Lordship—Please do.

Witness—The statement I made was that the writer was an Englishman and a lawyer: the other view being that it was a foreigner, by which I mean a Frenchman or a German.

Mr. Wilkinson (in re-examination)—Did you afterwards discover who the writer was?—Yes.

Who was it?—His Lordship sitting on the bench.

His Lordship—Were you employed in both the Post and Telegraph Departments in England and Japan?—Yes, in both departments.

Had you to do with letters?—I had.

His Lordship then quoted from *Regina v. Coleman*, where it is laid down that post office officials, lithographers, and bank-clerks have been admitted as experts in handwriting.

Mr. Lowder—I have a case—*Queen v. Silverlock* 1894, 2 Q.B., page 766—the point coming at 771. It was a criminal case and the question came up as to the admissibility of a witness, a solicitor, who was to give "evidence of opinion." Counsel then quoted the case, in which it is laid down that an expert of handwriting must be *patritus* in the matter. There was nothing to establish *patritus* in the case of Mr. Mason; or anything to show that he had such experience as would enable him to give evidence founded on a comparison of handwriting. He had merely said that he had made a private study of handwriting for some years, but there was nothing to show that he had been in the habit of giving evidence on the comparison of handwriting.

Mr. Wilkinson pointed out that in the case just quoted, a solicitor was admitted to give evidence on a comparison of handwriting and that the cases were analogous—in both cases the men had made a long private study of handwriting.

Mr. Lowder—And yet he could not tell my handwriting.

Mr. Mason—But the remark made to you was made before I had compared any handwritings whatever.

Mr. Lowder (interposing)—The evidence is closed.

His Lordship—I hold that his evidence may be received, by which I mean that he is, in my opinion, fully qualified to pronounce an opinion on handwritings. I have determined his competency.

Mr. Wilkinson (to witness)—Will you come again shortly before two o'clock. I now call Mr. Dunlop.

Charles George Buchanan Dunlop, sworn, deposed.

You are a British subject?—I am.
Resident at Yokohama?—Yes.

A merchant?—Yes.
Have seen this exhibit, epsilon, before?—Yes.

You see a mark on it?—Yes.
Who made it?—I did.

What does it say?—R—22 Oct.
What is the meaning of that mark?—Received

22nd October.

From whom did you receive it?—From Miss Christoffel.

Did you receive any other papers at the same time?—Yes.

I show you exhibit eta?—That I received at the same time. I think those were the only two at that time—that is to the best of my belief. Looking at theta, I now think I received that too. The words Red. 22. Oct. on eta, is in my handwriting.

Did you return them at once?—No, I kept them.

For how long?—For three or four days, I think.

What did you do with them then?—Returned them to Miss Christoffel.

Can you tell at what time on Oct. 22. you received them?—After tiffin, about one o'clock.

Mr. Lowder—Christoffel is the governess of your children?—Yes.

Did she tell you how they came into her possession?—Not at the time.

Did she tell you by whom they were written?—No. I asked her, what is this about letters said to be written by Mr. Dickinson? and I asked her to show me one.

Said to be from Mr. Dickinson to whom?—I do not know.

His Lordship—When was this?—In the morning about 8.30 a.m. or 9 o'clock, when Miss Christoffel came crying to my wife.

Did you know that these letters were taken from

Mrs. Carew's waste-paper basket?—I do not think I did then, I did afterwards.

Mr. Lowder—How soon afterwards?—A day or so, I can't say exactly.

And you still retain Christoffel as governess of your children?—Yes.

Did you tell her to burn the letters?—No.

Did you tell her to return them to the writer?—No.

Or to return them to the person to whom they had been addressed?—No.

Mr. Lowder—I have no further questions.

There was no re-examination, and Mr. Dunlop left the Court.

His Lordship (to Mr. Wilkinson)—Have you any other witness?

Mr. Wilkinson—I am afraid that I have none except those to whom objection is urged.

In answer to His Lordship, Mr. Wilkinson said that the fact that he intended calling Mr. Walter, Sir Ernest Satow, and Mr. Mason was only communicated to Counsel for the defence that morning. As to expert evidence being forthcoming, it had been hinted at in his opening.

Mr. Lowder said that the calling of Mr. Mason had not been intimated to him before, although Mr. Litchfield thought he had done so.

The Court then adjourned for lunch.

The Court resumed at 2 o'clock.

His Lordship—Have you any authorities for me, Mr. Lowder.

Mr. Lowder—No, my Lord.

His Lordship—And you, Mr. Wilkinson?

Mr. Wilkinson—I have no further authorities than those referred to this morning.

His Lordship—That is the one I referred to?

Mr. Wilkinson—Yes; the one referred to in Archibald on Criminal Practise, edition 1876, and the case of *Regina v. Conner*, Cock's Criminal cases.

His Lordship—That case is earlier.

Mr. Wilkinson—Yes, my Lord.

His Lordship—Referring to the notes on the last case, page 413, Cock's, 1870, I find it reads, "That the correct practice is that notice should be given to the prisoner of the evidence that will be brought forward during the trial," and I gather from the judgment that Mr. Justice Wills departed from the correct practise when he thought fit. The question, really, is one for my discretion, whether I ought to allow the evidence of the witness to which Mr. Lowder has objected. This raises the old question: what are the objects of a trial whether criminal or civil? It is the administration of justice in as nearly as perfect a way as possible so far as mere transient errors can be avoided. Now with regard to the letter received by Sir Ernest Satow, when was knowledge of that received by the prosecution?

Mr. Wilkinson—Not recently, my Lord, some time ago.

His Lordship—I think this is evidence that should not be allowed at the last moment. If the prosecution had knowledge of the existence of this letter some time ago then they ought to have conveyed information or notice of it to the defence.

I therefore decline to admit it. Now with regard to the expert evidence, in reference to the handwriting, I have already decided in favour of the competency of the witness—that was a question for me to judge. I have come to the conclusion that he may be considered an expert of handwriting.

Of course, his evidence will be merely a matter of opinion, and as an opinion it will go to the jury, who will consider what weight to attach to it. The objection to the introduction of his evidence was based on the same ground I understand; but although the principle may appear the same, in reality there is a difference, and one can see the difference. Counsel for the prosecution in his opening hinted that the question of handwriting and the identity of some letters would arise. I think that, under those circumstances, Mr. Lowder can hardly say that it comes upon him as a surprise that expert evidence on the point is to be called.

Mr. Lowder—If I may explain: I objected to expert evidence on evidence that has not yet been placed before us.

His Lordship—I see your point. I allow his evidence only on the letters that are now in Court.

Mr. Lowder—To that I have no objection. If I had been aware of that I should not have urged my objection so strongly.

His Lordship—Of course, it is principally to help in identifying the writer of the letters.

Mr. Lowder—I quite understand.

His Lordship—Of course, it will simply be a matter of opinion; and matters of opinion have no particular value; it is open to the jury to place their own value upon it; and so I admit his evidence. Then as to the other witness—

Mr. Wilkinson—That did not come to the

knowledge of the prosecution until some time after the trial had begun.

His Lordship—I can understand that. Miss Christoffel was examined on Thursday and her cross-examination finished on Friday, and I think that there was time between Friday and this morning to have intimated to Mr. Lowder that you intended calling this witness—that you proposed calling this fresh evidence in connection with the evidence elicited in the cross-examination. If you had wished to intimate the matter to the defence you could have done so then; I think it is a little late now.

Mr. Wilkinson—Well, my learned friend has now received intimation and perhaps I can call the witness at a later stage before my case closes.

His Lordship—But Mr. Lowder has taken the objection now and I am asked to deal with it now.

Mr. Wilkinson—As a matter of law, your Lordship has no power to shut out any evidence having relevancy to the case.

His Lordship—I do not see the relevancy of this evidence—it may be pointed out to me later, perhaps. I have decided against you on the first point; I am with you on the second; the 3rd is not allowed—it ought to have been done earlier. I think there is a good deal of pertinence in Mr. Lowder's remark that proceeding on the principle you have put forward, we shall never know when this case will terminate.

You put up a witness; she is cross-examined, and then you wish to call another witness next day on a point that has arisen in the course of that cross-examination. I shall not admit the evidence of Mr. Walter. I confess that I do not see the real relevancy of his evidence, and it is difficult to imagine it.

Mr. Wilkinson—Then as to the evidence of Mrs. Tocque. Notice of that was given to Mr. Lowder on Sunday evening—the earliest possible opportunity was then presented.

His Lordship—When I left the Court at noon, I had taken note of only the three witnesses just mentioned.

Mr. Wilkinson—There is another witness, my Lord, that I shall call as to proof of the accused's handwriting; there is also her diary that I wish to put in. I shall call a gentleman from the Bank, who will speak to her signature and other writing.

Mr. Lowder—I ask my learned friend to put in the diary.

Mr. Wilkinson—I think there are points in this case in which we cannot agree.

Mr. Lowder—I suggest that you put it in.

His Lordship—I shall admit the evidence of accused's handwriting.

Mr. Wilkinson—There are three other letters, one of which my learned friend has proved, and there are two others which I shall prove—all of which I read in my opening—by this witness. I shall ask him if these are not in Mrs. Carew's handwriting.

His Lordship—You understand, Mr. Wilkinson, that I think it not right to strain a point for the prosecution, nor for the defence.

Mr. Wilkinson—If I might be allowed to remark, that is a statement in which I quite concur.

Robert Cecil Day Ginnis, was then sworn and deposed.

You are a British subject?—Yes.

You are?—Acting accountant in the H. & S. Bank, Yokohama.

I believe that the prisoner had an account at your branch here?—She had.

You are acquainted with her handwriting?—Her signature more especially.

Can you recognise this signature (showing diary)?—This is not her official signature to the Bank.

Can you say if the rest is in her handwriting?—I should say that it is the same handwriting.

Would you look at the book—I do not want you to read it—and say generally if that is her handwriting?—It is like it.

His Lordship—Is this the best witness for her handwriting? he says he is only acquainted with her signature.

Mr. Wilkinson—I wish to lead a neutral person in the matter. (To the witness)—Will you look at this?—The handwriting is practically the same; her official signature is E. M. H. Carew: this letter is signed Edith M. H. Carew.

And this?—This is the same.

Mr. Wilkinson—I now put in the diary and these letters just recognised; and will lead further proof.

Mr. Wilkinson then read:—

Dear Mary,

I hope for the sake of Edgerley and the old people at home that you will see Mr. Porch who will take this letter to you. If it will not appeal to you, perhaps you will see him for the sake of Marjorie and Ben. I hope Mr. Porch (my father) will soon be here, and

trust that if you won't see my brother you will see him.

Yours sincerely,

EDITH M. H. CAREW.

169 Bluff.

The other is:—

Dear Mary,

I went round to see you this morning early. I suppose it was Miss Britan I saw, who said you would not see me. I am very sorry you wouldn't. However, I suppose you know your own mind best. I have a fair idea of what you will be asked and what you will reply in Court to-day, and I want to tell you that it depends entirely upon you to-day as to the result in everything. You yourself must see that, and I hope you will remember and bear this in mind for the sake of Majorie and Ben if for none else.

Yours,

E.M.H.C.

Mr. Lowder had no questions to ask. Mr. Mason was recalled and entered the box. You have examined that book (the diary) I believe, Mr. Lowder?—I have.

Will you look at No. 8, Mrs. Carew's order for soda-water?—Yes.

Exhibit Psi 1, Cc., have you seen those?—Which do you wish me to look at.

At that one, Psi 1?—Yes.

Mr. Lowder—I may say, that I have not cross-examined in regard to these exhibits, so that what is proved will be proved.

His Lordship—I suppose it is to prove accused's handwriting.

Mr. Wilkinson—I wish to proceed from the known to the unknown; he has not seen all these letters.

His Lordship—Do you not think that he had better see a letter in preference to these scraps and orders—he could form a better idea from a continuous letter.

Mr. Wilkinson—Quite so, I will get on as quickly as I can. (To witness)—I show you the letter of the 20th October?—Yes.

I now show you exhibits 43 and 44?—Yes.

You are able to state some peculiarities of Mrs. Carew's handwriting?—Yes, I believe I am.

And, I believe you made some rough notes of them, when you first examined them?—Yes.

Mr. Lowder submitted that he had not admitted all the exhibits that were alleged to be in Mrs. Carew's handwriting.

His Lordship—Then exhibit A must be left out of the examination.

Mr. Wilkinson—The material ones are the diary and the letters—Nos. 41, 42, 43, and 44.

Mr. Lowder—I do not question those.

Mr. Wilkinson—Looking at these letters, can you tell us, Mr. Mason, what peculiarities there are in accused handwriting?—May I look at my notes?

His Lordship—Yes.

Witness—This, I presume, refers to Mrs. Carew's handwriting alone?

Mr. Wilkinson—What is admitted to be her handwriting alone?—Yes.

Witness—Amongst the capitals the most characteristic are C, P, D, N, R, H, and T.

The small letters?—Especially characteristic of Mrs. Carew's handwriting in the small letters are a, b, d initial, and d final, f, in various forms; initial h, initial s—that is all.

Then?—I should like to add epsilon—the initial e in the form of the Greek letter.

Then punctuation—is that all you wish to say in regard to the small letters?—I have reference in my notes to two other exhibits, but these are not before me.

The question of punctuation?—Mrs. Carew's punctuation is extremely characteristic; it consists of nothing but periods—full stops—or marks scarcely distinguishable from full stops, and short dashes. Occasional quotation marks occur—and points of interrogation.

And any other peculiarities?—The other peculiarities are in groups or combinations—the initial t followed by an h, is almost invariably written in the same manner—I mean initial th, in word s the, this, that. That next is the word o'clock, which is invariably written oc—the apostrophe over the c instead of between the letters; another is the dot following single or double figures: as in the sentence "we 3. drove up yesterday."

Any other examples, how is number made?—Number is written not followed by a colon—that is specially characteristic—that is, the two dots are not put under the o as in the usual way.

Now those are the characteristics of Mrs. Carew's handwriting: now I am asking for the exhibits in Miss Jacob's case.

The exhibit—letters written by Miss Jacob—were then handed to witness.

Can you say what the characteristics of Miss Jacob's handwriting are?—They are very few.

Will you state what they are?—Of the capital letters they are all formed in the same manner—present no characteristics. Of the small letters, initial a almost invariably differs from the a in the middle of the word. A in the middle of a word is formed open. The letter f is abnormal.

In what respect?—It is not a common f.

Any others?—The word "to" is not distinguishable from the capital D. That is all I have to say about those letters.

Anything about d or t?—Nothing special: they are sometimes looped and sometimes not.

Punctuation?—It is well defined, commas, semicolons—properly formed—dashes, etc.

The next characteristic?—The dot follows numerals, as in Mrs. Carew's handwriting; the dot is found where it is not usually expected.

Mr. Wilkinson—I want the Christoffel letter, please. You (to witness) have seen this?—Yes.

Is there any characteristic in that handwriting?—Characteristic badness.

I don't think I need trouble you to analyze it. I put into your hand the letter "Beware"—and its cover, and another of the "Annie Luke" series?—I have examined them.

Do you find in those any characteristics of the last, which we will call Miss Christoffel's?—I find two letters, yes.

What are they?—The capital M and J.

Do you find any other characteristic?—No.

Looking at them generally, can you say if they are intended to imitate any of the handwriting you have seen?—I think not; I believe they are simply in disguised handwriting.

Can you say whether they are written by Miss Christoffel?—Decidedly not.

Can you give a general reason?—My general reason is that a good writer can write a good disguise, but a bad writer can not write a good disguise.

Are you able to form an opinion whether they were written by Miss Jacob?—I have come to the conclusion that they were not.

Can you give any general grounds for that opinion?—I cannot find any of the characteristics of Miss Jacob's handwriting, except the letter v—small v—which is occasionally formed as she forms it.

Are you able to form an opinion whether they were written by Mrs. Carew?—I find more of the characteristics of Mrs. Carew's handwriting in them.

Can you state what they are?—I shall have to go through them seriatim. Well, in No. 38, several words are very well written. One of the words "never," contains the Greek e, once. The initial s in "stay," "some," resembles Mrs. Carew's. The small letter h, in Yokohama. The d of "could," "find," and the small a's generally, although I do not attach much importance to them.

Would you look at the word "never"; is it imitated in any way?—I should consider it to be naturally written.

Of whose handwriting is it characteristic?—It is more characteristic of Mrs. Carew's than any I have seen.

Can you refer to any other "never"?—Yes, there is one in the diary, I think. I have a note of another "never."

You say these d's are characteristic of Mrs. Carew's, are they characteristic of Miss Jacob's?—No, they differ from the last named in being turned up; are slightly looped up—turned up. Mrs. Carew's d ends abruptly. Her diary is full of such examples—on the 5th September, in the word "did," for instance.

Will you pick out some other examples?—Here is a d in the word "find." I find the same characteristics in all the A.L. series.

Is there any other characteristic of Mrs. Carew's handwriting in No. 38?—The s in stay and some. Then there are special d and s used in the words "bad cold still," and the s in shopping in the diary of October 19.

You have looked at the diary and the letters, do those d's occur so frequently as to be a marked characteristic of Mrs. Carew's?—Yes.

And you found them throughout the A.L. letter?—Yes.

In what other letters?—In exhibit P—the s only.

Any other?—The word "silly" in the letter addressed to Mr. Lowder, "I never knew you," etc.

His Lordship suggested that the process of examination was very slow, would it not be better to leave these things to the jury to find out, now that the general characteristics had been pointed out.

Mr. Wilkinson—I much regret the delay. It is no pleasure to me to continue this examination, I can assure you. But I shall not consider that I have done my duty unless I proceed in this way.

His Lordship—I did not say delay, but we are proceeding very slowly, and where shall we end.

Photographs of some of the letters were here handed to the jury, and the examination proceeded, letter by letter—the d's, etc., as in the letter to Mr. Lowder; the Greek e's, being pointed out. Of course, witness said, there were exceptions in the writing of some of the letters. There were only two commas in the letter to Mr. Lowder; and all the rest are full-stops.

The letter to Mr. Hall, how does that begin—"I have just written,"

Will you point out the characteristics?—The h in "have," the s of "so," the Greek e of "earl," h of "have"; the d of "bamboozled." There are full-stops only in this letter. In accused's general letters and in the diary there are the same mistake of punctuation as in this A. L. letter—a full-stop where one would not expect to find one. After sun of Sunday there is a full-stop instead of a hyphen. Then there are full-points after the figures—but here they are quite logical. I took a special note of the d's being turned down because they were not apparent in any other handwriting shown me. I consider it a characteristic of which the writer may probably be unconscious. I have only selected those characteristics which I consider the writer unconscious of. There are characteristics in handwritings of which the writers are perfectly aware. These special characteristics I have spoken of are those of which the writer is unconscious. Their very marked features lead me to this opinion. There is the marked f in these letters, and the f of Miss Jacob; I think the writer of them must be aware of it. I rather looked for small peculiarities than big. The unconscious peculiarities of feigned handwriting are most likely to be reproduced. Most decidedly do I think that the punctuation is unconscious. Mrs. Carew's diary is characterized by nothing but stops, and this is a marked characteristic of the whole series of A.L. letters. The s I have pointed out in shopping is very marked; I did not find it very marked in any other writing submitted to me.

Before the Court rose, the jury were given a photograph of each of the letters so far gone through.

The Court adjourned at ten minutes to five o'clock until ten the next morning.

TUESDAY, January 19th.

Another bitterly cold morning with occasional showers of sleet and snow, kept down the attendance of the public to the slimmest proportions, and when His Lordship took his seat, beyond the persons actually engaged in the case and the witnesses, there were only a dozen people present. Mrs. Carew looked much brighter than on the previous day, and the passage of notes between her and Mr. Lowder were not quite so frequent. Most of the jury wore their great-coats during the morning, and even then appeared barely comfortable. Mr. Scidmore was present during all the morning sitting. An application was made at the beginning of the examination by Mr. Wilkinson, that the depositions of Miss Mary Esther Jacob, given at the magisterial examination, be read before the Court, owing to the fact that that lady was too ill to attend and give evidence from the witness box. Dr. W. S. Worden, her medical attendant, was sworn, and deposed to her condition, and said that as far as he could see from her symptoms at 9.15 that morning that she would not be able to attend Court either today or tomorrow. She had a very severe headache and a pulse of 110.

Mr. Wilkinson—I have an application to make, my Lord, and that is that the evidence of Mary Esther Jacob, taken at the preliminary examination, be now read, under rule 294.

"If on the trial of the accused it is proved on oath that any person whose deposition has been taken is dead or is so ill as not to be able to travel and that his deposition was taken in the presence of the accused and that he or his attorney cross-examined or had full opportunity of cross-examining the witness, the deposition may be read as evidence in the prosecution without further proof thereof."

Having read the rule, Mr. Wilkinson proceeded—With regard to that, my Lord, I propose to examine a medical gentleman who has been attending her. I have been trying to obtain another medical gentleman entirely unconnected with this case, and what I propose is to ask your Lordship not to decide the case now, but that your Lordship will be good enough to appoint any medical man whatever, as I am desirous that there should not be the least doubt on the point. There are cases which I have pointed out to my learned friend, but I think I should not state them until medical evidence has been taken. I will call Dr. Whiting Sweeting Worden.

Dr. Worden, after being sworn said, in answer to Mr. Wilkinson—I am an American citizen. I

am a graduate of the Medical College of Syracuse University in the State of New York, and am entitled to practise as a medical practitioner under the laws of my own State.

Mr. Wilkinson—What are you at present?

Witness—I am a medical missionary of the Methodist Episcopal Church.

Mr. Wilkinson—Have you visited Mary Esther Jacob, and if so, since when?

Witness—I visited her for the first time, professionally, on Friday last.

Mr. Wilkinson—Had you known her before?

Witness—I made her acquaintance about a week previous to that.

Mr. Wilkinson—Would you say where she is and what is her condition of health to-day?

Witness—She is at No. 2, Bluff, sick in bed.

His Lordship—When did you see her?

Witness—The last time was this morning at about a quarter past nine; she was then sick in bed.

Mr. Wilkinson—Are you able to say whether she is in a fit condition to come down to this Court to-day?

Witness—It is my opinion she is not in a fit condition to come down here to-day, and as far as I can see from her symptoms this morning she will not be able to come down to-morrow.

Mr. Lowder had no questions to put to the witness.

His Lordship (to Mr. Lowder)—I am a little embarrassed at the moment by your not putting any questions to witness, as I do not know what ground you intend to take.

Mr. Lowder—I have had no notice of the application now made, and I was just reading the section of the Order in Council. I have no questions to put to the witness.

His Lordship (to witness)—What are her symptoms?

Witness—She has a very severe headache, and a pulse of 110. I took that this morning.

His Lordship—On what other occasions have you visited her?

Witness—I visited her on Friday, then on Saturday and Sunday, and again on Monday morning and Monday evening.

His Lordship—Since when has she been confined to her bed?

Witness—She was not in bed when I called upon her yesterday, neither in the morning, nor in the evening.

His Lordship—Then she probably had not been in bed all day?

Witness—Probably not.

His Lordship—You say she is suffering from severe headache and has a pulse of 110; that she is not able to come down here to-day and probably will not be able to do so to-morrow?

Witness—That is so, Sir.

Mr. Lowder—I have not considered the question, but must—

Mr. Wilkinson (with heat)—I protest against such a suggestion. I intended to call the witness this morning, and not being able to do so, I had to take the only alternative.

Mr. Lowder—I have not had time to consider the nature of the depositions to be put in.

His Lordship—I should not propose to allow the depositions to be read to-day. The witness is not able to attend to-day and she may not be able to do so to-morrow, but she may be able to attend some time. Dr. Worden will see her again and will probably let us know.

Mr. Wilkinson—My Lord, I should like Dr. Worden to have some medical colleague to look into the case with him so that there may not be the shadow of a doubt in the matter. A suggestion has just been made that there is a P. & O. boat in harbour and there might be a doctor on board. I do not like to suggest any medical man who has been or who might be called upon to give evidence in the case, and probably in this way independent opinion might be obtained.

His Lordship—I do not think the Court should do it. I think Counsel might do it themselves.

Mr. Lowder—I should raise no objection to any medical man.

His Lordship (to Mr. Wilkinson)—Then try to arrange with some other medical man.

Mr. Wilkinson—Then Dr. Worden will be kind enough to see the patient and will perhaps come to-morrow morning and say how the patient is. To-morrow, I think, would be the only time that I should be able to read the evidence before closing the evidence I have to produce.

Mr. Lowder—My Lord, I am in a peculiar position in regard to this witness and therefore it is for that reason that I am not speaking. I shall leave it for the Court to decide, and I shall not insist upon any right I might otherwise claim to adopt.

His Lordship—We might go on, and the evi-

dence of the witness might be interposed during your case, Mr. Lowder.

Mr. Wilkinson—That would suit me perfectly.

His Lordship—It appears to me she should be called.

Mr. Lowder—Upon that I make no answer.

His Lordship—We will do nothing to-day. Mr. Wilkinson will get another independent opinion about her who must see her to-day and again to-morrow and see in what condition she is in.

Mr. Wilkinson (to the Court)—Dr. Worden wishes to state that there are other symptoms than those he has mentioned.

His Lordship—But I take it that a pulse at 110 is out of all question sufficient reason that the witness should not come here to-day.

Mr. Wilkinson next called Marguerite Tocque.

Mr. Lowder—I must make the same objection to calling Mrs. Tocque as I took yesterday, and I think your Lordship has already ruled on that point.

His Lordship—I only had three named before when I ruled, and did not hear the name of Mrs. Tocque mentioned until afterwards.

Mr. Lowder—Well, my Lord, I make the same objection.

His Lordship—Then let me make a note about this; Mr. Lowder objects because—

Mr. Lowder—Because I have had no notice until now.

Mr. Wilkinson—Until yesterday, my Lord, and a notice acknowledged previously, the evening before, that is Sunday. The fact of the existence of the evidence came to my knowledge on Saturday last only.

Mr. Lowder—On Sunday evening I received notice to produce among other documents certain letters addressed by Mrs. Tocque to the accused, but no notice that a witness was to be produced. Last night I received from my learned friend, Mr. Litchfield, a notice, giving me the names of the witnesses he proposed to call to-day, with an outline of their evidence, and Mrs. Tocque's name does not appear therein.

His Lordship—This being the case I am prepared to hear Counsel.

Mr. Wilkinson then addressed the Court and pointed out the views held at home on the subject. Before the Vexatious Indictments Act there was no case that could not be presented to the grand jury without the names of any witnesses being given, and the first intimation the accused had was that the grand jury had found a true bill against him.

His Lordship—Without having gone before a magistrate at all?

Mr. Wilkinson—Yes, my Lord. Continuing, the learned Counsel said the Vexatious Indictments Act referred to only a few cases, such as conspiracy, perjury, etc., in which case it was appealed to so that a man might not be placed in a false or difficult position. But that does not refer to cases like the one before the Court. I now refer you to the *Queen v. Connor*, one of Cox's criminal cases.

His Lordship (to Mr. Lowder)—Have you any serious objection to the evidence of Mrs. Tocque?

Mr. Lowder—Yes, my Lord.

Mr. Wilkinson, having read several passages in the above case, pointed out to the Court that both the Judges therein referred to, were of opinion that if the evidence was relevant it ought to be received, and that while it was the proper thing that notice of its production ought to be given, the only course would be to subject it to strong comment. The learned Counsel continued—It would be the introduction of a new procedure for it to be determined by the Court, instead of the Counsel for the prosecution, what evidence should be submitted. The practice from time immemorial has been for the counsel for the Crown to call witnesses at any time till the case for the Crown is closed and afterwards at the discretion and by the leave of the judge, and to shut that out would be a most serious innovation and one for which there is no authority whatever.

Mr. Lowder relied upon the judgment which his Lordship gave yesterday.

His Lordship, after expressing regret that the subject had not been more fully argued yesterday, said:—The view I acted upon yesterday was that if the Counsel for the Crown has got evidence which he proposes to call and does not give the prisoner notice of it until it is proposed to call it, I think in that case it would be unfair to call it. There was no reason in that case yesterday for the prisoner to be not informed, and that is why I refused to receive the evidence of the Minister yesterday. I did not refer to Mr. Mason because I think Mr. Lowder did not object to Mr. Mason, and now I come to the point again, Mr. Lowder, because you were not taken by surprise. The ruling I acted upon yesterday was that it was a surprise, and that the Crown could have helped it.

I do not know that I am bound by my ruling yesterday, but at any rate if I were bound by it I should say that the notice which Mr. Lowder received was notice that evidence would be brought. It almost looks as though the Judge is bound to allow any of the evidence. I shut out some evidence yesterday for the reason I named, because they had had it so long, but where they have not had it I do not think I should. If evidence comes to the case then it should be admitted.

Mr. Lowder—But they might have given it to me on Sunday evening.

His Lordship—The correct practice should be followed, but the mere fact that it is not followed does not preclude the evidence. I regret that the matter was not more fully discussed yesterday. I allow Mrs. Tocque to give evidence.

Mrs. Margaret Madeleine Tocque was then called and sworn.

Mr. Wilkinson—I formally call upon my learned friend to declare that he received notice to produce.

Mr. Lowder—Yes.

Mr. Wilkinson—And you gave up all letters?

Mr. Lowder—Yes.

Witness—I am a British subject, residing in Yokohama, and the wife of Charles Henry Stewart Tocque.

Mr. Wilkinson—This is your chit-book?—Yes.

Will you look at it and see the entry, Oct. 21, Mrs. Carew, one c. 7?—Yes, it means one chit.

Can you, to the best of your recollection, state the contents of the chit?—It was to ask how Mr. Carew was.

You sent the chit in this chit-book?—Yes.

And there you see a reply?—Yes.

Whose handwriting is it in?—To the best of my belief, Mrs. Carew's.

Mr. Wilkinson—I will read it. It reads—

“Very many thanks. Much about the same. Dr. Baelz comes again this evening. E.H.C.”

There are full stops between each sentence and each initial. (To witness)—You received it back again the same day, Mrs. Tocque?—Yes.

I see on the 22nd, an entry, “22, Mrs. Carew, one card—” did you on that day send a card to Mrs. Carew?—Yes. It was asking the same question.

And you send this chit-book with the card?—Yes.

And received it back the same day?—Yes.

With the remark?—“So many thanks. No change. E.H.C.”

In whose handwriting?—Mrs. Carew's.

Mr. Lowder had no question to ask.

His Lordship—I understand that there was a notice to produce a letter of accused's?

Mr. Wilkinson—Yes, my Lord, but merely on technical grounds, and I did not intend to go further.

Wada Haruye, the book-keeper at Maruya's, was next called and cautioned in the prescribed form by the Interpreter.

I want you to produce your book—rough credit sales' book—for 8th October?—Here it is.

This is your rough sales book for 8th October, and there is an obliterated entry on that date. Who obliterated that entry?—I did myself.

Before oblittering it did you make any other entry regarding it?—I did not cancel the entry until the bill was paid: then I transferred it to the ready cash sales' book.

Can you state why you obliterated it? Do you obliterate all your entries, or is this a special obliteration?—I do so with all when the money is paid.

This obliteration is a very heavy one, can you give any explanation for that?—I learnt something from the newspapers about this case—the Coroner's inquest—and thereupon, not liking the entry, I struck it out with a very heavy obliteration.

Would you let me see the entry for the 18th October?—Here it is.

Who made that entry?—Hayashi Shishichiro.

Counsel—Messrs. Wilkinson and Lowder—were looking over the book and reading the entries, when His Lordship interposed and I said that—instead of Mr. Wilkinson spelling out the words the witness could do so.

Mr. Wilkinson—I am afraid of going technically wrong: and this witness did not make this entry. We know the words that are written here. (To Witness)—Did you see it written yourself?—I did not. I recognise the handwriting.

Now turn over to the 20th?—Here it is.

Do you know who made that entry?—Yamada Masakichi.

What are these two characters (pointing to book)?—Bed-pan.

Where is the rough cash sales' book?—Here it is. Will you produce the page for the 20th October?—Here it is.

Who made that entry?—I did.

Do you know whether the articles mentioned there were sold or not?—I know they were sold. What are they?—Fowler's Solution.

Any beside that?—I made the entry but I did not sell the articles.

But what were the other articles?—There is no other article and no name.

Read the entry before Fowler's Solution?—That is for chloral.

You will see above those two entries that something is obliterated, who did that?—I do not know.

There are three heavy marks—is what is underneath them legible?—I cannot read them.

Do you remember what that entry was before it was obliterated?—I do not know. It is not in a place where anything ought to be written.

I understand that the top entries are for dispensary medicines, the lower for already made-up medicines?—That is so.

The made-up medicines are those not made up from Doctor's prescriptions?—That is so.

Now will you count up the number of entries of this class of medicine, made originally on the 20th of October?—Seventy-nine.

Well, will you tell us what is the number of the entry for chloral you sold that day, and the number of the Fowler's Solution?—28 and 29.

Will that afford you any indication as to the time of day at which they were sold?—I do not think so.

Was that the only sale of Fowler's Solution that day?—There is no other entry for either Fowler's Solution or chloral that day.

What do you say about the time?—I cannot tell, but I think it was in the forenoon: it might be so.

Now, have you looked through your books to see if there was any sale of Fowler's Solution to the name of Carew, prior to October last?—I have not looked through them yet. The question has often been answered, and I think every one ought to know.

But can you yourself say?—Well, I should have to look through the books to answer properly. This book begins on the 17th October.

Well, you can look through the entries?—This is the rough cash book, and the name of Carew will not occur there.

Well, are there any other entries of the sale of Fowler's Solution?—There is no entry of a cash sale of Fowler's Solution prior to the 20th, or from the 17th.

Mr. Lowder had no questions to ask.

His Lordship—I should like witness to refer to the credit sales' book.

That is the credit sales' book (book produced)?—It is.

Now look at the 17th?—Yes.

Was any anti-pyrene sold on that date?—There is no such entry on that date.

Mr. Wilkinson then recalled Hayashi Shishichiro.

Will you look at this entry—on the 17th day of the 10th moon, I take it to be—is that entry on the 17th of October?—It is on the 18th.

Did you make that entry?—Yes.

His Lordship—Does he know the fact of the entry being there of his own knowledge—did he make the sale?—I did.

His Lordship—What book is this?

Mr. Wilkinson—The rough sales book. (To witness) Will you read the entry?—"Bluff, 169, Carew, chlorodyne, one bottle, 50 cents; sugar of lead, one bottle, 10 cents.

This is all?—Yes.

Now there is a note on the top, will you tell us what it is?

Mr. Lowder—May I see it before he answers?

Witness—The words are "chit aru"—meaning that there is a chit.

Mr. Wilkinson—Is there any note there as to what became of the chit?—No.

Of your own knowledge, do you know what became of this chit?—I do.

His Lordship read the entry in his own notes of the answer that witness had given to the same question in the examination-in-chief.

Mr. Wilkinson (to witness)—What became of the chit to your own knowledge?—This chit was handed to the person who came on the 20th to buy Fowler's Solution and chloral, because she paid for the articles, along with the anti-pyrene.

His Lordship—It was a woman?

Witness—Yes.

Mr. Wilkinson—Who made this entry on the 20th?—Yamada Masakichi.

Mr. Wilkinson—We have already evidence of that, my Lord; it is the bed-pan sale. (To witness)—Have you personal recollection of the sale?—Yes.

Did you see the entry made?—No, but I saw the goods delivered—the Fowler's Solution and the bed-pan.

That is what you saw delivered?—Yes.

Mr. Lowder—May I suggest that this witness has already been called for the prosecution and examined by them: now he is recalled and submitted to what might be called a cross-examination.

His Lordship—I want to have these entries cleared up.

Mr. Wilkinson—That is all I propose to ask the witness.

His Lordship—I want this cleared up: "The woman who came on the 20th, paid two dollars sixty-five cents," is that so?

Witness, referring to another book—I find—Is that entry made by you?—Yes.

Give me the date, but first, what book is it?—The ready cash sales book.

Let me see the other books, keep them in view?—This book, is the rough cash-book, the other is the rough credit-book.

You are now referring to the rough cash-book—will you tell me what the entry is regarding the \$2.65—read all of it?—"Chloral, 20 cts. Fowler's Solution, 20 cts." I have only an entry for \$2.35, the other 30 cents were for something else.

Well, will you read the entry for the \$2.35?—"Carew, \$2.35."

What book are you referring to now?—The day cash-book.

Now read the entry there?—"Carew—What is the date?—"20th October, Carew \$2.35."

Is that all?—Yes.

How do you know what this \$2.35 refers to—let us hear it?—Anti-pyrene, chloral, chlorodyne, sugar of lead.

Can you tell us something more definite?—On the 8th October there was an entry for anti pyrene, \$1.75; on the same day there was another for chlorodyne 50 cents; sugar of lead 10 cents—that makes up the amount of \$2.35. Fowler's Solution costs 20 cents—so that she paid \$2.75. I made a mistake, when, speaking from memory, I said she paid \$2.65.

Mr. Wilkinson—Was there any Fowler's Solution sold to the name of Carew prior to the 20th October? I want to clear this up—I have examined the books and can say from my own knowledge that there was no Fowler's Solution sold to the Carew family before the 20th October.

His Lordship—Is Yamada to be called?

Mr. Wilkinson—Yes, but he is not here. I suppose we cannot have all the shop staff here at one time.

The Court then adjourned for lunch.

On resuming after the adjournment, two ladies were among the few spectators—presumably tourists.

Mr. W. B. Mason reentered the box.

Mr. Wilkinson asked for the production of the Annie Luke series of letters. (To witness)—Will you look at these, please. Would you point out any other peculiarities that you see in these letters to Mrs. Carew's handwriting?—There is the colon following no—for number—characteristic of Mrs. Carew's handwriting. This is characteristic of all the envelopes except U2.

Exhibit O—a genuine letter by Mrs. Carew—does that contain the same characteristic?—Yes.

His Lordship—That seems to be the only genuine letter of accused that bears the contraction of no.

Witness—Yes.

His Lordship—Then on what do you base your opinion?

Witness—I have seen it in many instances.

His Lordship—In the diary?

Witness—Probably not there, but it may be. Exhibit O is the only reference that I have in my rough notes. I am confident I have seen it on other letters, but whether they are exhibits I can not say.

His Lordship—How about the letters from Miyanoshta?

Witness—They have not been handed to me yet.

His Lordship looked through several notes and chits in Mrs. Carew's handwriting to find a no., but only found one on the exhibits in his hand.

Mr. Wilkinson (to his Lordship)—There are envelopes that have not been put in, but I do not know how to introduce them. (To witness)—Are there any other characteristics?—There is the dot following single and double numerals.

I think you said that was a characteristic of Miss Jacob?—Yes, except that she puts them after all numbers. Mrs. Carew puts them only after single and double numbers, not when they run into the hundreds. I shall like to point out in Exhibit U, that there is no dot after the 8—the letter to Mr. Lowder.

Any other?—In the envelopes marked P., the dot after the 5.

His Lordship—There would be one there, would there not, it is the end of a sentence?

Witness (to Mr. Wilkinson)—There are no

other such characteristics in the A.L. series. The diary is full of them in every page.

Mr. Wilkinson—Perhaps you would kindly single out a few, and name their dates?—Diary, page 70," we 3. drove up as yesterday. Page 118, "7. p.m." Page 99, "losing the first prize by 2. secs." Do you wish for any more? The diary is full of these as I said before.

Any other?—For the capital letters and the other letters to which I have referred, I should like to see the letter to Sir Ernest Satow.

Mr. Lowder—I must object.

Mr. Wilkinson—It was quite unintentional.

Witness—Am I not to see the letter?

Mr. Wilkinson—It is not put in.

Witness—I am rather taken aback by not seeing that letter.

Mr. Lowder—I must interpose. I must object to the witness conducting the prosecution, and not the Counsel for the prosecution. I feel I must protest.

His Lordship—It is not the Counsel for the prosecution that you object to?

Mr. Lowder—No, my Lord; to the witness.

His Lordship—But it was through inadvertence.

Mr. Lowder—Then he must be taught.

Mr. Wilkinson (to witness)—Have you anything else to say about the handwriting?—I have nothing more to say on the subject of handwriting.

Will you look at the paper of these letters?—

Mr. Lowder—I have not learned yet that this witness is an expert in paper.

His Lordship—We must see what the question is first.

Mr. Wilkinson—The question is, did the witness to the best of his knowledge, in looking over these letters, find any resemblances in the papers between the Annie Luke letters and those of Mrs. Carew?

Witness—To the best of my knowledge I have.

Mr. Lowder—Now I suggest that this is matter to be left to the jury to decide.

Mr. Wilkinson—I thought it would be better to have it in evidence rather than to leave it till the time comes for me to address the jury.

Mr. Lowder—I think that it should be left to the jury.

Mr. Wilkinson—I thought that it would be fairer to both sides to proceed in the way I propose.

His Lordship (to Mr. Lowder)—Mr. Wilkinson would have no opportunity of drawing the jury's attention to these matters until after you had finished your case.

Witness (in answer to Mr. Wilkinson)—I have noticed a similarity in the water-marks.

His Lordship—I shall allow the question. If it was not answered, then I should know nothing about these things, neither would the jury, until the case for the prosecution and the case for the defence is finished. We shall be able to appreciate your observations on the point if we hear these things now. Nothing would be more unfortunate than for me to stop you in the middle of your address and say that you are referring to matters that have not been brought out.

Mr. Lowder—This is evidence that I knew nothing about. I submit, with all respect, that it is the duty of the Counsel for the prosecution to open the whole of his evidence. In his opening Counsel for the prosecution referred to two letters only—the one signed Annie, the other signed Edith—which would be submitted to them for comparison; and I contend that he is now going further than when he opened. I am taken quite by surprise by this.

His Lordship—Taken by surprise is a convenient expression, but what does it amount to? There is no force in the expression in such a matter as this. I don't think that the point is worth the time that it has taken up.

Mr. Lowder—I am sorry that the point has to be made. It is my duty as Counsel for the defence, to take every proper objection and make no admission at all: this is my duty.

His Lordship—I do not ask you to make any admissions. (To Mr. Wilkinson) I have disallowed the objection, will you repeat the question?

Mr. Wilkinson (to witness)—Have you seen any similarity between the water-marks of these Annie Luke letters and the letters—the genuine letters—of Mrs. Carew?—The letter addressed to Mr. Lowder bears the same ribbed and straight water-lines as the half sheet of paper bearing date of 11th May—an order from Mrs. Carew to the Normal Dispensary for a bottle of Fellow's Phosphates.

The waterline is on the right hand half of that page. In pointing these out, my Lord, I may state that I am not a paper expert.

Mr. Lowder—May I apply that witness makes no remark save in answer to Counsel.

His Lordship (to witness)—You are supposed to answer only the questions now being addressed to you by Counsel for the prosecution; he is supposed to have heard what you are going to say,

and these remarks in the nature of additional explanation should not be given.

Witness—The letter, I have just referred to begins on the left page, and the water-lines on the other page do not run similarly.

Mr. Lowder (interposing)—I would point out that in one page of this letter there are water-mark letters and in the other there are none.

Mr. Wilkinson—I agree with my learned friend on that point—that is all I can say. (To witness)—Would you refer to exhibits O. & P.?—I find the same water-mark in an order from Mrs. Carew.

His Lordship—O. & P. you are asked about.

Mr. Wilkinson—Will you (witness) look at these—No. 15 and No. 14—then look at the Annie Luke letters?—I find in an order from Mrs. Carew on the 5th of May—

His Lordship—But will you not answer the question?

Witness—The water-mark of P. is the same as that of 15—L.D.'S.

Mr. Wilkinson—Would you look at this No. 14—This is the same as regards the left hand page—the first page. There the water mark is L.D.'S—the same as in P.

And O, a letter of Mrs. Carew's?—The same. Have other things occurred to you with regard to the water-mark?—Nothing.

Are there any other characteristics that you wish to call attention to?—Paper or other?

Paper, watermark, on anything?—There is. The envelope addressed to Mr. Hall matches the envelope addressed to Miss Jacob on Nov. 13.

Mr. Wilkinson—That has not been put in, my Lord.

Mr. Lowder (after comparing the envelope)—I should like to call the attention of the jury to the fact that it does not. Here is one envelope in evidence, one is not. I will waive the point and ask your Lordship and the jury to compare them.

His Lordship—But what a slender point it is. Witness says it is like, and you say that it is not: the jury can decide the point, I think.

Mr. Patterson (one of the Jurors)—I might observe that the witness only said the envelopes matched.

Witness—I was not speaking of water-marks; I was speaking of the envelopes matching. The water-marks may be different on two envelopes, but it is not usual to have water-marks on envelopes.

Mr. Wilkinson—Is there anything more in that series?—I have nothing more to say.

I now put exhibit N—the card marked M.J.A.L.—into your hand and ask you if there is anything you wish to say?—Yes.

So far as you can see, were the A.L. and M.J. written at the same time, with the same pen and the same ink?—I can't say about the time, but I do not think that they were written by the same hand.

Have you anything to say about the figures 1888?—Nothing special.

I now turn to the exhibits in the Jacob case—No. 20—with regard to the envelope, there the colon is characteristic is it not?—Yes, that is the characteristic colon.

His Lordship—That has the no, and a colon.

Mr. Wilkinson—There is a colon after a wavy line that looks like no.

Mr. Lowder—There is a way no, there, my Lord.

His Lordship—It is a wavy line where no might be expected.

Mr. Wilkinson—These pieces—the two pieces of envelope last discovered by Miss Christoffel—appear to correspond, is that so?—Yes.

In whose handwriting do you say it is?—Mrs. Carew's.

Her genuine handwriting?—Without a shadow of doubt.

Will you look at 33—a piece of flimsy containing disconnected words—and say whether the word "Dickinson" written there is written in the same way as in 16 and 17?—I think so.

You think they are written by the same person?—I think so.

His Lordship—That is the accused?

Mr. Wilkinson—Yes.

Exhibit A. 29: I refer to the last line on the exhibit, "M. J. for E. H. C." Have you any doubt about that?

Witness—I have no doubt about it.

His Lordship—The whole of it?

Witness—Yes, my Lord.

Cross-examined by Mr. Lowder—You told us yesterday, Mr. Mason, that you were only slightly acquainted with my handwriting at the time you asked me about this chess problem.

Witness—I did.

Mr. Lowder—Upon reconsideration, don't you remember that previous to that you had seen a very great deal of my handwriting?

Witness—If you will tell me the year. I re-

member copying your handwriting, but whether it was before that I cannot say.

Mr. Lowder—You cannot say that it was not previous to that?

Witness—I cannot say that it was not previous to that.

Mr. Lowder—I should like witness to take exhibit O, of the Carew Inquest, it is the letter signed "Edith" and addressed to the boat house.

His Lordship (to witness)—There is a letter enclosed.

Mr. Lowder—It begins "Dearest Walter, A most mysterious lady came here;" the h in here is not looped, is it?

Witness—I beg your pardon; it is distinctly looped.

His Lordship—Have you examined the letter? I think it is looped.

Mr. Lowder—I have looked at it with a glass, and I say it is not looped, but perhaps I suffer from defective eyesight. (To witness)—At the top of the second page you will find the words "I must see him." Is the h looped there?—No.

In the last line of all you will find "tell Rachel to give her"—the "h" in Rachel is looped, but the h in "her card" is not.

His Lordship—There are four h's and the h is not looped in "her card," but in the other three it is.

Mr. Lowder—The result is that in three instances the h is looped, in one it is not; and in two it is doubtful.

His Lordship—How many initial h's are there in that letter?

Witness—Six.

Mr. Lowder—And out of the six two are certainly not looped?—Yes, two are certainly not looped.

Three are certainly looped?—I say four are certainly looped.

Now we will take the initial "s," and I say there are fifteen initial s's in that one letter, that twelve are different to the "s" you consider characteristic of the accused's handwriting. "A most mysterious lady came here just now to see you." The "s" in "see" you say is characteristic?—I say it is one of the characteristics.

"She said she," will you see if either of those s's resemble the "s" you say is characteristic?—May I be allowed to explain?

His Lordship—You must answer the question and then perhaps afterwards.

Witness—They are not characteristic of the s I have referred to.

His Lordship—The Jury will see the exhibits. Mr. Lowder, continuing—"She said she would call again about 4.30" is the "s" in she characteristic?—No, not of the one I pointed out yesterday.

His Lordship—Will you point out the "s" you described yesterday?

Witness—The one in "see" is the one I pointed out as a characteristic "s."

His Lordship—There are three characteristic s's in that letter. What are they?

Mr. Lowder—On the third line of the first page; on the sixth line, and again on the sixth line of the second page. I am now taking the witness through the other s's. "She said she would call again about 4.30." Is there anything peculiar about the "s" in she?—No, there is not.

And the "s" in seemed, is that a characteristic s?—It is.

The s in the last line is different, is it not?—It is not.

Then in the second line of the second page "she said," I think those are different?—Yes.

And in the second line "see him"?—Yes.

And in the word "shall"?—Yes.

And then in the message, "shall I tell"? I make the net result to be that there are at most three characteristic s's, and eight out of the twelve that would not be called characteristic.

Witness—The letters I pointed out yesterday I said were specially characteristic.

Mr. Lowder—When you find in one letter that there are twelve initials s's eight of which are written in one way and three written in another way, by what method do you come to the conclusion that the three are more characteristic than the twelve?—I said that the three s's have characteristics of which the writer might be unconscious.

His Lordship—Then why should she be unconscious of the three and not of the twelve?—Because the twelve in these letters are normally formed and the others are not. By normally I mean formed in a common way.

His Lordship—That [the characteristic s] strikes me as a peculiar "s"; it looks like an 8. Do I understand you to say that that is the peculiarity of the "s"?—Yes; they are formed in that manner.

Mr. Lowder—Do your consider it an unusual

thing for a colon to follow the word no, being short for number?—I do.

His Lordship—Has either of the Counsel the original letter?

Mr. A. H. Cole Watson (one of the Jury)—Is it not in the witness's hands?

Mr. Lowder—Did you notice when giving your evidence or before giving it, that the water-marks of the letter addressed to me and the one written by Mrs. Carew, although bearing the same ribbed and straight water lines, do not bear the same letters in the water-mark?—I would like to see to what you refer.

Letters were handed to the witness for inspection and afterwards he replied—I see the letters now for the first time. In the one-letter there are letters in the watermark, but in the other there are not.

Mr. Lowder—Is it an usual thing to see ribbed and straight water lines in paper?—I am not a paper expert.

His Lordship—Can't you answer the question?—I do not know.

Mr. Lowder—The witness has been called upon the testify to these facts, my Lord. In the exhibits 15 and 16 the letters in the water mark are the same, "HIDES," now I would like the witness to take in his hands the remainder of the A.L. series and see if there is a single one of them with that name in the water-mark?—None of these have the same watermark.

I ask witness to look at the word Dickinson in exhibits 16, 17, 33; please examine them carefully and say if they were written by the same person?—I do.

If not, one of these must be a very good imitation of the other?—Certainly.

With regard to exhibit "M.J. for E.H.C.," if that were not written by Mrs. Carew, it is an exceptionally good imitation of her handwriting, is it not?—Exceptionally so.

So much so that you could not distinguish the one from the other?—I could not.

Re-examined by Mr. Wilkinson—My learned friend has asked you, Mr. Mason, with regard to the letters "h" and "s," and he asked you in what way they were characteristic, and now I have to ask you, do they occur in Miss Jacob's handwriting?—No, they do not, so far as I remember.

His Lordship—I think the only other he said was alike was the B.

Witness—Yes, my Lord.

Mr. Wilkinson—Will you look at the D in Dickinson in exhibits 16, 17, and point out any difference, if there is any, as well as likeness?—It is very difficult to judge, because one is written on Japanese paper, which is very rough.

His Lordship—Is it written with pencil?

Witness—Yes my Lord; they are both written with pencil, but judging from the difference in the quality of the paper I should say there was no difference.

His Lordship—This is an order for a bottle of quinine "and refill the accompanying," is that in Mrs. Carew's handwriting?—It is, my Lord.

And this, exhibit A—an order to Maruya for the bed-pan—is that in her handwriting?—It is, my Lord. I refer only to the signature; I have doubts about the other part, until I have examined it more minutely.

And exhibit psi—an order to Schedel?—That is heis.

And Cc—an order for two small bottles?—That is also in Mrs. Carew's handwriting.

Mr. Lowder—I should like the doubts as to the writing on exhibit A to be followed up.

His Lordship—Will you suggest the question?

Mr. Lowder—Whether the witness can say whether the whole of it, not alone the signature, was written by Mrs. Carew?

His Lordship—I think the words are more printed than written.

Witness—I have doubts about the words "one bed pan," I should be surprised to hear that the rest was not in Mrs. Carew's writing.

His Lordship—This is R 2, an envelope containing the torn and pasted letter—I want you to say whether, in your opinion, the handwriting on that envelope is the same as that on the other envelopes belonging to the A.L. series?—I think they are all in the same handwriting.

His Lordship—It is your suggestion, Mr. Lowder that they were?

Mr. Lowder—Yes, my Lord.

Mr. Davieson (a juror)—Do you know if the water-marks of one maker are the same on all his envelopes?—I know nothing of paper or water-marks at all.

Mr. Patterson—I understand the witness to say that one s in the letters of Mrs. Carew was specially characteristic. I should like to know if the other s's are characteristic?

Witness—No, they are common to many hand-writings.

Mr. Wilkinson—It is 4 o'clock my Lord.

His Lordship—Have you not another witness?

Mr. Wilkinson—Yes, but my learned friend is rather fatigued.

His Lordship—I think if the Japanese witness is present we might go on with him.

Yamada Masakichii was then recalled. He produced his books and read an entry on the 20th October, made by himself. It read—
"169, Bluff, Carew, one bed-pan, 85 cts; one ounce bottle of Fowler's Solution, 25 cts."

Mr. Wilkinson—That is the special entry that I required to produce.

His Lordship—Quite so.

Mr. Lowder—What is the obliterated word above the entry?—"Shishichiro knows about it."

I should like to know when those were written, by whom, why, and when they were obliterated?—I wrote them when I delivered the goods. I did not obliterate them.

Who did cancel them?—I do not know.

What made you write those words "Shishichiro knows about it"?—The Carew's were not in the habit of getting things on credit from us, so I gave the chit to Shishichiro, to ask if this was all right, and so I made the entry.

And Shishichiro was able to tell you that it was all right to trust the Carew's?—Yes.

I suppose you understood from what he told you that he knew the name of Carew?—Yes.

The Court then adjourned till 10 o'clock next morning.

WEDNESDAY, January 20th.

The sitting opened this morning with a scanty attendance of the public, but as the day wore on the room filled-up and by noon was crowded. The bright sunshine of the early morning was a pleasant contrast to the gloom of the previous day. The accused throughout the day maintained her usual keen interest in the proceedings, but her face at times was very anxious and worn. Mr. Scidmore again occupied a seat at the barrister's table next to Mr. Litchfield, and Dr. Eldridge sat, for a while, behind Mr. Lowder. At the outset, medical evidence was given as to the state of Miss Jacob's health. Dr. Worden stated that her pulse was 118, and her headache was very severe. Dr. Orme, of the P. & O. steamship *Formosa*, corroborated this, and said that in his opinion she would not be able to attend the Court for many days, as he found her pulse to be 116, while the heart-beats were 132, showing that 16 beats of the heart were lost before reaching the pulse—and her heart was therefore in a very weak state.

His Lordship—There is a point I overlooked when Mr. Mason was in the box. Should he appear again?

Mr. Wilkinson—I have telegraphed for him, my Lord, to come down, and I may make an application for him to be recalled.

His Lordship—I mentioned the matter the other day of the two dates to exhibit R; that has not yet been cleared up.

Mr. Wilkinson—I will try and have that cleared up for this afternoon.

His Lordship—Is there any medical evidence this morning?

Mr. Wilkinson—Yes, my Lord. I will call Dr. Worden.

Dr. Worden entered the witness-box.

Mr. Wilkinson—Have you, since yesterday, seen Miss Jacob since you were here in Court yesterday?—Yes.

Would you state what condition she has been in since, and her condition when you last saw her?—I saw Miss Jacob at four and at 8.15 p.m. yesterday, and this morning at about a quarter after nine.

His Lordship—And her condition when you last saw her?

Witness—I found her in bed with a severe headache and a pulse of 118.

His Lordship—And, unable in your opinion, to attend to give evidence.

Witness—Yes, Sir.

Mr. Wilkinson—Do you think it possible for her to be, at any time during the day, able to attend to give evidence?—I do not.

Mr. Lowder—I have no questions to put to witness.

Mr. Wilkinson—I have another witness to call, my Lord, a Dr. Orme.

Dr. Orme, sworn, said—My name is William Bryce Orme. I am a British subject, a member of the Royal College of Surgeons, England, and L.R.C.P. London.

And you present post?—I am now surgeon on board the P. & O. steamer *Formosa*.

Have you seen Miss Mary Esther Jacob?—I have seen Miss Mary Esther Jacob, I saw her

last night at 8.15. Dr. Worden was there at the same time.

Have you seen her since?—I have seen her again at 9.15 this morning. I was there before Dr. Worden, but he came in before I left.

Mr. Wilkinson—Is she, in your opinion; fit to attend here to-day to give evidence?—No, Sir, she is not.

His Lordship—You are not able to say when she will be able to attend?

Witness—No; I should not think for some days at least. I may say I found her pulse at 116 and the heart at 132, and therefore there were 16 beats to the minute which did not reach from the heart. I should therefore say her heart was in a very weak condition.

Mr. Lowder put no questions to the witness.

Mr. Wilkinson (to the Court)—I have just asked Dr. Orme, and he says he is going away to-morrow, so that I cannot ask him to come again.

His Lordship—Is the date of departure fixed?

Witness—Yes, my Lord, but there may be a slight delay.

Mr. Wilkinson, addressing the Court—My Lord, I have been considering very anxiously my position with regard to the letter to Sir Ernest Satow which was tendered in evidence, and your Lordship's ruling with regard to it. It is very unusual to ask a Judge to re-consider a ruling of this sort, but I have only to urge that I should have argued the case before your Lordship in the first instance if I had not laboured under a misapprehension. That is my own fault, no doubt, but the point which we have arrived at is that the letter which your Lordship has ruled ought not to be given in evidence upon the strength of the cases which were referred to. I do not know whether I have convinced your Lordship that the cases do not bear the construction which your Lordship put at the moment upon them, but I would ask in any case whether the construction that I urged when I did argue it before your Lordship is the right one, or whether there is any discretion in your Lordship that the evidence should be now admitted. Of course the position is different now to what it was before your Lordship made a ruling, and the question is whether that ruling can be—if a proper case is made out—whether that ruling can be reversed.

I submit it can be. I cannot find a case upon the point except the two cases you mentioned, but there is a point which bears incidentally upon it and has a very strong bearing indeed, and that is the right of Judges at all times, until final decision is given or judgment entered, to reconsider their judgment; and one strong case is that Judges at assizes or sessions can recall a prisoner and give a higher or a lower sentence. The cases referred to upon that point are in Archibald, "Pleading and Evidence in Criminal Cases," 19th Edition, page 190. After having read the cases, Mr. Wilkinson said—Now, my Lord, in my own experience I have seen that done twice, both of which arose through a mistake of the Judge in overlooking the statute and imposing a minimum sentence for a second offence. Prisoners were sentenced to a sentence which would be right if it were a first conviction, but which was wrong if it were a second conviction, and the prisoners were in each case brought up on a subsequent day and sentenced to sentences which the law required, so that there was there a very solemn step taken. It was taken on a mistake, but it was stated that as long as the assizes lasted it could be remedied. I submit that until the Crown has closed its case there is time for reconsideration, and I shall refer to the only cases which seem to bear upon that. In support of the point, the case I have already referred to is in 6 East, page 328.

His Lordship—Of course it is not the same point?

Mr. Wilkinson—I submit it has a very strong bearing.

His Lordship—There the prisoners were found guilty.

Mr. Wilkinson—Yes, my Lord.

His Lordship—There the judge said, it is not too late for me to pass a proper sentence upon a person found guilty.

Mr. Wilkinson—There was the case of the *Queen v. Nicolas*, 6 Cox's Criminal Cases, page 120.

Mr. Wilkinson, continuing—The point which the Counsel for the Crown (the doubt rested there) was that it having been seriously decided—the facts having been found by the Judge—that the evidence was not admissible evidence at all, he felt a doubt about putting it in on his part. In this case there never has been any doubt as to the admissibility of the evidence to be tendered. The only point which was decided was the point as to the propriety of allowing it to be put in. No objection was taken or, so far as I know, could be taken, to its being good and proper evidence.

His Lordship—We did not get that far, Mr.

Wilkinson. I am very anxious that nothing should take place to prejudice the prisoner, and knowing not why it should not have been given earlier, I decided that the prisoner ought to know it at a reasonable time before and not at the last moment only. Whether it was not known to the Crown before and they could not tell of it sooner, they had, of course, the right to apply.

Mr. Wilkinson—Your Lordship asked me the question and I said yes, and I should have gone on to state other risks, but I must say it was only known to me on the evening before it was to be put in evidence. I could not state to you any of the risks in private without a breach of statutory duty; to relate them in public would have been a breach of legal duty, but there are reasons which, if they could be stated, would show why. But there is one circumstance, and that is that so far as I am concerned as Counsel for the Crown, I only knew on the evening before that I was in a position to give that evidence.

His Lordship—Therefore you could not be in a position to give it to the prisoner, for although you knew of the evidence you did not know until the evening before that you could call it?

Mr. Wilkinson, continuing, said, he had intimated to his Lordship his readiness to accept any censure for not having given notice of the evidence, but there were circumstances which if they could be stated would account for it, but which could not be stated with propriety.

His Lordship interrupted Mr. Wilkinson and said, he did not think the case implied censure on the prosecution. The words are, *strong observation in his remarks to the jury*. The observation I understand to be that the accused had no knowledge of this evidence which was elicited at the last moment. Counsel for the defence had no knowledge of it—and it is quite possible that if they had had more time they would have had better opportunity of replying to it. It is an observation on the evidence, but it must not be taken without some consideration, and it is not to be put in the same place as knowledge of the evidence which had been duly considered.

Mr. Wilkinson—That is all I have to say, and I can only repeat that it is with regret I have to ask your Lordship to reconsider it.

Mr. Lowder—I gather from what has fallen from my learned friend that although he did not know he was in a position to put in the evidence, the evidence was in his possession.

Mr. Wilkinson—Not in my possession.

Mr. Lowder—In the possession of Counsel for the Crown.

Mr. Wilkinson—That is so.

Mr. Lowder—Therefore, although the Counsel for the Crown might not know that a witness was in a position to give that evidence they had that evidence in their possession and could have communicated it to me. They did not do so, and therefore the point is, I say, in exactly the same position as it was when your Lordship decided.

His Lordship (to Mr. Lowder)—Do you say that if they knew they were in the possession of evidence without knowing if they were in a position to produce it, they ought to have notified you of such evidence?

Mr. Lowder—I did not say they were in that position.

His Lordship—Mr. Wilkinson says he was not.

Mr. Lowder pointed out that he had received from Counsel from the Crown a list of names of witnesses intended to be called, and now his learned friend informed him that he did not intend to put them into the box.

His Lordship—Mr. Lowder has a right to comment upon that.

Mr. Lowder pointed out that in the case cited the Counsel for the defence had withdrawn his objection, but he (Mr. Lowder) had not withdrawn his.

Continuing, Mr. Lowder said—In the other case reported in 6 East, it was only a question of the passing of the sentence, and I do not think it has any bearing on the matter which is now submitted for your Lordship's decision. I should say that an application such as that now addressed to your Lordship is not only unusual but unprecedented. I have never heard of such a case before, and I submit that as your Lordship has given your ruling it has become as much a matter of record as the ruling of a judge can be. It is not one of those decisions which is drawn up, but it is a ruling during the case, and I say it is too late to have that reversed.

Mr. Wilkinson pointed out that the question he had given was that the time his Lordship could close the case was only at the close of the sessions, and submitted that the time he (Mr. Wilkinson) could be stopped from giving evidence was at the time he had finished his case.

His Lordship (to Mr. Lowder)—You have had

no opportunity of looking at authorities on this point?

Mr. Lowder—No, I have not.

The Court—I will not decide the matter until you have had an opportunity. I shall be glad myself to consider it.

Mr. Wilkinson—I now call Kuro Yanagijunya.

His Lordship—What is he?

Mr. Wilkinson—The *betto*. It is purely formal. I stated in my opening that he would be called, and I consider it my duty to call him and submit him for cross-examination if my learned friend so desires.

The man's name was called.

The Usher—He is not here.

His Lordship—He is only for cross-examination, you said.

Mr. Wilkinson—Yes.

His Lordship (to Mr. Lowder)—Do you wish to cross-examine him.

Mr. Lowder—Yes, my Lord.

Mr. Wilkinson—I will secure his attendance before I close.

Mrs. Priscilla Ellis was then called and sworn.

Mr. Wilkinson—You are an American citizen, I believe?—No, a British subject.

You are the wife of?—Harcourt Whimble Ellis.

You know Miss Jacob?—Yes.

You reside at No. 2, Bluff?—Yes.

And she lives there too?—Yes.

When did you make her acquaintance?—On the 25th October.

The day she went to Miss Brittan's?—Yes.

Do you remember Mr. Porch coming to see Miss Jacob?—Yes.

His Lordship—Does she know Mr. Porch?

Mr. Wilkinson—Do you know him?—Yes.

Will you tell us the circumstances?—On the 10th of November I was sitting on the verandah with Miss Jacob and Mr. Martinolish, when a gentleman came up whom Miss Jacob addressed as Mr. Porch.

Then what did he do?—He handed a note to Miss Jacob, saying, "A note from Mrs. Carew."

What then took place?—She went inside the hall, opened the note, and read it; then she and Mr. Porch went into the sitting-room and had a conversation together.

Did you see them at any time during this conversation?—Yes, I passed into the hall and saw Mr. Porch sitting in a chair facing the door, and his head was in his hands.

I shall not ask you for the conversation. Did Miss Jacob show you a letter soon afterwards?—Yes.

Would you recognise it again?—Yes.

His Lordship—Did you read it?

Witness—Yes.

Mr. Wilkinson—I put into your hand exhibit No. 43?—To the best of my belief that is the letter.

Mr. Wilkinson—This is the letter beginning "For the sake of Edgerley." (To witness)—

You mentioned the 10th Nov., are you certain about that date?—Yes, quite certain.

Did you see—were you shown—a subsequent letter?—Yes.

Were you there when it was received?—No.

Can you recollect anything about the date of that letter?—It was the day before Miss Jacob gave her evidence at the preliminary examination.

I now show you exhibit 44, can you recognise it, do you think?—Yes, to the best of my belief, that is the letter.

His Lordship—How do you fix the date of that?

Witness—I could not fix the date; but it was between the 11th and 16th.

Mr. Wilkinson—But you mentioned an event?—It was shown to me on the morning when Miss Jacob gave her evidence at the preliminary examination.

Mr. Wilkinson—It reads:—"Dear Mary:—I went round to see you this morning early. I suppose it was Miss Brittan I saw, who said you would not see me. I am very sorry you wouldn't. However, I suppose you know your own mind best. I have a fair idea of what you will be asked and what you will reply in Court to-day, and I want to tell you that it depends entirely upon you to-day as to the result in everything. You yourself must see that, and I hope you will remember and bear this in mind for the sake of Marjorie and Ben, if for none else. Yours, E.M.H.C."

His Lordship—That was on?

Mr. Wilkinson—It was Friday, November 13th, 1896. (To witness)—I believe that Miss Jacob for some time slept with you?—Yes.

Where was her room?—My room was directly below her's; her's was above.

Who occupied her room while she was sleeping with you?—Nobody.

Now will you state what you know of an incident—what you yourself heard of a visit to her room?

Mr. Lowder—I must object.

His Lordship—I must hear what the incident was first.

Mr. Wilkinson—I only want her to tell us what she heard. I cannot give a date or refer to the incident more particularly. What did you hear?

Witness—On the night previous to her giving her evidence—

His Lordship—That would be the 12th. What did you see or hear?

Witness—Miss Jacob retired about 8 o'clock as she was tired. About 10 o'clock Miss Jacob sprang up and said—

Mr. Wilkinson—You must not give us anything about that conversation, but only what you heard?

—I heard some one pass quickly up the stairs on to Miss Jacob's room.

Have you ascertained who it was that went to that room?—I have not.

So far as you know, was there any person who had a right or would in the ordinary way go to her room?—No, there was no one.

Mr. Wilkinson—That is all.

Mr. Lowder—I have no questions to ask.

Miss Harriet Gertrude Brittan, who was accommodated with a chair, was then sworn.

Mr. Wilkinson—You are an American citizen, I believe?—Yes.

And you live at No. 2, Bluff, Yokohama?—Yes.

You know Miss Mary Esther Jacob?—Yes.

She lives at your house?—Yes.

And has done so since the 25 Oct.?—I can't remember dates, it was the Sunday after the murder.

Can you remember Mrs. Carew coming to see Miss Jacob?—Yes.

Can you remember the date?—It was the morning of the day when Miss Jacob gave her evidence.

His Lordship—It was not on the Saturday of the inquest?

Witness—No.

His Lordship—She gave evidence at the preliminary examination.

Witness—It was a Wednesday, I think.

At what time of day?—About a quarter to eight in the morning.

Did she see Miss Jacob?—No.

Did you prevent her?—I did. Her Counsel had said that no one was to be admit—

Mr. Wilkinson—No, no, no, you must not say that. Do you remember afterwards a letter coming to Miss Jacob?—Yes, I do.

Would you know the letter again, if you saw it?—I think so.

Would you look at exhibit 44?—To the best of my belief that is the letter, Sir.

His Lordship—When did it come—the same day?

Witness—Within an hour and a half afterwards.

Mr. Wilkinson—Did you see the envelope on that occasion?—I saw the envelope, but I don't think I have seen it since. She took it out of the envelope, put it in my hands and I read it.

Mr. Lowder—Had you seen Mrs. Carew before?—No.

Did she tell you her name?—No. I asked her several times, and she said "No, no."

And still you refused to let her see Miss Jacob?—I did.

His Lordship—Since you have never seen her before and she did not give you her name, I must ask the accused to stand up. (Accused stood up.)—Is the accused the person who came or not?

Witness—She is, I am sure.

Mr. Wilkinson—The whole diary has been put in, my Lord, but I think it would be as well to read what are pertinent entries.

His Lordship—Very well.

Mr. Wilkinson—I think the entries from the 10th of October to the end, inclusive, should be read; perhaps the Clerk of the Court will read them.

His Lordship—He should have the book first, strange writing is always difficult. Can you go on with somebody else in the meanwhile?

Mr. Wilkinson—Yes, call Kuro Yanagijunya.

The Usher—He is not here.

Mr. Wilkinson—The next question, my Lord, is the question of the telegram to Kobe: would Mr. Troup come into Court and tell us about it?

His Lordship—Yes, send for him.

Mr. Troup at the moment entered the Court.

Mr. Wilkinson—Mr. Troup, would you kindly give us some information regarding the telegram question, and how far it has proceeded?

Mr. Troup—I applied to the Judge of the Yokohama Saibansho on Monday, with a view to his obtaining from the Post and Telegraph Office, the production of the original of the telegram in his Court. He undertook to apply to the Post and Telegraph office for its production, and I have since understood, by a message from his Court in answer to an enquiry of mine, that he has applied to the Post and Telegraph Office, but that at the

time of answering my enquiry (yesterday) he had received no reply.

His Lordship—That is the step you took?

Witness—That is practically where the question stands.

Mr. Wilkinson—Do you think, Mr. Troup, if it is likely that you will obtain information about it to-day?

Witness—I am to receive information when the telegram is produced in that Court.

His Lordship—If and when?

Witness—Yes.

His Lordship—You don't know if it will be produced?

Witness—No.

His Lordship—I would like to know whether the application you made was that the Judge himself might produce the telegram, or whether he would send an officer of his court to produce it here.

Witness—I did so. I saw the Judge personally myself, and in his reply to me he said he could not do so. I understand that to mean that the rules of his Court would not permit him to do so.

His Lordship—Failing that, you applied to have it produced in his own Court, and when?

Witness—He consented to make the application and has made it.

His Lordship—Can it be inspected?

Witness—Yes, for the purpose of being inspected and copied.

His Lordship—If it can be produced in his Court?

Witness—Yes, and then he would furnish me with a certified copy of it, and allow me to inspect the original, with an expert from this Court if so desired.

His Lordship—Then I think we had better do no more in the matter of the telegram until we can see whether Mr. Troup can inspect the original. That would be better than obtaining evidence of recollection from a witness—recollecting its terms.

Mr. Wilkinson—I might, before I close, my Lord, have the opportunity afforded of asking about the telegram; and if it is not possible to have it before I close—and I am very near that point now, as everyone will be glad to hear—then I may perhaps be allowed to introduce it by interposing.

His Lordship—We have evidence now to read, have we not, as to accused's statement when in the witness-box during the preliminary examination of Miss Jacob?

Mr. Wilkinson—Yes, my Lord.

His Lordship—We might take that now.

Mr. Wilkinson—Yes, only the front page requires correction.

His Lordship—It is only a transposition of exhibits, those can be explained to the jury as we go along.

The jury were then given printed copies of the evidence given by Mrs. Carew during the magisterial examination in Miss Jacob's case. Mr. Troup read the evidence from the Court record, and His Lordship read all the letters in reference to it as they occurred.

At twelve o'clock the reading was suspended and the Court adjourned for lunch.

The Court resumed at 2 o'clock, and Mr. Troup continued the reading of the evidence given by Mrs. Carew in the Jacob case. He concluded about 2.25 p.m.

Mr. Lowder—I would ask just one question of Mr. Troup. The evidence given by Mrs. Carew which you have just read, is in narrative form in your notes?—Yes.

But it was elicited both in examination-in-chief and in cross-examination by answers to questions put by Counsel?—Yes.

His Lordship—Is it not signed?

Witness—No, it was not read over to her.

His Lordship—Because?

Witness—Because it was not completed.

Mr. Wilkinson—You are satisfied with the correctness of your notes?—Yes. But I believe a present has been allowed to stand for a past, or *vice versa*. (Looking at notes)—I have in my notes the phrase, "everyone whom I had mentioned," instead of "have mentioned," but it is only a slight clerical error.

Mr. Wilkinson next applied for the box of letters produced in the Jacob case to be opened for the purpose of finding a certain letter.

Mr. C. D. Moss, the Chief Clerk, broke the seal in Court, and Mr. Litchfield was accorded permission to search for the letter.

His Lordship—While this is proceeding, I think we had better read the entries in the Diary.

Mr. C. D. Moss then read the following:—

October 10th Saturday. Got up at 5, to find it pouring, so went to bed again. It rained hard until 3 o'clock, most disappointing weather for the Regatta, which was held however in spite of wind and rain, as I never take any

interest in it myself. it didn't upset me very much. Had a curious and mysterious visitor shortly after tiffin. who called to see Walter. I went down to the Boathouse about 3. and walked home about 5. as it cleared. Walter does not seem too well, and I wish he could get a thoro' change. I suppose it is the damp. I saw Dr. Wheeler at the Boat House, and he gave me a prescription for my malaria.

October 11th Sunday. Lovely day went to the early Service. Walter stayed in all the a.m. waiting for the 'woman in black' who however did not come. She appears to be shy. Reggie and I went for a walk to the Race. Course and back and I got a short ride in the a.m. Walter not yet all well, and went to bed directly after Tiffin. I sent for Dr. Wheeler about 5. o'clock, who ordered W. medicine. not that it will do him much good I'm thinking.

October 12th, Monday. Fine, but doubtful. I rode to the Course. Walter didn't go he wasn't feeling well enough, but he went down as usual to office. Saw Mr. Tennant and arranged with him about the report of the races. Had a lot of trouble arranging about one handicap. wrote home.

October 13th, Tuesday. Rained a good deal, in the a.m. Walter and I managed however to get up to the Course. Heavy galloping. Mr. Packenham has arrived. Kobe going well. Paid some calls, and played Tennis Walter dining at the Club—and came home very late. he made me feel very much disgusted.

October 14th, Wednesday. Fine morning in fact no rain all day, but dull in the p.m. Played my Tennis Handicap and lost. M. Pernet was not up to much but as I never expected to win, it didn't matter. I am sorry, for him tho' Walter came home at 4. o'clock, and went to bed the result of last night's dissipation. Came home to find Reggie feverish and shivery, and sent for Dr. Wheeler. Majorie also has a bad croupy cold, quite a hospital!

October 15th, Thursday. Fine day. I rode to the Course. in spite of feeling very tired, nothing very exciting. Reggie decidedly better, only a feverish cold. Wrote to the Dr. and asked him to see W. at the Club. He doesn't seem at all himself. Went down the Town. played Tennis, and on coming back at 4.30. found R. up, and W. home in bed. He had been ordered a course of Vichy-water by the Dr. I wonder how long it will last.

October 16th, Friday. Fairly fine. Reggie stayed in bed till 11. and remained in the house all day. wrote to S.S. to say he was unable to go down to office. No news. W. stayed upstairs. I want him to keep quiet until Monday, if he will.

October 17th Saturday. Such a glorious day. Rode up to the course, lot of galloping. Mrs. Dunlop. Pearson, and Trixie, were there—Dr. came soon after breakfast but did not care about his going to Kamakura. R. and I walked round to Mr. de Kesch to excuse W. from dining there. got W. some books, and walked down the Town, taking Ben. Walter suddenly became very sick. I am glad he did not go away. Dr. W. says he is on the verge of jaundice. Dined at Mr. de Kesch's and got home before 11—Dunlops. Dodds. Festetics, and de Waepanaert there—went to a cricket match in the p.m. Reggie stayed with Walter, he is quite well again.

October 18th, Sunday. Fine day, colder, did not ride. W. still quite seedy. Mr. Stewart tiffed with us. Took the children to church. Mary went out with Elsie, and a friend. Had dinner upstairs. Cricketers went to Kobe.

October 19th, Monday. Fine day, had such a restless night with W. didn't go to the Course—stayed in all day. W. no better, he talked about going to the office after Tiffin, but he is not at all fit for it. wrote to Mr. Stewart at his dictation Reggie went back to his office. Majorie's cold still bad—

October 20th, Tuesday. Dull but no rain. Walter no better—no news—Dr. Todd came in the afternoon to see W. ordered him ice. Went down town in the a.m. remained in the aft—Walter rather alarmed me after dinner, and I went in search of Dr. Wheeler who was at Mrs. Morrison's. Mr. Parsons came in the aft. Had a very bad night.

October 21st, Wednesday. Cold, but no rain. Agreed with Mr. Parsons, that Dr. W. did not appear to understand W. case and wired thro the Dr. for Baelz—he couldn't come however. Had several callers. I am sure W is really ill and I am going

Mr. Litchfield now returned to the table with the letter he desired to find.

Mrs. Ellis was recalled, and Mr. Wilkinson asked her—Do you remember seeing any letter from England in the hands of Miss Jacob that was not addressed to her?—Yes.

Can you state how that came about?—It came in an envelope addressed to Miss Jacob.

Who was it for?—Mrs. Carew.

Could you recognise it again?—Yes, I believe I could.

Is that the letter—No. 22—letter from Miss Jacob's aunt to Mrs. Carew?—Yes, to the best of my belief.

Did you see the letter when it came in?—Yes, I did.

Is this the letter?—Yes, I think that is the letter, but I will not be sure.

Mr. Wilkinson—They are both dated from Strathalbyn, Baltinsboro, and bear date Oct. 1st. (To witness)—To whom was the other letter addressed?—To "my dear Mary."

Can you recognise the envelope?—I did not hold the envelope in my hand, so I could not say. Were both in one envelope?—Yes.

His Lordship—Was there an envelope on Mrs. Carew's letter?

Witness—No, my Lord. Both letters were in the same envelope. That is, Mrs. Carew's letter came enclosed in Miss Jacob's letter.

Mr. Wilkinson—There is so little doubt on the matter, but I will ask the witness to look at the date of the envelope?—It is October 1st at Baltinsboro, both in the post-mark and the address-date; and the Yokohama post-mark is November 7th.

Can you recognise this envelope as one sent to Miss Jacob?—No, I can't recognise it, as I did not particularly look at any of the envelopes.

Mr. Wilkinson—I undertook to put these envelopes in and I am meeting with a difficulty. Is Mrs. Brittan here?

Witness—No, she is not here.

Mr. Wilkinson—I may have another opportunity, but I can't ask my learned friend to admit anything. I should like your Lordship's decision on the matter we discussed this morning?

His Lordship—I should like to have time to think it over.

Mr. Wilkinson—If it—the letter to the Minister—is admitted, I should like Mr. Mason to have a look at it.

His Lordship—But he has already looked at it, I thought.

Mr. Wilkinson—Yes, my Lord, it is merely formal.

His Lordship—There is one question I should like to ask Mr. Mason.

William Benjamin Mason reentered the witness box.

His Lordship requested that exhibit X should be handed to the witness, and then said—Have you seen that before, Mr. Mason?

Witness—I think I have.

Would you like a glass to examine it with?—I prefer my own eyes.

Can you form any opinion as to whose handwriting that is in?—It is very difficult, my Lord, to say whose handwriting it is without having others to compare it with.

I thought you had the recollection of other handwritings in your mind?—I think it is Mrs. Carew's, but I should like one or two of her letters to look at. Exhibit A in the Carew Inquest, about which I spoke yesterday, would suit my purpose.

The Exhibit was handed to witness, and then he asked for one or two others.

His Lordship—Certainly.

Witness asked for more exhibits, pointing out to his Lordship that the letter shown to him was indistinct.

After examining all carefully, witness said—The handwriting resembles Mrs. Carew's more than any other I have seen.

You mean more than Miss Jacob's?—More than any other handwriting I have seen in connection with this case.

Then that is more than Miss Jacob's and Miss Christoffel's?—I have examined other handwritings in this case, my Lord.

His Lordship (to Mr. Lowder)—Would you like to put any questions to witness?

Mr. Lowder—I should like to look at that [the letter witness had just examined].

After looking at it, Mr. Lowder said—No, thank you, my Lord.

His Lordship (to Mr. Mason).—I overlooked this. I intended to ask you, Mr. Mason, yesterday.

The *betto* was the next witness called, but as he could not be found, Mr. Wilkinson said—I have mentioned it to my learned friend, my Lord, and it will suit his convenience perfectly if this man is produced afterwards. There is now the question of the telegram, and the question I have asked your Lordship to consider, and there is the question of Miss Jacob's evidence. Subject to these three

things—when they are decided my Lord—then my case will be closed.

His Lordship—So far as the telegram is concerned, I think we had better have that. This is how we stand, Mr. Lowder: if there is no better evidence we must take the best we can get.

Mr. Lowder—I thought I might assist the Court by putting the question myself in cross-examination.

His Lordship—I noticed that you put the question.

Mr. Lowder—Therefore I presumed that my learned friend and the Court were satisfied that we had got all we could out of the witness.

His Lordship—I think I should like him called. You suggested a message.

Mr. Lowder—But he said what the words were.

His Lordship—He said my recollection is—(To Mr. Wilkinson)—Do you wish to put any questions to him?

Mr. Wilkinson—No, my Lord.

His Lordship—I would propose to call him and put questions which occur to us now about it, and if we can get any better evidence of the telegram we must admit that. On the other hand, if we do get a copy made by Mr. Tronp himself that will be better.

Mr. Wilkinson—I prefer to leave the witness in your Lordship's hands.

His Lordship—Then I wish to ask him a question. There were two telegrams, you have asked him only as to one.

Mr. Wilkinson—That is true.

His Lordship (to Mr. Lowder)—Have you any authorities on the point which was argued this morning?

Mr. Lowder—No; I have not have an opportunity to consider the matter.

His Lordship—Do you think you could let me have it in the morning?

Mr. Lowder—I may. There is only one point I would mention about the proposal to put in the evidence of Miss Jacob. If the evidence she gave at the Magisterial Enquiry is to be put in, I should also ask that that given by her at the Inquest be put in.

His Lordship—Have you any objection, Mr. Wilkinson?

Mr. Wilkinson—No, my Lord, I could not take any objection.

His Lordship—I think that should be printed, and the evidence at the Inquest will be added to it.

Mr. Lowder—Of course, your Lordship will understand that I am not conceding the point that if she is able to be called she will be.

His Lordship—If we have the same report tomorrow then I presume the prosecution will read it, otherwise I should have to propose an adjournment of the hearing, which I cannot do. If later you both wished, and she should be able, that might be done—she should be called if you both agreed to do so.

Mr. Wilkinson—As matter of fact, I cannot put in her evidence at the Inquest, but I have no objection to its going in, therefore my learned friend may put it in.

His Lordship—You wish it put in, Mr. Lowder?

Mr. Lowder—Yes, I wish it put in, but I do not think there is any difficulty about it. It was taken on oath before an officer of this Court, and signed and sworn to. I would suggest that your Lordship put it in.

His Lordship—Very well. If you apply to me to have it printed for the purposes of the case I will have it done.

Mr. Lowder—That is what I wish, my Lord.

Mr. Dickinson entered the witness-box and was examined by his Lordship—You received two telegrams at Kobe on the 21st October?

Witness—Yes.

His Lordship—Will you tell the jury the precise words of the contents of each?

Witness—The first one, to the best of my recollection was, "when do you come back,"—"or wire when you come back"—"Baelz says very serious."

His Lordship—Was that the whole of the message? Was there not a name or anything else?

Witness—No, there was nothing else. I got that between two and three o'clock, and I wired back—I cannot remember the words, but it was to this effect, "that I had made arrangements to return by the *Kobe Maru* next day, but that if it was absolutely necessary for me to come back earlier I would do so that night," and I asked her to reply by wire, yes or no. The *Kobe Maru* left on the Thursday. I said that I did not wish to come back owing to the cricket dinner. Her answer was, "Many thanks Friday alright."

His Lordship—When did you first have occasion to recall to your memory the terms of the first telegram? You see it is now nearly three months ago.

Witness—I think that I spoke to her about it when I returned.

His Lordship—You returned on the Friday.
Witness—Yes, but I do not think that I spoke to her then.

His Lordship—That is the impression I got. Reading from my notes of the witness's former evidence, "When I returned from Kobe to this place I had a conversation with the accused on the subject of the telegram I received from her."

Witness—That is correct, but I do not think it was immediately on my return. I think one of the public had asked me whether Mrs. Carew had telegraphed to me. It certainly was not later than the preliminary examination, but it is impossible for me to say exactly.

His Lordship—Were you present at the Inquest on the Saturday?

Witness—I was present at part of it.

His Lordship—Did you read an account of it?

Witness—Yes.

His Lordship—On that Saturday it was stated that Dr. Baelz had been telegraphed for and he replied "would to-morrow evening do"? If you read the account of that, that would be likely to recall the words of the telegram you got on the Wednesday.

Witness—I do not recollect that passage at all. His Lordship—Very well; and so far as you can tell, it was not later than the first preliminary examination. How much earlier you cannot say?

Witness—No, I think it was sometime during the preliminary examination.

His Lordship—That is two months ago?

Witness—Yes.

Mr. Lowder had no questions to ask on this evidence.

Mr. Wilkinson—I should like to utilise this opportunity for putting in the envelopes I spoke of earlier in the day. (To witness)—Can you recognise the handwriting of these two envelopes?

His Lordship—What are they?

Mr. Wilkinson—The two envelopes I wished to put in before.

Witness—I should say undoubtedly these are in the accused's handwriting.

Mr. Lowder cross-examined the witness as follows—This envelope (one of the envelopes just put in) is addressed, Miss Jacob, No. 2, Bluff. There is a comma after the word Jacob, but no full-stop after the figure 2 on that envelope?

Witness—Yes, that is so.

Mr. Lowder—Here is the other No. 2, Bluff. Is there any stop or period after the figure 2 in that?

Witness—There is no stop after the figure 2. The Exhibits were then put in and marked 48 and 49.

His Lordship (to Mr. Wilkinson)—I believe you have a copy of Miss Jacob's evidence at the Inquest?

Mr. Wilkinson—I have, my Lord.

His Lordship—Then you could have that copy printed.

Kuro Yanagijunya was then sworn by the Interpreter.

Mr. Wilkinson—I offer him, but do not examine him.

Mr. Lowder—You were a groom in the service of the deceased, were you not?—Yes, I was.

When did you enter that service—was it last year or the year before last?—The year before last, on the 15th October.

How many ponies were there in the stable then?

—When I went there there was one.

Now in March, 1896, how many were there?—Two.

One of them was sick in the month of March?

—Yes.

And you received from Mrs. Carew some powder to give to the pony, did you not?—I received some kind of powder.

A white powder?—Yes.

Was it wrapped in paper?—Yes.

And a large packet, was it not?—No, a small packet.

Did you give the pony some of that white powder in the month of March?—I recollect so doing.

Was any of it left, and did you give a part of the remainder to the same pony in June or July?—Yes, that is so.

And this by order of Mrs. Carew?—Yes: it was by her orders that I gave the pony the remainder of the powder.

Have you got the paper in which the powder was kept?—I have not.

Are those two the only occasions that you can recollect giving the pony powders?—Yes, that is so.

Do you know where that powder came from?—I do not know.

Mr. Lowder—That is all.

Mr. Wilkinson—I have no question to ask.

Mr. Lowder—I beg pardon, your Lordship, but I omitted a question. (To witness)—Do you remember, during the summer of 1896, purchasing

same sugar of lead for the pony?—Yes, because the pony had a sore leg.

Was any of that sugar of lead left at the time of Mr. Carew's illness, do you know?—I bought about 10 cents worth, and there was about half of it left. I only used about half.

Have you got it now?—After that a horse with white legs hurt itself, and I used the rest of the sugar of lead on that.

Was it used before your master's death?—I used the remainder after the death of my master.

Mr. Patterson (one of the jurors)—I would suggest: In whose possession was this sugar of lead kept until the time that it was used?

Witness—In mine all the time.

Mr. Wilkinson—With the exception of what is before your Lordship, that closes my case.

His Lordship—And Miss Jacob's evidence?

Mr. Wilkinson—Yes, but that can only be known to-morrow morning.

The Clerk of the Court—The Court stands adjourned till 10 o'clock to-morrow morning.

THURSDAY, January 21st.

The interest of the general public in this trial, if the attendance in the Court-room is any indication, has fallen off very considerably. This morning there were only two or three people present when the proceedings began. The accused then looked bright and cheerful, though her eyes showed traces of recent tears, but at the close of the day's sitting she appeared completely exhausted.

His Lordship (to Mr. Wilkinson)—You are going to call Mr. Troup, I believe?

Mr. Wilkinson—Yes, my Lord.

His Lordship—Will you send for him.

Mr. Wilkinson—I have an explanation to make, my Lord, in regard to the putting in of the evidence given at the Inquest. My learned friend wishes to guard against any possibility of the evidence being admitted as though given by a witness of his own. In regard to this I am quite willing to admit anything that is necessary.

His Lordship—Of course we will first read the Magistrate's examination. But wait a moment: am I not to have any medical evidence?

Mr. Wilkinson—Yes, my Lord. I have the doctor in attendance.

Dr. Worden was called and reentered the box.

His Lordship—When did you see Miss Jacob last?

Witness—This morning, about 9.30 o'clock.

And in what condition is she in?—Worse than yesterday.

And her pulse?—Higher. It is 130, and she is suffering from nausea and vomiting.

And it is quite impossible that she can attend and give evidence?—Yes, quite impossible.

Mr. Wilkinson—I have no questions to ask.

Mr. Lowder—I would ask if the witness has considered it necessary to take the patient's temperature?—Yes, I have taken her temperature.

Is it normal?—It is slightly below normal.

Can you form any idea as to when she will be able to attend and give evidence in this Court?—From her present symptoms I think it will be some weeks, possibly months.

His Lordship—You mean able to leave the house?—Yes, sir.

At any rate she is not able to attend and give evidence here?—That is so, Sir.

Mr. Lowder—From the state of her sickness, can you tell us from what she is suffering?—Yes.

She is suffering from a disordered mental and nervous condition.

Might it not be hysterical?—The symptoms might indicate hysteria, and they might indicate something worse.

His Lordship—Is the other doctor present?

Mr. Wilkinson—He has gone, my Lord. He told me that his ship would leave this morning, so I did not ask him to attend.

His Lordship—Dr. Worden, was Dr. Orme present this morning?

Witness—No, sir.

His Lordship—He was not sure whether his ship would leave, and I thought that it being one of the P. & O. intermediate boats she might possibly have a delay.

Mr. Wilkinson—I have not made arrangements for any other medical man.

His Lordship—Then upon this evidence you apply?

Mr. Wilkinson—Upon that evidence I ask that the depositions made by Miss Jacob at the magisterial enquiry be now read.

Mr. Lowder—I only wish for my position in this matter to be clearly understood. I am willing to wait any reasonable time, if, after a time, Miss Jacob is in a position to appear here to give her evidence in person. If this is possible, within a reasonable time, I shall have no objection. But I shall strongly object to her being called and in-

roduced to give evidence after certain evidence for the defence is presented—that is my position.

Mr. Wilkinson—I do not clearly understand my learned friend. Does he object to the admittance of Miss Jacob personally after he has proceeded up to a certain point, or does he wish this evidence to be deferred?

Mr. Lowder—I did not suggest that this evidence should be deferred.

His Lordship—We shall read the evidence now, but if it is possible that Miss Jacob can attend later and give evidence in person then she will be called.

Mr. Lowder—I do not go so far as that: I shall object to her being called after I have gone to a certain point in my defence.

His Lordship—Then we had better have the evidence read, so that Counsel for the Crown can close their case. If, later, she can attend, and you desire her evidence to be given, Mr. Lowder, then she can be called: that will meet your case, will it not?

Mr. Lowder—Yes, my Lord.

Mr. Troup here entered the Court.

Mr. Lowder—My Lord, it occurs to me, that I should scarcely like her to be called even after I have made my opening address.

His Lordship—It is left with you. If you, Mr. Lowder, desire her evidence and she can attend, then she will be called.

Mr. Wilkinson (to Mr. Troup)—You held the preliminary examination of the accused on this charge?—I did.

In your capacity of Assistant-Judge of this Court?—Yes.

The examination was begun on Wednesday, November 11, I believe?—It was.

Adjourned till Thursday, the 12th, remanded on that day and then adjourned till Friday, November 13th?—That is so.

On Friday, the 13th, it was adjourned till Saturday, the 14th, and then from that day till Monday, the 16th?—Quite so.

From then it was continued on till Wednesday, the 18th November, when prisoner was committed for trial?—Yes, that is quite correct.

On the present charge for which she is being tried?—Yes.

During the whole of those proceedings up till the date already given by you, the accused was represented by Mr. Lowder and Mr. Walford?—Yes.

That was until the close of the proceedings on Saturday, the 14th, I believe?—Yes.

Up till the conclusion of the evidence of Miss Mary Esther Jacob the accused was represented by Mr. Lowder and Mr. Walford?—Yes.

That is the only essential point?—I can give you the exact time when Mr. Walford retired.

It is not necessary. Miss Mary Esther Jacob gave evidence on Friday, the 13th November?—Yes.

She was properly sworn and afterwards signed the depositions?—Yes, she was properly sworn and afterwards signed the depositions as correct.

Her signature in the book was signed in the presence of the Court?—Yes.

His Lordship—Was it read over to her?

Witness—Yes, it was.

Mr. Wilkinson—The examination was taken in the presence of the accused?—It was.

And in the presence of the prisoner's Counsel, Mr. Lowder?—Yes.

And the prisoner's Counsel cross-examined her upon some points?—She was cross-examined.

By Mr. Lowder?—Yes. Mr. Walford might have taken part of it. In my notes I have it only that she was cross-examined by Counsel.

And the whole of the examination was taken down in writing in the presence of the accused and her Counsel?—Yes. In the presence and hearing of her Counsel—I beg pardon, Mr. Walford was not in Court at the commencement.

His Lordship—But one of her Counsel was?

Witness—Yes. Mr. Lowder was present all the time.

You say he cross-examined the witness?—Her Counsel did.

That was Mr. Lowder?—Mr. Lowder, certainly.

Mr. Wilkinson—Now, will you read until I tell you to stop—there is one point at which I shall call stop.

Mr. Troup then read the evidence of Miss Jacob in the preliminary examination until he reached the place where Miss Jacob spoke of taking the children down town one day and meeting Mrs. Carew at the Post Office—some time in October. Then Mr. Wilkinson interrupted and the thread of the evidence was resumed where Miss Jacob said that she had never been in the Maruya shop before she was sent for the arsenic. He then read on to the finish as below:—

Mary Esther Jacob, Nursery Governess, residence now at No. 2, Bluff, sworn—I

am a British subject now residing in Yokohama. Previous to the 22nd October last I was in the service of Mrs. Carew as nursery governess. I first entered her service on the 13th of May. I came out from England, reaching Yokohama on the 13th of May. I was living in Somersetshire before leaving England. While in the service of Mrs. Carew I was comfortable in the house. I know Mr. Carew was ill in the latter part of October. I lent assistance in nursing him only on one occasion. My duty was with the children, and I was not asked to assist in the nursing at all. On the 21st October, Mrs. Carew gave me a small piece of paper, open, and another to Brett's which was folded and turned down at the corner. The open one was for Maruya's. She also gave me a third one for Moss, the furniture dealer, and a book to go to Curnow's. She also gave me one for Schedel's. I read the open bit in the room, and asked if I had to sign my name at the place, Maruya's. It was in Mrs. Carew's handwriting. It was an open bit of paper, with Mr. Maruya written on the inside, I cannot recollect the exact words, but I believe they were "Will Mr. Maruya give bearer one bottle Fowler's Solution of arsenic, and one bottle of sugar of lead." Mrs. Carew gave me five dollars to pay for it, and said she wanted change.

I took the stores on my way down town, and went to Maruya's last. At Maruya's I purchased two little bottles, labelled; one had sugar of lead on it and one had solution of arsenic. In the shop the man gave them to me openly; he did not put them in any paper at all. I put them in my little bag. I paid for them. The two children were with me, in a 'ricksha * * * I had never been in his shop before, I think. I had never been alone in the shop before. I might have been there with Mrs. Carew when I first arrived. I did not go to the shop on the 19th October. On the 21st, when I put the bottles in the bag, I went homeward. As I went down the street, I saw Schedel's assistant standing on the steps, and he beckoned me, and asked me to take a little bottle sealed up in paper. I took it, and put it in the bag with the other bottles, and took it up to the house. I should think it was perhaps half-past eleven or a quarter to twelve when I got back to the house. Mrs. Carew was on the steps to meet us. The children and I and Mrs. Carew went into the dining-room together. I gave the three bottles to Mrs. Carew. I know she put two of the bottles on the writing-table, by the window. Those two were Maruya's. I don't know what she did with the third; I did not notice.

After Mr. Carew's death I went to Maruya's store again on Friday night, the 23rd, with Miss Christoffel. I went to try and get that piece of paper that I had taken to Maruya's. I could not get it; but when the man was looking for it, he found another one, and showed it to us. He let us have it, and my friend, Miss Christoffel, took it away with her. I recognise the paper now shown to me as this piece of paper (marked "Carew Inquest, Exhibit A.")

When I got back to the house on the 21st, I said nothing to Mrs. Carew about what Maruya's man had said to me. I made a statement to Mr. Porch, after tiffin. I was anxious to get back the paper which I left at Maruya's on the 21st, because, Mrs. Carew, on the night of Mr. Carew's death, denied having written the piece of paper which I took, saying that Mr. Carew had written it. She said, further, that Mr. Carew had taken his own life and that she had a letter in her possession saying that he intended to do so; or had done it; but he could not have said that because he was dead. The occasion on which I was asked to assist to nurse was on the night of Wednesday, the 21st. I was having my dinner. I was asked to see if Mr. Carew would take a glass of brandy and soda with cocaine in it. Mrs. Carew told me there was cocaine in it. I took the glass to Mr. Carew. He did not drink it. I took the glass downstairs again. I told Mrs. Carew that he said "he would not have it: that he had taken a whole chemist's shop that day." Mrs. Carew stirred it up, and took it to him.

My duty to the children took me out of the house a good deal. I remember the 19th October last; I went out on that morning, with one child. We went as far as the Post Office, to meet Mrs. Carew, who had taken her little boy, Ben, down town. I remember Ben running across the road to meet me. It was on the road, this side of the Post Office. Marjory was not feeling very well, so we

changed, Mrs. Carew took Marjory back, saying she was going to take a "kuruma," and I took the little boy and walked back. Neither of us had a jinrikisha then. Mrs. Carew said she had left her jinrikisha at the chemist's to follow her, but she did not know where he (jinrikisha man) had gone. I went, with Ben, to the Post Office, to ask if the mail had come in. I walked back again, then, to the house at once, because they said the mail was in and was being delivered. I was expecting letters by the mail. I had two.

On the afternoon of the 16th, I believe we went to the Bluff Gardens.

On the morning of the 28th, I was out with the children. I believe we all went to the Convent, to meet my friend, Fraulein Christoffel, at ten o'clock. I met her. We are great friends.

I think Mrs. Carew was at home that morning, I am not at all sure. I don't know. I went back to the house to lunch. In the afternoon Mrs. Carew sent me down town again, to cash a cheque for her. Ben rode down on Mr. Fearon's bicycle. Mr. Fearon was working the bicycle and Ben was sitting in front of him; I cashed the cheque; Ben was waiting in the bank. It was the Hongkong and Shanghai Bank. I went straight back home after cashing the cheque. Mrs. Carew was sitting by the nursery window, as Marjory and I came through the garden. She told me, through the window, that Ben had run upstairs and gone into his father's room. I left Marjory in the garden. The *amah* took the children out again, in the afternoon.

I left Mrs. Carew's service on Saturday, the 24th. Before leaving Mrs. Carew's service, I had, for reasons of my own, looked at the waste-paper basket, which was kept in the dining-room. I expected to find letters of my own there, letters which I had not received from home. I never found any letters of my own there. I found other letters, fragments of letters. I gave these fragments to my friend, Fraulein Christoffel. She stitched them together for me. The first time I ever went to the basket must have been the 23rd or 24th of September. I did not find all the letters at the same time. I found fragments of one letter on the 23rd or 24th of September, and the rest after my return from Miyanoshiba. On the first Monday in October we came back from Miyanoshiba.

I gave all the fragments which I found to Miss Christoffel.

I was present when Miss Christoffel handed Mr. Litchfield some letters. It was on a Sunday, this month. It was not last Sunday, it was the Sunday before.

Cross-examined: ("Carew Inquest, Exhibit R1," being shown to the witness). I have never seen these fragments before.

("Carew Inquest, Exhibit R2," being shown to the witness). I have never seen this handwriting before.

Re-examined: I did not read all the fragments through which I extracted from the waste-paper basket. (R1 being shown again.) I don't recognise that handwriting. I never remember having seen any handwriting like that before.

Cross-examined: I do not know Mr. Carew's handwriting. I have never seen any of his handwriting. I think the fragments pasted on that piece of paper (R1) were not amongst those I handed to Miss Christoffel. I feel sure they were not.

(Signed) MARY ESTHER JACOB.

Till 2 p.m.

(Signed)

J. T.

His Lordship—Rather than waste time, might not Mr. Troup be asked about the telegram?

Mr. Wilkinson—Yes, my Lord. What have you done, Mr. Troup, about that?

Witness—Nothing has been done further than what I stated in Court yesterday.

His Lordship—The witness, Dickinson, when asked yesterday if he wired back from Kobe to the accused, did not say what the exact contents of his telegram were. He admitted having wired back to her: have you, Mr. Lowder, possession of that telegram?

Mr. Lowder—No, my Lord.

His Lordship—I only asked, because if it was in existence it would be the best evidence we could have.

Mr. Lowder—Quite so, my Lord. His Lordship—I have carefully considered Mr. Wilkinson's application yesterday that I should review my ruling as to the letter received by Sir E. Satow and permit it, if otherwise relevant, to be given in evidence. If the explanation made yes-

terday with reference to it had been given when it was first produced, I should have admitted it subject to its relevancy. That being so, is it now too late, the application having been made before the case for the prosecution has closed? I have come to the conclusion that it is not too late. It would not be too late to allow a witness to correct his evidence at any time during the case, and equally it cannot be too late now to correct a ruling on a point of practice, the necessity for such correction having become apparent from the statement made by Counsel for the prosecution in Court yesterday.

Mr. Wilkinson—Under those circumstances, I will put in the letter. Perhaps I may put in the envelope first, and to prove it I will ask Mr. Wilman to come into Court to interpret the date marks on the envelope. I apply, at once, that Mr. Mason be recalled. He is at present in Tokyo, but I will telegraph for him, and if he cannot be here by 2 o'clock perhaps he can by 2.30.

His Lordship—Very well: it is now 11 o'clock. Mr. Wilkinson—That will close the case for the prosecution. I am anxious, as I am sure my learned friend wishes, that all the evidence should be closed up before he opens, and it is for that reason I ask that Mr. Mason may see this letter.

His Lordship—Quite so.

Mr. Wilkinson—Shall I read the letter, my Lord? It runs as follows:—

Sir ERNEST SATOW.

Dear Sir,

I wish to call your attention to the very scandalous way—

His Lordship—I think the Chief Clerk should read it. It is best to have it in a neutral tone. Mr. Wilkinson—I had hoped that I was doing so.

His Lordship—I have no doubt that you were, still it is better that he should read it.

The Clerk of the Court then read the following letter:—

Sir ERNEST SATOW.

Dear Sir,

I wish to call your attention to the very scandalous way in which our Consul, Mr. Hall, has conducted the inquest of the late Mr. Carew. Had he any right to sum up in face of evidence produced as he has done.

Faithfully yours,

6th. Nov.

A. L. PRICE.

Mr. Wilman then stepped into the witness-box. Mr. Wilkinson—Will you look at the marks above the stamp on this envelope?

His Lordship—That is the envelope, I presume, that Mr. Lowder marked?

Mr. Lowder—Yes, I marked it.

His Lordship—It is same envelope that the Minister produced?

Mr. Lordship—Yes, that is the envelope.

Mr. Wilkinson (to Mr. Wilman)—Can you read the post-marks on the stamp?—Yes, I can.

Will you tell me what they are?—The two on the top of the stamp are, "Musashi, Yokohama," the other "29th year," and then the character for the month is not decipherable really.

Mr. Wilkinson—Let me see?

Witness—It is scarcely decipherable, but from the context I can see that it is probably the 11th month—*fu-ichi*.

Mr. Wilkinson—It does not matter much: can you see the day?

His Lordship—Wait a moment, let Mr. Lowder see it. (To the witness)—Is the day clear?

Witness—Yes, the "7th day," and then at the bottom is *yubin*—mail or post.

Mr. Wilkinson—Is it not the character for fourth—fourth delivery?—It is the character for *yubin*.

You do not think it is *nei-ben* (fourth delivery)?

—No, it is the short character for *yubin*.

Now what else is there?—That is all on the stamp.

Well, the mark on the letter?—"Musashi, Tokyo, 29th"—and then the character for year by itself can not be read; it is blurred there. It should read the "11th month, 7th day, *yubin*."

I would suggest that the deliveries are also there—*nei-ben*, fourth delivery, *chi-ben*, eighth delivery.

His Lordship—Is it necessary?

Mr. Wilkinson—No, we only want where it came from and where it was delivered.

His Lordship—I do not know what Musashi is?

Witness—The name of the Province.

His Lordship—The Ken—Prefecture?

Witness—No, the province where the two towns are situated.

The envelope was put in and marked 51, the letter was marked 50.

His Lordship—Are you going to have this letter photographed?

Mr. Wilkinson—Yes, my Lord.

His Lordship—I have seen the other enlarge-

ments and it seems to me that they are too large. I took up one last evening, and it was not at all satisfactory.

Mr. Wilkinson—Quite so, I think so too, my Lord.

His Lordship—I would suggest a photograph four times enlarged.

Mr. Wilkinson—I think these large ones were really intended to hang up in Court, that is the reason that they are so large. I am sorry that there will be a little delay before my next witness comes.

His Lordship—In the meantime, about the two dates 17 and 19, the mistake or error regarding the receipt of the pasted letter.

Mr. Wilkinson—I have looked it up in the newspapers, and I do not think it very material. The newspapers all have it 19th. My suggestion is that 17th is an error in the printed notes for 19th.

Mr. Lowder—I do not think it material. I am quite willing to take it either 17th or 19th.

His Lordship—It was an error in the print and I wished it to be cleared up. Would it be possible to read the evidence at the inquest now?

Mr. Wilkinson—Yes, my Lord.

His Lordship—It forms no part of your case.

Mr. Wilkinson—Quite so. I am prepared to make any admission that may be necessary.

His Lordship—Of course the Coroner is not here now, but his Clerk is: call Mr. Lay. Would you like this evidence printed, Mr. Lowder?

Mr. Lowder—Yes, my Lord.

Mr. Wilkinson—My learned friend would like my admission taken now, my Lord. It is: the Counsel for the Crown offers no objection to the report of the evidence of Miss Mary Esther Jacob as given at the inquest: and I agree that except for the purpose of putting it in, it may be treated as offered on behalf of the Crown—this is what is asked for by Mr. Lowder.

His Lordship—One moment.

Mr. Wilkinson—I repeat, my Lord, that except for the purpose of offering it, it is put in at the present moment—at this time—to be treated as though it were evidence taken on behalf of the Crown. To make the position very clear, Mr. Lowder does not want the witness to be taken as his witness.

Mr. Arthur Hyde Lay then brought in the inquest-book.

Mr. Wilkinson—Did you act as Clerk to the Coroner at the inquest held on the death of Mr. W. R. H. Carew, opened on the 24th October last?—I did.

Did Mary Esther Jacob give evidence on that date?—Yes.

Was the evidence so given by her read over to her, and did she sign it?—Yes, it was; and she did.

Will you kindly read the evidence. [Witness then read the statement.]

Saturday, October 24, 1896.

MARY ESTHER JACOB, sworn:—I had nothing to do with the nursing of Mr. Carew except once when I was asked to take him a glass said to contain brandy and soda. On Wednesday night I was having my dinner, Mrs. Carew called me and asked me to see if Mr. Carew would take this in a glass from me, containing brandy and soda, and she said cocaine, which Dr. Wheeler had ordered. He refused to take it from me. That's all I ever had to do with his nursing. I have never seen deceased take medicine by himself, without someone giving it to him. I have never seen Mrs. Carew give him medicines. I have seen her give him beef tea and things to take. I have purchased medicine for Mrs. Carew. On Wednesday the 21st I did so at Maruya's, Bentendori. It was syrup of lead and Foster's Solution of arsenic. I only purchased it on that one occasion. I have seen no use made of the medicine I purchased. I don't know where it was kept. The poisons I purchased were in two separate bottles: the quantity was not specified. I merely went into the room perhaps once a day, to show the children to the father. I know nothing about how the nursing was carried on. I didn't even know that there was a small table by the bedside. On the 21st I purchased the medicines at Maruya's by Mrs. Carew's orders. Maruya did not ask for a doctor's prescription before giving it. The name was written on a piece of paper. Mrs. Carew had written it. The man who sold me the medicine made a remark: he asked why we bought "so plenty deadly poison." I replied "I don't know." I didn't know any had been bought before. Maruya told me some had been bought the day before and some the day before that again, and that I must warn Mrs. Carew to be careful how she used it. No further conversation.

I did not report to Mrs. Carew the conversation at all. I told Mr. Porch after tiffin. He said how impudent the man was. Only the children were present with us in the dining-room. On the day before, Maruya told me a boy, and the day before that Mrs. Carew, had bought the medicine. I don't know the name of the boy. This conversation with Maruya aroused my suspicions. I had been told that Mr. Carew had been sick and in great pain and drowsy and this made me very uncomfortable, as I had been sent to buy poison. To my knowledge no one in the house assisted Mrs. Carew much. Ah Kwong and Rachel and Asa helped to carry things up. I was out of the house so much with the children, I don't know what went on during the day. While I was in the house Mr. Porch used to go in for a few minutes, ask him how he was and come out again. When I offered the deceased a brandy and soda, he said he wanted no more medicine, simply brandy and soda. He said he had already taken a whole chemist's shop. He did not know I had been purchasing poison as far as I am aware. The order for medicine bore no signature; was a little slip of paper handed to me by Mrs. Carew. The chemist asked me if I was Mrs. Carew. I had never been there before. I had a little boy of Mrs. Carew's and the little girl with me. I left the piece of paper with Maruya. The slip of paper was in Mrs. Carew's handwriting. I am positive of it.

(Signed) MARY ESTHER JACOB.
(Signed) J. C. HALL, Coroner.

Mr. Lowder—Was not this evidence, though now read in narrative form, elicited by questions put to her by the Coroner and the jury?—I think so.

Do you recollect whether the witness Jacob, when called upon by the Coroner to state what she knew, asked that questions be put to her instead?—I am not sure.

That is her signature and the Coroner's, I suppose, in that book.—Yes.

Mr. R. C. D. Ginnis, of the H. & S. Bank, recalled.

Mr. Wilkinson—Do you know any one of the name of Price residing in Yokohama?—I do not know of any one of the name of Price residing in Yokohama.

During the past year?

His Lordship—How long has witness been resident here?

Mr. Wilkinson—When did you come here?—I have been here since the 29th March last.

Since March last has there been a Mr. Price in Yokohama, to your knowledge?—Yes, there were two.

Can you state who they were?—One was Mr. Alexander Price, of Hankow, the other was the Hon. J. F. Price, of Bombay—I think of Bombay; at any rate of India.

Have you specimens of their signatures?—Yes. I have cheques of Mr. Alexander Price and a specimen of Mr. J. F. Price.

Can you refer to them?—I have them in my pocket.

Would you look at them and compare them with the signature on this letter, No. 50, and say whether this signature is that of either of those gentlemen?—No, it is not, my Lord.

Do you know of any other persons bearing the name of Price, who were here in Yokohama last summer or up till November?—No.

When did Mr. Alexander Price leave here, to the best of your recollection?—He left Yokohama before the 24th Sept., but remained a while in Kobe.

Till when?—That I do not know.

But he did not return here?—Not to my knowledge.

And the other Mr. Price, when did he leave?—I cannot say. His signature was sent up to us from our Kobe office on the 29th October, but I should have to refer to my books for more complete details.

His Lordship—But his signature was J. F. Price?

Witness—That is so.

Mr. Lowder had no questions to ask.

Mr. Wilkinson—Subject to calling Mr. Mason this afternoon, that closes any case. I think for safety that we had better adjourn till 3.30, or earlier.

His Lordship—He may arrive before that time, and then he would be kept waiting.

Eventually, after a little discussion, it was agreed to adjourn till 2 o'clock, the judge, jury, and Counsel to be apprised of the exact hour at which witness could appear after that time.

His Lordship—Will you be long, Mr. Wilkin-

son. Mr. Wilkinson—About ten minutes, my Lord.

His Lordship—And you, Mr. Lowder?

Mr. Lowder—A very little while.

The Clerk of the Court—The Court stands adjourned till 2 o'clock.

The Court resumed at 4.05 o'clock, and there was then a considerable attendance of the public.

Mr. Mason at once stepped into the box.

Mr. Wilkinson—I put into your hands exhibits 50 and 51 (the letter and envelope read at the morning sitting)—Will you look at those, Mr. Mason, and then tell us whether you are able to give an opinion as to whose handwriting they are in?—I am.

Whose is the handwriting, in your opinion?—I should say Mrs. Carew's without scarcely any attempt at disguise.

Would you state some of the peculiarities of Mrs. Carew's handwriting?

Mr. Lowder (interposing)—I may say that I shall not contend that the letter is not in the handwriting of the accused: it may save the time of the Court if I state so now.

His Lordship—Mr. Lowder, you do not dispute that this letter is in the handwriting of the accused?

Mr. Lowder—To save the time of the Court.

Mr. Wilkinson (to witness)—Will you look at the Diary on the date, 16th of July, you will there see the name Mr. Price, do you not?—Yes.

And you see Price in the letter—are they in any way similar?—I consider them similar.

Mr. Wilkinson (to his Lordship)—It is on page 114 of the diary.

His Lordship—And they are in the same handwriting?

Mr. Wilkinson—Yes. I wanted merely to call attention to the fact that the word Price did occur there.

Mr. Lowder—I have no question to ask.

Mr. Mason was thanked and withdrew.

Mr. Wilkinson—I have now a very formal piece of evidence to lead. I will call Mr. Kircher, and ask him to say whether he has made search for Annie Luke and then say whether he has found her.

George Kircher, Usher of the Court, was then called and sworn.

Mr. Wilkinson—Do you remember receiving instructions on the 3rd November from Mr. Hall, the Acting Assistant Judge of this Court, to make all proper and diligent enquiry for a person of the name of Annie Luke?—I do.

Did you make those enquiries?—I did.

Did you discover any trace of her?—I did not. Or hear of her being in Yokohama?—Not at all. Or of any person having seen her?—No.

And up to the present time you have not heard or seen anything of her?—No.

Mr. Lowder—I have nothing to ask him.

Mr. Wilkinson—This closes the case for the Crown, my Lord.

Mr. Lowder—I propose to call evidence, my Lord, but for the moment I must trespass upon the forbearance of the Jury and your Lordship in asking for an adjournment over to-morrow. Under ordinary circumstances I should not feel justified in doing so, but I have not yet had the opportunity for, and I feel the absolute need of, making such notes as I consider requisite to present the case for the defence properly before the Jury. I think perhaps it will be found, if this privilege is granted to me, that I may perhaps save time which might otherwise be occupied in a lengthy speech, which, with this privilege, may be made more concise.

His Lordship (to the Jury)—Well, gentlemen, it rests with you, practically. I quite appreciate the advantage Mr. Lowder will have by having time to prepare his case. Would you have any objection to giving him that time?

The Jury acquiesced.

His Lordship—Then, Mr. Lowder, we will adjourn till Saturday.

Mr. Lowder—I am much obliged to your Lordship and to the Jury.

His Lordship—Then the Court will be adjourned until 10 o'clock on Saturday morning. (To Mr. Wilkinson)—I did not ask if you agreed, I took it for granted.

Mr. Wilkinson—Certainly, my Lord.

The Clerk of the Court—The Court stands adjourned until 10 o'clock on Saturday morning.

SATURDAY, January 23rd.

The Court resumed this morning at a few minutes past ten o'clock, when only a few of the general public were present, but later the room filled to overflowing. The accused was looking very pale and anxious and at times leant her head wearily against the dock. Mr. Troup, the Assistant Judge, had a seat on the Bench with his Lordship. Mr. G. H. Scidmore sat next to Mr. H. C. Litchfield, the Crown Prosecutor for Japan; Mr. H. S. Wilkinson, the Crown Advocate, sitting

next; and Mr. Lowder last at the bar. Behind them sat Dr. Tripler (for the Crown). The barristers' table was piled high with enlarged photographs of all the letters put in during the course of the trial, as well as with printed slips of most of the evidence. The Jury were particularly alert during Mr. Lowder's address, paying strict attention to every word that fell. Mr. Lowder began at 10.15 a.m. and continued till 12 o'clock, when the evidence of Mr. Porch was interposed to prove the plan of the house at No. 169, so that the jury could inspect the premises in the afternoon.

His Lordship (to Counsel)—Have you been furnished with printed copies of Miss Jacob's evidence?

Both Counsel—Yes, my Lord.

Mr. Wilkinson—With regard to these prints, my Lord, I have conferred with my learned friend, Mr. Lowder, and he agrees with me that it would be a pity to read them before the jury again, but if some person will go into the box and say that this is a correct copy according to the book—

His Lordship—So far as the evidence before the magistrate is concerned, I have detected an error in line 113.

Mr. Wilkinson—I do not know that it has been read over. I do not think there has been an opportunity to do so.

His Lordship—Mr. Troup informs me that he and Mr. Wileman have read it over.

Mr. Troup—Yes. I read the minute-book and the print was read by Mr. Wileman.

Mr. Wilkinson—Then that has been just now?

Mr. Troup—No, it was yesterday.

Mr. Wilkinson—I had only seen it this morning and having made enquiries I was told otherwise.

His Lordship—The error on page 113 is an obvious error. It is for Counsel to say which course they would prefer (respecting the print of Miss Jacob's evidence).

Mr. Lowder—If anyone will say that it has been read over I shall be satisfied.

His Lordship—Mr. Troup says that Mr. Wileman read the print while he looked at his notes; and the Inquest was read over in the same way by Mr. Lay.

Mr. Wilkinson—One or other ought to say so.

Mr. Lowder—I am quite satisfied myself.

Mr. Wilkinson—So am I, my Lord, but I think it right that nothing should go to the Jury that is not sworn to.

Mr. Wileman then entered the witness-box.

Mr. Wilkinson—Have you read over this print, Mr. Wileman?

Witness—I have.

Mr. Wilkinson—The whole?

Witness—Yes.

Mr. Wilkinson—That is, the Inquest and the Magisterial enquiry?

Witness—Yes, I have read them both.

Mr. Wilkinson—One with Mr. Troup and the other with Mr. Lay. Have you found that this print is correct?

Witness—There is an error, I found it there.

Mr. Wilkinson—That ought to be the 20th (not the 28th), but with the exception of that all the rest is correct.

His Lordship—Should not the jury have a copy?

Mr. Lowder—Yes, my Lord.

His Lordship (to the Jury)—Gentlemen; you might make that correction while it is in your minds. You will find it on the last page but one. It reads as follows:—"In the morning of the 28th," it should be in the morning of the 20th.

Mr. Lowder—Gentlemen of the Jury:—Just three months have elapsed since the opening of the inquest into the death of Mr. Carew, the husband of the prisoner, with whose murder she is now charged. Perhaps the long delay is not altogether to be regretted. Men's minds had been greatly prejudiced by what I may call the almost sensational evidence that was given at the inquest by an eminent professor of chemistry; by the summing up of the Coroner, who based his remarks largely on that evidence; and also by violent articles which appeared in two local papers, condemnatory of the verdict of the Coroner's jury, one of which went so far as to insinuate that the verdict they returned was in violation of their oaths. I am not, gentlemen, one of those who complain of fair and reasonable newspaper criticism. Such criticism, as Lord Rosebery said, in a recent memorable address, when it is fair and moderate and reasonable, acts as a stimulant. But when it is unfair, immoderate, and unreasonable, it is apt to provoke a reaction in favour of the person whom it purports to destroy. Be that as it may, I am rejoiced to think that there has been time for further consideration; that the benign influences of Christmas have intervened; and that you are in a better position now than perhaps you would have been then to sit in judgment rather than in condemnation. Gentlemen, your enforced detention has, I know, been a great trial to you, and I am sorry if I have been the cause of prolonging it for a single

hour; but I may remind you that it is as nothing when contrasted with the mental and physical strain to which the prisoner has been subjected during the long period of her incarceration. What she has gone through few will ever know: fewer still, I hope, will ever experience. Nothing but the consciousness of innocence could possibly have enabled her to bear it. Nevertheless, gentlemen, I am not here for the purpose of asking for your commiseration or of appealing to your sympathies on her behalf; I am here to ask for Justice and that alone:—Justice, which you may remember Carlyle defines to be the only right of man. It may be as well, however, that I should bring to your minds what I mean by Justice:—Justice that is as it is administered in the criminal Courts of Great Britain and the United States, but in no other courts in all the world. It may be summed up in three famous rules which are as follows:—The first is this: that the law presumes the innocence of a person charged with crime until the contrary is proved. The second is that the proof must be affirmative and of so cogent a nature as to leave in the minds of the Jury no reasonable doubt of the guilt of the prisoner. The third is that the burden of this proof is on the prosecution, which if it is to succeed must succeed on the strength of its own case and not by the weakness of the defence. In illustration of those rules I will take the liberty to cite a paragraph from a work entitled "Ten years of a Police Court Judge," which was published in New York in 1884. The learned author says, as to the presumption of innocence: "It is greatly to be regretted that the so-called presumption of innocence in favour of the prisoner at the bar is a pretence, a delusion, an empty sound. It ought not to be so, but it is. Rufus Choate said that this presumption is not a mere phrase without meaning; that 'it is in the nature of evidence of the defendant; that 'it is irresistible as the heavens tilt over me;' that 'it hovers over the prisoner as a guardian angel throughout the trial; that 'it goes with every part and parcel of the evidence; that 'it is equal to one witness.' That is just what it should be, but what it is not. Practically it is of no avail whatever in the trial. The jury tread it under foot; the judge, the same moment he admits it in theory, forgets it in argument. It is a dead letter. Nay, so far from being merely inoperative, it is not hazardous to say that in the trial the presumption is reversed. By court and jury, by prosecution, police, and by the public the accused is presumed guilty. Let every one as he looks upon a prisoner in the dock, carefully inquire of himself and answer if this be not so. The reason is plain. The whole course of criminal procedure, from inception to close, is designed to shut out presumption of innocence and invite presumption of guilt. The secrecy of complaint-making, the mysterious inquisition of the grand jury room, the publicity of the arrest, the commitment to the lock-up, the delay of the trial, the enforced silence of the defence till the prosecution has done its worst, are all so many steps and strokes to blacken the accused before he is permitted to open his mouth with a syllable of evidence to break the force of the damaging array of circumstances. To suppose that the presumption of innocence, which unbiased nature prompts, is not before this time choked and strangled to death is an absurdity too good to dispute. The treatment itself of the prisoner negatives the presumption. In presence of such things the 'presumption' is a contradiction in terms. How can a person be presumed innocent who is treated as if he were presumably guilty? The fact that he is restrained of his liberty presumes guilt. There is no other construction to be placed on the restraint. Human nature is not capable of any other. Yet human nature ought to presume innocence until the contrary is proved.

THE REASONABLE DOUBT.

It would be a happy thing for the triers of criminal cases if somebody should succeed in defining a 'reasonable doubt.' A great felicity it would be if only someone should portray a reasonable doubt beyond a reasonable doubt. Nothing is more glibly spoken of than this doubt, yet there is nothing more doubtful. Lawyers roll it as a morsel under their tongues and roll it off at juries and justices as if it were a thing to be apprehended with as much certainty as a stark naked fact. But what a reasonable doubt is, it is doubtful whether they stop to think, or stopping, form any but a very doubtful opinion, should it be a matter of opinion at all? Should it not be a matter of conviction? Should not every one who is to enquire whether he has it, have as absolute an idea of what reasonable doubt is as he has of any other independent fact in the case? If the case is to turn on the matter of reasonable doubt, how can it turn right, unless the turning point be ascertained and fixed beyond all question? The

learning of the books on this subject is vast. It begins with the Bible. Its equivalent, law-givers, since the time of Moses, find in the Mosaic provision which forbade the death penalty 'till the crime be told thee, and thou hast heard of it, and inquired diligently, and, behold it to be true, and the thing certain.' (Deut. XVIII, 4.) This is said to be the amplification of Moses as a definer of the doubt. Modern authorities do not seem to have done much better. But it is not because they have not tried. One author says that the 'persuasion of guilt ought to amount to such a moral certainty as convinces the mind of reasonable men beyond all reasonable doubt.' But what is reasonable doubt? Another says 'a reasonable doubt may be described by saying that all reasonable hesitation in the mind of the triers respecting the truth of the hypothesis attempted to be sustained, must be removed by the proof.' Another describes it as 'that degree of certainty upon which the jurors would act in their own grave and important concerns. This seems to approach nearer a solution, and resembles a definition once heard in a charge to a jury. The judge who gave it is admittedly one of the ablest and clearest-headed jurists who ever sat upon the bench. He is the man whom Rufus Choate called 'one of the ablest minds of the State.' As near as memory serves, his words were as follow:—"Just what a reasonable doubt is, gentlemen, it is not quite easy to say; but you are practical men, and I instruct you, that you should be satisfied of the defendant's guilt to that degree of certainty which you would require for your guidance in acting decisively in any grave matter of your own within such time as is ordinarily given to a jury for deliberation in the case." Allowing this to be right instruction, is it not probable that many, very many, are convicted without proof beyond a reasonable doubt?

THE BURDEN OF PROOF.

This is another expression that should have a more fixed meaning. Like all other expressions used familiarly in discourse, it loses force and weight by its commonness. It plays a windy, wordy part in all argumentation on questions of fact. To the mind of the average hearer it assumes the likeness of a harmless sort of puff-ball, tossed hither and thither by cunning lawyers to mystify the case and the hearer and, for about the same reason, the trier comes to treat it as not of much account. How often does the juror give it serious thought that the plaintiff is weighted with a burden the defendant is not,—that, having asserted a thing, he should show it to be fact by a preponderance of the evidence? Many reason that assertion must be true, otherwise it would not have been asserted. Some regard *ipse dixit* as demonstration. Many look upon denial as despair. To them, he who denies seems to be in a fix. They never get the better of the first impression of the first word. But the old Roman rule—the proof devolves on him who declares, not on him who denies—is the American rule and the English rule, and there is no rule that ought to be more rigidly enforced in Court or out of Court. A righteous rendering of it would be, 'let him who cannot make good what he would assert, hold his peace or hold forth at his peril.' Then there would be less holding forth. Too much there is of heedless wanton allegation—accusation of a legal sort and all sorts. Rights are rated too low. Reputation is reckoned too cheap. It is painful to relate that the law holds reputation in very cheap estimation. Criminal procedure everywhere is a standing invitation to attack it at the public expense, and civil procedure affords no adequate remedy when it is attacked and damaged. A suit for libel or slander, however well grounded in law, generally leaves the aggrieved man worse off than when he invoked the law's aid. Before he can get a trial, the slander has done its worst, and before he can get a verdict he has spent thrice the money the law gives him to right the wrong that he has suffered." Let me supplement this by reminding you of the warning that was given by a very eminent English Judge in one of the most celebrated poisoning cases that has ever been reported in the annals of crime; he solemnly warned the Jury to bear in mind throughout all their deliberations that the greater the degree of guilt suspected, the greater must be the presumption of innocence. I am citing Sir James Stephen in the Maybrick case, as reported in the *Lancet* of 17th August, 1889. Here let me also take the liberty of saying to you, gentlemen, that if at this moment, or if at any moment during the course of the trial, you find yourselves prepared to give a negative answer to either of the two questions propounded to you by the Crown Advocate in his opening address, you are not obliged to listen to anything further; nay, it is your bounden duty at once to set the prisoner free. The questions are:—First—Did the deceased die of arsenical poisoning, exhibited

in the form of Fowler's Solution of Arsenic? Second—Was the arsenic administered by the prisoner, knowingly, and with intent to take her husband's life? Directly there is a doubt, a reasonable doubt in your minds, as to the answer that ought to be given to either of those questions, the prisoner is entitled to the benefit of that doubt, and to be acquitted and released. Now the learned Crown Advocate in his opening, which was a model of fairness, as one might have expected from one of his position—though I may be pardoned for saying that the prosecution has been somewhat minute and in parts even pretty—hoped to be able to demonstrate to you that the two things I have just mentioned, namely, that the deceased met his death by arsenical poisoning; that the arsenic that caused his death was administered by his wife. Not only, gentlemen, is there no absolute proof that he died of arsenical poisoning; but there is absolutely not one atom of proof that Mrs. Carew administered arsenic to her husband in any shape or form whatever, solid or in solution. On the first point I shall lay before you the evidence of three medical men, practical pathologists, which Dr. Divers admitted he was not, who will tell you that it is under the circumstances quite impossible to pronounce an opinion as to what he died of. On the second point, I shall ask you to consider the probabilities of the matter, as it is in evidence before you, and shall then invite you to come to the conclusion that the prosecution is based on the merest suspicion, for which there is little or no warrant. No man or woman of British birth is ever convicted of crime on suspicion, and never will be as long as justice is administered by British judges and juries, each fulfilling their respective functions, without fear and without favour. Let me then call your attention a little more closely to what the learned Counsel actually undertook to do; and it will then be apparent that they have failed to make out their case against the prisoner. They undertook to prove—First, that the deceased died of arsenical poisoning and that sugar of lead in no way contributed to the death; secondly, they undertook to adduce circumstantial evidence so strong as to lead to the inevitable inference (a) that he died of Fowler's Solution of Arsenic, administered to him by his wife, in frequent and increasing doses, over some period of time; (b) that there was in the stable a white powder which was probably arsenic and which was probably administered to the deceased by his wife, but was neither a cause of death, nor the cause of death. The questions which I consider you will eventually have to answer are these:—1. Did the deceased die of arsenical poisoning exhibited in the form of Fowler's Solution? 2. Did he die of arsenical poisoning exhibited in the form of white arsenic? 3. Did he die of arsenical poisoning exhibited in the form of Fowler's Solution, and white arsenic, and acetate of lead; or of any two of them, and, if so, of which two combined? If you find that he died of white arsenic, the prisoner is entitled to be acquitted; for no arsenic in that form has been traced to her possession. If you find that he died of lead poisoning, the prisoner is also entitled to be acquitted, because the deceased, in the absence of the prisoner who was in Church at the time, himself sent a messenger to Maruya's shop on the 18th of October to purchase a bottle of sugar of lead, and the inference is that he took it himself. If you find that he died of the combined effects of arsenic exhibited in the form of Fowler's Solution and of white arsenic, the one administered by the prisoner, the other not, she is also entitled to be acquitted, because it is impossible to say that that which was administered by her caused the death. If you find that he died of the combined effects of white arsenic and sugar of lead, the prisoner is entitled to be acquitted, because the white arsenic has not been traced to her, and the deceased himself sent for, and probably took, the sugar of lead. If you find that the deceased died of the combined effects of Fowler's Solution of Arsenic and sugar of lead, the prisoner is entitled to be acquitted, even though you may think the Fowler's Solution was administered by her, because it is impossible to say that his death was caused solely by the form of poison administered by her. If you find that the deceased died of the combined effects of arsenic administered by the prisoner in the form of Fowler's Solution—exhibited to the deceased in the form of white arsenic, by whom you do not know; and of sugar of lead taken by the deceased himself, in that case also the prisoner is entitled to be acquitted. In fact, it comes to this, that in order to bring in a verdict of guilty, you will have to find (a) that the deceased died of arsenical poisoning, whether in one form or two, to the exclusion of lead poisoning; (b) that whether the arsenic was exhibited to

the deceased in one or both forms, it was administered to him by the prisoner feloniously, wilfully, and of her malice aforethought with the intent to kill and murder her husband—for so runs the indictment. Whenever poisons, in more forms than one, are found *post-mortem* (and in this case according to Dr. Divers there were three), and a person is accused of poisoning the deceased, it is necessary for the prosecution to make out affirmatively beyond doubt that the death is attributable to either one or more of them; and that the accused person administered that one or more with intent to murder. Otherwise the prosecution fails. It was for this reason that, in his opening address, my learned friend surmised that the defence would ignore the possibility of lead poisoning, thus leaving only two forms of poison to be accounted for, and he lead evidence to show that the amount of white arsenic found was insufficient to cause death, for he could not trace it to that poison. He was driven to admit that it rested with the prosecution to show that the deceased met his death from only the effects of arsenic administered in one form only, and that form Fowler's Solution. Now I have something to say to you on the subject of each of these three kinds of poison and as to their connection with the case. I will speak first of all as to the white arsenic, secondly as to the sugar of lead, and thirdly as to Fowler's Solution. Mrs. Carew, pages 3 and 4 of the printed evidence, says, "At the time he ordered the arsenic through me, when he ordered the sugar of lead, I told him there was a small quantity in a bottle in the stable which had been used some time ago as a lotion for my pony, and I asked him what he wished to do with it. He told me that some years previously he had used it with great effect as an external application for congestion of the liver, and I never thought of either of the two bottles until yesterday." The Counsel for the prosecution asked you to decide whether in making that statement the prisoner meant that arsenic, *i.e.*, white arsenic, had been used as a lotion for the pony, or that sugar of lead had been so used. But surely there can be no ambiguity about what was meant? Her husband had asked her to procure for him two articles, viz., Fowler's Solution of Arsenic and sugar of lead. She knew he had been accustomed to take arsenic in the form of Fowler's Solution. Is it in the least likely, then, that she should suggest white arsenic to him as a substitute for Fowler's Solution? Or that she should have asked him what he wished to do with it, if she had referred to white arsenic? Besides, look at the construction of the sentence, and it is obvious that she could not possibly have been referring to white arsenic. Then again, she was referring to a particular conversation that had taken place between her husband and herself, which conversation she had related a moment before. It will be found at the top of page 2. "On Tuesday evening he gave me a slip of paper which I have, on which was written 'One bottle Fowler's Solution of Arsenic, one bottle sugar of lead.'" Read in the light of that conversation, we have this statement, "at the time he ordered the Fowler's Solution of arsenic through me when he ordered the sugar of lead, I told him there was a small quantity," of what? It can only, I submit, relate to sugar of lead. In order to support their theory, however, the Counsel for the prosecution went on to say "that though the *betto* applied sugar of lead in the stable, he was also given on two occasions by Mrs. Carew a small quantity of white powder which was sprinkled over the pony's food and which might have been white arsenic."

His Lordship—Will you please read it again? Mr. Lowder—"That though the *betto* applied sugar of lead in the stable, he was also given on two occasions by Mrs. Carew a small quantity of powder which was sprinkled over the pony's food, and which might have been white arsenic." Further, that the examination of the stomach of the deceased showed that at one time or other, probably some days before the death of the deceased, arsenic in a white state, as a powder, was given to him. The prosecution cannot trace that white arsenic; they know only of sugar of lead or white arsenic being in the stable and that on two occasions the *betto* received from Mrs. Carew a white powder to be sprinkled on the pony's food. Now, what is the evidence on this point? I am citing from the opening speech of the Counsel for the prosecution. What is the evidence on this point, gentlemen? You heard yesterday the evidence of the *betto*. He said that he remembered in the early part of March, or during the month of March last, he had been given by Mrs. Carew a white powder to be administered to the pony, and he said that a month or two afterwards he used the remainder to give to the pony. He also said he had sugar of lead in the stable, that a portion of it had been used as an external lotion for the pony's foot before the death of the deceased and that the remainder

had been used after the death of the deceased. But, gentlemen, you will hardly credit me when I tell you that all the time the Counsel for the prosecution were building up this flimsy theory in order to lead you to believe that the prisoner had, or might have, administered poison to her husband in the shape of white arsenic, they had at their command papers that they themselves had procured from Schedel and exhibited in this Court, showing that on the three occasions, two of which were referred to in my learned friend's opening speech—though which two he intended I do not know—powders had been prescribed by Schedel specially for a pony, *i.e.*, on the 15th January, 1889; 2nd March, 1891, and the 4th March, 1896. In the first of these orders Mrs. Carew specially asked for powders for a pony; in the second Schedel or some one in his shop marks the powders ordered as "for a pony;" in the third the nature of the medicine wanted is named by Mrs. Carew, viz., nitre and bicarbonate of soda. All this evidence was in the custody of the Court, having been placed there by the Counsel for the prosecution. While there it was accessible to them at all times, had they wished to see it. But they did not wish to see it, they did not want to upset their own theory by looking at it or asking any questions about it. They preferred to lead you to suppose that those powders might have been, or have contained, white arsenic. They were very particular in questioning Schedel as to the possible presence of arsenic in other articles furnished by him, but, as to these powders, they left them alone. Mrs. Carew, it will be remembered, had herself drawn the attention of the Coroner to her belief that arsenic would be found in a bottle of the medicine containing Dr. Baelz's prescription. As to that, the most minute enquiries were made. Whether by any possibility arsenic could have crept into that bottle, or whether when it was dropped, any foreign ingredient could have got into it, and Dr. Divers was brought from Tokyo to prove that he had found arsenic in the medicine; and you will be asked to believe that the prisoner put it there. Well, gentlemen, if she did, she must be one of the most foolish persons that ever lived. At page 9 of her evidence she says to me,—"and this, be it remembered, was the 4th November—"I handed you just before coming into Court the bottle, Exhibit L. It is said to be made from Dr. Baelz's prescription for my husband. The bottle is from Schedel's dispensary, and bears the number 13934." I wish you to hand that bottle in, because, having smelt it, I believe it to contain arsenic—"Now, if she had put the arsenic into that bottle, why should she call attention to the presence of arsenic in the bottle? She was at that time fully aware that she was suspected of poisoning her husband; more than ten days had elapsed since suspicion first attached to her. Her house had not been searched, and she had the fullest control over everything in that house. She might have buried the bottle in the earth, or thrown it into the sea; if she were afraid that its absence might be noticed she might have washed it out carefully, and left it to be found by others. This, I submit, she would have done if she had had a guilty conscience. Gentlemen, the prosecution did not discover that there was arsenic in that bottle. The prisoner herself called attention to her suspicion, and asked, through me, that its contents should be analysed. The same, or a similar, argument applies to all the bottles produced by her and also to the fender. The explanation of the stain on the fender was given by her, and was corroborated by Asa, the maid. She produced that fender and requested that the stain might be analysed. It was analysed, and it was found to consist of human urine. I have had an independent analysis made, with the result that Dr. Divers' statement is verified. Well, if she had not been certain that the stain was caused by the contents of the bottle which she supposed to contain arsenic, it is unlikely that she would have called attention to it. There are two explanations—the first is unlikely—namely that some one had been tampering with the bottle. The second is probably the true one. I had particularly cautioned Mrs. Carew to bring the fender into the Court with her in order to make sure that the stain should not be touched, as I was anxious that on being analysed it should corroborate her statement as to the breaking of the bottle. Well, instead of bringing it with her, it was sent down by a servant, and I saw with my own eyes, and with some heat called her attention to the fact, that the stain showed unmistakable signs of having been rubbed with something wet just before it was brought into Court. I will myself, if necessary, give evidence to that effect. It was probably wiped off with a cloth that had been used to clean the bedchambers and this would account for the presence of urine and the absence of arsenic. I had, however, not concluded what I

wished to say on the subject of white arsenic when I made this digression. As to the Fowler's Solution of arsenic, the prisoner himself had furnished all the information that she had or at all events that she remembered. The prosecution were then informed by Dr. Divers of his discovery of white arsenic in the gullet. What was their duty under these circumstances? Obviously it was then their duty—nay even long before—but certainly then, to have every utensil that had been used by the deceased, or employed in the preparation of his food, seized and analyzed. Has this been done? If it has, it is due to the prisoner that the facts should be stated. However, having found the presence of white arsenic in the stomach of the deceased, and having endeavoured to trace it to the prisoner and failed, it became necessary for the purpose of the prosecution to minimise the effects of its presence as much as possible. Accordingly, Dr. Divers was called, and he gave it as his opinion that as he found particles of solid white arsenic in the intestinal canal—the stomach and intestines—it was not given in that form to any large extent. He added:—I should say it was exhibited in solution for the most part, because I found so very little white arsenic in the stomach and intestines. That, he says, is opinion, not knowledge. He goes on to give it as his farther opinion from the history of the case, that it is clearly one in which arsenic, meaning thereby Fowler's Solution of arsenic, was given repeatedly and in increasing doses, and also that assuredly it was not taken by the patient himself. Those gentlemen, you will probably agree with me, are very marvellous opinions for any man, however expert, to be able to form. I shall call before you three practising men, who will tell you that the absence of solid white arsenic in the intestinal canal is not an indication that arsenic had been taken in solution; that white arsenic melts by being dissolved and absorbed; that it is not the quantity found in the stomach, but the quantity absorbed that causes death, and that if it is shown, as it has been by Dr. Divers, that white arsenic had been exhibited to deceased somewhere between the 19th and 22nd Oct., there is no reason, even supposing the dose to have been a large one, why the whole or nearly the whole of it may not have been dissolved, absorbed, and partially excreted before death. They will also testify that they do not consider that *post mortem* conditions, and the results of chemical analysis, taken by themselves, justify the confident opinion expressed by Dr. Divers that arsenic taken in solution must have been taken by the deceased; and finally they will tell you that death from solution of arsenic is excessively rare. As to the symptoms as detailed by Dr. Wheeler, they will tell you that including the intermission on the Wednesday, they are compatible with the suggestion that death may have occurred from a single large dose. Moreover, Dr. Divers, in examination, had to admit this. He says, "I could not smell anything suggestive of Fowler's Solution in the stomach; particularly I had my nose for lavender, but I did not detect anything of the kind." It is true that he afterwards added that they don't give much for smells in the case of a man dying whose stomach remained in the body for a day, but if he did not give much for such smells why was he so keen to look for them? Finding no smells, I asked him whether I might take that as an "indication" that death, if caused by arsenic, was caused by white arsenic; and he said no, but in reply to a further question he was constrained to admit that I might take the absence of smell as showing a possibility, nay more, a likelihood, that if the death was caused by arsenic it was caused by white arsenic. To this the Counsel for the prosecution may reply that the Fowler's Solution furnished by Mariya was not flavoured by lavender. I don't know whether it was or not, but it certainly was very perceptibly scented with something or other, as you yourselves perceived when the bottle produced by Hayashi was opened. Dr. Divers could not smell anything suggestive of Fowler's Solution in the stomach, which was fresh and sweet. The result of all this is that the absence of smell may be taken as showing a likelihood that death was or may have been caused by white arsenic administered to the deceased, and Dr. Divers further admitted that even if there had been no evidence of arsenic in solution having been exhibited to the deceased, the eight little solid particles found in the gullet would be a sufficient indication of the possible, nay of the likely, cause of death. The death of the deceased then, it may confidently be asserted, may possibly have been caused by the administration of arsenic in solid form. I will now proceed to a consideration of another poison which was discovered by Dr. Divers in the body of the deceased, I mean of course acetate of lead: I pass on now to the third poisonous substance exhibited to the deceased. The indisputable facts in evidence regarding it are that on

Sunday, the 18th October, the deceased in the absence of his wife, sent for a bottle; and that his wife, at his request, sent for another bottle on the 21st. I shall call evidence to show that each of those bottles contained, when full, 335 grains of the poison; and that there remains in the bottle now in Court 97½ grains. The deceased may therefore possibly have taken 572½ grains of sugar of lead, a quantity far more than sufficient to cause death. Dr. Divers would have you believe that the poisonous dose of acetate of lead is 1½ to 2 ounces. Reece, a great authority, gives it as one ounce; but Naunyn, a greater, gives it as from ½ to ¾ of an ounce. In confutation of the evidence given by Dr. Divers, I shall call witnesses who will satisfy you that there is no greater certainty as to what amount of lead, found *post mortem*, represents a given amount taken than does the find in the case of arsenic; that a very small amount recovered may represent a large amount taken, just as with arsenic; and that in cases of acute lead poisoning, the lead, when absorbed, is found in much larger quantities in other organs than in the stomach, liver, and intestines. The proportions of lead to 100 grammes of tissue, recovered *post mortem* is—in the liver, 0.625 milligramme; in the kidneys, 4.0807; in the heart, 4.166; in the bones, 2.678; and in the bile 4.166. That being so, an estimate of the amount of lead taken, based on the examination of the liver and intestines alone, is of no real value. But that valueless estimate was nevertheless adduced by the prosecution, in order to induce you to bring in a verdict of guilty against the prisoner! Then as to the similarity of symptoms in cases of poisoning by arsenic and poisoning by lead—that is in cases of acute lead poisoning—I shall prove to you that there are or may be many cases, often, too, which are practically indistinguishable by the symptoms alone. From the evidence adduced by the prosecution, it has been shown that there is the same vomiting and nausea; the same constriction of the throat in swallowing; the burning pain; the severe pain in the abdominal region; the pain in moving the bowels, and in urinating: all these symptoms are similar in both cases, and cannot be distinguished from the other. Arsenic has no effect in colouring the patient's stool, but in lead poisoning we have a stool of a dark hue. I shall also prove by unimpeachable medical testimony that in view of the detection of both arsenic and lead, in the *post mortem*, it is impossible to say that death may not have been caused by both, or either of those poisons; the lead, perhaps, reinforcing what, without it, might have been merely injurious, but not fatal. Nay further, the medical practitioners whom I shall call will tell you that three kinds of poison having been exhibited, viz., white arsenic, Fowler's Solution, and sugar of lead, it is impossible, on any conceivable theory consistent with the symptoms, to give an opinion that death was due to Fowler's Solution alone, administered in successive and increasing doses. I will now allude briefly to the history of our knowledge of what is called the arsenic habit. In 1875, the 48th annual meeting of the German Society of Naturalists and Physicians, was held at Graz, and Dr. Knapp, practising in Styria, introduced two male arsenic eaters to the assembly. One of these men consumed in their presence above six grains of white arsenic—that is, enough to poison three men—without suffering the slightest inconvenience; and it was stated that he had been accustomed to this sort of thing for years. Dr. Knapp's other subject partook of rather more than four grains of the yellow arsenic (that is of orpiment), and he too had done the same thing with impunity for years. This man stated that having to enter a house in which fifteen persons had died of typhus fever he prepared himself for the attempt by taking a dose of less than half a grain of orpiment (i.e. yellow arsenic). This caused some disagreeable results; but the unpleasantness having worn off, he repeated the dose and entered the house without contracting the disease. He was so pleased with the success of his experiment that he continued to take arsenic ever afterwards. It became a habit with him. He, too, was in robust health. I think it was Mr. Heisch—a teacher of chemistry at the Middlesex Hospital—who first brought the subject of arsenic eating prominently before the profession. This was about the year 1822. Since then the fact has again and again been demonstrated by the researches of medical men and travellers so that now there are few persons who would venture to express any doubt upon the question. Indeed, it has long been acknowledged by the best authorities that arsenic eating is extensively practised in the south-west of Austria. When arsenic-eating was first brought before the notice of the world it was treated as a gross imposture would be, and the stories about it were classed with those of Welsh fasting-girls and universal reme-

dies. Indeed, the profession confidently asserted that these Styrian peasants partook of nothing more unwholesome than a piece of chalk, for it was deemed utterly impossible that a man could, unscathed, consume enough poison to affect a dozen people and certainly enough to kill at least three of them. Facts, however, are stranger than fiction, and a fact so strange as this could not lie unnoticed in the region of myths. In 1851, Tschudi brought the matter again prominently forward, and since that time it has been so clearly demonstrated, with all the requirements of scientific research, that it would be absurd to deny it to be a sober reality. But all the world takes poison in some form or other every day—ether, alcohol, opium, hashish, nicotine, essences, and so on, and without calling forth any particular expression of wonder. This is so common a habit that with some people this taking of poison has become a condition of existence. The arsenic eater may be—indeed, after many years' use of it, he very likely is—administering a dose of something absolutely necessary to his existence. It must not be supposed, however, that any one takes arsenic quite openly. On the contrary, it is generally begun in secret. A very small dose is taken at first. It is taken once a week, then twice a week, and so on until a daily dose becomes necessary. The dose also is increased in quantity till as much may be taken as in ordinary circumstances would actually kill two or three individuals. But it must not be supposed that the drug can be consumed altogether with impunity. When first taken—in very small doses—the person taking it is seized with nausea and burning pains in the mouth, throat, and stomach, and probably is as uncomfortable as the boy who has taken his first cigar. But one peculiarity of arsenic eating is this, that when a man has once begun to indulge in it, he must continue to indulge, for, if he ceases, the arsenic in his system poisons him, or, in other words, the last dose kills him.

His Lordship—What are you reading from, Mr. Lowder?

Mr. Lowder—From an article that appeared in *Chamber's Journal* for the 4th July, 1885.

His Lordship—I hand you down a legal work that touches the point.

Mr. Lowder (having read the paragraph indicated)—I am making this part of my argument to the jury, to show them the history of our knowledge of arsenic.

His Lordship—I am extremely loathe to interrupt your address.

Mr. Lowder—Well, if your Lordship thinks that it would be more correct, I will pass on.

His Lordship—It would seem so, from the authority I have handed down. Of course you could go on quoting an entire encyclopedia upon the subject in question.

Mr. Lowder—Quite so. I bow to your Lordship's ruling. I pass on. The case before you, however, is not one of arsenic eating, but of the consumption of arsenic in the form of Fowler's Solution, and you will probably be asked to draw a distinction between the ability of the system to tolerate the one and the other. Upon that point I shall adduce the evidence of three medical practitioners, Dr. Eldridge, Dr. Baelz, and Dr. Munro, that there is no ascertained reason why habituation to the use of arsenic in solution, such for instance as Fowler's preparation, may grow to a very great extent. Indeed, you may remember I put to Dr. Divers these questions: "Is there any conceivable reason why one not a Styrian should not be able to accustom himself to swallow the same dose?" His answer was in the negative. I then asked him whether he could deny this proposition: "Doses of arsenic, in substance or solution, have been used in a few days beside which 20 or 30 drops three times a day are insignificant?" And his reply was: "No, I cannot deny that, I do not see how any man can deny it." I have thus established, by the principal medical witness called for the prosecution, the ability of the human system to tolerate very large doses of arsenic in solution. Dr. Baelz will tell you of an instance that has occurred in his own practice where the doses were 20 or 30 drops, three times daily, but he will add that he was at one time under the supposition that the dose in that case was as much as 100 drops at a time; and he will tell you as a fact that doses of arsenic in substance or solution have been used in a few days beside which 20 or 30 drops at a time are quite insignificant, and I think his evidence will be corroborated by that of Drs. Eldridge and Munro. That being so, Mrs. Carew's statement that her husband was accustomed to take Fowler's Solution of arsenic without measuring it drop by drop, and in very large doses, is confirmed, and though there may be a doubt whether an ounce bottle could be consumed in four or five doses you must remember that that is mere conjecture on the part of Mrs. Carew. She conducted an ex-

periment at my request on this point. She took an ounce bottle, filled it, and poured out what she conceived was about the quantity she had seen her husband take, and the result was as she has stated. But it is quite possible she may have been mistaken in her conjecture as to the exact amount of the dose. That her husband had been accustomed to take arsenic from the year 1880 until his death will be proved to you by many witnesses. So that when Mrs. Carew was asked by him to procure arsenic there was absolutely no reason why she should be surprised. But the medical gentlemen whom I shall call will also tell you that if a man had at one time accustomed himself to the use of excessive doses of arsenic and after an interval should again begin where he left off this might be exceedingly dangerous. Indeed, he might kill himself, and this, gentlemen, is what possibly happened in the case of the deceased. His Lordship will tell you that it is no part of the duty of the Counsel for the defence to account for the death of the deceased. My only duty is to defend my client against the charge brought against her. Evidence, as I said just now, will be offered to show that the deceased had from time to time taken arsenic in very large doses. He was taking it as far back as the year 1880, when, on a voyage from Sydney to Plymouth, and as recently as the 8th of October last at his own table he told a lady who was sitting next to him—and who will be called—of his addiction to the drug. Mrs. Carew had herself administered it to him when in the Straits; and she had been accustomed to see him take it not continuously, but periodically, all their married life. The prosecution invite you to disbelieve Mrs. Carew's statement that a bottle was always on the sideboard; but I shall call a witness, not a member of the household, who will corroborate her on that point. Indeed, it was such a common thing of the deceased to be taking arsenic that there is absolutely no reason why Mrs. Carew should have been in the least surprised when applied to by her husband to procure arsenic for him. He first asked her to procure it for him on Tuesday, the 20th, and he repeated his wish on Wednesday morning. Mrs. Carew's recollection was that she had refused to humour him on the Tuesday; but being confronted with an order, the whole of which is apparently in her handwriting—though not necessarily so, for even Mr. Mason had his doubts as to part of it, and if he is liable to error as to one part why not as to the other?—addressed to Maruya for a bed-pan and a bottle of arsenic, she was constrained to admit that she must have sent for it even though she had no recollection of having done so. But if it is true that a consumer of arsenic must not only continue his indulgence, but must also increase his quantity of the drug, it need occasion no surprise that Mrs. Carew may have sent for a bottle on the 20th, and thought so little of it as to have forgotten all about it. She was accustomed to see her husband take the solution, and in large quantities, not even measuring it by drops. It is not, therefore, even probable that in sending for the arsenic she had any intention of using it to destroy her husband's life. She sent for it to please or humour him. But, it may be said, she concealed from Dr. Wheeler the fact that her husband was taking arsenic. That is true, and easily accounted for; but I will enlarge upon the point at length later in my address. I will merely say here that if she had procured this arsenic to poison her husband with, I put it to you, gentlemen, as reasonable men, would she not have taken pains to procure it surreptitiously? How might she have done that; do you ask? Well, she might have gone to Brett's and asked for a repetition of Dr. Wheeler's prescription of a previous year. But, better still, if, as is alleged by the prosecution, she is the writer of the A. L. letters she could easily have written ten orders for it in a feigned hand, in the very same handwriting indeed as in the A. L. letters, have gone down to Bentendori, sent the first urchin she met in the streets into Maruya's for the arsenic with money to pay for it, have disappeared herself, and left what?—an order in Maruya's hands, signed A. L., written in the same hand, thus showing that she herself had nothing to do with the purchase of arsenic. But instead of that what do we find? We find this woman, who, according to the theory of the prosecution, had conceived the intent to murder her husband as far back as October 10th, going up to Dr. Wheeler in the Boat-house (where indeed she could have had no idea she would meet him) and asking him to prescribe arsenic for her. So that it comes to this, that this prisoner was such a bungler that there is not one single one of all the array of bottles that she procured for herself, or was instrumental in procuring for her husband, for which there was not in existence an order in her own hand-writing, easily discoverable, easily procurable. More than that,

Exhibit "X." was so faintly written (whether it is in her handwriting or not) that she actually copied it out in her own handwriting, and gave it to Mary Jacob to take to Maruya's shop.

His Lordship—Does it appear anywhere that she copied exhibit X. or that any of the orders sent to Maruya's was a copy of exhibit X.?

Mr. Lowder—Yes, my Lord, in the evidence of Mary Jacob. She said Mrs. Carew wrote it in her own handwriting (after a pause)—My learned friend reminds me that it is in Mrs. Carew's own evidence. Mary Jacob also stated that on both occasions she had written it out. We have thus an absence of concealment in the purchase of the arsenic by the prisoner, so marked that it actually amounts to making of evidence against herself; and on the other hand, an intense anxiety at all times for the presence of Dr. Wheeler; a fear lest he did not pay sufficient attention to his case; a ready assent to the suggestion that Dr. Todd should be called in on the Monday; a still readier assent to Mr. Parsons's suggestion that Dr. Baelz should be telegraphed for on the Wednesday, when she wrote to Dr. Wheeler to that effect. And here I may call your attention to the fact that Mary Jacob returned from Maruya's with the bottles of arsenic and sugar of lead at just about the time when the prisoner was writing to Dr. Wheeler to beg him to call in Dr. Baelz. Is it credible, is it conceivable, that a woman, a wife, who had just purchased two bottles of poison with the intention of administering them to her husband, so as to kill him, should deliberately sit down and write to her medical man, beseeching him to call in a stranger, a doctor of great eminence, whose practised intelligence might easily, for all she knew to the contrary, at once detect from the look and symptoms of the patient that he was being poisoned by arsenic? To my mind I confess that it is neither credible nor conceivable. As a rule to guide you in considering probabilities, gentlemen, I would remind you, in a formal way, that evidence which is consistent with two views is not conclusive of either; and that though, for the defence, when evidence is inconclusive, probability becomes argument, that proposition does not hold good for the prosecution in a criminal case. Our law does not admit of any person being convicted of a crime on suspicion, or possibility, or even on probability. Gentlemen, we have before us an outline of the married life of Mr. and Mrs. Carew—from their wedding day until they left England for Singapore, and from the time that they arrived there and thence on till they came to Japan—as put in by the Counsel for the prosecution. I will read it to you, if you desire to have it read; but it has been printed, and you will have it before you for reference. Further details, to fill in that outline—since their arrival in Japan—will be furnished by witnesses whom I shall call. But I feel that I ought to hasten to an answer of the question:—Why did she not tell Dr. Wheeler that her husband was taking arsenic? The explanation that I have to make is this:—because she would have had to tell him that he had consulted Drs. Baelz and Munro upon certain matters he did not want Dr. Wheeler to know of. Suppose Mr. Carew to be still alive: would not the concealment from Dr. Wheeler of a fact that her husband did not want him to know, be considered a wifely and dutiful act? And is it rendered any less wifely and dutiful, any more suspicious, because he is dead? Surely not. Moreover, there was absolutely nothing in her mind to connect the symptoms with arsenical poisoning; even the doctor never suspected it; and if he didn't, why should she? Of course I am arguing always on the assumption of her innocence. But her whole conduct shows that she never did suspect. I will take you briefly through those days. On the Sunday, the 11th of October, she wrote for Dr. Wheeler, who came at 6 p.m. and prescribed for him. On Thursday, 15th, she wrote to Dr. Wheeler asking him to see her husband at the Club. On Saturday, the 17th of October, she wrote early to Dr. Wheeler regarding Mr. Carew's desire to go to Kamakura. He came about 10 a.m., and after seeing his patient said that he was not to go down to Kamakura. We found from Dr. Wheeler's evidence that there was no talk of Mrs. Carew accompanying her husband to Kamakura on that occasion, and that she never proposed to accompany him. If she had intended to poison her husband why should she have let him leave her sight even for a moment?—she would have invented some reasonable excuse for keeping always by him; but no suggestion of the kind can reasonably arise. On Sunday, October 18th, she went down to church, and after the afternoon service went in search of Dr. Wheeler, and not finding him, left a message for him. On reaching home she sent him a note and he came round after dinner about 9 p.m. On Monday, the 19th, Dr.

Wheeler came twice. On Tuesday, the 20th, Dr. Wheeler came in the morning, and proposed to call in Dr. Todd. Mrs. Carew at once readily agreed to the proposal. Dr. Wheeler came again at 6.30 and gave the patient a hypodermic injection. We know what followed. Mr. Carew became very restless, and Mrs. Carew not liking her husband's symptoms went in search of Dr. Wheeler late at night; she finds him, and he comes again at 11.25 p.m. That same day, Tuesday, the 20th, she spoke to more than one personal friend who called, about her wish to call in Dr. Baelz; this was before the suggestion was made to her by Mr. Parsons. Next morning, the 21st, Mr. Parsons calls and suggests the advisability of calling in Dr. Baelz. She at once sits down and writes to Dr. Wheeler, begging him to get Baelz down to see her husband. That same day Wednesday, the 21st, she speaks to Dr. Hatton, a personal friend of the family—and whom I shall call—about her anxiety regarding her husband, and she asked him to give her some friendly advice in the matter. Early on Thursday morning, the 22nd, she writes for Dr. Wheeler who comes at 7 a.m. Not satisfied with Dr. Wheeler, at this visit, she writes to Mr. Parsons, begging him to come round. He does so, and she entreats him to see Dr. Wheeler, and insist upon his getting hold of Baelz. On Thursday evening she writes to Dr. Wheeler to ask him to come round; and when he comes, she tells him of her husband's taking arsenic. She produced all the bottles at the Coroner's inquest, calls attention to her suspicion that arsenic is mixed with Dr. Baelz's prescription, and also calls attention to the stain on the fender. Gentlemen, are these the actions of a woman who knows that her husband is dying of poison administered by herself? Would not her guilty knowledge have led her to conceal his sufferings rather than call in skilled physicians who might at any moment connect the symptoms with the real cause. Then Dr. Wheeler testified that at the last moment, or very shortly before he left the house, she said she had administered an emetic to the deceased. Mr. Pouch will tell you he saw her administer the emetic. Is it likely that the wife who had poisoned her husband would offer him an emetic in the presence of the doctor, or knowing that the doctor was coming, and who might possibly inspect the vomit and ascertain that there was arsenic in it? Dr. Wheeler has already testified to her having spoken of her desire to procure the assistance of a nurse, and others will give similar evidence. I would also like to remind you of what Dr. Wheeler said with reference to her treatment of her husband during his sickness. I will read it in the form of question and answer as I have it before me:—

"As far as your observation went during the illness of the deceased did the accused carry out faithfully all your orders and instructions with reference to your patient?—Certainly.

"Whenever her assistance was required it was at your service?—Yes, she was always there.

"And rendered it willingly?—Willingly.

"Was there anything in her behaviour to lead you to suppose she was not on the most affectionate terms with her husband?—Nothing whatever.

"So far as your observation went they were, until the time of his death, on the most affectionate terms?—They always seemed to me to be on affectionate terms.

"And nothing came under your observation to lead you to suppose that she was knowingly creating the symptoms she was helping you to alleviate?—Nothing came under my observation.

"You had absolutely no suspicion of her until Thursday morning, until these communications were made to you?—None whatever.

"She evinced a wifely anxiety during the sickness of her husband?—Certainly.

"And that up to the hospital steps when she was obliged to leave her husband in the hospital?—Yes."

There was produced, on the part of the prosecution, a letter addressed by the accused to Sir Ernest Satow, the British Minister. At the time that that letter was produced I was not instructed with regard to it. I had no knowledge of its existence; therefore, it was my duty to resist its being put in the evidence before you, and I did so. I wish that I had known of its existence, because my effort to prevent its being put in evidence may have led you to suppose that I attached more importance to it than I do. Certainly, had I known as much then as I know now, I should have done what I afterwards did and then have acknowledged that it was in the handwriting of the accused. You must bear in mind, gentlemen, the circumstances under which that letter was written. The opinion therein attributed to A. L. Price was shared by nearly every one who read the summing

up of the Coroner. I will read it to you in order that you may form an opinion for yourselves.

"The Coroner—This is an important and difficult case, and I am much pleased with the care and intelligence with which you, gentlemen of the jury, have followed the evidence. You will remember that when this enquiry was opened on the Saturday, three medical men had been examined in the forenoon at the Royal Naval Hospital; they were Dr. Wheeler, the deceased's medical attendant, and the two doctors at the Naval Hospital who had conducted the *post mortem* examination. The result of the evidence given by the three medical men was to make clear the fact that the deceased had not died from natural causes. The facts then given made it essential that an expert should be called in to make a chemical and analytical examination of the contents of the viscera of the deceased gentleman, and this examination you ordered me to have carried out. I at once placed the matter in the hands of Dr. Divers, of Tokyo. In the afternoon of that day three other witnesses were examined. They were Miss Jacob, the nursery governess of Mrs. Carew; Mr. Porch, Mrs. Carew's brother; and Mrs. Carew herself. The evidence given that afternoon all tended to show that medicine, that arsenic, had been procured from Maruya's by Mrs. Carew's orders. The testimony of Miss Jacob on this point was clear and unshaken in the brief cross-examination to which she was subjected. Her demeanour was that of an unwilling but truthful witness; and her evidence on every material point remains unshaken. The evidence also pointed to the fact that throughout the week or eight days' illness of deceased, his wife, Mrs. Carew, was in sole charge of the nursing by day as well as by night, and received no assistance in the nursing; and that on her own admission she then knew that her husband was taking arsenic, yet never considered it of sufficient importance to call her husband's medical attendant's attention to the fact. Gentlemen, you will perceive the gravity of that admission, supposing it was afterwards proven that death did result from the arsenic that had been taken. We come now to the second day of the inquest, when other evidence was given, namely, the keystone of the whole case—Dr. Divers' evidence. It is hardly necessary for me to read over the clear, and explicit, and forcible terms in which Dr. Divers showed to your satisfaction—must have convinced you—that death resulted from arsenical poisoning. That simplified your duty very much, because it reduces the issue to practically one point, namely who administered the arsenic? Now there are two possible suppositions at least: one that the deceased administered the arsenic himself; the other that it was administered or was given to him by some one else. If he himself took the fatal dose he must have done so intentionally or unintentionally. If in the first case, it would be a case of suicide, if not, then death would have been due to misadventure. Now for the supposition that he deliberately committed suicide by taking arsenic: there is a hardly a jot or tittle of evidence to support it. The supposition, I think, may be safely dismissed. The explanation which Mrs. Carew's evidence on the first day was calculated to suggest, was that the deceased, being in the habit of taking arsenic—of medicinally dosing himself with arsenic—and having, in spite of her remonstrances, insisted on being supplied with it; and she having found the bottle which she had given to him sealed in paper—the inference intended to be drawn was that he had overdosed himself and had died from the effects of that overdose. Now, with regard to that supposition, Dr. Divers gave some very clear and convincing evidence. From the state of the viscera and the scientific conclusions he drew, he considered it decidedly and distinctly improbable that deceased had himself administered the arsenic from which he died. Arsenic, he showed, was not a cumulative medicine—that is, it is not a medicine which, if taken in small medicinal doses, remains in the system and at last produces the effect of a poisonous dose: that it goes on accumulating until it becomes fatal. On the contrary, arsenic is a medicine that is soon passed through the body and is quickly eliminated from the system. The evidence of the viscera indicated clearly to Dr. Divers that not one dose but a repetition of doses had been given to the deceased. Then, against the supposition that deceased overdosed himself, was the fact of the great difference in the medicinal and a fatal dose of arsenic—a proportion of 1 to 30. That is, a man accustomed to take arsenic medicinally would have to give himself a dose thirty times the size of the medicinal dose to produce death. An attempt was made to shake Dr. Divers' evidence by cross-examination on that point with regard to the tolerance of arsenic by persons habituated to the use of it; but it

seems to me that his evidence was quite unshaken on that point. He laid it down that the idea of a grain dose having been taken by a Western stomach and tolerated was unknown to science. The case of the Stryian peasants was exceptional and by itself; and the evidence seems to negative the supposition that the deceased administered arsenic to himself either intentionally or unintentionally. Then, if he did not administer it himself some other hand must have given him the poison. Who can that be? Naturally and inevitably, suspicion will fall on the nurse, upon his wife, Mrs. Carew, who was in sole charge of his nursing, without any assistance, except sending up occasionally a drink of milk, or beef-tea, or something by one or other of the servants. Now, if it was not Mrs. Carew, it may have been someone outside, and that introduces the mention of Annie Luke. The case which the able Counsel for Mrs. Carew has been endeavouring to make out, I take to be this: that on or about the 10th October last, a woman named Annie Luke, with whom Mr. Carew had previous relations in England or elsewhere, came to Yokohama, and during the course of Mr. Carew's illness, in an interval in which Mrs. Carew was not at the bedside of her husband, found entrance to the deceased's room and administered the poison. If that is not the implication, then I fail to see what the object of all this evidence as to Annie Luke can be. Now, gentlemen, Annie Luke has been seen, according to the testimony of Mrs. Carew on the day of the regatta, the 10th of October. Mrs. Carew swears that a woman, dressed in black, and wearing a veil, called, desiring to see Mr. Carew, and finding that he was not at home she made an appointment for 4.30 that afternoon, and stated that she did not come then she would come next morning. She did not keep that appointment. That is the sole clear statement as to the appearance in the flesh of Annie Luke. No doubt the *amah* testified that on one occasion during Mrs. Carew's absence from her husband's bedside, a woman called and enquired after Mr. Carew and asked where his bedroom was. She could give us no particulars, as it was dark. That may have been Annie Luke, or it may have been a neighbour coming kindly to enquire. What is certain is that Mrs. Carew mentioned about a woman in black on the 10th. This woman, who is called Annie Luke, comes if not into appearance, into hearing, on the 10th, and she disappears as mysteriously as she appeared, on the 20th, after writing a couple of letters—one to Mr. Lowder and one to myself. The most diligent search to find any evidence of her corporeal presence, where she stayed, or of her whereabouts during her twenty days' stay in Yokohama, has been ineffectual. Gentlemen, I take upon myself the responsibility of saying that, in considering your verdict, you need not complicate your minds much as to the share which such a person as Annie Luke may have taken in this tragedy. It remains then for you to consider the evidence of Mrs. Carew herself. She admits that on the 20th—after at first denying it—that she sent an order to Maruya's for a bed-pan and a bottle of Fowler's Solution. She does not deny the fact testified by Miss Jacob, that on the 21st she procured another ounce bottle from Maruya's. Her own handwriting is in evidence to show you that on the 17th and 21st she likewise procured half ounce bottles from Schedel of the Normal Dispensary. In her first evidence she admits having given the arsenic to her husband sealed up in paper. She denies, of course, ever having administered arsenic to him as a medicine during his illness. It will be for you, gentlemen, to consider the possibilities of the case. In coming to a conclusion as to the cause of Mr. Carew's death, as to how it was he was poisoned by arsenic, you will consider these various theories—the theory of suicide, intentional or by misadventure, and the theory of homicide by Annie Luke or by Mrs. Carew. It will be your duty gentlemen—I lay it down as a simple canon of sound reasoning upon this as upon other subjects—to choose the hypothesis to form that conclusion which at the same time is the simplest of all and which fully accounts for all the known facts of the case. The salient facts of the case I may recall briefly in applying that canon of reasoning. Mr. and Mrs. Carew were married in 1889—seven years ago. They lived on happy terms of conjugal affection till quite recently, when by Mrs. Carew's own confession unpleasant discussions arose on a certain point. That point was money matters. In July last—but I had better read Mrs. Carew's evidence as supplying, or assuming to supply what her Counsel, Mr. Lowder, considered was wanting, namely, an explicable motive. [The Coroner here read extracts relating to the monetary discussions, relative to the remittances from England; Mrs. Carew's half-yearly allowances and private means.] Resuming, he said—The unpleasant discussion arose in July last. The 10th of last month

was regatta day, a very inclement, rainy day, as some of you may remember. On that day two contemporaneous facts make their appearance in the story. One is the mentioning by Mrs. Carew at the Boat-house to her husband in the presence of other people, of a certain mysterious lady in black, who was afterwards fully particularised as Annie Luke. The second important fact on that day was the obtaining by Mrs. Carew from Dr. Wheeler of an order for arsenic for her own malarial fever. On the 11th October, Mrs. Carew procures from the Normal Dispensary, on that prescription of Dr. Wheeler's a half-ounce bottle of arsenic; on the 15th of October, four days afterwards, Mr. Carew is confined to his house, not to leave it again, except after a week's interval to die. On the 17th, two days afterwards, Mrs. Carew procures a second half-ounce bottle of arsenic from the Normal Dispensary. On the 19th, Mr. Carew's illness increases in gravity, the symptoms increase in seriousness. On the 19th, a bottle is procured from Maruya's for Mrs. Carew by a person whom Maruya's shopman, Hayashi Shichihiro, could not distinctly identify as Mrs. Carew, and who signed the name "Mrs. Carew." The same person called on the 20th and paid for the medicines and obtained the writing on which she had written them on the 19th. On the 20th, the day following, another ounce bottle of arsenic is procured on Mrs. Carew's written order, by Mrs. Carew's own messenger, Miss Jacob; and likewise on the day preceding his death a third half-ounce bottle was procured from the Normal Dispensary. On the following day, at five o'clock, Mr. Carew died. Those are the main facts upon which you are to draw your own intelligent inferences in order to bring in your verdict. If you reject the supposition of suicide or death by misadventure, if you reject the story of Annie Luke as largely imaginary, suppositional, impalpable, intangible, and unverifiable, you are necessarily driven to the conclusion that arsenic must in some way have been administered by Mrs. Carew. If you come to the conclusion—if the evidence seems to point—that Mrs. Carew's hand was the hand that administered the poison, you are bound by your duty and your oath to find out and determine in your own minds whether it was administered with intent to kill. That is to say, your verdict must either be manslaughter—that is to say culpable negligence—or it must be wilful murder. On the side of the negligence there are these considerations to be taken into account. Mr. Carew had, I believe, undoubtedly taken arsenic medicinally. That was explicitly testified to by Mrs. Carew herself, who said it was prescribed by a doctor in the Straits Settlements, Dr. Simons, and that she administered arsenic herself to him medicinally, so that both Mr. and Mrs. Carew were not unacquainted with the previous administration of arsenic. In support of the statement that he had previously taken arsenic medicinally, we have the testimony of Mr. Dickinson, who declares that some years ago, at Dzushi, Mr. Carew told him that some years previously in the Straits Settlements, he had nearly killed himself by an overdose of arsenic. Then there is the statement of Dr. Munro that the impression was made on his mind that Mr. Carew on one occasion told him that he took arsenic. If you think that this previous administration, or previous taking, of arsenic by Mr. Carew was sufficient to relieve Mrs. Carew from due vigilance during her nursing mission at her husband's bedside, you may come to the conclusion that there was an absence of intent to kill. But while I present these two considerations of the favourable side of the case, it is also my duty to put to you the facts that seem to point in an opposite direction, the facts that seem to point to intention on the part to Mrs. Carew. These are, first of all, the nature of the poison employed. Arsenic, as Dr. Divers told us, is colourless, tasteless, odourless, and very hard to detect by the person to whom it is administered. It is a poison that is and has been frequently chosen for the purpose of poisoning persons. Another fact that seems to indicate intention is the frequency with which the doses of arsenic were procured—no less than six separate times between the 11th and 21st. The third indication that seems to imply intention on the part of whoever administered the arsenic, is the presence of sugar of lead in the intestines of the deceased. It has not even been suggested that the deceased ever administered sugar of lead to himself, and Dr. Divers has explained to you that the fact of sugar of lead having been administered concurrently with arsenic would be to stop the hæmorrhage, the bleeding of the intestines, which arsenic tends to produce. These are three indications. There is a fourth indication. That is the fact of Mrs. Carew's reticence—silence, her complete silence, on the subject of the arsenic being taken, to the deceased's medical attendant

during those days of his illness and suffering. Gentlemen of the jury, you will now consider your verdict."

Gentlemen, it was well for the prisoner that the Coroner had not the power to pronounce sentence: for that is about the only thing he left undone in his address to the jury. He has been before you during the course of the proceedings, and you have had an opportunity of judging of his partiality. When asked why, on the morning of the 22nd October, his suspicions were aroused against Mrs. Carew, he said that it was because of something he had noticed in her manner on the 19th. The summing up was, I submit, in itself sufficient, apart from the distress she was in by reason of the death of her husband, to drive her distracted; and it was in a fit of distraction that she wrote the letter. It bears date the 6th November, which was the day on which the Coroner summed up, and was written whilst she was smarting under a sense of the injustice that had been done to her, and it is not surprising that she should apply to her Minister for redress. Had she signed her own name to the letter, no one could have found fault with her. The signing of the name of Mr. Price, who was a great friend of hers, cannot of course be defended; but it does not form the smallest particle of a link in the evidence of her being guilty of the crime of murder. She was the person accused; and she therefore thought that if the Minister's attention were drawn to it by one of the public, the complaint would carry greater weight and be likely to receive more attention. So she chose the name of a great friend of hers, who did not happen to be in Japan, and who could not therefore be compromised by the use of it; disguised her hand as best she could; and posted the letter to the Minister. She has evidently made an attempt to disguise her handwriting; but so poor a one as to make it impossible to believe she could be the writer of the Annie Luke letters. If she had been able to disguise her hand as well as the writer of those letters did, she would certainly have done so when addressing the Minister under an assumed name. The letter also shows that she was not practised in imitating the handwriting of other people; for she did not imitate the signature of Mr. Price. I wish to make an application to your Lordship sooner or later, and that is, that the Jury shall have an opportunity of inspecting the house, the residence of the Carews. I suppose there can be no objection on the part of my learned friend, and I have no doubt your Lordship will see the desirability that the Jury should inspect the house.

Mr. Wilkinson—I do not object, with the usual preliminaries.

His Lordship—And precautions?

Mr. Wilkinson—Certainly.

Mr. Lowder—I do not make any application for an adjournment over this afternoon, but as I have not quite finished the notes of my address to the Jury, if it would be convenient for the Jury to make the visit this afternoon it would be a great convenience to me. If this suggestion is acquiesced in, I shall propose to prove a ground-plan of the house and then hand this plan of the house to the Jury and ask them to make their own observations of their own examination of the house.

His Lordship—Interpose it, as it were, in your speech?

Mr. Lowder—Yes.

His Lordship—I presume that it will rest with the Jury?

Mr. Davieson (one of the Jury)—Any time that is convenient.

Mr. Patterson (another Juror)—We have no objection to go this afternoon if it is so desired.

His Lordship—Mr. Lowder would like to adjourn for the afternoon, and part of the afternoon might be utilised in doing something which would have to be done later if you did not do it to-day.

Mr. Wilkinson said he would consent to anything that would suit the Court.

Reginald Colmore Porch was then sworn, and deposed.

Mr. Lowder—You are a brother of the accused?

—Yes.

You have lived for some months in the house with the accused?—Yes.

And are still living there?—Yes.

I hand you a ground-plan of the house and of the upper part of the house—this is the architect's plan: the man who built the house?—This is a plan of No. 167, Bluff.

You will notice a room marked in pencil, dining-room, is that the dining-room?—Yes.

Will you mark where the sideboard stood?—It is marked.

Is the position of the writing table also marked?—Yes.

And correctly marked?—Yes.

Now, on the upper floor, there is a room marked nursery, is that correct?—Yes.

Both the lower and the upper halls are marked?—Yes.

Your own room, the children's room, and the Carews' room?—Yes.

Off that last room is a verandah?—Yes.

Was that verandah used by the deceased as a dressing-room?—It was.

Will you mark on the verandah the position where his chest of drawers stood, where he kept his medicines?—I mark it with the letter A.

On this chest of drawers stood what?—A looking glass and a cabinet containing medicine bottles.

His Lordship—I presume they are standing there still?

Mr. Lowder—Have they been removed?—No, only the medicine bottles.

His Lordship—When did you last see them?

Witness—Two days ago.

His Lordship—You have not noted their position since?

Witness—No.

Mr. Lowder—By whom were the medicine bottles removed?—By Mr. Hodges.

All excepting those brought down by the accused?—That is so.

Can you describe where the medicines were kept on the side-board?—On the left and right hand sides were shelves, and the medicine bottles were kept there.

His Lordship—Have you seen the plan, Mr. Wilkinson?

Mr. Wilkinson—Yes, my Lord.

Mr. Lowder—I would ask the witness when these bottles were removed from the house, about the beginning of the trial?—That is so.

And there are no medicine bottles there now?—None.

Mr. Lowder—I may mention that it will be necessary that you are not present in the house, Mr. Porch, when the jury are there.

His Lordship—No one may be present beside the five jurymen and the official in whose charge they are. They had better take the plan with them.

Mr. Wilkinson—Quite so.

Mr. Lowder—Perhaps I had better ask the witness one more question, that is whether the furniture has been removed. There have been one or two articles—a bed, chair, washstand—taken to the jail, I believe?—With the exception of those articles, the furniture has not been changed.

His Lordship (to Mr. Lowder)—Here is another authority (handing down book) on the point alluded to this morning.

Mr. Lowder—I had only intended alluding to the salient features of our knowledge of the history of arsenic, the rest I should bring out in evidence.

His Lordship—Then you propose to resume your address to the jury at 10 o'clock on Monday?

Mr. Wilkinson—My Lord, I think that something must be arranged in regard to the other case, say 10.15.

His Lordship—I had forgotten that: certainly. I understood that Miss Jacob was too ill to attend, still the formality must be observed; we will adjourn to the time you propose.

The Clerk of the Court—The Court stands adjourned till 10.30 on Monday morning.

MONDAY, JANUARY 25th.

His Lordship entered at half-past ten o'clock. There was a very distinct falling off in the attendance of the general public, as compared with Saturday. What might be termed the regular *habitués* of the Court—persons from China Town and its purlieus—have begun to lose interest in the proceedings, and now the attendance is principally confined to the merchant class of the community. The accused looked pale but cheerful when the proceedings commenced, but as the day drew on she was fain to rest her head wearily against the side of the dock at more frequent intervals than on the days in the preceding week. Yet not a word from Counsel and Bench seemed to escape her vigilant attention. Towards the close of Mr. Lowder's address, when he became most impressive, the prisoner's head sunk almost from view below the level of the box, and when next her face was visible her eyes were red with weeping. The Assistant-Judge again occupied a seat on the Bench during the morning.

His Lordship—We are ready, Mr. Lowder.

Mr. Lowder—Gentlemen, I interrupted the strict sequence of my address to you on Sunday, because I was anxious, at the earliest possible moment, to dispel any misunderstanding that might have arisen in your minds owing to the production of the letter addressed to the British Minister, and to my resistance against its being offered in evidence against the prisoner. But I will now proceed to consider a point which I purposely left uncovered on Saturday, as it required to be treated separately. I refer to the purchase of the first bottle of arsenic at Maruya's shop. Now there are, at all

events, two undoubted facts in this case, and that is that from the very beginning the two principal witnesses against the prisoner (leaving out of consideration for the moment the evidence which she may be said to have accumulated against herself), have been, as to the purchase of arsenic at Maruya's shop, the witnesses Hayashii and Mary Jacob. Mary Jacob, unfortunately, is not available. You will not have the opportunity of seeing her, or of hearing her testimony, except as it has been read to you. It is possible that you may be asked to infer or that you yourselves may think, that the charge I have made against her was preferred with the unworthy motive of excluding her evidence. As to that, it may be sufficient to point out to you that it was quite impossible for me to foresee that she might be taken ill; and in the second place, his Lordship will doubtless explain to you that in charging her with being the writer of the series of letters known as the "Annie Luke" letters, and in opening the evidence in support of that charge, as I did before the Magistrate, I was giving to her, and to the Counsel for the prosecution, evidence that I might have sprung upon her in cross-examination, and which she and they might not have been able to meet at the moment. They thus had full warning of one of the points to be made for the defence in this case, which was of the greatest advantage to them. So much for that incident. But I wish to call your particular attention to the evidence of the witnesses Hayashii and Jacob, so far as relates to the most important dates, viz., 19th and 20th days of October. He said in his evidence before the Coroner, that "in the course of the last month he sold arsenic to a foreigner on the days 19th, 20th, and 21st." He was asked to whom he sold it on the 19th, and he replied that he did not recollect very well, but probably it was to Mrs. Carew. I am referring for my facts to a report, but it will be recollected that I cross-examined Hayashii when he was in the box as to what he had said.

His Lordship read the evidence given by Hayashii in cross-examination on the 13th, when he said, "I do not know whether or not Mrs. Carew was the person who came on the 19th." On the same occasion Hayashii said, "I gave evidence on the 2nd November last. I was asked if I sold arsenic on the 19th, 20th, and 21st of October, and I said I did. I was asked if it was Mrs. Carew, and having looked at her I said I could not say."

Mr. Lowder—Secondly, there was the evidence of Jacob herself given to the Coroner as to the 19th; and that I have here. It is on the first page of the printed copy of the inquest, line 30: "The man who sold me the medicine made a remark; he asked why we bought 'so plenty deadly poison.' I replied 'I don't know.' I didn't know any had been bought before. Maruya told me some had been bought the day before and some the day before that again, and that I must warn Mrs. Carew to be careful how she used it. No further conversation. I did not report to Mrs. Carew the conversation at all. I told Mr. Porch after tiffin. He said how impudent the man was." That was Miss Jacob's statement before the Coroner, namely that arsenic had been purchased on the 19th. Then Mrs. Carew made a statement as to the 19th before the Coroner to the effect that she had not been down to the town on that particular day. It will be found in the evidence, and I do not think it will be contradicted, that she did make that statement before the Coroner. Then Hayashii admitted in cross-examination that he had repeated before the magistrate the statement he made before the Coroner with reference to the 19th and 20th. Then I wish to call your attention to Jacob's statement to the magistrate as to the 19th.

His Lordship read his notes of Hayashii's evidence before the Coroner and before the Magistrate. Before the Coroner Hayashii said, "I am certain I sold sugar of lead on the 19th. I am sure it was sugar of lead because I looked it up in the day-book." Then before the Magistrate he stated, "I said I remembered selling arsenic to a foreign woman on the 19th."

Mr. Lowder—Then I was going to call attention to Miss Jacob's statement as to the 19th. Page 2 line 992: "My duty to the children took me out of the house a good deal. I remember the 16th October last; I went out on that morning, with one child. We went as far as the Post Office, to meet Mrs. Carew, who had taken her little boy, Ben, down town. I remember Ben running across the road to meet me. It was on the road, this side of the Post Office. Marjory was not feeling very well, so we changed. Mrs. Carew took Marjory back, saying she was going to take a 'kuruma,' and I took the little boy and walked back. Neither of us had a *jinrikisha* then. Mrs. Carew said she had left her *jinrikisha* at the chemist's, to follow her, but she did not know where he (the *jinrikisha* man) had gone. I went, with Ben, to the Post Office, to ask if the mail had

come in. I walked back again, then, to the house at once, because they said the mail was in and was being delivered. I was expecting letters by the mail. I had two." With reference to this particular day I shall also present to you the evidence of Mr. Walford, who at my request called at Maruya's on the 26th November last. He saw Hayashi, who was behind the counter. He did not give his name, but he said he had come about the Carew case, and he made a note of the conversation at the time. The first question he asked was whether he could remember the time on the 19th when a foreign woman came to purchase arsenic. He said he could not remember the time, but referred to a book on the counter and after looking at the entries said it must be about noon or a little before noon, as it was about the middle of the entries. Then as to the time of payment on the 20th for the purchase on the 19th, Mr. Walford will say he remembers another book being opened, and the witness remembered the payment being made about the same time of day, that is a little before noon. Mr. Walford asked what had been paid for on the 20th, and the answer was anti-pyrene bought on the 8th, sugar of lead and chlorodyne bought on the 18th, and Fowler's Solution and more sugar of lead bought on the 19th. I would also on that point refer to the opening speech of my learned friend, which was made on the 5th January. He says, referring to Monday, the 19th: "On this day there was purchased at Maruya's an ounce bottle of Fowler's Solution and $\frac{1}{2}$ of an ounce of sugar of lead by a lady who gave the name of Carew. In a statement made by the prisoner, and to which I shall afterwards more fully refer, the prisoner denied that she made this purchase. She denies having been down town that day, but you will have the evidence of Miss Jacob that she met her down town at the Post Office, and Maruya's assistant will say that the lady who made the purchase gave the name of Carew, and that the same lady who purchased the solution called the next day and paid for it, and at the same time paid for the chlorodyne and sugar of lead purchased on the 18th in the name of Carew." Further on in his address to you, my learned friend again made reference to the 19th, and pointed out that you would have to take it into your serious consideration whether the arsenic purchased on the 19th was purchased by the accused or not. Down to the 5th January, therefore, the principal part of the prosecution had been rested on these facts:—(a) That a foreign woman had, on the 19th, purchased Fowler's Solution and sugar of lead at Maruya's shop; (b) That the same foreign woman had, on the 20th, paid for the Fowler's Solution and sugar of lead she had purchased on the previous day, and had taken away the paper on which she had signed the words "Mrs. Carew;" (c) That Mrs. Carew had denied that she was down in the town on the 19th; (d) That Jacob had sworn that she was, and was prepared to swear to the fact again, before you. This, gentlemen, is not a mere mistake such as anyone might make. She gave facts and circumstances which recalled to her mind that it was on the 19th that she had to go down to the Post Office and get some letters, that she did go to the Post Office, and that she took one child with her; that Mrs. Carew had gone with the other child, and that they met at the Post Office and changed children, Mrs. Carew returning with the little girl and she taking the little boy. Now, Hayashi Shishichiro was called before you on the 12th January, just seven days after the opening speech of the Counsel for the prosecution; and he then, for the first time, reversed the evidence he had previously given on two occasions, and what he had said to Mr. Walford; said that there was no sale at all on the 19th; that the sale and the payment both took place on the 20th; and that the articles sold and paid for were Fowler's Solution and chloral hydrate (not sugar of lead). I don't know when this change in the evidence was first made known to the Counsel for the prosecution; it must have been at some time between the opening speech on the 5th and the calling of Hayashi on the 12th; but certainly the first I heard of it was on the 12th, when Hayashi was under examination.

Mr. Wilkinson here whispered something to Mr. Lowder, and

Mr. Lowder resumed—My learned friend mentions that he communicated the fact to me on the day before, so it escaped my recollection. My recollection was that I only heard it when Hayashi was under examination. However, it was not communicated to me until the day before. Mrs. Carew, it may be recollected, had produced a bottle of chloral hydrate before the Coroner, stating that she had found it among her husband's medicines in the dressing room, but had never seen it before. She had also denied that she had been down to the town on the 19th, and her denial of that fact is corroborated by

an entry in her Diary, which, on the 12th Jan. and for a long time previously had been in the hands of the Counsel for the prosecution. Well, it was, to say the least of it, a convenient discovery that the 19th had been mistaken for the 20th; and that one of the articles purchased was chloral hydrate and not sugar of lead. Pray do not misunderstand me, gentlemen, as imputing any unworthy act or motives to the Counsel for the prosecution. All I say is that it was a fortunate discovery for the prosecution, for by means of it they were able to account, to their own satisfaction, for the purchase of a bottle of chloral hydrate by a foreign woman whom they believe to be the prisoner, and to get rid of one bottle of sugar of lead,—that is to say to reduce the number of bottles of sugar of lead that found their way into the house from three to two. But the visit of the foreign woman to Maruya's, gentlemen, had been opened to you by the Counsel for the prosecution as having taken place on the 19th; also, that she had on that date purchased a bottle of Fowler's Solution of arsenic and a bottle of sugar of lead; and it is matter of regret that the alteration in the evidence to be presented to you on these points was not communicated to me as soon as it became known to the Counsel for the prosecution. Which of the four different statements made by Hayashi—three of which agree, and were made shortly after the occurrences testified to, and one of which was made recently, is to be believed, if indeed credence is to be placed in any of them, is for you, gentlemen of the jury, to determine. All I would suggest to you is that none of them ought to be allowed to form a link in any evidence the tendency of which is to criminate the prisoner at the bar. So much for Hayashi. But there is a great deal more to be said about the 19th. The two pilfering thieves, Jacob and Christoffel, some time in September, when, apparently, the first Dickinson letters were written, conceived the idea of collecting and stitching these letters together. The reason given for doing so, by Christoffel, is that she desired that her friend's character should be protected, in the event of Mr. Carew's finding out that visitors, not altogether friends of the family, were admitted into the house. Now that reason is untrue, on the face of it; because Mr. Dickinson was a friend of the family, and because, unless these letters had been put together, and at all events partially read, Christoffel could not have known that they were of a compromising character. At all events they were collected, and pieced with the obvious intention of being used against Mrs. Carew in some way. I shall, I think, be able to show you that, Ah Kwong, a Chinese boy, who was in the service of the Carews, was also employed and paid by Jacob to pilfer the waste-paper basket; in which case the finding in her possession of papers, written to Mrs. Carew by her from No. 2, Bluff, and which ought therefore to be in Mrs. Carew's possession, is accounted for. To return, however, to the 23rd or 24th September. Rachel Greer will tell you that she saw Jacob piecing together one of the letters before the visit of the Carews to Miyano-shita; that when she had succeeded in ascertaining what was in it, she danced with joy, and read a portion of it out to Rachel. Evidence will also be given to show that Jacob had on several occasions been seen to enter her master's bed room, in the absence of Mrs. Carew. And if, as I suggest, these letters were collected to serve as a weapon of defence if, and when, Mrs. Carew should discover the true relations between Jacob and the deceased, we at all events have an intelligible theory, which would fully account for the collection of the letters. At all events, they were to be made use of in some way against Mrs. Carew. Having thus established a desire on the part of Jacob to injure her mistress, it is not difficult to understand why she falsely alleged that Mrs. Carew had been down in the town on the 19th October. That she herself was down in the town that day she admits; and when she was under the impression that arsenic had been purchased at Maruya's on that day, by a person signing the words "Mrs. Carew," she endeavours to fix a falsehood on her mistress for the purpose of showing that she was the person who purchased arsenic on the 19th. And it can have been no mere mistake on her part, for she gives circumstances to show that she cannot have been mistaken as to the date—and the 19th was the day on which the mail was delivered. Now Hayashi, on each occasion that he has been before the Court, has been confronted with Mrs. Carew, and has been unable to recognize her as the person who came to his shop, whether on the 19th or the 20th. Hayashi probably knew Mrs. Carew; because Yamada, in a note to a credit sale, debited to the name of Carew wrote, "Hayashi knows about this." That was the obliterated note. At all events, the person who purchased arsenic on the morning of the 20th,

paid for the previous purchases of the 8th and 18th, and the persons, Jacob and Christoffel, who went to Maruya's on the 24th paid for the previous purchase of a bed-pan and a bottle of arsenic. The question is, how did they know, or how could they guess that Maruya's shopman would give up a credit order to any one asking for it on being paid for the thing ordered, unless one of them had done the same thing before? Then again, why did Jacob fail to communicate to her mistress the message sent by Hayashi on the 21st? It was a message of great importance; but she contents herself with mentioning it to Mr. Porch, and in so casual a way, that as she herself says, he didn't seem to understand the drift of it. But though she doesn't give the message to her mistress, she speaks about it to Christoffel, who speaks about it to her master, and so, unknown to Mrs. Carew, a rumour is spread about that Mrs. Carew has poisoned her husband. And why was the name of Maruya not communicated to Dr. Wheeler until late in the morning of the 22nd? He had been in personal communication with Jacob on the subject earlier in the day, and she could have given him the name of the shop where the arsenic was purchased, had she been minded to do so. Her reticence on that point is, to say the least, suspicious, as indicating that she might have known that it would have been better to have further enquiries instituted. Now as to the 19th. In order to show that Mrs. Carew, as a matter of fact, was not down in the town as alleged by Jacob at the Magisterial Inquiry, and as she was, at all events as late as the 5th January, when the prosecution opened, prepared to swear before you, I shall adduce the following evidence:—1. Mrs. Carew's Diary; 2. The evidence of a lady, whom I shall call, who was with Mrs. Carew that morning about 10.30 to 11.30; 3. Mr. Walford's evidence of a conversation with Hayashi on the 26th Nov., when the latter timed her visit as having taken place about noon, a little before rather than after; 4. The evidence of a gentleman that he lunched at the Carews' that day, arriving some little time before noon, when Mrs. Carew came downstairs to meet him; 5. The evidence of another lady that she saw Miss Jacob at about 11.15 that morning, in the Main Street, with both the children. I come now to the 20th. I asked Dr. Wheeler at what time his visit was paid to Mrs. Carew on Wednesday, 20th; and he said it was paid in the forenoon, as soon as possible, about eleven. Hayashi says that he should judge from the entries in his book (though the time of the visit is not entered) that the visit of the foreign woman that day took place about 11 o'clock in the forenoon. Now, without going into minutes, or tens of minutes, or even half-hours, it is obvious that if Mrs. Carew was at home to receive Dr. Wheeler at about 11 o'clock that morning, she could not have been at Maruya's shop at the same time, or anywhere near it—but on this point I am happy to be in a position to call a witness, Takayama Sadakichi. He remembers taking Mrs. Carew down town on the morning of the 20th; and he will tell you the places at which he called; and will say that Maruya's shop was not one of them. He is unable to remember the hour of his departure or return, but he knows he returned with Mrs. Carew before noon on the 20th. These things being so, not only is Jacob proved to be endeavouring, for purposes of her own, to fix Mrs. Carew with the first purchase of arsenic, and giving the date of the purchase of the first; but it is absolutely certain, if you believe Sadakichi's evidence, that the person who made the first purchase of arsenic, finally said to have been made on the morning of the 20th, was not Mrs. Carew, but some one who was personating her, and some one who brought the only bottle of chloral hydrate sold at Maruya's on that day into the Carew's house. Who that person was, I cannot say. It is enough for the purposes of the defence that it was not Mrs. Carew. But the evidence has a more far-reaching effect than that. It shows that there was a person, a female, purchasing arsenic and chloral hydrate, in Mrs. Carew's name. But there was absolutely no suggestion that Mrs. Carew ever bought arsenic otherwise than openly, and by means of an order written in her own writing, until that suggestion was made by Mary Jacob. But it is in evidence that her husband said to her on Wednesday, that if she would not send for the arsenic, he would find other means of procuring it; and in corroboration of that it will be shown that he did procure sugar of lead by other means, viz., by sending for it while she was out of the house. Gentlemen, on this evidence I am entitled to ask you to say that the articles purchased and paid for on the 20th October, were not purchased and paid for by the prisoner. Indeed, it would not be likely, if she had purchased arsenic in the morning, she should be sending

for it again on the evening of the same day. But if she is not the foreign woman who visited Maruya's shop on the 20th (and if you have any doubt about it, she is entitled to that doubt), it shows that the deceased had other means of obtaining the poison he wished for, or that some other woman was introducing it into the house. Gentlemen, that the deceased was in the habit of dosing himself, there is abundant evidence to show; and if that is so, why should he not have been taking arsenic, as is alleged by the prisoner? We find from the evidence before you that on Monday, 12th October, a bottle of Mother Siegel's Syrup had been procured, and the prisoner said it was for her husband. On Tuesday, 13th October, Dr. Baelz's prescription was filled at Schedel's dispensary, and again on Friday, 16th, Dr. Baelz's prescription was filled at Schedel's. On Sunday 18th, in the absence of his wife at church, he sends to Maruya's for sugar of lead; and on the same day he takes some dark looking liquid which might be Schedel's arsenic. Rachel Greer will tell you that on that day her master asked her to pour some soda-water into a glass. She will also tell you that there was already some liquid in the glass and that it was darker than the colour of sherry. I dare say you will have noticed when the bottles were produced that the colour of Fowler's Solution sold by Hayashi differed from the colour of that sold by Schedel. Schedel's was of a much darker colour than that sold by Maruya, and at this time the only arsenic brought into the house, according to the evidence, was that bought from Schedel. That shows three things:—First, that he was dosing himself with Siegel's Syrup and Baelz's prescription with the knowledge of his wife. Second, that he was dosing himself without her knowledge with sugar of lead. Third, that he was dosing himself for a pain about which he had consulted Dr. Munro and Dr. Baelz some years ago in 1893, and with reference to which he told his wife, on Tuesday, the 20th October, that when he was suffering in such a way, arsenic was the only thing that gave him any relief. On Wednesday he again spoke of the great pain he was in, and told his wife that if she did not get him what he wanted, he would find other means of procuring it, whereupon she wrote out on another piece of paper, copying from the slip he had given her, the names of the poisons he had asked for, and gave them to Mary Jacob openly and without any attempt at concealment. I submit, gentlemen, that if you find as a matter of fact that he was taking medicines that were not poison; and sending for, and probably taking, sugar of lead that was a poison; it makes it less difficult to believe that he was taking arsenic. Why should he send for Baelz's mixture on the 13th, and again on the 16th, unless he was suffering from pain in the bladder, for which it was originally prescribed? That he in some way connected the pain he suffered with the taking of arsenic is apparent from the evidence that will be given by Mr. Kaufmann, who remembers that some time ago he was in the urinal at the Club when Mr. Carew seemed to be suffering great pain, and volunteered the information that he was in the habit of taking more arsenic than an ordinary man could stand. The pain he was then suffering, I suggest, was caused by the bladder trouble; and the mention of arsenic with that pain, tends to corroborate Mrs. Carew's statement of what her husband reminded her of, viz., that when he was suffering in that way, arsenic was the only thing that afforded him any relief, and that if she would not get it for him he would find other means of procuring it. But arsenic also produces the pain stranguary; and it is therefore possible, as Dr. Munro testified, that the deceased might, by taking arsenic, be inducing the very pain that he was taking arsenic to alleviate. While on this subject of dosing himself, I would remind you of the very important evidence given by Mr. Thomas, of Brett and Co.'s. He had made very careful experiments with sugar of lead, in order to ascertain how much could be administered to a patient, in the different kinds of fluid the deceased was taking, without his knowing it: and in no case did it exceed 5 grains in $\frac{1}{2}$ a pint of liquid. Whatever, therefore, may be said about the tastelessness of arsenic, it cannot be said of sugar of lead that it could be administered in any large quantities without the patient knowing it. The probability is that the deceased was taking sugar of lead knowingly; and arsenic also. If, as Mr. Dickinson testified, the deceased had taken an overdose of arsenic on a previous occasion, from which he had nearly died, he would probably have recognized the pain he was suffering during his illness. But if that is so, why did he not complain to the doctor that he was getting arsenic? I am aware, of course, that this line of argument lies in the theory of suicide. It is not one that I myself proposed for the defence, as I see no sufficient

motive for it; I merely mention it as a possibility. As to the telegram despatched to Mr. Dickinson by the accused on the 21st, I fail to see why so much importance is attached to it, or to Mrs. Tocque's chit-book. That Mrs. Carew did send a message to Mr. Dickinson, there can be no doubt, his recollection of the last words of it is that they were, "Baelz says very serious." Well, she is not responsible for the words which reached Mr. Dickinson. My suggestion is that the words were "Baelz sent (or sent for) very serious." What possible motive could Mrs. Carew have had for saying that Baelz had come, when it was well known he had not? Then as to the chit-book of Mrs. Tocque. What object was there in saying what was not true; and which could be so easily proved to be untrue? "Very many thanks, about the same. Dr. B. comes again this evening, E.H.C." Leave out the word again, and it is absolutely true. Which is the explanation most consistent with probability? That word "again" was written inadvertently, or purposely. And if purposely, what was the purpose, and how is it connected with the guilt of the prisoner? And now I come to the question of the torn envelope—the two pieces of paper last produced by Christoffel and put into evidence by the Counsel for the prosecution during that witness's examination. The writing on this envelope is apparently that of the prisoner, whose explanation of it is that it was some stupid after-dinner game they used to play in the summer when her cousins were on a visit to her. No one knows for how long or short a time it had been in Jacob's possession; but how it is proposed to use it for the purpose of incriminating the prisoner, I am at a loss to understand. Neither do I understand why the witness Christoffel should have deceived Mr. Litchfield about it as she evidently did. Her reason for withholding it, viz., that she thought it too incriminating, is ridiculous and false on the face of it. Neither she nor her friend Jacob have shown any signs of being influenced by any such merciful motive. They had done their best to ruin Mrs. Carew's character, and to throw suspicion upon her as being the murderess of her husband; and it was therefore from no feeling of compassion that the paper was withheld. I myself cannot see that any importance can be attached to it; and under the circumstances in which it is produced, I am entitled to ask the jury to leave it out of consideration altogether. I have now but two other points to deal with—two points that I have left to the last—and I will now present them to you. They are the Annie Luke letters and the Dickinson letters. It is alleged by the prosecution that these letters were written by the prisoner at the bar; and Mr. Mason was called to give his opinion to that effect. The value to be attached to that opinion, gentlemen, is entirely a question for you. For myself, I think it of no more value than your own eye-sight and judgment. You will recollect that on Wednesday last, after the conclusion of the re-examination of the witness Mason, he was asked by my Lord whether he thought exhibit A—the order for the bed-pan and the bottle of arsenic—to be in the handwriting of the accused. His reply was, "I might make a more minute examination. I was looking at the signature. I have doubts about the other part." I afterwards suggested that the nature of these doubts should be explained, and put this question through the Court:—"I would ask whether the witness could state positively if in his opinion the whole of it was in the handwriting of Mrs. Carew?" The witness carefully examined the paper for some time, and his doubt was confirmed; he said, "I have doubt about the words, one bed-pan; I should be surprised to learn that the rest was not in Mrs. Carew's handwriting. Then again, after a very lengthy examination in chief, in which the initial letters s and h played the most important part as being more characteristic than any others, I took the witness through the initial s's and h's in only one short letter written by Mrs. Carew, and had no difficulty in showing that at least two out of six h's did not bear out his theory; and that out of fifteen initial h's, there were only three that the witness would call characteristic, and twelve that he would not call characteristic. He enumerated the capitals C, P, D, M, R, H, and I, and the small letters a, b, d, initial, l in various forms, and the letter e, as well as the letters th in combination, as specially marked in Mrs. Carew's handwriting; but he apparently found none of these in the Annie Luke letters. Then he gave it as a special characteristic of Mrs. Carew's handwriting that the letter o in the contracted form of the word "number" was followed by a colon, instead of having two horizontal dots under the o. He also called attention to the elision mark in the word o'clock; and stated that Mrs. Carew invariably placed it over the c, instead of between the o and c. I have only looked at one piece of Mrs. Carew's handwriting to find

this alleged peculiarity, viz., in the letter signed "Edith;" and there the elision mark is not over the c, but in its proper place.

His Lordship—What exhibit?

Mr. Lowder—The letter signed Edith.

His Lordship—The torn letter?

Mr. Lowder—It has only a corner torn off. I have examined that letter, but I did not carry the examination farther.

His Lordship—It is exhibit O.

Mr. Lowder—Thank you, my Lord. You will see, gentlemen of the jury, that the mark is not over the c, but between the o and the c.

His Lordship—I have the exhibit you refer to; have you a photograph of the letter?

Mr. Lowder—Yes. Here is the enlargement, and the position of the elision mark is most apparent—it is between the o and the c, not above the c. I have not taken my researches farther, but you, gentlemen of the jury, will see that Mr. Mason's theory is not there carried out.

Continuing, Mr. Lowder said—Gentlemen, as I said before, I attach little value to Mr. Mason's opinion as an expert in handwriting or in fact as far as that goes to any expert in handwriting, I prefer your eye-sight and judgment, and will therefore not pursue the subject further. Apart from the question of handwriting, there are strong reasons against the presumption that Mrs. Carew wrote these letters. If she wrote them, the fact was known to her, and to her alone; and she might have suppressed them without anyone being the wiser. Then the language and sentiments contained in them are not such as she would be likely to make use of. It is inconceivable, for instance, that she should, under the then existing circumstances, have written to me that letter of the 11th November. You no doubt bear that letter in mind; I presume that you do, and will therefore not read it to you again. I have no doubt you will refer to that letter before the case closes. My learned friend, in his opening address, stated that Mary Jacob would testify that when she has shown the card left by the mysterious stranger on the 10th October, the letters A. L. were not on it; and Mr. Mason says that the M. J. and A. L. were not, in his opinion, written by the same hand. The inference you will be invited to draw from that is that the letters A. L. were subsequently inserted by Mrs. Carew. But if so, she was not the writer of the M. J. on the card; nor the creator of the mysterious stranger; nor the writer of the A. L. series of letters. Gentlemen, it is not of vital importance in this case to ascertain who wrote those letters, provided you are satisfied that Mrs. Carew did not. I say they were probably written by Mary Jacob; and read with that theory in mind, there is little or no mystery about them. However, all I ask you to do is to compare Mrs. Carew's acknowledged handwriting with the handwriting of those letters, and to say where the slightest similarity is to be detected: and also to bring the question to the test of your own common sense, and to say on what possible theory Mrs. Carew would have done anything so absolutely idiotic and meaningless as to have written those letters. Gentlemen,—I have now to turn to a consideration of the correspondence between the prisoner and Mr. Dickinson. It is obvious that these letters have been introduced in evidence for the purpose of showing that there existed a motive in the mind of the accused for getting rid of her husband. And the very first thing that occurs to one to ask is, why should she wish to do any such thing? No woman, with an inclination,—perhaps I had better use the word propensity—to gratify her vanity by captivating the senses of the opposite sex, ever had such great opportunities as were allowed to her,—ever had so complaisant a husband. Mr. Dickinson has already given evidence pointing in that direction; and it will be confirmed by Mr. Porch. There were the "Ferret," the "Ice-cream Vendor," or "Organ Grinder," the "Youth," and others to whom reference is made in the Diary, if you care to scan its pages,—all male friends, all admitted by the husband to a greater degree of intimacy with the wife than is generally considered allowable; and the question is why should she wish to get rid of a husband who gave her every facility for amusing herself with flirtations which, in the case of Mr. Dickinson at all events, were carried somewhat beyond the limits of a passionless liaison. It seems to me, gentlemen, and I put it to you as reasonable men, that the very last person in the world a woman would wish to poison would be the husband who allowed her such liberty and latitude. It must be borne in mind that a woman never thinks it wrong for a man to be in love with her, whatever opinion of that man her husband may entertain. And if Mrs. Carew allowed herself to give to Mr. Dickinson a greater degree of encouragement than was

strictly prudent, she did no more than hundreds of women have done before her; are doing at this very day, and continuing to do from day to day; and will do and continue to do, in spite of what moralists may preach to the contrary. But are they to be thought capable, on that account, of the atrocity charged against the prisoner? If so, it is a fortunate thing that the number of husbands living in the East who are in the habit of dosing themselves with arsenic, or other poisons, is comparatively small. Now men are not free from the same species of vanity which I have indicated. You will doubtless remember that passage in one of the letters of Mr. Dickinson in which he actually resents the dislike of the man who, in the same breath he says he loathes and despises, and whose wife he is instigating to obtain a divorce from her husband! Then how was she to benefit—what advantage was she to receive, from the death of her husband? Will it be suggested to you that she wanted to marry Mr. Dickinson—that woman being *varium et mutabile semper*, she desired a change? Obviously the answer to that is that she had, or took, most perfect freedom to do as she pleased. Of course, gentlemen, you will bear in mind that the ardent wording of the letters addressed by Dickinson to the prisoner is his own,—provoked, perhaps, to some extent,—but nevertheless for which she cannot be held entirely responsible. When a man is ingratiating himself with a woman, he is apt to use exaggerated language, and so far as its excess goes, it is not to be charged to her account. Mrs. Carew, it must be evident to you is not deficient in imagination, and is given largely to exaggeration; but it would be just as reasonable to charge that exaggeration to Dickinson, as to charge his to her. With regard to her moral standard, and, if it come to that, that of her husband also, perhaps the less said the better; I am not here to defend either. But in spite of that, and in spite of a passing flirtation with Dickinson, the attachment between the spouses seems to have been very sincere, and to have remained unbroken. How then, do you ask, can the Dickinson letters be explained? Gentlemen, he would be a bold man who would undertake to attempt to explain the vagaries of either woman or man in connexion with the sexual passion. The Latin poet asks:—

Quid levis pluma?—pulvis.

Quid pulvis?—ventus.

Quid ventus?—mulier.

Quid mulier?—nil.

Shall I venture to translate it, gentlemen, for the benefit of those of you who left school before I did? What is lighter than a feather?—dust.

What lighter than dust?—wind.

What lighter than wind?—woman.

What lighter than woman?—nothing.

The poet thus asks and answers a question to which we perhaps should not have dared to offer a reply. This one thing is evident, in the conduct of the spouses towards each other, and that is there was forbearance, great forbearance, on both sides. But that it never degenerated into indifference, or want of affection between them, is evident by the letters written to him by her from Miyanoshita on the 28th and 30th days of September. Why, indeed, should affection have died? Each would seem to have tolerated in the other the tendencies of which each was self-conscious; and if Mrs. Carew wrote or spoke of her husband as bullying her, it was merely an exaggerated method of attracting the sympathy of the man with whom she was for the moment amusing herself. Gentlemen, I submit to you that that correspondence affords no satisfactory evidence of any desire on the part of the prisoner to free herself from chains which allowed her the utmost freedom. The wording of the letters, as I have said, are his, not her's; and though you may be of opinion that the prisoner is gifted with great mental and physical capacity, it not unfrequently happens that those acquirements are coupled with sexual obliquity. Dickinson couldn't marry her, and she probably knew it. And why should she want to marry him? He was simply one of a series! What advantage would it be to her to get rid of her husband? She was about to purchase a house, and about to purchase a position for her husband in a mercantile firm in Yokohama. Why then kill him? The whole facts seem to be that whilst she was obtaining Dickinson's sympathy under false pretences, for her own temporary amusement, he was instigating a divorce,—as to which she did not even consult, or ask any advice from, Mr. Litchfield, who was then her legal adviser. The conclusion I invite you to draw, gentlemen, is that the Dickinson letters show no motive for the crime charged; and that in considering your verdict it would be the height of injustice to add inadequate

motive, or absence of motive, to insufficient fact. Let me again remind you of the letters written by the prisoner to the deceased, from Miyanoshita, towards the end of September; I need not read them now, doubtless you bear their terms in mind. But it will be important for you to remember them. If I understand the theory of the prosecution aright, from the 19th of October, the whole character of the mind and feelings of the prisoner towards her husband changed, and she set herself to prepare for the perpetration of of the most foul, cool, deliberate murder that ever was committed. Of course one cannot say that such a thing is impossible, but I will venture to say that it is highly improbable. Borrowing and adapting an eloquent passage from the learned Dean of Faculty in his defence of Madeleine Smith, I say he will be a bold man who will fathom the depths of human depravity; but this at least experience teaches us, that perfection, even in depravity, is not rapidly attained,—he was evidently thinking of the Latin proverb, *Nemo repente fit turpis simus*, and it is not by such short and easy stages as the Crown Advocate has been able to trace in the career of Edith Carew that an affectionate wife passes all at once into the appalling wickedness of a Borgia! Such a thing is not possible. There is a certain progress in guilt, and it is quite out of all human experience. From the tone of the letters, there should be a sudden transition from affection for a particular object to the strange desire for removing one who offered no obstruction to her wishes and purposes. Think, gentlemen, in your own minds, how foul and unnatural a murder it is that is imputed to the prisoner,—the murder of one whom she married against the wishes of her parents, and who was the only man whom she had ever really loved or cared for. And the object of that affection, you are asked to believe, she suddenly conceived the purpose of murdering. Such is the theory you are desired to believe. But, gentlemen, before you believe it, will you not ask for demonstration? Will you be content with suspicion, however pregnant, or will you be so unreasonable as to put it to me in this form, that the deceased having died of poison, the theory of the prosecution is the most probable? Oh, gentlemen, is that the manner in which a jury should treat such a case? Is that the kind of proof which they should convict on a capital offence? Leaving that part of the subject, I will touch on another, it is the evidence given in this Court by Mrs. Hodges. Gentlemen, it is to be regretted that the learned Counsel for the prosecution should have thought it necessary to call Mrs. Hodges before you to tell you of the painful incident that occurred in Court during the preliminary examination of the accused. I cannot think it was necessary to their case, but, on the other hand, I cannot think it will influence your decision in a sense adverse to the prisoner; in which case it is not entirely to be regretted. What was the document she endeavoured to repossess herself of? It was a letter which had been stolen from her, and made use of against her, for the purpose of compromising her. When she repossessed herself of it, the real purpose of its production was not present to her mind. She was thinking only of her own shame. "He who fishes from me my good name, robs me of that which not enriches him, and makes me poor indeed." Until the production of these letters, her name, so far as the public were concerned, was untarnished. Her shame was known to herself alone, and one other, as she fondly hoped. It was about to be published to all the world; to be recorded against her in the history of this case; to be read one day, perhaps, by the children in whose name she had so pathetically appealed, and appealed in vain to the cruel Mary Jacob, who had never received anything but kindness at her hands, as is shown by the letter written to Mrs. Carew by E. Jacob, Mary Jacob's mother, but kept back by Mary Jacob from the person to whom it was addressed. And here I may remark, incidentally, that all the letters addressed by Mrs. Carew to Mary Jacob, as well as her own, and her brother's visit to that person, were with reference to these letters alone. Gentlemen, she tried to repossess herself of this compromising letter; and was it not natural that acting upon the impulse of the moment she should do so? So far from its being an indication of her guilt, of the terrible charge that was then and is still hanging over her, I submit to you that the reverse construction is the only one to be put upon it. Contrast the demeanour during the whole of the trial with her behaviour when her shame was about to be proclaimed. It was of infinitely more importance, in her eyes, to shield her honour than to defend her life. She was humiliated and ashamed. Had she been conscious of the guilt of murder, that consciousness would, I submit, have over-

whelmed and surpassed the less feeling in so great a degree as to have made it impossible for her, even on the impulse of the moment, to do a thing so obviously calculated to increase, in the minds of the public—as indeed it did—in the minds of the public from whom must eventually be selected the jury who were to be her judges—the suspicion that she was the murderer of her husband. Confronted, gentlemen, with this monstrous charge of murder, she had stood erect, proudly conscious of her innocence. Her courage has never failed her. You have had the opportunity of regarding her, day by day, in the prisoner's box; and you will have no difficulty in believing me when I say that perhaps there is not a single person in this community who has not felt her position, whilst awaiting and whilst undergoing her trial, more keenly than she has felt it. Gentlemen, you judge of the veracity of a witness as much by his demeanour and bearing as by the evidence he gives; why should not the same rule be applied to the prisoner at the bar? Is her demeanour, under trial for her life, when contrasted with her behaviour in endeavouring to repossess herself of a letter that had been stolen from her by a pilfering nursery governess, a proof, or even an indication of a guilty conscience? Gentlemen, I am not afraid of the answer you will give to that question. Gentlemen, you will be relieved to hear that I have nearly finished what I wished to say to you. I sincerely thank you for the great patience with which you have listened to me. I have, owing to your forbearance, had the opportunity of putting before you what I had to say more concisely than I otherwise could have done; but in justice to the cause I am advocating I could not have well said less than I have. There is one thing, however, to which I should like to call your attention before I sit down, and that is the cruel conspiracy of silence that was maintained at a time when one word to either Mr. and Mrs. Carew might have been sufficient to clear her of the terrible suspicion fastened upon her by Mary Jacob and Elsa Christoffel. Before noon on Wednesday, Mary Jacob has her suspicions aroused; she also had a message to deliver to Mrs. Carew. She did not deliver the message; but in the afternoon she communicated her suspicion to Christoffel. Christoffel, in turn, passed it on to Mr. Dunlop, by Mr. Dunlop it was whispered to Dr. Wheeler, by whom it was told to Mr. Hall. Dr. Wheeler, instead of communicating it to Mrs. Carew, actually charged her brother to say nothing to her about it. I ask you, gentlemen, whether that was fair treatment? The suspicion entertained was so grave, so serious, of such import to the person suspected, that in the commonest justice it ought to have been communicated to her, in order that, if possible, she might have removed it in its very inception, by an appeal to one whose mouth was so soon to be closed for ever. Gentlemen, I have done; and I am cheered by this consideration, that however weak the defence set up may be, a prisoner in the position of my client is never really unprotected in a Court presided over by a British Judge, assisted by a British Jury.

Mr. Lowder, after a short pause, next said—I intend now to call medical evidence; but as it is nearly twelve o'clock it would perhaps be convenient to adjourn.

His Lordship—In that case, as we are rising early we had better resume at half-past one o'clock. Will that suit you?

Mr. Lowder—Quite, my Lord.

His Lordship—And you, Mr. Wilkinson?

Mr. Wilkinson—Quite, my Lord.

The Court then rose for luncheon.

His Lordship took his seat at 1.35 in the afternoon.

Mr. Lowder called for Mr. Jephson, but the witness did not answer to his name. Dr. Eldridge was then called, and having been sworn, was examined by Mr. Lowder.

Mr. Lowder—Dr. Eldridge, you are a medical man, now practising in Yokohama?—I am.

How long have you been practising your profession?—Nearly thirty years.

Mr. Lowder here interposed and said—My Lord, there is a witness, whose name I called just now, who has just arrived and who wishes to leave very soon and whose evidence I wish to interpose. It will not take five minutes, my Lord, and I would ask Dr. Eldridge to stand down for a few moments.

Mr. Jephson then entered the witness box, and having been sworn on the Old Testament, according to the Jewish custom, was examined by Mr. Lowder—My name is Louis Jephson; I am a British subject and a resident in Yokohama.

You were acquainted with the deceased, Mr. Carew?—I was.

Can you recall a conversation with him in which the word arsenic was mentioned?—Yes. At tiffin

at the Club. I suppose I was looking unwell, and he said—"What is the matter with you?" I said, I am suffering from—

His Lordship—When was this?
Mr. Lowder—Could you recall what month this was?—It was in September last, after arriving from Miyanoshta.

I presume after your arrival from Miyanoshta. About what time in September was it?—In the beginning of September.

What was the nature of the conversation?—I said I was suffering from gouty eczema, which caused great irritation, and I was afraid I should have to take to the old prescription, viz., arsenic pills; but that I was afraid of getting them made up in Yokohama because I had no prescription. At that he replied, "What! arsenic, why I have taken tons of it."

His Lordship—What did he say.

Witness—"I have taken tons of it."

His Lordship—But you were saying something more?

Witness—Yes, in his exaggerated way, he replied, "Why I have taken tons of it."

Mr. Wilkinson did not put any questions to the witness.

Dr. Eldridge re-entered the witness-box.

His Lordship—You left off saying, "I was thirty years in my profession."

Witness—Nearly thirty years, my Lord. I have a diploma from the University of Georgetown, at Washington; have gone through Post-Graduate Courses in New York Schools, and have a special diploma for chemistry as a post graduate.

Mr. Lowder—And an administrator, and later associate professor of Anatomy in your *Alma Mater*—I was.

You were a teacher in various branches of medical science for seven years?—I was.

You are an honorary member of the Association of the Bellevue Hospital of Surgeons?—I am. I am one of some three or four honorary members of that Association.

You are a member of the New York State Medical Association?—I am.

And also of the Physiological Society of Washington?—I am.

And you are a citizen of the United States?—I am.

Were you present in Court when Dr. Wheeler gave his evidence?—I was.

And also when Dr. Divers gave his evidence?—Yes.

And you listened attentively to the evidence then given?—I did.

Now, taking the symptoms of the Carew case as detailed by Dr. Wheeler, can you say whether they were so distinctly specific as to clearly indicate arsenical poisoning?—They were not.

Might they have been due to some other cause?—Yes.

What other cause?—Almost any form of irritant poison, even from bad food, such as oysters or bad fish.

His Lordship—Of course you are speaking as to the whole sentence?

Witness—Yes. Even from bad oysters and bad fish.

Mr. Lowder—Supposing the death itself was due to arsenical poisoning, might the earlier symptoms have arisen from some other cause?—Certainly.

And what would be the effect of arsenic taken on the top of those symptoms?—It would depend on the dose, but if there was already some irritation it would increase the irritation, but it might not produce any specific symptoms whatever.

Arsenic would tend to aggravate it?—Not necessarily producing any specific symptoms whatever.

Would the tendency be to aggravate it in any great degree, even to a fatal dose?—Yes, it would.

Is qualitative testing for arsenic in the urine very elaborate?—No.

Are not stricture of the urethra and inflammation of the bladder, particularly of long standing, often accompanied by disease of the kidneys?—In a considerable proportion of cases.

The presence of albumen in the urine, does that give cause for suspicion in any particular thing?—*Prima facie* it raises a suspicion of a disease of the kidneys.

Examining urine chemically for the purpose of diagnosis and finding albumen, would you consider it necessary to take any other steps?—I should.

With what view?—Of settling the question of the presence or absence of disease of the kidneys, as far as possible.

In what would such further examination consist?—The use of the microscope.

Now supposing a patient were suffering from kidney disease, would a given dose of arsenic be more dangerous in that case than if he were not suffering from kidney disease?—Certainly. On

account of the suffering from kidney disease the elimination of the arsenic would be longer.

Can you judge by looking at a kidney which is apparently healthy to the naked eye whether it is sufficiently diseased to interfere with its eliminative functions?—No.

What would be necessary?—Microscopic examination.

You have heard and read, have you not, of the habitual—even excessive use—of arsenic in Styria?—I have.

His Lordship—That is white arsenic.

Witness—But arsenic habitation occurs in almost all countries. It is well recognised now as occurring not only in Styria, but in Germany, France, Great Britain, and the United States. In Great Britain it is generally taken as Fowler's Solution, except in Cornwall, where the miners use the arsenical ore; in fact, it is so well recognised now as a general habitation that one of the latest German authorities speaks of it as being used as a *genusmittel*, or a pleasure or satisfaction, or as we would say, as a pick-me-up.

His Lordship—Is he referring to only particular kinds of arsenic?—No, to arsenic in general. Even Brunton, who has been quoted in connection with this trial—in his great work on the apertics—is not an authority to limit arsenic habitation to Styria, on the contrary, he gives it as one instance only.

His Lordship—I do not remember the name of Brunton having been mentioned.

Witness—He was quoted by Dr. Divers.

Mr. Lowder—What is the maximum dose of Fowler's Solution? Can you state it?—It ranges quite widely. The usual dose is from five to ten drops, but a much larger dose has been known.

In my own experience ninety drops. Thirty drops, three times a day. I have prescribed that for a considerable time.

His Lordship—For a considerable time, you say?

Witness—I gave it for a considerable time.

His Lordship—Is that an isolated case?

Witness—It is an isolated case in my own experience, but I have given approximate doses.

His Lordship—What do you call approximate?

Witness—I have given twenty drops.

His Lordship—Three times a day?

Witness—Yes; three times a day.

Mr. Lowder—Would you be surprised to hear that 100 drops can be tolerated?—In view of the evidence we have of habitual arsenic, I see no reason why 100 drops should not be tolerated at a time.

And beyond?—It would be a rare instance, undoubtedly, unless it were reached by gradual prolonged habitation.

His Lordship—But still this dose of 100 drops would not be repeated in the same day?

Witness—I know of no reason why it might be not repeated the same day in view of what we know of arsenic habitation. I have known of no instances, but I know of no reason why it should not be possible.

His Lordship—When you speak of general habitation, of course you refer to what you know as from books?

Witness—In books, of course. If habitation to the extent of 7 grains of white arsenic in a day is possible, I see no reason why 13 grains taken in the form of Fowler's Solution is not possible. We have the best evidence that 7 grains can be tolerated.

Mr. Lowder—And 3 grains in the form of Fowler's Solution would be, how much?—That would represent about 300 drops.

His Lordship—I understand it is from 100 to 120 drops to the grain.

Witness—There are 4 grains to the ounce, and roughly speaking there are 480 drops to the ounce, it would be a little under 3 grains in the 480 drops, or ounce of Fowler's Solution.

Mr. Lowder—Should you say that, given the ability to tolerate arsenic in any form—is there any reason why it should be confined to the people living in Styria?—I have already answered that question.

His Lordship—He says it is taken in France, Germany, the United States, etc.

Mr. Lowder—Supposing a man had accustomed himself for a period of time to excessive doses of arsenic and then discontinued it for a period, and then supposing he began again where he left off?—It might be excessively dangerous.

Is jaundice an occasional symptom of both acute and chronic arsenical poisoning?—It is.

Would an affection of the liver be apt to produce jaundice more quickly than if the liver were not affected; that is if arsenic were taken?—It would in the liver, whether already disordered from climatic causes or the use of alcohol; jaundice might be produced from an amount of arsenic which under other circumstances would not manifest itself in that way.

In examining for arsenic *post mortem* in a criminal case, what portion of the body should you consider it necessary to examine?—The rule, I think, in such cases is to examine the gullet, liver, intestines, kidneys; and in many cases other portions, such as the heart, bile; sometimes the bones and brain.

Have you anything special to say with reference to the examination of kidneys?—I should say it was rather exceptionally necessary to examine the kidneys as it is one of the organs chiefly affected by arsenical poisoning.

Now, if in examining any given case you could find white arsenic in the stomach and identify it as such, and should also find it dissolved in the same organ, as well as absorbed arsenic in the liver, could you draw from that any deduction that arsenic had been taken in any other form than solid arsenic?—From the facts you have given me, I should have no right to draw any other deduction than that the arsenic present was all derived from the white arsenic.

Supposing that arsenic is found in the stomach and tissues *post mortem*, do you know any method for determining from the *post mortem* examination and from chemical analysis whether the arsenic was given in one or repeated doses, or through a given length of time?—No, that is impossible.

In any given case where arsenic is found *post mortem*, and it is shown that the deceased had taken the drug medicinally within a short time of his death, would not this fact affect the deduction of arsenic in the body?—It would affect the interpretation of the presence of arsenic in the body. It has been held that the presence of arsenic in the body after it has been administered medicinally within three weeks or even a month—

Mr. Wilkinson—I would like your Lordship just to make sure, before Dr. Eldridge goes forward, whether he means held.

His Lordship—I presume you mean that it has been held by medical experts?—Yes—would account for the presence of a reasonable amount of arsenic in the body.

That is to say, that arsenic administered medicinally as far back as a month before, would be found in the body?

Witness—That fact would account for the presence in the body of arsenic in the *post mortem*.

Mr. Lowder—Do the symptoms of lead poisoning resemble those of arsenical poisoning in many cases?—Yes.

His Lordship—Do you mean that many of the symptoms are the same?

Witness—I mean that the symptoms are the same or closely resembling those of arsenical poisoning in very many cases, or very many instances.

His Lordship—Quite so. I only want to make it quite clear.

Mr. Lowder—Is there any certainty what amount of lead found represents a given amount taken?—No.

Of arsenic?—No.

Even a very small amount recovered may represent a very large amount taken?—Yes.

His Lordship—In either case?

Witness—Yes. In either case.

Mr. Lowder—In the present case, the stomach, the liver, and the intestines were chemically examined and the kidney was not. Now in acute poisoning by lead, what have you to say of the amount that may, when absorbed, be found in the kidneys as contrasted with what may be found in other parts?—With a given weight of the organ there may be as high as $\frac{7}{8}$ times the amount found in the kidney as found in the liver, or about four times what would be found in the intestines.

Can you speak as to the heart, bile, bones, etc.?—In the heart and bile there may be something like $\frac{6}{8}$ times as much as in the liver, weight for weight; in the bones I think something like four times.

Can you give a reference to your authority on this point?—Chittenden—one of the highest authorities on such subjects in the United States. I think he is acknowledged all over the world as an authority.

I do not know if you remember volume and page, but if you can, Counsel for the other side may wish to have it?—It is volume 5.

Mr. Lowder—What value should you place upon the estimate of the amount of lead found which is based upon the examination of the liver and intestines alone?—I do not like estimates in a matter of life and death.

His Lordship—Which are based upon the examination of the liver and intestines alone?

Mr. Lowder—Yes, that is the case. Have I not put my question clearly, my Lord?

His Lordship—Well, I do not quite understand it.

Witness—I should place no value, or rather I should say I would place little value. I do not like estimates in matters touching life and death, an estimate in such cases depends too much upon the

question of experience or the prejudices of the observer, or on the perfection of the senses and many other causes. I think that where more than a trace is found, weighing is essential.

His Lordship—Do I understand that even if it had been weighed you would place very little value upon that as a basis of what had been taken?

Witness—Yes. But of course, the weighing would have given us a more definite idea of what had been taken.

Mr. Lowder—Now if both arsenic and lead are found *post mortem*, can you say absolutely which caused the death or whether both caused the death?—It would be almost impossible to say whether either caused the death, or whether or not both caused the death.

Can you give us any idea of what the action would be, would the poisons react upon one another or would one reinforce the other?—They would reinforce each other. Neither would act independently of each other, both being irritant poisons.

Now is it absolutely opposed to reason or theory that a person would commit suicide by taking repeated doses even though it were painful in its effects?—No; a determined suicide might continue taking doses of a painful poison, hoping that each one would finish him. It is a matter of common experience that suicides very often chose a very painful form of death even when much easier means are within their reach. For instance, I have known a well educated druggist to commit suicide by strychnine, perhaps the most painful poison of all.

His Lordship—You say you knew him?

Witness—Yes, sir; though all the easier means of death were at his command.

Mr. Lowder—Dr. Divers has stated that he concludes that arsenic had been taken in solution by the deceased from the fact that he found so little white arsenic in the stomach and bowels. What have you to say to that?—The amount of white arsenic found undissolved *post mortem* in the stomach and bowels does not definitely bear any relation to the amount taken.

His Lordship—That I think we have had before.

Witness—I think not quite in the same form.

Mr. Lowder—Let me put my question in another way, my Lord. White arsenic acts when being absorbed?—Yes.

Then if it is shown that deceased had certainly received white arsenic at a date some time preceding the 22nd October, is there any reason, even supposing the dose had been a very large one, why the whole or a very great part of it might not have been absorbed and partially excreted before the time of death?

His Lordship—What evidence is there that white arsenic had been taken?

Mr. Lowder—Dr. Divers says that deceased had evidently received white arsenic between the 19th and 22nd. (To witness)—Is death from Fowler's Solution of arsenic well known or is it rare?—It is very rare.

So far as medical knowledge goes?—Yes, so far as medical knowledge goes.

Is there anything in the symptoms as detailed by Dr. Wheeler, including the remission of Wednesday, inconsistent with the supposition that death might have occurred from a single large dose of white arsenic?—No.

Mr. Lowder—Dr. Divers gave the poisonous dose of acetate of lead as $\frac{1}{2}$ to 2 oz. Do you agree with him?—I do not. The limit, or the range of the fatal dose, like that of arsenic, is very wide. I should say that from 2 drachms upwards is probably the fatal dose of lead.

His Lordship—Dr. Divers said from $\frac{1}{2}$ to 2 oz?

Mr. Lowder—Yes, my Lord; and witness says from $\frac{1}{2}$ oz. upwards.

Mr. Lowder—Can you give authorities?—I can. And I suppose a fatal dose of arsenic: can you say how widely that varies?—It so varies that it runs from 2 grains to 2 ounces; that is 2 ounces has been recovered.

Mr. Lowder here asked for a small bottle, exhibit E.

His Lordship (to witness)—Do you mean first dose?—Yes.

Mr. Lowder asked witness to examine exhibit E. His Lordship—That is what he weighed the other day?—Yes. I weighed the contents of that bottle. I found 97½ grains of acetate of lead remaining in the bottle. It is about one-third full.

Have you examined and weighed a similar bottle when full?—Yes.

Obtained by you from Maruya?—Yes, I have taken it with my own hands from among a number of small bottles exposed for sale at Maruya's and I weighed the contents and found it contain 335 grains. I then emptied the bottle in evidence, transferred the contents of the new bottle to it and found that it exactly filled it.

His Lordship—The bottles are the same size?—Witness—Yes, my Lord, only that they vary as bottles do.

Mr. Lowder—I would like that bottle put in evidence.

Witness—I will mark my initials on this bottle. Mr. Lowder—Now supposing the deceased had taken the whole of one bottle and as much as is missing from the other bottle; how much would he have taken?—He would have taken 572½ grains, or roughly speaking 1 oz. $\frac{1}{2}$ drachms. Certainly well within the limits of a fatal dose. I mean, well over the average amount of a fatal dose.

It has been inferred by Dr. Divers from the fact that arsenic was found in the body of the deceased, and from the fact that Fowler's Solution went to the house before his death, that Fowler's Solution was taken by the deceased and that death was due to the same?

Mr. Wilkinson—My Lord, I am rather puzzled as to my recollection as to that question having been put to Dr. Divers, I should like your Lordship to refer to your notes.

His Lordship—I presume it was not put to him in exactly that way.

Mr. Lowder—No. It was not put to him in exactly that way, but it was a history of the case.

Mr. Wilkinson—I do not think it was put to Dr. Divers at all that Fowler's Solution was taken to the house. I think that all the questions so far as they appeared in the examination-in-chief were limited to the *post mortem*, to the chemical examination afterwards, and to the symptoms as taken in evidence.

His Lordship (to Mr. Lowder)—Perhaps you can refer me to the question as it was put?

Mr. Lowder—I cannot, my Lord, but I will put the question in another form. (To witness)—Can you say that from your knowledge of the history of the case that the death might not have been the result of lead poisoning?—I cannot.

Now referring to the symptoms of arsenic and lead poisoning, are not many of them practically indistinguishable?—I refer, of course, to acute cases of lead poisoning?—They are.

Vomiting might occur in both?—Yes.

And intense nausea?—Yes.

And violent diarrhoea?—Yes.

And severe abdominal pain?—Yes.

And acute pain in the stomach region proper?—Yes.

And constriction of the throat?—Yes.

And great distress in moving the bowels?—Yes.

And painful and difficult urination?—Yes.

Is there any distinctive colour of the stools caused by arsenic?—None, except when there is hæmorrhage; then it is bloody.

What are the characteristics of the stools in arsenic poisoning?—Those of simple diarrhoea, or like the rice water discharges of cholera.

What would be the effect of lead upon the stools?—It would darken them.

That would not be an effect of arsenic?—It would not.

Now, in cases of acute poisoning by lead have you to say about the blue or dark lines on the gums?—That is a characteristic of chronic poisoning by lead, not acute poisoning. It is very rarely or never found in acute lead poisoning.

Now as to the duties of the examining chemist where poison is found and in cases of suspicion of homicide, what are the duties of the chemist in such cases?—That is a very large question.

That is with reference to determining the weight?—I think it is his duty to determine the weight where it is at all possible.

Now you recollect Dr. Divers' statement as to the amount of white arsenic found in the body of the deceased: I wish to ask you whether, in your opinion, that might have been sufficient to cause death, whether Fowler's Solution had been taken or not?—Yes.

His Lordship—He said there was $\frac{1}{2}$ of a grain found in the liver.

Mr. Lowder—I am only talking of the eight little specks of white arsenic.

Witness—It would have been sufficient to indicate the cause of death.

Whether Fowler's Solution had been taken or not?—Certainly.

His Lordship—Does he mean that the presence of those eight little specks would lead him to believe that sufficient white arsenic had been taken to cause death?

Witness—That is so, and finding arsenic elsewhere, that is finding arsenic in the stomach and intestines, these eight little specks were sufficient to indicate the cause of death whether Fowler's Solution had been taken or not.

His Lordship—Then you imply that the eight little specks were not derived from Fowler's Solution, but were derived from white arsenic?—Yes.

His Lordship—Of course, if Fowler's Solution had not been taken—which is part of the suppo-

sition which has been put to you—then the arsenic found in the tissues could not have been Fowler's Solution?

Witness—I mean to say that it is not necessary to suppose the administration of any other arsenic besides the white arsenic to account for the death.

Mr. Lowder—Supposing there is no evidence one way or another of Fowler's Solution having been taken and only the evidence of these eight little specks?—I should never think of Fowler's Solution. It would be quite sufficient without that.

His Lordship—That finding these eight little specks, you would infer that any other arsenic found in the system might be derived from white arsenic, and these eight little specks would be sufficient to indicate that death was due to white arsenic, and that these eight little specks indicated the presence of other arsenic?

Witness—I should say that death was due to white arsenic of which the specks were a part.

Mr. Lowder—I would ask, if white arsenic had been administered twenty-four hours before death, or a long time before, say on the Monday, would your answer be the same?—Yes, my answer would be the same.

His Lordship—How long before death?

Mr. Lowder—I put the minimum at 24 hours, and the other, three to four days.

His Lordship—That is to make the difference that Dr. Divers gives?

Mr. Lowder—Yes, my Lord.

His Lordship—That comes back to the point you were at some time ago, and that is that from the presence of these white specks you could not infer that Fowler's Solution had been taken at all?

Witness—Just so, my Lord, but to put it in another way, the finding of these white specks would be sufficient to indicate what was the cause of death.

Mr. Lowder—It would indicate that white arsenic in sufficient quantities had been taken?—Yes, and with finding that arsenic had been absorbed in the stomach.

Mr. Lowder—Now, three poisons having been exhibited to the deceased, viz., white arsenic, Fowler's Solution, and sugar of lead, can you give an opinion as to whether death was due to Fowler's Solution alone administered in successive and increasing doses?—I should say it was not due to Fowler's Solution alone.

Do you recall the description given by Dr. Divers of the *post mortem* appearances which he would expect to find in the case of acute lead poisoning?—I do.

Do you agree with his statement as to what ought to be expected or should be expected under those circumstances?—I do not.

Mr. Lowder then read an extract from Dr. Divers' evidence, and then,

Witness said—In the first place there are many cases of acute lead poisoning in which there is absolutely nothing distinctive in *post mortem* appearances.

Mr. Lowder—No distinctive pathological changes?—No distinctive pathological changes. In the second place, it is very doubtful whether the contraction of the intestines he speaks of even if existing immediately after death would have persisted until the time at which his examination was made.

His Lordship—That was for 18 hours. It would persist for a very short time.

Mr. Lowder—Dr. Divers has stated that the absence of gastritis in the deceased is in favour of death from arsenical poisoning?—I do not agree with that, it occurs in a very large proportion of cases.

His Lordship—It was so in the Maybrick case, the question there was that death was from gastritis and not from arsenical poisoning.

Mr. Lowder—These questions, my Lord, were taken from the Maybrick case.

Cross-examined by Mr. Wilkinson.

You stated, Dr. Eldridge, that taking the symptoms as detailed by Dr. Wheeler, they were not so distinctly specific as to indicate arsenical poisoning?—I did.

Were they inconsistent with it?—They were not.

Taking those symptoms coupled with the *post mortem* experiences and the chemical analysis stated by the different doctors and Dr. Divers, did they not indicate arsenical poisoning?—They did not.

Not even the finding of the arsenic?—They did not.

Taking the symptoms of the *post mortem* appearance and the finding of arsenic, but not the chemical analysis, was that an indication of arsenical poisoning?—Yes, it was.

Lead was found, did the presence of lead in the quantities found by Dr. Divers render the whole symptoms inconsistent with death from arsenical poisoning?—They did render the symptoms inconsistent with death from arsenical poisoning because the symptoms were those of irritant poison-

ing; but the finding of lead distinctly magnified the appearances.

You are not prepared to say that death was not caused by arsenical poisoning?—I am not.

I take it that you are not prepared to say that arsenic did not contribute to the death of the deceased?—I am not.

In your opinion, from your evidence you say that in all probability arsenic did contribute to the death?—Yes.

You have said that there is nothing inconsistent with the theory that arsenic may and probably did contribute to the death?—I have said nothing inconsistent with that.

Speaking of the symptoms alone, of course the finding of arsenic and the finding of lead did away with the bad oysters?—Of course. I simply used that as a suggestion, and that it may be attributed to something like that at the beginning, and that if arsenic was taken it was not taken during the whole illness.

Apart from the finding of arsenic or lead, the symptoms found by Dr. Divers in the stomach, would they indicate bad oysters or other things?—They might or they might not.

What is the usual appearance of the stomach when it has had bad food?—There may be gastritis or there may not be; the whole force of the poison may be directed towards the symptoms.

But is it not a fact that in such cases gastritis is more frequent even than in those of arsenical poisoning?—I should say the reverse.

Now, in the case of white arsenic you have stated that supposing that nothing had been said about Fowler's Solution, and you had made the *post mortem* examination and had found the little specks of white arsenic, you would have concluded that death was caused by white arsenic?—If I did not find anything more.

Leaving the lead out of the conclusion and speaking of white arsenic instead of solution?—I should certainly, considering the absorption that might have taken place, conclude that death had resulted from white arsenic.

I take it that the fact of the finding of the white specks is inconsistent with death having been caused by arsenic in solution?—It is not inconsistent. The only *post mortem* evidence is white arsenic. There was no *post mortem* evidence of Fowler's Solution, and consequently I should say that death was due to white arsenic.

Now as to the giving of white arsenic within 24 hours or perhaps a longer time. If it had been given within 24 hours would you have expected to find more than the 8 specks?—Not certainly so.

As a matter of fact, in most cases of poisoning by white arsenic, is it not a fact that a quantity is found in the stomach?—But you do not give me the conditions.

I speak of what you have read. Is it not usual in cases of poisoning by white arsenic to find in the stomach more distinct traces, or rather more distinct leavings as it were, than are found in other cases?—I should say so generally, because in some cases absolutely nothing has been found. It depends upon the condition of the stomach.

But I am speaking of reported cases?—No. I should not think it did.

Dr. Divers says the specks had not produced inflammation. If there had been a large quantity taken don't you think there would have been inflammation?—Not necessarily so.

You were speaking just now of the throat; Dr. Divers found a difference between the action of lead and arsenic and that that caused by lead was of a corrosive nature. Do you believe in that?—Not in all cases. In large doses of acetate of lead that is generally the case, but in many cases there are absolutely no signs of lead. The fact is that in all poisoning cases there is no case you can call a perfect case?—That is true.

As a general rule the effect that lead has upon the throat, would have been distinguished from the effect of arsenic?—Yes.

You can hardly say that the cases of acute lead poisoning are very rare?—As rare as the poisoning by Fowler's Solution. Authorities state that in many cases no pathological conditions are present, and it is difficult to form a rule, as the authorities seem to be evenly balanced on the point.

You say that fatal cases of acute lead poisoning are not only rare but very rare?—They are as rare as poisoning by Fowler's Solution, which is also very rare.

But in cases of the throat this distinction can be discovered, can it not, without it being fatal?—Yes, you would detect it, but absence would not necessarily prove that lead had not been taken. What does not exist during life cannot take place after death.

But the tendency of lead is to corrode, and arsenic does not?—You are right in that sense that lead is corrosive and arsenic is not.

With regard to lead poisoning, Alexander Winter Blythe—with whom you are familiar—says that acute cases of lead poisoning are common but seldom fatal?—That is true with the majority of cases of lead poisoning.

Do you agree with this statement, that in regard to sugar of lead that a large single dose is less likely to destroy life than smaller quantities given in divided doses for a considerable period?—Yes, that is so.

Dr. Blythe gives certain proportions as to the localisation of lead, perhaps you can explain it?—The difference is that one is chronic and the other acute. I was dealing with acute poisoning. However, in the cases you have shown me it is simply a difference in the opinion of the authorities. The results there obtained are not from human beings but from rabbits. Results from human beings could not be obtained, but the results from animals are considered good evidence on the question of absorption.

Do you believe that the finding of solid white arsenic is proof of white arsenic having been administered?—I must be taken as such.

I suppose it is a possibility but it has never been determined?—I do not think it has occurred to one to find crystallised arsenic from Fowler's Solution. I will accept Dr. Divers' assertion on that subject.

As a matter of fact there have never been any experiments on the lower animals in regard to that?—I do not think so.

With regard to death by Fowler's Solution, is it not often fatal?—What do you mean?

His Lordship—He said that death from Fowler's Solution was very rare.

Mr. Wilkinson—That is from recorded cases, my Lord.

Witness—Yes.

Mr. Wilkinson—I simply say that the recorded cases are very few, and, so far as we know, it is a rare means used for poisoning. (To witness)—When people are poisoned it is more usual in the solid form?—Yes.

His Lordship—I suppose it means that people rarely resort to Fowler's Solution for the purposes of poisoning?

Witness—Quite so.

Mr. Wilkinson—And acute poisoning by lead is not fatal?—No, and I should say that the larger number of cases of poisoning by Fowler's Solution are not fatal. When I was speaking of poisoning by Fowler's Solution being rare, I was speaking of fatal poisoning.

Mr. Wilkinson—Quite so. The medicinal dose you put higher than Dr. Divers, but there is a long distance between your medicinal dose and the fatal dose. Then in speaking of poisoning by Fowler's Solution I take it that you mean the exhibition of Fowler's Solution in larger quantities than the medicinal dose and smaller than the fatal dose. What is a fatal dose? You mention a man taking two grains of white arsenic. That is not in your own experience. Can you tell us where it is recorded?—Reece, speaking of a fatal dose of arsenic, says:—"2 $\frac{1}{2}$ grains killed a robust girl in 34 hours; on the other hand, recovery has taken place after taking 1 grain, 1 $\frac{1}{2}$ grains, and 2 grains of the fatal substance."

I believe that toxicologists draw a great distinction between arsenic in substance and arsenic in solution?—They do draw a line, but I should not say it was a strong line. They account for the tolerance of the Styrian peasants because they take it dry and not in solution.

THE CHARGE AGAINST MISS JACOB.

The Court opened punctually at 10 o'clock.

His Honour (to Mr. Scidmore)—I observe that the accused is not in Court.

Mr. Scidmore—In explanation—

His Honour—Wait one moment, Mr. Scidmore. Mr. Litchfield is here (to Mr. Litchfield)—This is your first appearance?

Mr. Litchfield—Yes, I am watching the case on behalf of the Crown.

Mr. Scidmore, continuing—In explanation of the absence of the accused, I desire to call Dr. Worden. Dr. Whiting Sweeting Worden, having been sworn, was examined by Mr. Scidmore.

You have been in attendance on Mary Esther Jacob since the last sitting of the Court?

His Honour (to Mr. Scidmore)—You had better mention the date, perhaps.

Mr. Scidmore—The date has slipped my memory for the moment.

His Honour—I can give you the date. It was January the 13th. (To witness)—Have you been in attendance since January the 13th?—Yes, sir.

His Honour—Or before?—No, sir. From the 5th January.

Mr. Scidmore—When did you last see her?—I saw her this morning, about 9.30.

What was her condition?—She was sick in bed. Is she in a fit condition to be present in this Court?—No, sir.

His Honour (to Mr. Lowder)—Do you wish to put any questions to the witness?

Mr. Lowder—No.

His Honour read over the evidence of the witness and then witness signed it.

Mr. Scidmore, addressing the Court—Your Honour will see that I am placed in an embarrassing position. It is my earnest desire that the charge against my client should be disposed of with the least delay possible. Her sickness places an impediment in the way, but I wish to bring to your Honour's notice the statement which was made by the prosecuting witness at the outset of the case, and such other testimony as is before your Honour, and to ask that this charge may be dismissed. Of course I am not in a position to go into an elaborate argument on the point, but I submit to your Honour that in the case, as stated by the prosecuting witness, no jury would convict. It will be remembered he stated that the conclusion that he would ask to be drawn from the testimony to be given—not a conclusion but the conclusion—was that Miss Jacob was the writer of the Annie Luke letters, and that therefore she was the self-convicted murderess of Mr. Carew. That is a conclusion that I do not think the facts would justify even if it was proved that Miss Jacob wrote those letters. Of course, with the limited time I have now before your Honour I am not in a position to answer this question at length, I had been in hopes that Miss Jacob would be able to attend this morning, but I trust that your Honour will dismiss the charge against her or have it gone into as soon as possible. It has already gone on for a considerable length of time and my client has suffered considerably thereby.

Mr. Lowder—I have to say that the application seems to be very premature, considering that the evidence of the prosecution is not yet before your Honour, and that you are not in position to say what it will be.

His Honour—You say—

Mr. Lowder—That you are hardly in a position to say what the remainder of the evidence for the prosecution will be.

Mr. Scidmore—I take it, according to the statement of the prosecuting witness, that his entire case is on that one conclusion. He proposes to prove that the author of the Annie Luke letters is Miss Jacob, and that therefore she is self-convicted.

Mr. Lowder—My friend is quite right, and that is the point I shall submit at the close of the prosecution that this will be a case that ought to go before a jury for decision.

His Honour—I presume you intend to submit other evidence to connect the accused with the death of Mr. Carew, other than those letters, otherwise I should have to rule that Mr. Scidmore was correct.

Mr. Lowder—I have other evidence besides that, your Honour. It was the tracing of the letters to Miss Jacob which put me on an enquiry with reference to other circumstances which certainly will have to be brought before your Honour in connection with the death of Mr. Carew and the charge made against Miss Jacob. The prosecution certainly will not rest entirely on the letters themselves. There will be other incriminating evidence brought before you.

His Honour (to Mr. Scidmore)—I think, it would be premature for the Court to decide on your application in the present state of the evidence, and I think the case must go on. It is, of course, the desire of the Court that the case should go on as quickly as possible so that your client may be relieved, or that the result of the prosecution may be determined, but I do not feel in a position to grant your application at this stage. Is Dr. Worden still in Court?

Dr. Worden reentered the witness-box.

His Honour—You, say that Miss Jacob is not in a fit condition to be in Court this morning. Can you give me any idea when she would be likely to be able to appear?

Dr. Worden—I cannot give any definite time. Her condition is a nervous condition and she may be better to-morrow, or possibly worse to-morrow. I cannot give any definite time.

His Honour—The Court will probably be occupied for some time. How would the 5th February, Friday, suit you?

Mr. Lowder—Would that be next Friday, your Honour?

His Honour—It would be Friday week.

Mr. Scidmore—Of course, your Honour knows my views on the subject. I want the hearing as quickly as possible.

His Honour—Of course it is known that another case is proceeding in the Court which, apart from the illness of the accused, would prevent the case

going on immediately, in any case, for any length of time.

Mr. Scidmore—I would like the earliest appointment possible.

His Honour—How would this day week do? I do not think we could fix it earlier, on account of the case I have referred to.

Mr. Scidmore—I should like the earliest date your Honour can possibly fix upon.

His Honour—This day week will be the 1st February.

Mr. Lowder—I do not apprehend the case before the Court can possibly be completed by that time.

His Honour—I do not wish to fix a date unless we can proceed.

Mr. Lowder—The case before the Court must go on from *de die in diem*, and I am afraid it will not be completed by next Monday.

His Honour—We had better say Friday.

Mr. Scidmore—Of course, your Honour will have to fix the date, but I must insist upon the earliest day possible.

His Honour—I adjourn the hearing till Friday the 5th February at 10 o'clock in the morning, and I trust your client will be able to appear. You accept notice for her appearance then?

Mr. Scidmore—Yes, your Honour.

TUESDAY, January 26th.

Proceedings began this morning in an almost empty Court. There was, however, a very large attendance of the medical faculty, Dr. Baelz, Dr. Eldridge, Dr. Munro, Dr. Tripler, Dr. Harris, and Dr. Moore-Graham, all being present. A whole library of medical works were laid out on various tables inside the barrier. The Accused entered quietly as usual; she looked brighter than on Monday, but very fragile, having grown strikingly thinner within the past few days. Dr. Eldridge's cross-examination was interrupted to allow of Dr. Moore-Graham's evidence being interposed, as the latter wished to leave for Kobe at noon. He spoke of meeting the deceased on board an Orient liner on a voyage from Australia to England, in the eighties, when Mr. Carew in the course of a professional consultation asked for an old prescription for arsenic to be made up, as he had been in the habit of taking it in the Straits some years before.

Mr. Lowder (addressing his Lordship) said—My Lord, I have a witness from Kobe who wishes to return by noon, and with your Lordship's permission I wish to interpose his evidence.

His Lordship—Very well.

Dr. Moore-Graham, having been sworn, examined by Mr. Lowder, said—My name is George Robert Moore-Graham. I am a medical practitioner, practising and residing in Kobe.

Were you acquainted with the late Mr. Carew?

—I was.

When did you first make his acquaintance?

—In August, 1880.

Where was this?—In Australia.

You were then serving on board a British steamer called the *Potsi*?—I was. It was an Orient liner.

Which steamer was bound for England?—Yes.

And the late Mr. Carew was a passenger on board that steamer?—Yes.

So that you were acquainted with him during the whole voyage?—Yes.

How long did that voyage last?—Six weeks.

What was the state of his health during that voyage?—He was invalided home; he was very ill.

Do you know what he had been suffering from?—He had had congestion of the liver, jaundice, and he was also suffering from malaria.

His Lordship—I have it that he had had congestion of the liver.

Witness—Well, he was just getting better from it, and that was why he was invalided home.

Mr. Lowder—Did you prescribe for him?—No.

Did he obtain any medicine from you, and if so what was it?—As far as I can recollect, he gave me a prescription and I made up medicine from that during the voyage home.

Do you remember the nature of the prescription?—The principal ingredient was arsenic.

Was he taking it continually?—Yes, so far as I know, when he was with me during the voyage.

Do you remember having any conversation with him with reference to taking of arsenic?—Yes, we talked about the different remedies for this particular disease. I remember this very clearly, because the subject was receiving a great deal of attention at the time. I spoke to him about the various drugs and asked him why he did not take quinine. He said he had been ordered arsenic when living at Banyu in the Straits.

Did he say anything about that being his stock remedy?—Yes, his stock remedy; his favourite remedy.

I think you made use of the expression that he swore by it?—Yes, something of that kind, but it is so long ago that I cannot quite recollect. He placed confidence in the drug. I have known him since, I met him in Singapore and have known him in Japan.

Cross-examined by Mr. Wilkinson—At this distance of time would your memory serve you to say what was the quantity of arsenic in the medicine?—I should say it was the usual medicinal dose; that is about five minims.

There was nothing in the prescription as marking it as a heavy dose?—No.

His Lordship (to Mr. Wilkinson)—Before you proceed with the cross-examination of Dr. Eldridge, I would say that my notes of the last part of the examination are not very full, therefore any part that is material had better be gone through again. His Lordship read through his notes and then said—It seems to me that your questions should be so framed as to elicit the evidence that you wish me to have when putting the question to the jury on medical evidence.

A discussion took place as to what really should be put to the jury, his Lordship remarking that he did not want the trial to become a mere contest between medical authorities on small points. On Mr. Lowder expressing the desire that it should be put to the jury that death might be caused by either of the poisons mentioned, his Lordship said they would then have to go into all the questions in detail.

Dr. Eldridge then entered the witness box and the cross-examination by Mr. Wilkinson was continued.

Upon one point on which you had given an answer to my learned friend as to the distribution of lead, the figures you cited were from Chittenden?—They were from Chittenden, but were quoted by Chittenden from Ziemann, and the lead was introduced hypodermically in the form of nitrate, which is different from sugar of lead. But the question is one of lead poisoning not by acetic acid and nitrate acid: those acids play a different part.

Naunyn was mentioned as an authority and what I have read he cited from Ziemann's cyclopædia. Perhaps you will read the passage?—"The amount of sugar of lead which is necessary to produce severe or fatal poisoning is from 2 to 3 drachms or upwards, but it has happened that much larger doses—an ounce or more—have been taken without fatal result." I agree with that passage where it states that an ounce or more of acetate of lead has been taken without fatal results.

Mr. Wilkinson—The point I want to say is, that that is Naunyn's opinion. It was referred to by my learned friend.

Mr. Lowder—I wish you would also take down the preceding passage:—"The amount of sugar of lead which is necessary to produce severe or fatal poisoning appears to be quite large; from 2 to 3 drachms upwards."

His Lordship—Then you agree with that passage which Mr. Lowder has quoted?—Yes. I stated that in any examination in-chief.

Mr. Wilkinson—Would you look further down the page, Dr. Eldridge. It says that these symptoms in the mild, severe, or even fatal cases are always those of corrosive gastritis. Do you believe in that?—I do not as a general statement, and I can produce my authorities for not believing it. I do not agree with it so far as its being always corrosive gastritis. Always is too wide, but I have answered that before—that the cases of acute lead poisoning are so few that there is not sufficient evidence to determine the point, you can hardly determine a question of gastritis without a *post mortem*.

Yesterday, I showed you Blythe, and I believe you said he was an authority. I think I showed you a passage with which you agreed. Here is another, on page 556: "Fatal doses of lead—It may almost be said that it is impossible to destroy human life with any single dose likely to be taken or administered."—I do not agree with that. I have already admitted in my examination-in-chief that the dose is very large and that acute cases are very rare, but I cannot subscribe to that, I think it is too strong.

On the subject of arsenic taken in the solid or in solution, you mentioned that the recorded fatal cases of poisoning by Fowler's Solution were very rare?—Yes.

There was a solution at one time which was used very freely?—Yes. But it is quite different.

His Lordship—That is a different form?

Mr. Wilkinson—Yes, my Lord, but it is in solution. It is *aqua taffana*.

Witness—Fowler's is a new solution, the one just mentioned is an old one. The latter was not a medicinal poison, but was invented in the middle ages for the purpose of poisoning people, and

there is no doubt whatever that a great number of fatal cases were caused by it.

I am now referring to the article by Chittenden, at the top of page 764, in which he refers to obviously one of the most important circumstances in the solution of poison?—Yes, I agree with that.

Woodman and Tidy are very great authorities on toxicology, I believe. They say:—"One point as regards fatal quantities—Orfila asserts that however much arsenic any be taken into the stomach the whole quantity absorbed in case of death never exceeds $\frac{1}{4}$ to 2 grains. On the other hand, there are numerous cases on record of recovery after enormous doses. In nearly all the cases, however, two conditions are recorded, first that the poison was taken after a full meal and secondly that very early and free vomiting occurred?"—This no doubt is the explanation of many cases which otherwise appear inexplicable.

Do you agree with Woodman and Tidy's explanation of the taking of abnormal doses without fatal effects?—As a rule, yes, but there are cases recorded where that rule would hardly suffice.

But you would take that as an explanation?—Yes.

There is one point here I should like to call your attention to: "Where death resulted in the application of arsenic to a fungus in the eye, the stomach after death showing all the symptoms of arsenical poisoning?"—I should quote that in support of the statement I made yesterday that the external application of arsenic terminates in gastritis.

Would you agree with the passage from Taylor's American Manual on Medical Jurisprudence. You will find it in the 11th American Edition, page 72: "The immunity of the Styrians in the habitual use of arsenic may be occasionally quoted to explain the detection of poison in a dead body, or a motive for its purchase, but no scientific witness who has seen anything of the operation of arsenic can allow this statement to influence his opinion of its ordinary effects on the human being." Do you agree with that?—I do not agree with it.

I refer you to Taylor on Poisons, page 294. This is a statement with regard to symptoms:—"As a general rule the symptoms which prove fatal are continuous."—Yes, as a rule they are.

Mr. Wilkinson—But it is only right to say that an exception is given directly afterwards?—Yes, I gave that exception, but as a general rule the symptoms which prove fatal are continuous.

Referring to Chittenden, page 776, column 2, "A study of the distribution of arsenic in an acute and chronic case of poisoning shows plainly that it is quite possible to decide distinctly whether the poison has been taken in oft-repeated doses or whether it has been administered in one or two large doses." Do you agree with that?—I agree with that practically, but I should have to look up the arguments more closely. In many cases I should think yes, but in the majority of cases I should say no.

Did you understand from listening to Dr. Wheeler, that the symptoms became aggravated towards the end?—Yes.

And would not that be a symptom of the repetition of the dose?—Not necessarily. There are cases on record of death after seven days, from a single dose.

But there was what you may call a gradual aggravation up to the last?—What I understood was that there was an intermission and then an increased aggravation.

You were speaking of microscopic examination to fully test for albumen in the urine?—Yes, I mean microscopic examination of the sediment of the urine.

The instance which you spoke of having given 30 drops at a dose, what was it?—It was a case of very obstinate itching of the skin, in which, after having used arsenic for some time I pushed the dose up to 30 drops.

Would you say that the effect of the disease renders the case more tolerant?—I should say not.

But toleration often exists where poison is administered to a disease?—Yes, but I am not aware that that applies to arsenic.

But it is a fact, is it not?—Yes.

You stated in speaking of medical experts, that the taking of arsenic three weeks before would account for the presence of a reasonable amount of arsenic in the body. Have you formed an idea of what a reasonable amount would be?—We have it in the present case that there was one-sixth of a grain.

I mean something more than a trace; sufficient to base some result in a criminal case, and I suggest to you that one sixth of a grain is really a very large amount to be found in the liver?—I do not think it is a very large amount.

Taking into account that the maximum to be

found in the body is 2 grains?—It is certainly above the average.

Dr. Eldridge, will you now tell me, if I sum up correctly. Taking the symptoms, the *post mortem* appearance, and the chemical analysis and hearing nothing of other things, would you attribute death to white arsenic or lead?—To either or both.

And that having those appearances you consider them inconsistent with death from Fowler's Solution alone?—That is so.

But you do not consider them inconsistent with death from Fowler's Solution assisted by the others?—That is so. It is not absolutely inconsistent, but you must remember that when two or three poisons are exhibited, as in this case, it is impossible to say from which of the three or of two out of the three, bought it about.

Re-examined by Mr. Lowder, Dr. Eldridge said that he was opinion that none of the questions put to him in the cross examination would lead him to modify any of the evidence given in the examination-in-chief.

No questions were put by Bench or Jury.

Dr. Baelz was then called.

Edward Otto Baelz, was sworn and said—I am a medical practitioner living in Tokyo. I am a Professor of Medicine in the Imperial University of Japan.

Mr. Lowder—I must now trouble your Lordship to read your notes of Dr. Wheeler's evidence regarding the symptoms of deceased, as the witness was not present in Court when that evidence was given, and I wish to base a question on those symptoms. I am afraid you will have to read a long extract.

His Lordship then read his notes of Dr. Wheeler's evidence of the history of the case, also Dr. Todd's and Dr. May's testimony, at the close of which,

Mr. Lowder said—Taking the symptoms as a whole from the detailed accounts of the three doctors just read, I wish to ask you whether they were so distinctly specific as to indicate arsenical poisoning?—They were not so distinctly specific.

Might they have been due to some other cause?—It might have been possible.

Is qualitative testing for arsenic in the urine a very elaborate process?—No.

Stricture of the urethra and inflammation of the bladder, particularly if of long standing, are accompanied by kidney disease?—Yes, that is so. They are sometimes followed by disease of the kidneys.

Would the presence of albumen in the urine arouse suspicion of disease of the kidneys?—It is always a sign of an unhealthy function of the kidney.

If you found albumen in the urine would you consider it necessary to take other steps for determining the question of the disease of the kidney?—Yes. It is of course dependent on the symptoms.

In what would that further examination consist?—Microscopical examination.

Suppose that a man was suffering from kidney disease, would a dose of arsenic taken by him be readed more dangerous?—It is quite possible, because kidney disease might interfere with excretion.

Answering further questions Dr. Baelz said—The habitual excessive use of arsenic is not confined to any one country in the world. I know of two cases in my own experience of habitual taking of large doses. One was of a man who had been suffering from skin-disease. He had been ordered to take arsenic in his boyhood, and went on increasing in dose by dose until at last he was taking as much as 90 drops a day. This occurred last year. He at first said that he had taken as much as a teaspoonful of Fowler's Solution, but when I pointed out how many drops that was, he modified his statement and said that it was 90 drops a day. He is now a man of about 41 years, and has suffered from skin-eruptions since his boyhood. He was very positive in regard to this statement. It is very unusual for a man to take such a quantity per day, but it is not impossible. Doses of arsenic have been given, in substance or solution, beside which doses of 20 or 30 drops per day are quite insignificant. I remember prescribing for the deceased, Mr. Carew, some years ago. He complained of pain in the bladder. He told me that he had suffered from malaria and liver-trouble, but at that time he was suffering from bladder trouble alone. There is no reason why any man of any race can not become habituated to the use of arsenic even to the extent known in Syria. There is no ascertained reason why the habituation of Fowler's Solution should not grow to a large extent. If a man who had been in the habit of taking doses of arsenic were to leave off and then suddenly return to the use of the same doses, it would be very dangerous. Jaundice is an occasional symptom of both acute and chronic arsenical poisoning. If the liver were already out of order, from some cause other than arsenic, an amount of

arsenic insufficient to produce jaundice in ordinary circumstances, might produce it under these conditions. In examining for arsenic *post mortem* in a criminal case, I should consider it my duty to examine other portions beside the stomach, liver, and intestines. I should consider it particularly important to examine the kidneys. If in any case I should find white arsenic in the stomach, as well as dissolved arsenic in the same organ, and absorbed arsenic in the liver, I would not assume that arsenic had been taken in any other form than white arsenic. I know of no method of determining by *post mortem* conditions and the chemical analysis, whether the arsenic has been given in repeated doses or over what length of time. The symptoms of acetate of lead poisoning may resemble those of arsenical poisoning. The quantity of arsenic found *post mortem* would not of necessity indicate the amount that had been taken. I give the same answer as to lead. In both cases a small amount discovered may represent a very large amount taken. In acute poisoning by lead the poison when absorbed is found in larger quantities in other organs than it is in the liver and intestines. As to the intestines, it is not always possible to say, but if a person died very quickly after taking the poison, you might find more lead in the intestines than elsewhere; but the general distribution would be more in the other organs than in the liver. An estimate of the amount of lead found in the liver and intestines alone would hardly be of any value. It is not possible to say with absolute certainty in this case that death has been due to either of the two poisons found or to both. White arsenic acts by being dissolved and absorbed. The fact of white arsenic being found in small quantities in the stomach and bowels would not lead to the conclusion that arsenic had been taken in solution. Supposing white arsenic to have been exhibited from the 18th October to the 22nd—the day he died—there is no reason why even a great part of the dose should not have been dissolved, absorbed, and partially excreted. Reported cases of death from Fowler's Solution of arsenic are rare; as rare as death from acute lead poisoning: the proportion is about the same. The symptoms detailed by Dr. Wheeler are compatible with the supposition that death might have been due from one large dose of white arsenic, or from several. There have been cases where the time has been longer—one where it took seven days to kill. In that case no special remedy against arsenic had been used. In the present case the intermission of the symptoms on Wednesday makes no difference in my answer.

At this point the Court adjourned for lunch.

The Court resumed at 2 o'clock, and Dr. Baelz's examination was continued.

Mr. Lowder—You, I think have a case, Dr. Baelz, that came within your own experience, of poisoning by Fowler's Solution, have you not?—Yes, but it was not a fatal one.

Would you give us the circumstances?—It was that of a lady who had been in the habit of taking daily medicinal doses for cosmetic purposes. She took it for years, thinking that the arsenic would give her a good complexion. She took it in doses of about 30 drops a day. But one day when requiring some medicine, she mistook the bottle and took about 200 drops of the solution—Fowler's Solution of arsenic.

And she recovered?—Yes, she recovered.

Could you give us the poisonous dose of acetate of lead?—It is given differently in different books. The lowest I know of, is 2 drachms. In others—

His Lordship—It varies?

Witness—Yes.

Mr. Lowder—You have given us a good authority for the minimum dose?—Yes. That is the smallest dose I know of.

Your authority is a good one?—Yes, Zeissman. The poisonous dose of arsenic varies very much, does it not?—Yes; very much.

Even two ounces have been recovered from, I think?—Yes.

Suppose that 335 grains of sugar of lead were consumed by the deceased between the 18th and 21st, and about two-thirds of a bottle were afterwards taken, making 572½ grains in all—assuming that quantity to be taken, would that be a poisonous dose?—It could be; but not necessarily.

Lead in that quantity having been found in the house, and lead having been found in the body—that is sugar of lead—could you say that death was not the result of lead poisoning?—I could not say so.

Will you take it, assume it, that no other poison had been found in the body but this lead, and that 572½ grains had been taken, would the lead found in the *post mortem* be sufficient to indicate the cause of death?—I can only repeat my answer: it might be.

Now, as regards the symptoms of arsenical poi-

soning and lead poisoning, these may be practically undistinguishable?—They can be.

I am referring to acute cases?—Yes.

Vomiting?—Yes.

Intense nausea?—Yes.

Violent diarrhoea?—Yes.

His Lordship—Need we have this all over again?

Mr. Lowder—Will you read your notes on this subject, my Lord, then witness can be asked the general question, and see if he agrees with the former statements.

His Lordship having read the notes

Witness said—They may be practically distinguishable.

His Lordship—I will take that down.

Mr. Lowder—All these symptoms may occur in both?—Yes.

Is there any distinctive colour in the stools in arsenic?—No; they are like the stools in cholera: there is no characteristic colour.

What effect has lead upon the stools?—It has an effect: it would darken them.

Now a blue or dark line on the gums, would that occur from lead poisoning?—In chronic, not acute.

His Lordship—That is Dr. Eldridge's statement.

Mr. Lowder—Yes. (To witness)—Do you think it necessary that the examining chemist should determine absolutely the precise amount of poison found by weighing it, where possible?—Yes.

Any poison?—Yes, wherever possible.

You have heard Dr. Divers' statement as regards the finding of white arsenic in the stomach?—Yes.

Now do you consider that the quantity of white arsenic taken, as indicated by the amount found, may be sufficient to cause death, apart from the taking of Fowler's Solution?—There is no necessity for the Fowler's Solution to be given, and we do not know how much white arsenic was taken. The quantity of white arsenic found may have been sufficient in itself to indicate that white arsenic was given in sufficient quantity.

Then if such a quantity of white arsenic was found it might indicate that white arsenic may have been given in sufficient quantity to have caused death?—It may have done.

Can you form any definite opinion whether it was given 24 hours before death or some days previously?—I cannot say.

His Lordship—You can not infer from the amount found the quantity that might have been taken?

Witness—No, I cannot.

Mr. Lowder—Or that out of the three poisons exhibited, white arsenic, Fowler's Solution, and acetate of lead, you can not say which of the three caused death?—No.

Is the theory consistent with the symptoms (that death was due to Fowler's Solution alone, administered in successive and increasing doses)?—No.

Can you give a description of the *post mortem* appearances, what would you expect to find in the case of acute lead poisoning?—In most cases, I should expect a whitish layer of membrane on the throat; and in most cases inflammation of the stomach; in many cases there would be a dark appearance of the intestines.

That is the general appearance?—The general rule is that there is also a strong inflammation of the stomach and intestines. In some cases, however, it has been found that no remarkable pathological changes have occurred.

In cases of arsenical poison is gastritis the exception or the rule?—The rule.

The absence of gastritis?—Is the exception.

Mr. Wilkinson then rose to cross-examine.

From the evidence read out to you regarding the symptoms as noticed and described by Dr. Wheeler and the other doctors, can you say, on the whole, that they are inconsistent with death by arsenical poison?—I never said that they were inconsistent.

They are consistent with death from irritant poisoning?—Yes.

Then you can not say that death was not due to arsenical poisoning?—No.

And the symptoms were not inconsistent with death by poisoning with Fowler's Solution?—The white arsenic is inconsistent with death by Fowler's Solution alone.

You think it contributed?—Yes.

Is the quantity of lead found by Dr. Divers inconsistent with the idea that death was due to arsenical poisoning?—Dr. Divers only gave an approximate estimate. It is a difficult question to answer unless one has a definite quantity. With only an approximate estimate to go upon, I cannot say whether it contributed to the death.

Dr. Divers said that in his chemical examination he found less lead, proportionately, than arsenic?—Yes. There is generally a much larger quantity of lead wanted to kill.

Then you can not state whether it was the lead

or the arsenic that was the more efficient cause of death?—Supposing the whole quantity of lead to have been taken—

His Lordship—That is from the 18th to the 21st? Mr. Wilkinson—Yes.

Witness—Each of these poisons by themselves might be fatal.

But arsenic is more peculiarly fatal?—Yes, arsenic is the more deadly. Arsenic may have been the most efficient cause of death here if the dose—I won't say a fatal dose—was large enough, and the lead was proportionately smaller.

I believe one-sixth of a grain of arsenic found in the liver is a large quantity?—Yes.

In all probability then the arsenic contributed very considerably?—It may have contributed, but not alone, and then only probably.

If you looked for arsenic alone, and observed the pathological appearance, and had not the history of the case you are now in possession of, would you consider the quantity of arsenic found by Dr. Divers—would you be disposed to consider that the arsenic in that case was the most efficient cause of death?—I do not follow you.

I am asking you to dismiss from your mind the history of the case, and carry yourself back to the beginning, and then looking at the system and pathological appearances, would you, on finding the arsenic found by Dr. Divers—not letting in the lead at all—be able to say that arsenic was the most efficient cause of death?—Generally arsenic is the more common poison employed in criminal cases. I cannot say to what degree lead may have contributed to the death in this case.

Arsenic is the more deadly poison of the two?—Yes, a great deal.

Acetate of lead—poisoning cases are few, are they not?—Yes.

And fatal ones fewer still?—Yes.

I believe sugar of lead is not considered to be a deadly poison now?—Oh, yes. It is a poison. In some countries it has still to be kept under lock and key. Arsenic always has to be kept under special conditions, but I believe that the regulations are relaxed in some countries as regards sugar of lead.

Then it is not kept under such strict rule as the arsenic is?—That is so.

You say that once you prescribed for the deceased: it was for the bladder?—Yes, irritation of the bladder.

It was in 1894, I believe?—I cannot say, it was some years ago.

You did not prescribe arsenic for him then?—Oh, no.

Was it necessary then to use an instrument?—No.

Was it a bad stricture?—It was not in regard to a stricture that he consulted me: he was suffering from inflammation of the bladder. I prescribed for it, and he afterwards told me that it relieved his pain and that he had had the prescription made up several times. He told me this once after coming from Miyashita.

Then the kidney disease had not then manifested itself?—Kidney disease goes upwards from the bladder; it may have developed from that time.

And your palliative gave him relief from his pain in the bladder?—Yes, I know it did.

Mr. Wilkinson—I must now ask you, my Lord, to read your notes concerning the testing of the urine of deceased for albumen.

His Lordship read his note on the subject.

Mr. Wilkinson (to witness)—You said that finding albumen in the urine, you would consider it necessary to go further in your research?—Finding albumen it would not be necessary to go farther, but I generally do so, when from general observation I could not account for its presence sufficiently. I should then examine with a microscope. Whenever I cannot account sufficiently for the presence of albumen I do this.

At Counsel's request, Dr. Baelz was handed Dr. Todd's *post mortem* report. Having read it,

Mr. Wilkinson said—Can you form a probable opinion from that report, whether the affection of the kidney was sufficient to impair its power of eliminating the arsenic?—No. I could not say that I could form such an opinion.

Does kidney disease cause distress in passing water?—In kidney disease generally there is no difficulty in passing water; indeed, the patient often never knows he has kidney disease for a long time—but inflammation of the bladder and stricture in the urethra do cause pain in passing water.

Examination with the naked eye would suffice for a trained man to detect disease of the kidney when examining the urine?—No, I should not trust my naked eye.

For any confirmed kidney disease a naked trained eye would be sufficient, I suppose?—It would have to be followed by microscopical examination.

Referring to a case which you spoke of just now

as coming within your experience, the case in which a man spoke of taking Fowler's Solution by the teaspoonful—I suppose he took it in 30 drops at a time, three times a day?—Yes.

Have you seen it taken by him?—No. But I went to him, having learned that he was spreading the statement abroad, and I asked him to tell me positively the truth on the matter. He then said that he took it by the teaspoonful, and I pointed out to him that that was impossible, as such an amount was 100 drops. Then he took a bottle of water and poured out the quantity he was in the habit of taking, and from my experience I could judge that it was the quantity I have just spoken to—30 drops; this he took three times a day.

You are quite sure of this?—I took the step I mentioned to make sure of it.

I do not wish to ask for his name, but is he present at hand?—Not for the moment.

In Japan?—No.

Mr. Lowder (interposing)—I should have called him if he had been: he is in Singapore.

Mr. Wilkinson (to witness)—You considered it an anomalous case?—Yes.

It is not possible, I suppose, that as he exaggerated the amount at first, that he exaggerated the quantity in your presence?—It is not possible. I pressed him on the point and assured myself of his statement. He told me that I might use it should I so desire.

The taking of abnormal doses of arsenic that have not proved fatal, is, you say ascribed by the authorities to two reasons: one that it is taken in the form of white arsenic and the other that it is taken on a full stomach, while the vomiting is generally severe?—Yes, but there is a third reason: the arsenic may remain for a long time unabsorbed by reason of being enveloped in food.

His Lordship—Under those conditions you agree with its non-fatality in certain cases?—

Witness—Yes.

Mr. Wilkinson—And of course you have read or heard of these cases: in your own experience you have only come across the lady and the gentleman?—Yes.

You would agree with the statement that a similar quantity of arsenic in Fowler's Solution would be more readily fatal than a similar quantity of solid white arsenic?—Yes, because of its ready absorption, Arsenic in solution is more quickly and surely absorbed.

Therefore the exhibition of Fowler's Solution would be more likely fatal in an over-dose?—Yes. Otherwise the qualification does not apply—the enveloping of white arsenic in food.

Then the symptoms first observed by Dr. Wheeler, which he ascribed to jaundice might have been due to arsenic?—Yes, they might.

The jaundice appearance on the 15th could not, in your opinion, be due to the exhibition of a large quantity of arsenic, if arsenic had really been given?—It is not probable, with the other symptoms taken into account.

You form no opinion whether it would be more probable that death was due to arsenic rather than to lead?—It could be; as I said just now, arsenic is a more common poison than lead.

Then as to your remarks regarding the distribution of lead in case of poisoning by lead in the human body, they are based on experiments conducted on the lower animals?—Most of them. I do not know of any experiments on the human being—at least so far as acute cases go.

I understand that in chronic cases of lead poisoning there is a large proportion of fatal cases?—Yes.

I believe that as a general rule the symptoms in cases of fatal arsenical poisoning are continuous, although cases may be where an intermission occurs?—Yes.

You mentioned Ziessman as giving the smallest medicinal dose?—The next smallest dose is double.

And I believe no fatal cases are recorded with that dose?—Naudyn says it is fatal; but I do not know of a case.

The same amount of sugar of lead spread over the whole body would have a speedier fatal result than the same quantity taken all at once?—Yes, that is so.

Speaking of the colour of stools, are not arsenical stools coloured a greenish hue through the bile?—They may be, but the hue is not characteristic. I am not aware of green stools in arsenical poisoning cases.

I think it is Taylor on "Poisons," who says that the greenish colour is noticeable in the stools?—I have never seen it.

And he says the colour is caused by the bile?—The colour may be caused by the bile, but it is not due to the arsenic.

Of course I mean that the colour is caused by the bile?—That is different.

You said to my learned friend just now that you

considered it the duty of the examining chemist to ascertain the weight of the poison found *post mortem* by weighing it?—Yes; for that reason I added, if it is possible.

In cases where very large doses of acetate of lead had been exhibited would not its presence have been felt by the swallower—would it not cause sore throat?—It has not always been the case.

That is the tendency?—It can be.

And be distinguished, roughly speaking, from arsenic—one being corrosive, the other not?—I do not think it would be so simple. In both cases there might be constriction, but no marked corrosion.

The general tendency of lead is to corrode?—More or less: suppose it were taken in a big dose, not much diluted: but it depends upon the dose.

Gastritis, you say, is a symptom of arsenical poison?—Yes.

Is *tenesmus* of both?—Yes; but it is not common in either.

Mr. Lowder had no question to ask.

Mr. Patterson (one of the jury) in view of the fact that Dr. Divers had laid great stress on arsenic being practically tasteless and that acetate of lead would cause a burning of the membrane of the throat, said he would like to ask Dr. Baelz one question. Would a poisonous dose of sugar of lead if put into a fluid—say barley water—*that* had been sweetened and flavoured, be so disguised as to pass the swallower's recognition?

Dr. Baelz—It is very difficult to say.

Mr. Patterson—Should like your opinion.

Dr. Baelz—It is difficult to answer at once. Some people have complained of a sense of constriction after having taken it, but it is a question whether a real sense of taste is meant. The lead would be most likely to affect the membranes, as arsenic attacks the nervous system. If the dose of acetate of lead is put into fluid that has been sweetened and flavoured, and in such a minimum dose as I have mentioned, it might be taken without being recognised by the person who swallows it. But we could only find this out by some one who has tried: he alone could tell.

His Lordship—Then it is a surmise on your part?

Witness—Yes.

His Lordship—Having regard to the relative quantities?

Witness—Yes.

His Lordship—What is a fatal dose?

Witness—Two drachms.

His Lordship—What is its relative size?

Witness—A teaspoonful.

His Lordship—Just now you did not admit the exactitude of a teaspoonful: you said it was exaggeration.—[Laughter.]

Witness—That is so.

A bottle of sugar of lead among the exhibits was then handed to witness and he indicated the quantity upon it.

Mr. Lowder—I will have an experiment conducted in Court if your Lordship wishes, with regard to the matter.

His Lordship—Taking the quantity mentioned as a minimum fatal dose?

Mr. Lowder—I have taken it experimentally.—[Laughter.]

Mr. Patterson—I also know the taste of sugar of lead, my Lord.—[More Laughter.]

Dr. Niel Gordon Munro, recalled, deposed—I am a medical practitioner residing in Yokohama. I am a Bachelor of Medicine and Master of Surgery. I heard Dr. Wheeler's evidence in regard to the symptoms of the deceased in his last illness.

His Lordship, at Counsel's request, read Dr. Todd's statement to the witness from his notes.

Witness—These symptoms were not so distinctively specific as to indicate arsenical poisoning to the exclusion of any other source of irritation. If a man was suffering from kidney disease the fact that he took a dose of arsenic would be to render the dose more dangerous than if he was a healthy man.

His Lordship—Did this witness hear Dr. Baelz's evidence?

Witness—I was present in Court when he began, my Lord. But I left at a quarter to twelve o'clock. I heard all his evidence this afternoon.

Mr. Lowder—I am afraid I can only shorten the examination by a very little, my Lord. (To witness)—Have you ever had a case of arsenical poisoning, in the course of your practice?

Witness—I have had a case of that description.

The case to which I refer was treated by me for *anæmia*—poverty of blood—and I put him under a treatment of Fowler's Solution—3 drops a day—and after a few days—six days afterwards, he came to me exhibiting distinct symptoms of arsenical poison. A kidney that to the naked eye looked healthy may prove diseased under microscopical examination. In my opinion that would be sufficient to interfere with its eliminating functions. There

is no reason why a person should not habituate himself to the use of Fowler's Solution in very large quantities. Supposing that he had at one time been used to very large doses, and then left off and resumed the same doses later on it would be very dangerous: certainly much more dangerous if there was kidney disease. The finding of white arsenic in the stomach and the discovery of absorbed arsenic in the tissues would not be sufficient to warrant the inference that arsenic in another form than white arsenic had been taken. I know of no method by which one could arrive at a conclusion from what was found in the stomach of the deceased, that arsenic had been given in increasing and successive doses. The amount of poison found in the remains is no indication of the amount taken. A very small amount found may represent a very large amount taken. An estimate of the amount of lead found in the liver and intestines has a value, but I should not attach very great importance to it, however, if no other portions were examined. I consider that the kidney, nervous system, and bones should be examined in cases of lead poisoning. It would be impossible to state as a definite fact that death was due to either lead or arsenic, if both those poisons were found in the body. The conditions and symptoms deposited to by Dr. Wheeler are compatible with the suggestion that death was due to a single large dose of white arsenic. I was present in Court this afternoon during Dr. Baelz's examination and cross-examination, and I heard all the questions put and the answers he gave; and I agree substantially with Dr. Baelz's evidence.

Re-examined by Mr. Wilkinson—I heard all the questions you put to Dr. Baelz in the course of the cross-examination. I agree with his answers, except or one or two minor points. One is with reference to the taste of sugar of lead. In my opinion it would be necessary, in order to disguise its taste, supposing it to be given in the quantity mentioned, to mix it in a bucketful of fluid.

His Lordship—With that exception, then, you agree with the answers given by Dr. Baelz in cross-examination?

Witness—There might be one or two minor points.

His Lordship—What are they?

Witness—It is a matter of opinion merely, an inference, whether the arsenic was taken in solution or in a solid form. There is nothing to indicate from the symptoms which form it was in, but the appearances are all in favour of white arsenic having been taken—but that is a matter of opinion not a statement of belief.

Mr. Wilkinson—There is nothing inconsistent with death by poison?—Either from Fowler's Solution, white arsenic, or lead.

You once treated Mr. Carew?—Yes.

Did you prescribe arsenic for him?—Never.

You have never prescribed arsenic for stricture?—Never.

And never heard of any authority who gives it?—No.

The Court then adjourned till 10 o'clock the next morning.

WEDNESDAY, January, 27th.

Again there was an almost empty Court-room when proceedings were resumed, and for the first time for several days, the seats provided for the medical faculty, just behind the barristers, were without occupants. The medical works also had decreased in volume, only a few text-books remaining out of the piles in Court yesterday. Accused appeared about as cheerful as on the preceding day, but in the afternoon she exhibited greater traces of extreme weariness. Several witnesses appeared for the first time—including Mr. N. W. McIvor, Consul-General for the United States at the port of Yokohama—being introduced by the defence. At the close of Mr. McIvor's evidence His Lordship offered him a seat beside him on the Bench, but Mr. McIvor had to decline the courtesy owing to pressure of business engagements. The proceedings moved quicker than at any previous time during the trial, four witnesses being disposed of before half-past ten o'clock, and three more by 10 minutes past 11; some sixteen in the course of the day.

Robert John Ward, having been sworn, said in answer to Mr. Lowder—I am a British subject residing in Tokyo.

You were acquainted with the late Mr. Carew?—Yes, slightly.

Do you recollect meeting him and having a conversation with him some little time ago?—Yes, sir.

You cannot give the exact date?—I cannot say whether it was at the last Spring Race meeting or whether it was at the Autumn meeting in 1895. It was at one or the other.

Will you state the nature of the conversation you had with him?—He called me on one side

and said he had heard that I was a good hand at doctoring dogs, and he asked me if I would see his dog. Some time after I did see his dog.

But with reference to arsenic?—I gave him arsenic.

In what shape?—Fowler's Solution.

His Lordship—When was it?

Witness—It was some days after the races.

Did he ask you for it?—No, I prescribed it for the dog, and a pot of ointment which was also poison.

How much did you give him of this Fowler's Solution?—I gave him what is missing from this bottle. [The bottle was produced by witness, and which was slightly more than half-full.]

Cross-examined by Mr. Wilkinson—Can you state about how much there is missing from the bottle?—I cannot say.

You do not know what the size of the bottle is?—I do not know.

His Lordship—It was full when you gave it to him?

Witness—No. I poured it out of the bottle myself and brought it down here to him.

You have never used any out of that bottle since you poured out the part you gave to him?—No, my Lord.

Mr. Wilkinson—Did you prescribe what was to be given to the dog?—Yes, to start with 2 drops three times a day and increase the dose one drop from day to day till it got to be 10 drops; continue to give it this dose for 10 or 12 days and then take it off in the same way, one drop per dose per day until the dose was down to two drops, and then discontinue it altogether.

Mr. Wilkinson—How many dogs did you prescribe for?—One.

Did you estimate the quantity as to how far it would go?—No, sir.

Did you say it was Fowler's Solution?—I told him it was arsenic—I told him to be very careful with both articles as they were poison. He said he was quite familiar with the use of arsenic, or words to that effect.

You were at both race meetings, I suppose, so that you cannot remember satisfactorily to your own mind which of them it was?—No, I cannot, sir.

Did you afterwards have any conversation with Mr. Carew about it?—Yes, once, and he then told me the dog was all right.

Mr. Wilkinson (to his Lordship)—I suppose this bottle should be put in.

His Lordship—I do not know.

Mr. Lowder—I have no wish for it to be put in.

Mr. Wilkinson—I think the quantity should be measured. I should think the jury would like to know.

Mr. Nicholas Williams McIvor, was sworn, and examined by Mr. Lowder.

You are the United States Consul-General at this port?—Yes.

You are a member of the Yokohama United Club committee?—Yes, sir.

You were acquainted with the deceased, who was manager of the Yokohama United Club, or rather secretary?—He was secretary.

Mr. Stewart is on the committee of that Club with you?—Yes, sir.

In consequence of a conversation which you had with Mr. Stewart, do you remember, on one occasion, stopping Mrs. Carew and speaking to her?—I remember stopping Mrs. Carew and speaking to her, and I think it was the result of a statement made to me by Mr. Stewart.

You cannot recollect the date of that conversation, but it was during his illness, was it not?—I have no idea of the date. I have nothing by which I can fix it.

His Lordship—It is suggested that it was during his illness?—Yes, it was two or three days before his death.

Well, I want to know what she said to you with reference to medical attendance or the obtaining of any further medical opinion?—She said to me that Dr. Baelz had been sent for and was coming down, but I am not certain as to the form of the sentence—whether she said that Dr. Baelz had been sent for, or that she had sent for him.

Mr. Wilkinson did not put any question to the witness.

Mrs. Harriet Louise Walter was next sworn. Examined by Mr. Lowder.

You are the wife of Mr. James Walter, a British subject, residing in Yokohama?—Yes.

I have asked you to recall what occupied you on the morning of the 19th October last, have I not?—Yes.

And have you been able to do so satisfactorily to yourself?—I have.

You spent a portion of that morning with the accused, did you not?—I did.

At her house?—At her house.

Without being exact as to minutes can you say about how long you spent with her, and from when

to what time?—Somewhere between half-past ten and half-past eleven.

His Lordship—Did she spend the whole of that time?—I cannot be positive as to the whole of that time, but it was somewhere between half-past ten and half-past eleven. I went about half-past ten—or a little later, and left about half-past eleven.

Mr. Lowder—You have absolutely no doubt about the day?—None whatever.

Cross-examined by Mr. Wilkinson—With regard to the time, looking back as far as you can recollect, were you there nearly an hour?—I think so; yes.

Mrs. Madeline Rede Guinness, having been sworn, was examined by Mr. Lowder.—You are the wife of Mr. Guinness, a British subject, resident in Yokohama?—Yes.

You were acquainted with the deceased?—Yes. You remember dining with him early in the month of October last?—Yes.

His Lordship—With him or with them?

Witness—With them—I think it was Friday, the 9th.

Mr. Lowder—There were other people dining there, too. You were one of a party?—Yes.

You sat next to the deceased and conversed with him?—Yes.

On that occasion did he mention to you anything about arsenic?—He told me he had been dosed with all sorts of things and arsenic into the bargain. Those were his words, as near as possible, so far as I can remember.

Did he volunteer this statement to you?—He was talking about his health and he mentioned medicines.

Mr. Wilkinson put no question to the witness.

Mr. Max Kaufmann having been sworn in the Jewish manner, was examined by Mr. Lowder.—You are a German and resident in Yokohama?—Yes.

You were a friend of the late Mr. Carew?—Yes.

Do you remember playing a game at billiards with him on the 13th October last?—Yes, I do.

Was there anything that he said during the game that struck you as being remarkable?—During the game he repeated a good many times a certain sentence in French:—*Le moment est arrivé ou il faut faire la chose.*

Did you understand that to have reference to the game of billiards he was playing?—No.

His Lordship—You understand French?

Witness—Yes.

His Lordship—Then had you not better translate?

Witness—Yes, the translation is "The time has arrived when the thing has to be done."

Mr. Lowder—Did you think that referred to the game?—I did not know what it referred to—I could not tell.

Do you recollect, on another occasion, you met the deceased in the urinal of the Club?—I do.

His Lordship—An earlier occasion?

Witness—Yes.

Mr. Lowder—Did he appear to be suffering pain at that time?—He did.

Did he make any remark about it?—He said in reply, probably to a remark of mine, that he was in the habit of taking more arsenic than an ordinary man could stand, or something to that effect.

His Lordship—That was in reply to some remark of yours, you suppose?

Witness—Probably, but it is so long ago that I do not recollect what the conversation was that referred to it.

Cross-examined by Mr. Wilkinson—Can you fix the time? How long ago is it since the earlier conversation?—I could not tell, but I should say it was within the last year, or year and a half.

His Lordship—Speaking from now?

Witness—Speaking from now.

Mr. Wilkinson—Can you fix the conversation near enough to make you have a clear idea whether he wished to convey to you that he was then taking, or that he had been in the habit of taking arsenic?—I do not exactly recollect, but at that time he was suffering from pain, and probably I may have asked him what was the matter, and what he was doing for it.

What I want to find out, Mr. Kaufmann, is whether he was referring to having taken arsenic at some other time or whether he was taking arsenic as a remedy at that particular time?—As far as I can remember, he said he used to take, or was in the habit of taking arsenic.

His Lordship—This is the question, did you understand that he was in the habit of taking arsenic at the time of the conversation you are mentioning?

Witness—I take it that he had been taking arsenic and that he might be taking it then.

Mr. Wilkinson—The particulars of the conversation are not so well remembered by you as to say definitely whether he was speaking of the

particular time of the conversation or referring to a previous time?—I could not tell.

As near as you can recollect, what were his words?—That he was taking more arsenic than an ordinary man could stand.

On the previous occasion when you were examined in regard to this, Mr. Kaufmann, and you gave an explanation of what you thought at the time of the sentence *le moment est arrivé ou il faut faire la chose*?—Well on that special occasion I could not make anything out of it. He was in good spirits, slightly intoxicated, but he was perfectly able to play his game at billiards very well. During the game he repeated this a good many times. He was not depressed; on the contrary, he was rather elevated.

His Lordship—That means of course, in good spirits?

Witness—He was in a good humour. His Lordship—Was he in good spirits or was he not?

Witness—Seemingly in good spirits. Mr. Wilkinson—You say you do not think it referred to the game; but don't you think a man might use that expression when he wished to intimate, now, I am going to show you what I can do?—I don't think so, when there was no occasion for it in reference to the game.

You never remember him referring to bladder trouble, do you?—No.

And it is a year to a year and a half ago since you had this conversation with him?—Yes.

Mrs. Emma Mary Hutchison, was sworn, and examined by Mr. Lowder—You are the wife of Mr. Hutchison, a British subject, resident in this port?—I am.

You are acquainted with the accused?—I am.

You know her children and you know Mary Jacob?—Yes, I do.

You have been asked to recall what you did on the morning of the 19th October last, have you not?—Yes, I have.

And have you been able to your own satisfaction to recall what occupied you on that morning?—I have.

You had spent the previous day at a country house at Dzuishi?—I had.

And at what time did you return?—About nine o'clock on the Monday morning.

You spent some time shopping, I believe?—I did.

And you saw Mary Jacob during that morning?—I did.

Can you recollect where?—Passing Kuhn's window in Main Street.

At what time was that?—At about a quarter past eleven.

Was she alone?—No, she had the two children. I remember calling my little boy's attention to the children.

You did not see Mrs. Carew that morning?—No.

Cross-examined by Mr. Wilkinson—You are quite certain, Mrs. Hutchison, about both the children being with her?—Yes, I am.

Mr. Richard Durant Robison, was next sworn, and examined by Mr. Lowder—You are a British subject resident in Yokohama?—Yes.

You were well acquainted with the deceased?—I was.

Do you remember his wife's going home about the year 1894?

His Lordship—It was in 1893.

Witness—I remember her going home, but I do not remember the year, my Lord.

Mr. Lowder—Did you see a great deal of him during her absence?—Yes. She called upon me, and when she was at my house one day she asked me to look after her husband a bit, and I became more intimate with him after that.

And he would talk to you about his personal affairs?—He spoke to me about his personal affairs.

Did he speak to you about the state of his health?—He spoke to me repeatedly about the state of his health.

What did he say was the matter with him?—I do not remember exactly, but I remember the use of the word malaria.

Did he mention anything else?—It was later when he mentioned to me of his having stricture.

Did he say anything to you about remedies that he was taking or had been taking?—He spoke to me about his illness in the Straits and, as far as I remember, he said it was malarial fever that he had been suffering from and he said that he had been cured or rescued from that by the use of arsenic.

Did he say anything about the quantity?—I think he said that he had been taking enormous doses of arsenic then.

Did he say anything about suffering from malarial fever here?—Thereby in a casual way, when I asked him what was the matter, he would say, "it is only my old trouble" or something to that effect.

Do you know whether at that time he was in the habit of taking medicines?—Yes.

That were not prescribed for him?—Yes.

His Lordship—Is he speaking of the time while his wife was away at home?

Witness—It was during the period his wife was away at home.

Mr. Lowder—Did he say anything to you in reference to these?—When he first spoke to me about stricture, I said: "What did Wheeler say about this," and he said "Oh, I have not consulted Wheeler," he said he specially wished that he should not know about it.

Did he say anything about doctors generally?—I do not remember specially, but I knew he had little opinion of doctors' opinions himself.

He preferred to doctor himself?—I knew he was doctoring himself.

You knew the accused very well, and have seen her frequently with her husband?—Frequently.

Are you able to say what was the state of their relations as man and wife, so far as your observation went?—Most affectionate; almost unusually affectionate.

I speak more particularly to the affection of the wife for the husband?—Yes, of the wife for the husband.

She was in the habit of writing often to you?—Yes, she wrote several letters to me.

Recently?—Yes, while I was at home this last time. I went on the 9th May, 1895, and returned on the 9th November, 1896.

And in these letters did she refer to her husband?—I do not remember particularly, but suppose she did. She mentioned in the usual way that Walter was quite well, or something of that kind. I do not remember specially.

Now, before going home on this last occasion do you remember going up to lunch at the Carew's house?—I do.

They were not then living at No. 169?—No, it was at a house at the top of the 100 steps. I think it is No. 57.

Do you recollect before luncheon going to the sideboard with Mr. and Mrs. Carew?—I do.

To take a glass of sherry and bitters?—It was sherry and bitters.

Can you say anything about the side-board?—Was it flat like this table, or had it shelves?—I do not think I remember it particularly.

Now, do you remember an incident not in connection with the sherry, but in connection with something else?—I remember it very vividly. Mr. and Mrs. Carew came with me into the dining room to take a sherry and bitters and I went up to the sideboard and saw a white bottle about one-third full of an amber coloured liquor. I put forward my hand to take the bottle, and one or both of them said "don't touch that, it is poison, it is arsenic." Then subsequently—I think it was Mrs. Carew but I am not quite certain—said "it's Walter's drops."

When you were at home did she write to you with reference to any contemplated arrangement respecting her husband?—She did.

She wrote to you with reference to the arrangement she was contemplating making for her husband?—Yes, but I had heard of it previously from my Manager here in Yokohama.

What was the arrangement as contemplated by her?—This is a short letter from Mr. Bent.

His Lordship—But we want to hear what she wrote.

Witness—I have her letter. It was in reference to his coming into our house and bringing in fresh capital.

Mr. Lowder—And she asked you to see her uncle or some relative of her's at home in reference to it?—I do not think that, but the letter is here if you wish to see it.

Cross-examined by Mr. Wilkinson—With regard to Mr. Carew as a talker about himself generally, was he not a man whose geese were swans?—I think so.

He was really given to a little exaggeration?—I think so.

So far as your recollection goes can you, will you, try to fix the size of the bottle you saw?

All the exhibits were shown to witness and he said it was similar to exhibit 11—a one ounce bottle from Maruya's—but that it seemed to have been a little higher.

Can you remember about the date of the visit?—I am not quite certain. I know that I tiffed there twice in the Spring of 1895, but I cannot remember at which tiffin it was at.

His Lordship—I understand that it was the last summer that you were at home?

Witness—Yes, I was home last summer, but I went in 1895. One of the tiffins was a kind of farewell to me and I went on another occasion. It was in March or April 1895, that I went to tiffin there.

And you cannot recall for certain whether it was

Mrs. Carew who said "It's Walter's drops"?—No, but that is what I think.

Mr. Ambrose Barry Walford, a British subject, practising at the Bar in Yokohama, was next sworn. He deposed—I remember paying a visit to the shop of Maruya's in Bentendori, on the 26th Nov. last, at Mr. Lowder's request. Hayashi was at the counter. My object was to ascertain as clearly as possible the time when a foreign woman went to the shop on the 20th Oct. to pay for a purchase of arsenic on the 19th. Hayashi replied at first, with reference to the 19th, that he could not tell the time when the foreign lady had called. I asked him if he could tell by reference to a book that was lying on the counter before him, and he then said that from the position of the entry in the book—he said it was about the middle of the entries—from that position he knew it must have been about mid-day, before mid-day—before noon. Then in answer to my second question in regard to the 20th, he made at first the same reply—saying that he did not know. Then he opened another book, I think, but I won't be certain. Then he said that the payment had been made on the Tuesday at about the same time as the lady had called on the Monday. In answer to another question, he told me what the lady had purchased on the 19th. My question to him was, "what did the lady pay for on the 20th." I took a note of his answer at the time—perhaps the Court will allow me to refresh my memory. (Permission granted.) She paid for anti-pyrene which had been bought on the 3th Oct., also sugar of lead and chlordyne bought on the 18th; and also Fowler's Solution and more sugar of lead bought on the 19th.

His Lordship—Your question to him was, what did she pay for on the 20th?

Witness—Certainly.

Mr. Wilkinson then cross-examined witness, who said—Those were the questions I put to Hayashi, and these are the answers—a short note of the answers—that he gave me.

Did you put a question in regard to the 19th?—I put the question in the form noted on my paper.

You assumed the 19th?—I had no doubt of the 19th.

In putting the question you assumed that?—Certainly.

Did you look at the book?—He looked at a book, but I could not have read it: it was all in Japanese.

His Lordship—And the conversation?

Witness—All in English.

Mr. Wilkinson—You raised no question as to any doubt of the 19th?—No, I had no doubt.

And the 20th?—I put the question as to the 20th also without having any doubt.

His Lordship—Did you ask if it was the same lady?

Witness—No, I assumed that it was the same. No further questions were put.

Mr. John Peter Reid was next sworn. He deposed—I am a British subject, resident in Yokohama. I remember being at Fujiya's Hotel, Miyanoshta, in September last. I returned from Miyanoshta on Monday, the 28th Sept. I saw Mrs. Carew in the hotel on the morning I left.

She gave me a parcel to take down to Mr. Carew, in Yokohama. When she asked me if I would take it, she mentioned that Mr. Carew had left his slippers behind, and would I mind taking them down in a parcel. There is no other J. P. Reid that I am aware of, in Yokohama.

Mr. Wilkinson had no questions to ask.

Mr. Lowder—I should now like to put in as evidence—or rather call attention to—various entries in the diary. I would begin on Sept. 30th, and go on to Oct. 2nd or 3rd. The first entry is as follows:—

Sept. 30. Wednesday	
Rain	Did nothing.
but	grumble
at	the weather.

Mr. Lowder—My suggestion is that the words were put so widely apart to make them more emphatic. The next entry entry is even more so. It reads:—

Oct. 1. Thursday.	
Rain	grumbled still
more	at the weather.

Mr. Lowder—And now I will call your attention to an entry on Friday, October 1st. It reads:—

Oct. 2. Friday.

Rained and grumbled so much that at 2 o'clock I wired W. to say I wanted to return. Ah Kwong and I with sweetest "Tama" caught the 9.30 train, arrived home 11.55, all asleep, and all well. Had a long talk with W. before I could get to sleep.

His Lordship—That is the day that she said she would return?

Mr. Lowder—Yes, she returned that day.

His Lordship—It looks from that as though it was a sudden impulse of her own to return?

Mr. Lowder—If you refer to your notes you will find, my Lord, that she had an engagement to meet her husband on the Saturday.

His Lordship—Yes, I have it in evidence. You are quite right, she might have returned by an early train on Saturday to keep that engagement, instead she makes up her mind to get in on the Friday night.

Mr. Lowder—I now call attention to an entry on September 26, to prove formally the date on which they went to Miyazoshita.

Sept. 26. Saturday.

Up Early. Rode to the Course—Fine a.m. but rained most of the remaining day—Left 11.25 for Miyazoshita Mary and I walked up the pass. W. & R. followed by the later train. Hotel fairly full.

Mr. Lowder—I shall next call your attention, gentlemen, to an entry on Monday, the 5th of October.

Oct. 5. Monday.

Rained most of the day. Mary M. and B. turned up at 11.45. W. seedy.

We all feel most depressed at this weather—I don't ever remember such incessant rain, of course I got malaria and went to bed before dinner.

Mr. Lowder—Then on the 9th October there is this entry:—

Oct. 9. Friday.

Dull and rainy in the p.m. W. went to the Course—I didn't—

I went down the town—Tried to play Tennis in the p.m. too wet. Walked home, found Walter in bed tired out, and I was glad to join him, arranged to go to Tokyo to see Baelz fever no better—and it is silly going on day after day. Heard from Father re the house, also from Harry. How odd about Mr. Welch.

His Lordship—It is your suggestion that she was going up to see Dr. Baelz on her husband's account?

Mr. Lowder—No, for herself. It might have been both. I call attention to the entry because it is made on the 9th October, the day before she met Dr. Wheeler at the boat-house.

Edward Owen, sworn, deposed—I am a British subject, resident in Yokohama, and employed in the office of the P. and O.S.N. Company. I was acquainted with the deceased and remember his coming to the P. & O. office on the 13th October. It was about 2 o'clock. He asked me whether a lady had been in that day to book or take—her passage. He described her as being rather tall, dressed in dark clothes, and wearing a veil. I believe he said that she was fair. I told him that I had not seen any such lady there. He said, "I may as well tell you the reason for asking this question." He then said that a lady had called at his house to see him; he was not at home, and the lady had seen his wife and left a card to be given to him. He told me that some initials were on this card, but I do not recollect what they were. He also told me that he had received a second card. I believe he said that this was sent to him at the house. He told me that 1888 was on the card, with other initials—what they were I do not now know. I do not know whether they were the same as on the first card. He said the second card was evidently to give him a better clue as to the identity of the lady. He did not produce either card; he had not them with him. He said he did not know who the lady was, but that she might be a lady whom he had known in the Straits, or a lady to whom he was engaged in England.

Mr. Wilkinson—In the print of Mr. Owen's evidence at the inquest two discrepancies occur that it might be as well to clear up. One is a date. They would occur on the Inquest-book at page 282. No, I see that the date is correct in the inquest.

Do you remember him saying that this lady had been seen outside your office gates by Mrs. Carew?—Yes, he did say that. That he gave me as a reason for coming in.

Can you recollect whether that was to convey to you the impression that she had been seen there after or before she had been to the house?—After she had been at the house.

His Lordship—Did he enquire where she had been booking a passage to?

Witness—He did not say.

Mr. T. W. McIlraith was next called.

The Usher—He is not present.

Dr. Hatton was accordingly sworn. He deposed—My name is Piers James Hatton, a British subject, resident in Yokohama, practising as a physician. I knew the deceased, and the accused also. I remember calling at Mrs. Carew's house during the illness of her husband. It was the day before he died, a Wednesday. The conversation turned upon her husband's illness—she spoke of it. She described his symptoms to me. She told me that he was vomiting, had diarrhoea, pain in the stomach and sides, and was picking at the bed-clothes. She asked me what I thought of it? I said I could not say, as I had not seen the patient. She said that she was very tired and was trying to get a nurse. She also said that she was expecting Dr. Baelz at 5 o'clock that afternoon. This was about 4.30 when I called.

Mr. Wilkinson had no questions.

Mr. McIlraith not being present

Mr. Lowder said—We have gone on so quickly this morning—the cross-examination being so short—that I may possibly exhaust my witnesses to-day. I am not prepared with a witness to fill up the few minutes before 12, so I propose, we take the usual adjournment.

The Court then rose for lunch.

The Court resumed at 2 o'clock.

James Ramsay Parsons was sworn, and deposed—I am a British subject, resident in Yokohama. I knew the deceased very well. I knew him in Singapore. I was a great friend of his; not so much so of his wife's. I heard that he was ill and went to call at his house. It was on Wednesday, the 21st October. This was just after twelve o'clock. I had a conversation with Mrs. Carew with reference to her husband's illness. In consequence I made a suggestion with reference to writing to Dr. Wheeler to ask Dr. Baelz to come down. Mrs. Carew made no objection; she readily assented. Nothing was said on the subject before I suggested it to Mrs. Carew. I can't say that I met Mrs. Carew on the previous morning, but I recollect meeting Mrs. Carew down town once after her husband was confined to the house.

I met her, stopped her *jinrikisha*, and inquired of the illness. On the Thursday morning I received a line from Mrs. Carew asking me to come round at once. This was, roughly speaking, about a quarter to eight. She did not ask me to see Dr. Wheeler: it was any one suggestion, and she certainly agreed with it. Mrs. Carew remarked that she had sent for me, as Dr. Baelz had not arrived that morning; and she knew that I was anxious to get his opinion; and then asked what should she do. I then said that there would be time before Mr. Boag's funeral for me to go up and see Dr. Wheeler, and I thought that that was the best course to take. I did see Dr. Wheeler. He told me to tell Mrs. Carew to keep the patient quiet and not to talk to him. I myself said to Mrs. Carew, after my interview, "Dr. Wheeler seems confident of his case; do not worry." These were my words, not Dr. Wheeler's.

To Mr. Wilkinson—I could not say whether I met Mrs. Carew down town either on Saturday, Monday, or Tuesday: I met her down town, that is all I recollect.

Mr. Kobayashi Beika, a naturalised Japanese subject, sworn, deposed—I was acquainted with the deceased, the late Mr. Carew. On one occasion I had a conversation with the deceased relative to his taking poison.

Will you state that conversation slowly?

His Lordship—At what time was this?

Witness—It took place at the Y.U. Club, and I am under the impression that it was about a year and a half ago, and the conversation arose during tiffin. We were speaking about tonics. I was speaking to him about taking strychnine tonic: it was prescribed for me by Dr. Eldridge. Then he mentioned to me, in a very characteristic way—swinging his arm—"Oh, that is nothing, I have taken enough poison at a time to kill six men." Then the conversation drifted away on to other subjects.

Mr. Lowder—I think you added something more at the Inquest?

His Lordship—I will look up the notes of the Inquest.

Witness—That was the substance of the conversation, whether it was in the present or past I do not know.

His Lordship—Did he say why he had to take poison?

Witness—I recollect that he said, "I am obliged to take it."

Mr. Lowder—That is what I wanted to get at, but I could not put the words into your mouth.

Do you recollect whether he mentioned the

poison?—I can't say that he did. I have an impression—

Perhaps you have gathered that since?—Perhaps.

You were at Maruya's Store, would that help you?—I was there, but I do not recollect Mr. Carew telling me the name of the poison. I can't recollect whether it was in the present or past he was speaking.

Mr. Lowder—Or whether it was, "I am taking" or "I have taken"?—I cannot recollect.

Mr. Thomas Wallace McIlraith was sworn.

Mr. Lowder—You are a British subject and now resident in Yokohama?—Yes.

Some years ago you were residing in the Straits Settlements?—I was.

You were not acquainted with the late Mr. Carew, were you?—I was not.

But you were aware that he was an officer in the Government service?—Yes. I should say an officer of the Government in one of the protected Malay States.

Mr. Lowder (to his Lordship)—I am now proposing to ask the witness something that is not of his own knowledge but that was of common knowledge; and that is, did he know of common knowledge, or hear through common knowledge, that the deceased was taking arsenic while in the Straits?

His Lordship—Have you anything to say, Mr. Wilkinson?

Mr. Wilkinson—No, my Lord, although it is not strictly evidence, I shall not object.

Witness (to Mr. Lowder)—As regards common knowledge I can't say. But I have heard it stated in conversation, while in the Straits, it has been stated to me—that there was a Mr. Carew who was, or who had been, suffering from an over-dose of arsenic. The circumstance that led up to this was the fact that I myself was taking arsenic at the time, and it was mentioned to me by way of a caution.

His Lordship—A caution as to how you should use the arsenic?

Witness—Yes, as a caution: that is how I took the statement.

Mr. Wilkinson had no question to ask.

James Stewart, sworn, deposed—I am a British subject and resident in Yokohama. I am a member of the Y.U.C., and am on the Committee of that Club, and I am well acquainted with the accused. During the illness of the deceased I lunched with his wife on more than one occasion—that was on the Sunday and Monday before he died—18th and 19th Oct. I saw him on both days. I saw both husband and wife together on both days. He was in bed. I stayed chatting with him ten or fifteen minutes, and was able to see the demeanour of the wife towards the husband. On Monday Mrs. Carew appeared to be most affectionate towards her husband. She said to me that he was indisposed to take his medicine, and I said "I am sure he will take it if you give him a kiss with it." She then put her hand on his forehead, passed her arm round him, and whispered something in his ear, which I did not hear, having stepped back so as not to overhear.

No questions were asked.

Evelyn Oswald Kenyon, a British subject, resident in Yokohama, sworn, deposed—I was acquainted with the deceased and was a friend of the family. I always thought the spouses were on the most affectionate terms possible. That applies to both, either in each other's presence or in the absence of the other. I live in a mess, and one of my mess-mates, in the autumn of last year was taking Seigel's Syrup. It was a subject of chaff amongst us. About that time I went out with the late Mr. Carew, yachting or bathing. I can't be absolutely positive on the point, but I believe about that time I once said to him when he was feeling out of sorts, why not take Seigel's Syrup, and mentioned that it had just been taken by one of my friends.

No questions were asked by Mr. Wilkinson.

In answer to His Lordship, Mr. Lowder said that he had five native witnesses to call.

Takayama Sadakichi, a *jinrikisha* man, was called, and sworn.

Mr. Lowder—Your stand is not very far from 160. Bluff?—That is so; it is near-by.

Do you know Mrs. Carew?—Yes.

Do you recollect taking her down into the town on the morning of the 20th October last?—I remember doing so.

You do not recollect the exact hour?—It was in the morning before midday, but I do not remember the hour.

What makes you recollect the date?—If it was an ordinary date, I should not remember it at this far date.

Will you explain?—I remember it because it was the festival day of the god Ebisu.

Now what places in the town did you take Mrs.

Carew to that morning?—First to the Post Office; after that to Sakaicho, to Omiya's shop; after that to a Chinese tailor, and then returned to the Bluff.

You did not taken her anywhere else?—No nowhere else.

Mr. Wilkinson—After leaving the Post Office, how did you go?—I left the Post Office, came down the broad street and turned into Sakaicho.

Did you go further than Omiya's?—No, I there turned and went to the Chinese tailor's.

How long did you remain at the Post Office?—I cannot speak to such a small period of time.

And at Omiya's?—About ten minutes.

But you can't recollect how long you were at the Post Office?—It could not have been more than five minutes.

Did you see Mrs. Carew all the time she was in Omiya's?—I can't say, for when I land a person I sit down in the *kuruma* and wait.

Have you often taken Mrs. Carew down town?—Except that time, I do not recollect having done so at that period; but some considerable time before I took her down town.

And since the 20th?—No, not since that date.

What time was it when you got back to your stand?—At present that is entirely gone from my recollection.

Did Mrs. Carew stop on the road to speak to anybody?—I do not recollect her having done so. Were you one man alone?—I was alone.

Going up the hill?—Mrs. Carew got out and walked up the hill.

How far is Omiya's from Maruya's?—Four or five *cho*.

A *cho* being?—Thirty *ken*—a *ken* is six feet. About 360 yards?—Yes.

Omiya's is nearly in a line with the Post Office?—They are in different streets, but nearly opposite, so to speak.

From the Post Office to the Machigaisho, how far is it?—About one *cho*.

And from Omiya's to the entrance to Bentendori?—About two *cho*.

Is Bentendori on a line with Sakai-cho?—Not quite in a line, and not in the same direction as Ota-machi.

You know Maruya's shop?—Yes, very well.

When was it first recalled to your mind, the subject of this trip down town that day?—By no particular reason, but I was called here as a witness.

His Lordship—That is not an answer. When was he first spoken to about it?

Witness—I have never recalled it before this day.

Mr. Wilkinson—Did he speak to no one about it?—No; to no one.

Do you know what you came here for to-day?—From my own thoughts having heard that Mrs. Carew had got into this position, and I thought that I should be asked about it.

And you say positively that from the 20th Oct. up to this day, you have not spoken to anybody about it?—Positively nobody.

Mr. Lowder (to witness)—Although you have not spoken to any one about it, did I not speak to you about the matter?—Never. [Laughter.]

Are you quite sure?—I never spoke to you about it. [More laughter in which everyone in Court joined.]

Mr. Lowder sat down.

His Lordship (to Mr. Lowder)—You procured his attendance in the regular way—by summons or subpoena?

Mr. Lowder—I asked him to come, having heard of him; but your Lordship will recollect that I mentioned his name in my opening.

His Lordship—He seems to be an authority on distances. Does he know what Schedel's, No. 79, is?

Witness—Yes, that is a drug-store.

How far is it from Maruya's?—About five minutes.

Mr. Thomas Simpson, sub-editor and short-hand writer of the *Japan Gazette*, was then put into the box and sworn. In answer to Mr. Lowder, he said he was present during part of the time when the Inquest was held, and took down the Coroner's summing-up. This he transcribed the same day.

He heard Mr. Lowder read that transcript to the jury a few days ago, and could swear to its correctness. [Witness handed in a copy, which was put in.] Mr. Simpson also proved the insertion of an advertisement offering a reward for the discovery of the writer of the Annie Luke letters.

Mr. Thomas, Manager of Messrs. Brett & Co., Chemists and Druggists, was recalled.

In answer to Mr. Lowder, he said he had brought with him soda-water, barley-water, lime squash, milk and soda, cornflour, and beef-tea.

Mr. Thomas then carried out in the presence of the court and jury, some experiments with sugar of lead in four various liquids—using 4 grains—

a medicinal dose at a time. Mr. Wilkinson did not care to taste the prepared waters, causing some laughter when he declined Mr. Lowder's offer. The jury tasted a few of the liquids.

Mr. Patterson thought that the experiments would not be of much use unless the various liquids were prepared and flavoured as for an invalid.

Mr. Thomas said that the presence of sugar of lead in beef-tea would alter its taste: it would give a metallic taste to the other liquids.

Mr. Patterson—Would it be perceptible to an invalid with a furrowed or dirty tongue?

Mr. Thomas—It would be perceptible in the quantity named, unless mixed with a gallon of liquid it would be imperceptible.

A half tumble of barley-water was prepared with 4 grains of sugar of lead and tasted.

Mr. Patterson—That has not a perceptible taste.

Mr. Thomas—I can taste the lead.

A Juror—I taste it slightly.

Mr. Lowder—I am afraid, my Lord, that tastes differ.

Some cornflour was next prepared.

His Lordship—Dr. Baelz said that the minimum fatal dose was 2 drachms, what proportion does 4 grains bear to that?

Witness—That is the 30th part of 2 drachms.

Mr. Lowder—We are trying only medicinal doses.

The Jury detected no taste in the prepared cornflour; in regard to the lime-squash flavoured with five grains of sugar of lead they expressed no opinion.

His Lordship—Do you know Maruya's shop?—I do.

How long would it take to reach it from Schedel's, walking?—More than ten minutes.

Which is nearer to 169, Bluff?—I suppose Schedel's would be the nearest in any case.

A person who left Schedel's to go to Maruya's would take at least 20 minutes getting there and back?—Yes, fully.

Mr. Lowder—I wish myself to prove the last of the A.L. series of letters.

His Lordship—Very well.

Mr. Lowder obtained permission to give his evidence standing at his place at the bar.

Mr. Wilkinson—I think you have proved that letter.

Mr. Lowder—It is the letter of the 11th November.

His Lordship—I find from my notes that you have proved it.

Mr. Lowder—Thank you, my Lord. I now wish to give some evidence with regard to the stain on the fender. I gave instructions for the fender that is in evidence, to be brought down from 169, Bluff, exactly in the state it was in when I gave those instructions. I recollect seeing the fender brought into the Registry, and the stain upon it showed distinct signs of having been wiped. I am able to say so, because I had previously carefully examined the fender at No. 169.

His Lordship—And noticed the condition of the stain?

Mr. Lowder—Yes, my Lord.

Cross-examined by Mr. Wilkinson (Mr. Lowder entering the witness box for the purpose)—Could you describe the stain when you first saw it?—Yes, it looked like a dry splash, or pool, splashed pool, about that size (indicating with the hands)—about 6 or 8 inches in diameter. The edges were not smooth.

Could you trace the outline, near about?—I can't tax my memory so far as that.

I suggest that you may be mistaken in regard to the wiping?—I can't say now, but I can say that when I saw it first brought to Court, it bore distinct traces of recent wiping.

His Lordship—What time elapsed between the time you saw it first, and the time it came into Court?

Mr. Lowder—Two or three days.

His Lordship—In your speech you said that the 19th was a mail day, can you prove it?

Mr. Lowder—Yes, my Lord.

His Lordship—I only wanted to have it down in evidence if I could. What mail was it?

Mr. Lowder—The mail delivered that day was a San Francisco mail.

Mr. Wilkinson—There are some other questions in regard to the fender that I should like to ask but I would prefer to ask them of Mr. Thomas.

Mr. Thomas, not having left the precincts of the Court, was called and re-entered the box.

Mr. Wilkinson—If arsenic had been dropped on the fender could you have scraped arsenic off?

—Yes. If a half ounce bottle had been spilt on the fender—that is Fowler's Solution—I should expect to have found 2 grains—that is if the arsenic had not evaporated. I should have expected in my testing to have found arsenic reaction under these circumstances.

Now supposing that the fender had been wiped

over, would that take away any of the arsenic and, if so, what would be left?—If a person wiped it with a damp cloth, you would not, I think, get an arsenic reaction.

Would the whole of it be taken or removed by the damp cloth?—That I could not say unless I experimented with the whole.

Looking at the fender, could you say how far the wiping extended?—The stain was dry when I saw it.

Are you able to form an opinion whether it has been wiped off?—That I should not like to say. If a cloth had been dropped, it might have sucked up the arsenic; if it had been wiped over I should have expected a larger stain. If it was taken up at all I should think it has been mopped up. The mopping must have extended entirely over the stain, that is, if mopping was resorted to.

Yasuda Yasunobu, the cook, late in the service of the Carews, was the next witness sworn.

Mr. Lowder—You were in their employment during Mr. Carew's illness?—I was.

Did you from time to time prepare corn-flour for the deceased?—I did.

And while you were making corn-flour for the deceased were you using it for other purposes?—Yes, the children also had some of that corn-flour. Hanauye Asa, an *ama*, was sworn.

Mr. Lowder—You are a servant at 169, Bluff?—Yes.

Were you there during Mr. Carew's illness?—I was.

Do you see that fender, exhibit K, do you recognise that as the fender in your mistress's bedroom?—Yes.

Do you recollect being called up by your mistress on one occasion to wipe up a mess made on that fender by the breaking of a bottle?—Yes, I do remember.

You threw that bottle away did you not?—I did. And afterwards you were told to look for it and you brought it to this Court?—I did, I found it and gave it to my mistress.

Did you, at that time, when taking the bottle away wipe up the fender?—I did.

Do you remember the fender being brought from the house down here?—I do not remember the date; but I remember the circumstance.

Before it was removed from the house, do you remember whether the stain was wiped?—It was dirty, so it was wiped.

Who wiped it?—I did, myself.

What with?—With a dirty cloth which is in the bath-room.

Was it a damp cloth?—Yes, it was damp.

Do you know what it had been used for?—To wipe the water-closet with.

Do you recollect the nursery-governess, Mary Jacob?—I do.

Have you ever seen her enter the bedroom of your master?—I have.

Was her mistress in the house at the time?—No.

Do you know the day—was it on one occasion or more?—I saw it on two occasions.

Do you remember the date?—I do not.

Do you remember at what time of the day?—About three or four o'clock.

On both days?—I think about the same time on both occasions, but I do not remember very well.

How long did Miss Jacob remain in the bedroom?—I do not know.

Did you go downstairs before she came out of the bedroom?—I went downstairs in the meantime, thus I cannot say when she came out.

Was this during Mr. Carew's illness, or before it?—One time during his illness, and the other time before.

Did you ever see Mary Jacob sewing torn pieces of paper together, or putting them together?—I saw her sew scraps of a letter together.

On one occasion, or more than one?—At various times.

Mr. Wilkinson—Take the first time when you say you saw her enter the bedroom, where was Mrs. Carew?—Outside of the house.

Where was Mr. Porch?—He was also out.

Where were the children?—In the nursery.

At what time did Mr. Carew usually come home?—About 5.30 to 6 o'clock, usually.

The first of these occasions was before Mr. Carew took ill?

His Lordship—She said one time was during his illness.

Mr. Wilkinson—Well, when was the first time?—On both occasions the circumstances were the same, the wife and brother-in-law were out.

Well, how long was it, the last time, before Mr. Carew's death?—Four or five days before his death.

Was it a Sunday?—It was a Sunday.

Where was Rachel Greer?—

His Lordship—Is Rachel Greer in Court now?

Mr. Lowder (after enquiry)—Yes.

His Lordship—She had better leave the Court.
Mr. Lowder—I think so, too.

Rachel Greer, the Eurasian maid, was then conducted outside the Court-room by the Usher.

Mr. Wilkinson (to Mr. Lowder)—Do you intend calling Rachel Greer this evening?

Mr. Lowder—No, not this evening. I shall be very happy if the Crown will do so.

Mr. Wilkinson—The Crown will not call her. (To His Lordship)—You asked me just now, my Lord, if I should be long. I think my cross-examination will be lengthy now.

Mr. Lowder—Then suppose we adjourn now, then there can be no communication between the two girls regarding the questions you are now about to put.

Mr. Wilkinson—I should like to proceed, and I also want to prevent communication between them. His Lordship—That is desirable.

Mr. Lowder—If the cross-examination goes on they must hear what you are questioning the witness about.

His Lordship—They are living in the same house?

Mr. Wilkinson—Yes, my Lord.

His Lordship—Can they be kept apart?

Mr. Lowder—I do not know whether this witness has any relations or friends in Yokohama where she can go for the night. Will the Interpreter ask her?

Witness, in answer to the question, said—I have no relations in Yokohama, and I have not had time yet to go out and make friends.

His Lordship—Perhaps she could be accommodated in a room of one of the servants in the quarters attached to the Court?

Mr. Lowder (to the Interpreter)—Would she mind staying down here with one of the servants of the Court?

His Lordship—With the wife of one of the servants of the Court?

Mr. Lowder—Yes, with a wife of one of the servants.

His Lordship (to Mr. Wilkinson)—That is if you so desire it.

Mr. Wilkinson—I think it would be wise.

Mr. Lowder—I think it would be desirable (to the Interpreter)—Explain the matter to the witness.

Witness—If my mistress has no objection, of course I can stop.

Mr. Lowder—Will you tell her, Mr. Interpreter, that I think it advisable for her to stop down here.

Witness—I prefer to stop in my own separate room at No. 169.

His Lordship—It is very natural. But she must understand that she is not to speak to Rachel Greer at all.

Witness—I will not speak to anybody.

Mr. Lowder—Perhaps, Mr. Porch will see that the women are kept apart at No. 169, this evening.

Mr. Porch—I will endeavour to do so.

The Court was then adjourned till 10 o'clock the following morning. It was observed that the witness Asa and Rachel Greer came out of Court together and had a conversation on the piazza in front of the Registry.

THURSDAY, January 28th.

Folks were evidently too busy to-day with the out-going mail to have time to spare for the Court, and until late in the morning, the attendance was the slimmest of any since the trial opened. Miss Christoffel was an interested listener during the morning. The accused looked pale—with occasional deep flushing of the face—and very weary from the outset, but maintained her vigilant observation of all that passed. Owing to the late arrival of Asa, the witness whose cross-examination had only just begun when the Court adjourned the previous evening, the evidence of a *finrikisha* puller was interposed. He entered the service of the Carews the day before Mr. Carew's death, and spoke to the finding of a letter on the doorstep at No. 169, after Mr. Carew's death. At five-and-twenty minutes past 10 o'clock, the cross-examination of Asa, by Mr. Wilkinson, was continued, and it lasted till 11 o'clock.

Hanauye Asa when called by Mr. Lowder did not answer to her name.

Nishiyama Fukujiro, having been sworn, was examined by Mr. Lowder.

You are a *finrikisha* man in employment at 169, Bluff?—Yes, I am a *finrikisha* man now.

And were you before the death of Mr. Carew employed as a *finrikisha* man?—I went into the service of Mr. Carew one day before his death.

Do you remember finding a letter on the front door-step at any time?—I do.

Do you remember the date?—I do not. I have forgotten it.

Was it before or after the death of Mr. Carew?—It was after the death.

What did you do with the letter?—I handed it to the servant called Rachel.

Mr. Lowder—Perhaps he might see the enve-

lope [exhibit S 2].—Was it anything like this?—I cannot read characters but it was about that in size.

Cross-examined by Mr. Wilkinson—What time of day was it when you found it?—It was in the afternoon.

Could you tell about what o'clock it was?—I think it was in the afternoon between two and three, but I cannot be certain.

Did you see anybody bring it?—No, I did not see anybody bring it.

Where did you come from as you came to the steps?—I was coming in at the gate and near the steps there is a brazier, and I was going to the brazier when I saw the letter.

The front gate you mean?—Yes.

His Lordship—In the open?—Yes, there is a brazier near the stairs.

Mr. Wilkinson—When were you asked to recall the fact of finding this letter? This is the first time you have been here about this?—It is.

Now have you discovered when it was that you were first asked to remember it?—To-day is the first time.

His Lordship—Then that should not take a long effort of memory, surely.

Mr. Wilkinson—Have you spoken to anyone about it before coming here to-day?—I spoke to the gentleman at No. 203. [Mr. Lowder.]

Did you go about it, or did anyone else tell you to go?—I went with a letter to that gentleman's house, and at the same time I was questioned about the other letter which I had found.

Who was that other letter from?—It was a letter given to me at No. 169.

Can you tell who wrote it?—I do not know who wrote it, but there was only the brother of my mistress at the house when I got it.

How long ago was it?—I have forgotten. Two or three days ago, but I cannot say how long.

His Lordship—Cannot he say if it was a month?

Witness—It was in the last year; it was not in this year.

His Lordship—Who was it who gave it to him?—I believe it was Rachel.

Re-examined by Mr. Lowder—You have frequently brought letters to me from No. 169, have you not? Not to 203, Bluff, but to my chambers at No. 28?—Yes, between then and to-day I have frequently brought letters to you.

Hanauye Asa, next re-entered the witness-box, and was cross-examined by Mr. Wilkinson—Yesterday you told us of the last occasion when Miss Jacob went into her master's room. Now will you tell us when the first occasion was?—It is long ago—I cannot tell.

How long ago?—I do not know.

Were you there when Miss Jacob came to Miss Carew's?—I was.

How long have you been in the service of Mrs. Carew?—Last year, 27th August.

His Lordship—That is when she entered the service?—Yes.

Mr. Wilkinson—Was it last year or the year before. Were you there before Miss Jacob came to the Carews, or were you there after?—After.

How long after you joined Mrs. Carew's service, was this the first time?—So long ago that I cannot tell.

His Lordship—It was the 27th August when she entered the service, so that will be about 5 months?—Yes.

Have you had any conversation with anybody about Miss Jacob going into her master's room?—I have.

Who had you the conversation with?—I told Mrs. Hutchison about it one time.

Did Mrs. Hutchison ask you about it?—She did. Let us know when it was you saw Mrs. Hutchison, what you said to her about it?—The time is this month. It was in the dining-room of No. 169.

Were you called into the room by anyone?—Yes, I was called in.

Who sent for you?—Rachel sent for me.

When you were called into the room, Mrs. Hutchison was there?—Yes.

What did Mrs. Hutchison say?—She questioned me as to whether Miss Jacob had ever gone into Mr. Carew's room and asked me what I knew about it.

What did you say about it?—I said I did.

And what did she say then?—She then asked me when it happened.

And did you give the same answers you gave to-day and yesterday?—I gave the same answers as I have given to-day and yesterday.

To whom else did you speak to about it?—I never spoke to anybody about it before speaking to Mrs. Hutchison.

You never spoke to Rachel about it?—Never.

Never spoke to Porch about it?—Never.

From the first of these occasions until you spoke

to Mrs. Hutchison you had never spoken to anyone about it?—No.

Will you take a cloth and wipe up the fender?

His Lordship (to Mr. Wilkinson)—Are you going to ask her about the breaking of the bottle?

Mr. Wilkinson—Yes, my Lord.

His Lordship—Because I do not know who broke it.

Witness—I recollect being called by my mistress to wipe up a mess on the fender which had been caused by the breaking of a bottle.

His Lordship—Who broke the bottle?—I was not present when the bottle was broken.

Mr. Wilkinson—Then what was the first thing you saw about the fender and the mess on it?—The bell ring and I was told to sweep up the room, and I saw some small splinters of glass and a larger portion of a bottle on the fender.

How did you pick up the glass?—I took a dust-pan and a broom and swept up the glass into the pan.

Was the fender very wet then?—It was.

Did you see what sort of stuff was on the fender?—That I cannot speak to.

You first of all brushed it off?—Yes.

Did you wet the brush very much?—Yes, the broom got a little wet.

Could you tell how far the wet went on the fender when you first saw it?—I did not take particular notice but about as much as there is now.

His Lordship—That is when first she was called into the room?—Yes.

Mr. Wilkinson—At first you brushed it. Did you also wipe it up?—Yes, at that time I wiped it with a rag.

Did you wipe it afterwards?—I wiped it once more before it came down here. I did not know it was going to be used, so I wiped it.

His Lordship—How many days ago was that?—I cannot say how long ago it was.

Mr. Wilkinson—Will you take a cloth and show us how you did wipe it?

His Lordship—Who told her on the second occasion to wipe it up?—Nobody. I saw it was dirty, so I wiped it.

Mr. Wilkinson—On the second occasion did you use the same duster as on the first?—Yes. On the first occasion I mopped it up like this [witness showed the Court how she did it] so as to pick up the splinters of glass, and then I wiped it. I wiped it very carefully and took all the wet off.

When you wiped the fender before coming down here did you wipe the whole of the fender?—This [pointing to the front of the fender] I wiped carefully, but the other part [that where the stain is] I only took the dust off.

With the same cloth?—Yes.

Just show us how you did it the second time? [Witness pointed, but did not attempt to touch the stained part, except slightly in the centre.] Continuing, she said—There was a lot of dust centred in this spot [the place where the stain is] which I dusted off.

Did you make it as wet in one place as the other with that dirty cloth?—That cloth was dry.

The second cloth was quite dry. Did you wipe it with one or two cloths?—It was one cloth, and it was quite dry.

His Lordship—But she told us it was damp yesterday. She said she wiped it with a cloth that was in the bath room and it was damp?

Mr. Uchiyama, the interpreter—She says she meant that to apply to the first occasion, when she wiped it at first it was wiped with a damp rag, but on the second occasion it was wiped with a dry rag.

His Lordship—The fender was then dry [the second occasion]?—It was dry.

Mr. Wilkinson—And you rubbed it with a dry cloth and that was all?—That was all that was done to it between the time of my seeing it and the time it was brought here.

So that on the second occasion you did not use a wet cloth; that is quite clear?—Yes, that is quite clear.

It was in exactly the same condition from the time you wiped it on the first occasion till you brought it down here, excepting that you had wiped it with a dry cloth?—It was entirely in the same condition except that it had gathered more dust.

Mr. Davieson, (one of the Jury) said he would like to know if witness received instructions before sending the fender down to the Court not to touch it?

His Lordship—She says she was not told to wipe it, but that she did it herself. (To Mr. Uchiyama)—Will you please ask her that more particularly?

Witness—I never received any instructions not to wipe it.

Mr. Patterson (one of the Jury)—On the two occasions she has spoken to of seeing Miss Jacob in her master's bedroom did she see Mr. Carew in the bedroom?—I saw him myself.

And was the door shut behind Miss Jacob on

these occasions, or on either of them, after she entered the room?—I only saw her entering the room. I could not say whether the door was closed behind her or not.

His Lordship—Has she spoken with the witness Rachel since yesterday?—No.

I mean since she gave her evidence standing there yesterday?—No. From the time I gave my evidence until my entering here I have not spoken to Rachel.

His Lordship—On any subject?—On no subject whatsoever.

Kitamura Kichizo, having been sworn, was examined by Mr. Lowder—You are a servant at 169, Bluff?—Yes.

How long have you been there?—Two years this month.

Do you recollect your master and mistress going up to Miyano-shita in September last?—I do.

While they were absent you were employed to change the rooms, that is to say to change what was the nursery into a bedroom?—Yes.

In changing the rooms do you recollect picking up two pieces of paper?—I do.

Would you recognise them if you saw them?—I think I could.

In which room did you find them. In the room that was used as a nursery or in the one used as a bedroom?—I found them in the then nursery room.

What did you do with those pieces of paper?—I handed them to Rachel.

Were these pieces of paper Japanese or foreign paper?—One was Japanese paper and the other foreign paper [exhibits 32, 33].

Can you recognise them?—Yes, because there are some marks scratched on them.

Mr. Lowder—You have been questioned by me on this subject have you not?

Mr. Wilkinson (to Mr. Lowder)—This is wholly inadmissible.

His Lordship (to witness)—Has Mr. Lowder questioned you on this subject before you came here?—Yes.

Mr. Lowder—You know Mary Jacob?—I do.

Have you ever seen her or heard her in the bedroom of Mr. Carew?—I heard and saw her.

His Lordship—Does he mean on two occasions he saw and heard her, or what?—One time I only heard her voice there, the other time I saw her.

Do you know if Mrs. Carew was in the house on either of those occasions?—I don't know.

Was Mrs. Carew in the bedroom on either of those occasions?—She was not in the bedroom.

Have you been spoken to about this matter before to-day?—I have been spoken to before on this matter.

Mr. Wilkinson (to Mr. Lowder)—You can't ask these questions; I can.

Mr. Lowder—I must repeat the question my Lord. I see no objection.

Mr. Wilkinson—So far there is no objection.

Cross-examined by Mr. Wilkinson—Having shown to witness exhibits 32 and 33 (the two pieces of paper) he said—When did you give these to Rachel?—At the same time as I found them.

Had you any conversation with Rachel about them?—I had no conversation with her about them.

Were there any other papers left in the room?—Yes, there were papers which the children had been writing on and picture papers.

No other such sheets of paper as these?—No.

Whereabouts in the nursery did you find them?—His Lordship—They came from behind the bureau.

Mr. Lowder—Between it and the wall?—Yes.

Let him try and explain to his Lordship the position of the bureau—where it was?

Witness then drew a plan of the nursery, with the position of the furniture before he shifted it. This was then explained and handed in to Court. The bureau behind which witness found the papers, was in the corner near the bay window.

Mr. Wilkinson—What made you take the papers to Rachel, what made you think of that?—I could not read English, and at one time I threw away a newspaper that was still wanted and was scolded for it, so I took the papers to Rachel who could read English.

Mr. Wilkinson—I believe the witness Asa is still in Court listening, she had better leave.

The Usher—She has left the Court.

Mr. Wilkinson (to witness)—You say you once threw a paper away?—Yes, and I was severely scolded for it. And I was told never to put papers that had writing on them in the waste-paper basket.

But were there any letters lying about the room?—I can but repeat my previous answer.

Were there any letters lying about the room?—There were some envelopes on the mantelpiece; these I removed to the mantel-piece in the other room.

Were there other pieces of paper besides those you have mentioned?—There were.

What were they?—There were some papers that the children had used, and these I picked up and put with their toys.

But where there no chits, letters, notes, etc., lying about?—Only those that I have spoken of.

Mr. Davieson—My Lord, may I call your attention to the fact that the witness Asa has just returned into Court.

Mr. Wilkinson—She appears to be fetching and carrying.

His Lordship (to Mr. Lowder)—Do you require her any more?

Mr. Lowder—No, my Lord. I do not know whether the Crown requires her?

Mr. Wilkinson—Certainly not.

His Lordship—Tell her she must go away.

Mr. Wilkinson (to witness)—Well, is it a fact that the only papers, besides those you removed from your master's room and the children's papers, you gave to Rachel?—I first cleared the children's room.

You are not answering the question?—There was no reason to ask questions about the papers on the mantel-piece and the children's papers. I found the papers I have mentioned, and I asked Rachel, who was in the room with me, whether they were of any value.

Then what did Rachel say?—Rachel told me that they were of no value.

When did you afterwards see those pieces of papers?—I have seen them since, before you saw them in Court?—I saw them once, when Mr. Lowder sent for me.

How long ago was that?—The last day of December.

And did you tell Mr. Lowder the same story then as you are telling now?—Yes.

And that was on the 31st December?—Yes.

You are positive there is no mistake as to that?—I am certain, because that day I had been out buying things.

Mr. Wilkinson—Were they marked in the Jacob case, Mr. Moss?

Mr. Moss (Chief Clerk)—One was.

His Lordship—I can tell you from my notes. Yes, I see that they are mentioned by Mr. Troup.

"two pieces of paper not yet put in were shown to the witness—these are the pieces of paper"—then we marked them 32 and 33.

Mr. Wilkinson—Is there anything to particularly mark them, in Mr. Troup notes?

His Lordship—He said, "these are the pieces of paper"—and I presume this was on the 13th January.

Mr. Lowder—I presume so, my Lord.

Mr. Wilkinson (to witness)—Are you quite positive that these are the two pieces of paper?—There is no doubt whatever.

Although you do not read English?—Yes, I know them because of the erasure on the foreign piece of paper, and the Japanese paper from the looks of it.

What was the last occasion—he is speaking of seeing and hearing Miss Jacob in Mr. Carew's bedroom—now which was the latest, the hearing or seeing?—The second occasion, when I only heard the voice.

What did you hear her saying?

At this moment Rachel Greer entered the Court.

Mr. Wilkinson—Rachel Greer must not come in here.

His Lordship—Tell one of the servants of the Court to stand at the door and tell her she may not come in.

Mr. Lowder—Although I raise no objection, I do not recognise the right of the Crown to keep her out. I wish, however, to make this explanation.

Rachel Greer has a young baby, and she grows hysterical every now and again. There is, as your Lordship knows, no accommodation for witnesses at this Court, no place where they can go while waiting to be called. Now if Rachel Greer becomes hysterical through waiting it will be very difficult to get her round in order to come here again.

His Lordship—When will you want her?

Mr. Lowder—She will probably be my next witness, and I do not know how long the cross-examination of the present witness will continue.

His Lordship—Shall we say 2 o'clock for her then?

Mr. Lowder—I do not know, my Lord.

His Lordship—Will you be long, Mr. Wilkinson?

Mr. Wilkinson—I shall probably take from now till 12 o'clock.

Mr. Lowder—She gets hysterical in consequence of waiting about here, and it might be difficult to get her again. Perhaps Mr. Porch will see that she goes home now and returns at 2 o'clock.

The incident then closed and the cross-examination of the witness was continued.

Mr. Wilkinson—What did you hear her (Miss

Jacob) saying?—I have not been in the Settlement long, and I do not know a foreign language.

How long ago was that?—I could not say, but I believe it was after they returned from Miyano-shita.

During his illness?—No, before.

What time of day?—I do not go upstairs till after 9, so it was about that time of the day.

Where was Mrs. Carew?—That I could not say.

I do not know whether she was in the house or not.

Had Mr. Carew had his breakfast?—Yes.

Where were children?—I believe that the children were in the same room as the master.

That will do for that occasion, where were the children next time?—I am speaking now of the time when I saw her, and that was in the afternoon—it was about the children's tea-time.

How did you see them—your master and Miss Jacob—was the door open?—Yes, the door was open.

I think that will do.

Mr. Lowder—I believe that Mrs. Carew was in the habit of going out early in morning to the race-course?

Mr. Wilkinson—Does this arise on the cross-examination?

His Lordship allowed the line of questioning.

Witness—Yes. I mean she went out about 10 o'clock when she went out with the master.

Mr. Lowder—I mean earlier than that?—Yes, she was in the habit of leaving the house earlier.

Mr. Patterson—I should like to ask one question. The witness says that he does not know whether Mrs. Carew was in the house or not on the occasion when he said he saw Miss Jacob in her master's room: now does he know whether Mrs. Carew was in the room or not?

His Lordship—Do you mean at 9 o'clock in the morning?

Mr. Patterson—Yes.

His Lordship—He says the children were there with their father.

Mr. Patterson—That is so, but I should like to know if he knows whether Mrs. Carew was in the room or not?

Witness—I cannot say whether Mrs. Carew was in the bedroom or not.

Mr. Patterson—That is all I wanted to ask.

Mr. Lowder—My Lord, I have now to make a suggestion with reference to the witnesses Rachel Greer and Ah Kwong. My learned friend, Mr. Litchfield, when I asked him to supply me with the names of the witnesses to be called by the Crown, gave me a list, upon which these two names appeared. I would now like to ask if it is not the duty of the Crown to put those witnesses into the box for examination?

His Lordship—When were you given the list?

Mr. Lowder—At the beginning of the proceedings I asked for a list of the witnesses that were to be called for the Crown; these names were then given me.

His Lordship—When was this: the date?

Mr. Lowder—On the 29th December. It was then that my learned friend gave the list to me. The same applies to Mr. Porch. (After a pause and search)—I have made a mistake, my Lord, Ah Kwong is not here on the list, though I fully understood, from the prosecution, that he would be. I had asked leave to examine him. Though his name is not on the list the names of Mr. Porch and Rachel Greer are.

His Lordship—Did they give evidence at the preliminary enquiry?

Mr. Lowder—I am not quite sure if they did.

Mr. Wilkinson—Yes, they did.

His Lordship—Both Porch and Rachel Greer gave evidence?

Mr. Lowder—Yes; my application also refers to Ah Kwong.

His Lordship—That is on a different footing.

Mr. Lowder—He also appeared before the magistrate and I understood that he would be produced here at the trial.

His Lordship—Yes, and you apply?

Mr. Lowder—My application is that these witnesses be called by the prosecution, so that they may not be treated as my witnesses.

His Lordship—And as for Ah Kwong, is he here?

Mr. Wilkinson—I understand he is under the care of Mr. Lowder, and is therefore a witness for the other side.

Mr. Lowder—My learned friend is misinformed. Ah Kwong is not under my care: he is not being looked after by me.

His Lordship—Well, Mr. Wilkinson?

Mr. Wilkinson—My learned friend has given no authority. I will direct your Lordship to the *Queen v. Thompson*, a case decided in 1876.

His Lordship then turned to *Regina v. Thompson* (13 Cox) and read:—"It was not proposed by the prosecution to call the witness to prove these statements, although both had been before

the Grand Jury, and were on the back of the indictment.

"Marshall, for the defence, insisted that the nurse should be called, as her name was on the back of the indictment, and the prosecution were, therefore, bound to call her, and though they could not give her statement in evidence, he could obtain it on cross-examination.

"Lush, J.—The prosecution are not bound to call these or any other witnesses because their name happens to be on the indictment, although I should have pressed them to do so in a case of this kind; but if you, for the defence, insist on the nurse being called and giving evidence of a statement favourable to your view of the case, that would let in the statement made by the deceased to the doctor, and so the prosecution might then, if they pleased, give it in evidence as rebutting testimony. "The evidence of neither witness, therefore, was given."

His Lordship—That is to say, Counsel for the defence wanted one of two witnesses only, and the Judge said that the Crown was not bound to call these or other witnesses although their names had appeared on the back of the indictment.

Mr. Lowder—That is the difficulty I have felt in calling these witnesses. Does the Crown intend in this case to treat Rachel Greer as one of its witnesses?

Mr. Wilkinson—Certainly not.

Mr. Lowder—I was not aware of the case that his Lordship has so kindly cited, and I was under the impression that the Crown was obliged to call all the witnesses it had named. I think still that that is the better procedure.

His Lordship—Of course we have to look at these things from the circumstances of the case. These two witnesses are still in the house of the accused, are they not?

Mr. Lowder—Yes.

His Lordship—And you want them submitted to you for cross-examination: you suggest that you should cross-examine them. If the objection is taken—

Mr. Wilkinson—It is taken.

His Lordship—Then I must rule against you, Mr. Lowder, on that authority.

Mr. Lowder—Under the circumstances, I must, during the recess, take seriously into consideration the advisability of calling these two witnesses. The Court then rose for lunch.

Mr. Lowder—My Lord, I have been very seriously considering, during the recess, what it is my duty to do in view, first, of the result of the cross-examination of the witness Kitamura Kichizo—

His Lordship—Who was he?

Mr. Lowder—The last witness, my Lord,—on the question of Mary Jacob having been seen in her master's bedroom in Mrs. Carew's absence; and, secondly, of the fact—of which I was only made aware a day or so ago—that the only other evidence on that point on which I can now depend is the evidence of two Japanese women-servants. Before saying another word, I will remind your Lordship of the evidence given by the prisoner at the bar at the preliminary investigation of the charge preferred by me against Mary Jacob, which evidence has been put in by the prosecution. The prisoner herself testified that she had had absolutely no suspicion of the existence of any impropriety between her husband and Mary Jacob. It is therefore obvious that the charge did not originate with her. That is the point to which, in her interest, I wish to call attention; that the responsibility of the suggestion does not rest with her. I feel that no charge of such a nature can be substantiated by any direct evidence now in my possession, and I have therefore come to the decision that it is my duty at the earliest moment, now, to inform your Lordship that I am not in a position to offer satisfactory direct proof of that charge. I therefore unhesitatingly withdraw all I have said that may have been based upon my ability to adduce such proof.

Hanaue Chiaki, *alias* Rachel Greer, having been cautioned in the usual form by the Interpreter, said, in answer to his Lordship, that she was a cousin of the maid, Asa. She was accommodated with a chair.

Mr. Lowder—You are a Japanese subject?—Yes.

And have been in service at 169, Bluff, for some time?—Yes.

When did you enter their service?—On the 17th March last year.

And have remained there since?—Yes.

Do you remember your master and mistress going to Miyanoshita in the September of last year?—Yes.

During their absence what had, up to then, been the nursery, was made their room, and *vice versa*?—Yes.

Did you take part in effecting the change?—I did.

What other servant in the house was occupied in the same way?—My cousin and the man-servant, Kitamura Kichizo.

Do you remember receiving anything from Kitamura?—I did, some pieces of paper.

What did you do with those pieces of paper?—I did not think they were of any value, but I put them into a toy-box of the children's.

Is this the box (pointing to a cabinet in Court) referred to?—Yes.

What recalled to your memory the fact of your having placed the pieces of paper in this box?—I had been asked by Mr. Lowder if any pieces of paper had been found lying about, and did not then recollect; but on another occasion, while on the way to Mr. Lowder's I remembered that I had put them in this box.

Should you recognise those pieces of paper again if you saw them?—I would.

Are these the pieces of paper (pieces shown)?—These are the papers, but they have now red marks on them.

Now, of course, you are acquainted with Mary Jacob?—Yes.

You saw a great deal of her?—Yes.

Have you ever seen her practising writing?—Yes.

Have you can seen her apparently copying writing?—I do not know whether she was copying exactly what was before her; but I saw her put the writing of the lady of the house before her, and writing from that.

Have you ever seen her stitching pieces of paper together?—At various times I saw her bringing pieces of paper from her mistress's waste-paper basket and piecing them together.

When did you first see this?—I can't quite remember, but it was in July or August.

Do you remember having a conversation with her with respect to a particular letter which she had pieced together?—Yes.

Did she read it to you?—Yes.

Did she say from whom it was?—From Mr. Dickinson.

What was her demeanour when she was able to read it?—She was very glad, rejoicing, and dancing about.

Did she read a portion of it to you?—She read it to me at various times; but I did not very well understand its purport.

His Lordship—Did she read it, then, or a portion?

Witness—A portion of it.

Mr. Lowder—Now there was in the service of the Carews a China boy named Ah Kwong, was there not?—Yes.

Do you know whether he ever went to the waste-paper basket?—Miss Jacob, he told me—

Mr. Wilkinson objected. The witness could not tell them what was the conversation between Ah Kwong and a person not in Court—an absent person. She could not give the conversation that Ah Kwong had with her, unless a foundation had been prepared for it.

His Lordship—The question so far has only been did she know if Ah Kwong went to the waste-paper basket.

Mr. Wilkinson—Yes, my Lord, but the witness was going on to tell us what Ah Kwong had told her as to what Miss Jacob is supposed to have said to him.

His Lordship—Did witness hear a conversation between Miss Jacob and Ah Kwong?

Witness—No. Ah Kwong told me about going to the waste paper basket for—

Mr. Wilkinson—That is just what I understood it would come to.

Mr. Lowder—Well, what did Ah Kwong tell witness?

Mr. Wilkinson objected.

Mr. Lowder—I can't call Ah Kwong.

His Lordship—I can't help that. If the point was material I should advise the jury, in my charge, to put it out of their minds.

Mr. Lowder—I see what your Lordship means. (To witness)—Did you ever see Ah Kwong at the waste-paper basket?—No.

His Lordship—That is the question I would have suggested.

Mr. Lowder (to witness)—Do you recall the 18th of October last, I wish to ask you a question whether Mrs. Carew took the children to church that afternoon?—Yes.

Do you remember if your mistress took the children to church that afternoon?—Mrs. Carew generally did not take them along to church, but as I did not see them that afternoon, I think Mrs. Carew took them to Church.

They were not with Mary Jacob that afternoon, at the time you are speaking of?—Miss Jacob was also out.

She went out after her mistress?—Yes, after Mrs. Carew had left the house.

Then when she left, did she have the children with her?—No, she went out alone.

Now, that day, when Mrs. Carew went out, did you receive an order from your master to send out for something?—He gave me a piece of writing, and told me to send a *jirikisha* man with it.

To go where?—To Maruya.

Did the man bring something back to you?—Yes.

What did he bring back?—A bottle: I can't remember whether it was more than one: it was a bottle of medicine.

And what did you do with those bottles or bottle?—I took them upstairs and gave them to my master.

Was Mrs. Carew in the house at that time?—She was not.

His Lordship—Neither when she sent or when they came?—That is so.

Mr. Lowder—Now during that afternoon, while Mrs. Carew was absent, did your master ring for you and ask you to give him soda-water?—The soda-water was in the room and he asked me to give it to him.

Did you pour it into a tumbler?—I did.

Was anything in the tumbler before you poured in the soda-water?—Yes.

Much or little?—Very little.

What colour was it?—It was darker than sherry. Was it darker than this bottle?—(Maruya's arsenic solution)?—Yes, darker than that.

Was it darker than this (Schedel's)?—I can't remember positively, but I think it was a little lighter than that.

Mr. Wilkinson—At what time did Mr. Carew take the soda-water and the medicine?—I do not remember exactly, but it was either about 4 or, a little after four.

About 4 o'clock?—I can't quite remember, it may have been between 4 o'clock and half-past five.

Had you sent for the medicine then?—I think it was after the medicine came back.

Where did your master put the medicine?—I handed it to my master and left the room; I do not know where he put it.

Did you see it again?—The medicine was in a paper parcel, so I never saw the inside and I cannot tell.

Did your master open it in your presence?—I did not see him do so. I handed it to him and went right out.

When did you speak about this medicine first?—After some considerable time I mentioned the fact to Mrs. Carew; I believe it was after my master's death.

Do you know what *jirikisha* man went for it?—I do not know.

Was there no *jirikisha* man employed about the house at that time?—No.

Was what you saw in this tumbler like this stuff (Baelz's mixture)?—I cannot say: I did not take particular notice at the time, so I cannot say.

Was it a tumbler or a small glass?—A tumbler. How much was there of this liquid in the glass?

About as much as now remains in the bottle.

Do you remember what time you sent for the medicine to Maruya's?—I do not remember, as I did not look at the clock.

Was it immediately after the departure of Mrs. Carew?—Not long after she left.

At what time did Mrs. Carew return?—I do not know.

Do you know at what time Miss Jacob went out?—I think before I went to Maruya's.

Did she go out alone?—I did not see her go out, but I heard that she had left the house.

Then how do you know that she went alone?

I referred to the children more particularly; there was no one in the house who would go out with her beside the children.

But you did not see Mrs. Carew go out with the children?—Mrs. Carew was not in the habit of taking out the children, but I missed them about that time and so supposed Mrs. Carew had taken them.

How do you know that Miss Jacob left after Mrs. Carew?—Ah Kwong told me that any mistress had gone out.

Did you see Miss Jacob after this?—I went upstairs after he told me and saw Miss Jacob in her own room, in a white dress.

Alone?—Alone.

And the children were not in the house then?—They were not in the house then.

You say that as far back as July you saw Miss Jacob taking fragments from the waste-paper basket and stitching them together?—At one time I saw her doing this almost every day.

Can you fix the time nearer than that?—No. Was it long before the family went up to Miyanoshita?—The gathering of the pieces was done long before that, the sewing of them together was done in August or September.

Were they sewn or pasted?—She was in the

habit of getting thin Japanese paper from the w.c., and she used to sew the pieces together on that. But she did sometimes piece them together direct without this aid.

Now the first time you saw this done, did you not think it very strange?—I thought she was doing something very wrong.

Did you tell your mistress?—I saw it so often that I thought it impolite, and so I told my mistress.

When did you tell your mistress?—I cannot remember the time, but I think it was in August. But my mistress did not believe me and said it was nonsense.

You say Miss Jacob read some to you, was it among the first?—From August she occasionally read parts to me.

Can you tell me what you recollect of those letters?—No, as I did not know their proper purport.

You can read yourself?—Yes, a little.

Did you read them yourself?—No, she placed them before me and read them.

Were they then sewn?—Some were, others were not.

Who were they from?—She said that they were all from Mr. Dickinson.

Did you mention the matter to your mistress after August?—I was scolded by Mrs. Carew on the final occasion.

I should like an answer?—I don't know whether I ever spoke to her about it afterwards; but I have an impression that I did speak to her.

What is your impression of the time when you spoke to her again?—I could not say.

Did you speak to her after your master's death?—I have forgotten.

Latently, since Mr. Carew's death, to whom did you speak about it?—To Mr. Porch, and Mr. Lowder spoke to me about it.

About when?—I have forgotten.

Do you know what Miss Jacob did with those things that she appeared to have copied from her mistress's writing?—I do not know.

What sort of paper was she using then?—I don't quite remember, but it seemed to be letter-paper, and letter-paper without lines; and also on thin Japanese paper.

Did you ever see her putting these things into envelopes?—No.

Do you remember what your mistress's writings were like that she was copying?—It seemed to be written on a piece of note-paper, but lengthways.

Will you tear this paper to the size?—About this size (note-paper).

And the paper that she was writing on?—I cannot say, but it might have been the same as the paper she was copying from. Sometimes she wrote on Japanese paper, sometimes on foreign.

Did you ever tell your mistress that the letter was from Mr. Dickinson—the letter that was read?—No.

When did you first tell her about that?—If I did mention it, it was after my master's death; but it is only an impression.

Are you quite positive that you saw Miss Jacob sew these letters together herself?—I am, and she said to me, "Rachel, I am going to sew this together nicely and tell you what is in it."

And she did this time after time?—Yes, and with great rejoicing.

His Lordship asked the witness to repeat what she heard in English.

Witness—I understand English, but I am not sufficiently proficient to speak it aloud.

His Lordship—Try.

Witness (after a good deal of pressing)—"I find this again, after I make together, and read it to you."

Mr. Wilkinson—Mrs. Carew was very good to you and to Miss Jacob also?—Yes, very kind to both of us.

Now what do you think Miss Jacob wanted to do this for?—I thought that she was very bad, but that she wanted to read the letters—that it was her principal desire to do so.

And you are quite sure it was as far back as August last?—Yes, that was the time.

And could you not tell us what was in the first of the letters?—No, I could not.

Even if they were read to you again?—No.

How did she show her joy?—She held the letter up in her hand and danced up and down.

And what did you say to her?—Nothing.

Mr. Lowder—How long did this piecing of letters go on—from the middle of August till when?—As far as collecting them was concerned, it started before August.

And down to what time did it extend?—I think till up to the end of September; but I believe on some occasions it was after the family came back from Miyayoshi.

Mr. Wilkinson—Does this rise from the cross-examination?

Mr. Lowder—Yes. I have done.

Mr. Patterson—I should like to ask one question. At the time the witness gave the deceased soda-water on the Sunday, was he able to get out of bed. Was he in bed; and did she see him drink the soda-water?

Witness—He was in bed.

Mr. Patterson—Did he sit up, or get up, to drink it: did he take it in bed?

His Lordship—Did she see him take it?

Witness—I did not see him take it.

Mr. Patterson—When she poured the soda-water into the tumbler, in which she saw some coloured fluid, did she detect any smell?—I had a cold at the time and did not smell anything.

Then with reference to the paper that she saw Miss Jacob's copying, how did she know that it was in Mrs. Carew's handwriting?—I know Mrs. Carew's handwriting, having seen it about.

His Lordship—If you were shown two different handwritings, would you be able to tell which was Mrs. Carew's?—I think I would.

Can you read English?—A little.

Show her this photograph: whose handwriting is it in?—It seems to be something like Mrs. Carew's, but I cannot say.

Now show her this; whose hand is that in?—This looks like her writing.

His Lordship (to the jury)—This last is Mrs. Carew's, the other is Miss Jacob's.

Reginald Colmore Porch was next called. He deposed—I remember Sunday, the 18th of October last. I recollect that Mrs. Carew took the children to church in the afternoon of that day. The two spouses were living on the most affectionate terms both during his illness and before his illness. Mrs. Carew once said, during his illness, that she thought about calling in Hunter, the nurse. This was about four days after he was taken ill—about Sunday or Monday. I remember, on the day of his death, before he was removed to the Hospital, that Mrs. Carew gave him an emetic. This was about a quarter past two. Dr. Wheeler came about a quarter of an hour afterwards.

Mr. Lowder—You knew the deceased well?—Yes.

Did he allow his wife all the liberty she wanted in the selection of her male friends?—Yes.

Now with regard to himself, from your knowledge of his disposition, and from his conversation, did you gather that he gave himself the same freedom?—Yes, I should think so.

Have ever seen this piece of paper before (the flimsy bearing the words "M. J." "Dearest Walter")?—Yes.

Tell me, as nearly as you can recollect, where you first found it?—About the second of January I found it in Miss Jacob's birthday-book.

Is that the book (holding up book) in which you found it?—Yes.

Had you even seen it before?—No, never before.

You went to see Mary Jacob, after she went to No. 2, Bluff, I believe?—Yes.

With what object did you go to see her?—I went to see if she had taken any letters from the waste-paper basket. She said she had gone to the waste-paper basket to see if she could find letters of her own; but I did not understand that she had taken any letters from the basket.

Was the deceased able to be up and about on Sunday, the 18th?—I should say he could; but I did not see him up.

But afterwards on the Wednesday, wasn't he up on a chair talking and chaffing?—I do not remember.

Do you know if he was in the habit of taking sugar in his tea or coffee?—He never took sugar in anything.

Mr. Wilkinson—Before Miss Jacob left the house, had you a conversation with her with regard to the waste-paper basket?—Yes.

What did she say?—She gave me the same answer as she gave me at No. 2, Bluff.

Did she not say that she had letters?—No.

Are you quite sure?—Quite.

Do you remember the date of your visit to No. 2, Bluff?—No.

She did not tell you that she had letters out of the basket?—She did not say so, but I understood from her remarks that she had not.

You took a letter to her from Mrs. Carew?—I did.

You heard it read in Court?—Yes.

Was the conversation with her at No. 2, Bluff, confined to the letters?—Nothing, whatever, beside her leaving the house.

How long were you there?—About 25 minutes. Those were the only two subjects?—Yes.

Did she give her reason for leaving?—No. She said she could not remain in the house any longer, but I do not know why she left.

Was the subject of her evidence to be given at

the magisterial enquiry referred to?—No. I did not know what evidence she had to give.

The subject of the evidence was not mentioned at all?—No.

I suppose you knew what was in this letter when you took it?—Yes.

Counsel read the letter beginning, "For the sake of Edgerly." And you are quite positive, Mr. Porch, that you did not hear then or on any previous occasion that Miss Jacob had letters?—No. I did not know she had the letters.

When did you first see them?—When they were produced in Court.

Did you know from whom they were?—No, not till they were produced in Court.

Did you not know of their existence?—Yes, but I did not know who wrote them then.

Well, when did you first learn of their existence?—Sometime during the inquest. I learnt then that Miss Jacob had been to the waste-paper basket, and was thought to have letters in her possession.

She mentioned this on the 24th Oct.?—Yes.

Was not your conversation with her something like this "Have you been to the waste-paper basket at night," and she said, "No, I have been there during the day time?"—I do not remember.

And she gave as her reason, that she went there in search of letters of her own?—That is so.

She did not deny that she had letters?—I understood that she had found none of her letters.

I believe Mr. Eastor was the gentleman referred to as "The Ferret" in the family circle?—Yes.

What did you do on Sunday, the 18th Oct.?—I went out for a walk.

Had Mrs. Carew left the house?—She left the house just before I did.

Where was Miss Jacob then?—In her room. I did not see her in her room; but I think she must have been there because she had a headache. I understood that she left the house after Mrs. Carew.

Is there anything improbable in the suggestion that she left the house with Mrs. Carew?—No; not that I know of.

I am instructed that she left the house with Mrs. Carew, the children, and Elsa Christoffel, and that after leaving the gate she went with Miss Christoffel, for a drive round the race-course?—I knew of the drive round the race-course.

You know of the drive?—Yes; I know of the drive, but I can't say whether she went out with Mrs. Carew, and I can't say when they started.

Did Mr. Carew ever suffer from malaria?—I think he did.

You remember saying at the inquest, "Dr. Wheeler made a mistake this morning, when he said that Mr. Carew suffered from malarial fever"?—I did say so.

His Lordship read the note from the inquest book.

Mr. Wilkinson then said—Can you say why you said that?—I do not know. I think that he ought to have said that Mrs. Carew suffered from malaria.

To his Lordship—I am not certain whether Mr. Carew suffered from malaria or not.

Mr. Wilkinson—You remember, Wednesday, the 21st?—Yes.

You remember what Maruya's man said about buying "plenty deadly poison"?—Yes, but she did not mention Maruya's name: she said simply the chemist.

His Lordship—What did she say?

Witness—He wanted to know "why she was getting plenty deadly poison."

Mr. Wilkinson—Did you mention the matter to Mrs. Carew?—No.

Did it not strike you that the making of such a remark by a chemist was something out of the common and was worthy of comment?—No, not in the least. I knew arsenic was a medicine as well as a poison.

Did it not occur to you that it was a remark calling for some action?—No, not in the way she told it me.

She said to you that the chemist had asked her "why you buy so plenty deadly poison"?—Yes, but in a very casual way.

Was not the communication serious enough?—Not, in the way she said it.

But she did convey to you clearly that the chemist wanted to know why she got plenty deadly poison?—Yes.

I believed that you said at the inquest that you did not know but that the purchase of arsenic was in accordance with Dr. Wheeler's orders?—I do not know now.

His Lordship—I will read the note. "I did not know at that time that the arsenic was not purchased at Dr. Wheeler's orders."

Mr. Wilkinson—You knew nothing about what the deceased was suffering from?—I knew he was vomiting.

You said at the inquest that you did not know

what his complaint was?—I meant I did not know what he was actually suffering from.

But you observed the vomiting symptoms?—Yes. You say you had seen Mrs. Carew give her husband his medicine?—Yes.

And that he had several medicines, but you could not tell their names?—I did not know what they were.

Mrs. Carew mentioned to you that Dr. Baelz was wired for and he was coming?—She told me she had wired to Dr. Baelz: once she said that he was coming, but that he could not come.

That he was coming, or had come?—He was coming, but that he did not come.

You also said that you never saw his medicines administered to him except by your sister?—Yes.

Is that correct?—Yes.

You also said that you were not in the house all the time?—No, I was not.

Did you know Mr. Boag?—Yes.

Do you remember his death?—Yes.

Do you know when it was?—The 21st October, I believe.

His Lordship—I can give you the date from the Inquest-book if you require it.

Mr. Wilkinson—I think it is sufficiently clear (to witness)—Mr. Boag was buried the day Mr. Carew died?—Yes.

His Lordship—Will you be long, Mr. Wilkinson?

Mr. Wilkinson—Not very much longer, my Lord.

His Lordship (to Mr. Lowder)—Is this your last witness?

Mr. Lowder—Yes, my Lord.

Mr. Wilkinson (to witness)—You brought this Diary down to Mr. Lowder?—I did.

Where was it kept?—In the dining room.

That birthday book of Miss Jacob, when did you find it?—It was after Mr. Hodges, the constable, had been and searched the house for any further bottles?—Perhaps: I think it was about the 2nd of January that I found it.

That was the very same day he went?—Well, I found it the same day.

Do you remember the constable going up?—Yes.

And do you remember whether it was before or afterwards that you found this book?—Before.

I don't ask about minutes, but I want to know about hours?—I don't know of hours.

Well, do you think you can recollect whether it was before or after?—After, I think.

It was lying, where?—In the nursery on a box where the children kept their toys.

There is a door opening out behind into your room, or your bath-room?—No, there is a dressing-room that can be reached that way.

Have you lately been using or passing that way?—No.

When were you in the nursery before?—I went into the nursery about the day after Rachel found the pieces of paper.

His Lordship—Those two pieces lately alluded to?

Mr. Wilkinson—Yes. (To witness)—The book you found on the box?—Yes.

Did you open it?—Yes.

Find anything?—I did not find the piece of paper the first time that I opened the book.

Mr. Wilkinson (to the jury)—There is the book, and there is the piece of paper, gentlemen. (To witness)—You found the book on the 2nd Jan.?—Yes.

You took the book, where?—To the dining room. When did you find the paper?—I found it just before I went to give it to Mr. Lowder; I opened it and found the paper there.

But you opened the book the first time and found nothing?—I only opened part of the leaves: I afterwards searched it.

You did not search before?—No.

Do you remember the day that you found it?—On a Friday, I think.

In the meantime the other two pieces of paper had been given to Mr. Lowder?—Yes.

You remember the Thursday, the day Mr. Carew died?—Yes.

Do you remember meeting Dr. Wheeler?—Yes.

He was just leaving the house and you were about to enter?—I met him opposite Mr. Jackson's as I was going to the house.

He mentioned to you something with regard to arsenic?—Yes.

Did you communicate this to Mrs. Carew?—Later, yes.

When later?—After he had been removed to the hospital.

Dr. Wheeler gave you instructions?—He gave me instructions not to mention the matter to Mrs. Carew at the time.

What else?—That Mr. Carew was not to receive anything except from me.

After you got home Mrs. Carew gave him something?—Yes.

What?—An emetic.

After you got home, in spite of what Dr. Wheeler told you, you went to tiffin?—Yes. But as Dr. Wheeler told me that the patient was not to take anything from Mrs. Carew, and as Mrs. Carew had tiffin with me, it came to the same thing.

He was not to receive anything?—Nothing, except barley water from me.

Are you quite sure he received nothing?—Yes. Nothing was given him but the emetic.

His Lordship—When did you get home?

Witness—About half-past twelve.

His Lordship—You went straight to tiffin?

Witness?—Yes.

His Lordship—And at one o'clock went upstairs to the sick room?

Witness—Yes.

His Lordship—Where was your sister at half-past twelve?—In the dining-room.

Mr. Wilkinson—Then you were wrong when you said at the inquest that Mr. Carew had some beef-tea and corn-flour for his tiffin?—He had had his tiffin before I came home. He had tiffin at 12. Rachel Greer said in her evidence that he had his tiffin at twelve—at mid-day.

Did Mr. Dickinson call as usual every day from the beginning of October?—So far as I know, I should say so. I did not notice any difference in his calls.

Mr. Dickinson dined with you and Mrs. Carew on the evening of October 13th?—He might have done; I do not know.

The evidence of Mrs. Carew, as given at the inquest, is that her husband dined at the Club that night?—Yes. I think he did dine out that night; but I won't be sure.

You dined at home?—Yes.

And Mr. Dickinson?—Yes, I suppose so, so far as I recollect.

Mr. Lowder—Will it be convenient to adjourn now?

His Lordship—Have you any questions in re-examination?

Mr. Lowder—I think I may have, on consideration.

Mr. Wilkinson—There is one point, my Lord, in regard to Mary Jacob and her movements on the afternoon of Sunday, the 18th, which is still doubtful, and I think that it will be necessary to call rebutting evidence to prove that she did leave the house with Mrs. Carew, and did not stay behind as some of the witnesses suggested.

His Lordship asked if anything turned on it?

Mr. Lowder—I do not know; I hardly think so.

Mr. Wilkinson—It does not appear so now, but possibly there may be at any rate it is a day during the last illness of Mr. Carew. The imputation of the witnesses against Miss Jacob has been withdrawn, I know, but I think the point should be cleared up, and that rebutting evidence should be admitted.

Mr. Lowder—To save the time of the Court I will suggest that Mary Jacob, Elsa Christoffel, and Mrs. Carew did leave the house and pass the gate together. I give the suggestion for what it is worth.

Mr. Wilkinson (to Mr. Porch)—You do not know any thing to the contrary?—No, it is quite probable.

The Court then adjourned till 10 o'clock next morning.

FRIDAY, January 29th.

Some half dozen people were scattered about the benches of the Court-room when proceedings were resumed this morning. The accused looked pale but composed, though her eyes maintained an ever watchful scanning of the faces of the Judge and jury-men. Mr. Lowder did not recall Mr. Porch for re-examination on the previous day's cross-examination, but began at once to call the attention of the jury to some of the exhibits to enable them to determine whether or not the accused was the writer of the Annie Luke letters. His Lordship thought that the letters from Miyanoshiita and Nikko—the finding of them—should first be cleared up.

His Lordship (to Mr. Lowder)—You do not propose to examine the last witness?

Mr. Lowder—No, my Lord. Gentlemen, before saying the last few words which it will be my duty to address to you presently, I should like to call your attention to some of the exhibits, especially with reference to handwriting, in order that you may be able to form an opinion as to whether or not the A. L. letters were written by Miss Jacob.

His Lordship—You are now addressing the Jury, Mr. Lowder, you are summing up your case?

Mr. Lowder—Yes.

His Lordship—Will you tell me before you begin about the Miyanoshiita letters? The handwriting has been proved, but where they came from

has not. There are letters from Miyanoshiita and Nikko, but there are no envelopes.

Mr. Lowder—All I can say is that they were handed to me.

His Lordship—By the accused?

Mr. Lowder—No, they were in the house of the accused.

His Lordship—They came in without any explanation?

Mr. Lowder—Yes, my Lord, I thought perhaps they would bear internal evidence that they had been received, coupled with the evidence that Mr. Reid gave.

His Lordship—Yes, he gave evidence, but I do not know any more about them than that there are simply two letters.

Mr. Lowder—I am afraid, my Lord, I can give you no further evidence about them than that. Of course, as the jury will understand, I cannot call the prisoner herself to give evidence.

His Lordship—They were found in the house, by whom?

Mr. Lowder—I do not know, and therefore I am not in a position to state.

His Lordship—There are envelopes?

Mr. Lowder—(After looking in his bag)—Yes, my Lord, I have the envelopes, and stupidly I left them in my bag without putting them in. If it is not too late, I will put them in now.

His Lordship—Quite so.

Mr. Lowder—I have the envelope that might fit the letter of the 28th or that of 30th September, and I have the envelope that fits the letter from Nikko.

His Lordship—With the post-mark upon it?

Mr. Lowder—Yes.

His Lordship—Very well. You see the only other letter that was put in we had the envelope itself.

Mr. Lowder—Yes, my Lord, it escaped my memory. Perhaps I had better prove the handwriting by Mr. Porch.

His Lordship—I thought the handwriting had not been proved?

Mr. Wilkinson—I think it was, my Lord. Mr. Dickinson proved the handwriting.

His Lordship—I just wanted that matter cleared up for my own satisfaction.

Mr. Wilkinson—This envelope, I admit, bears the post-mark Nikko, 25th day 7th month.

His Lordship—The 25th July.

Mr. Wilkinson—Yes, and that it has an obliterating stamp of Yokohama.

His Lordship—I will enter on my notes. "Mr. Lowder produces an envelope which Mr. Wilkinson admits bears the postmark 25th July, and also bears an obliterating stamp of Yokohama, the 26th day, but the month is not clear." I understand it has already been proved?

Mr. Wilkinson—Not the envelope, my Lord, I admit that this envelope is true and bears the obliterating stamp Miyanoshiita, and also bears another stamp 29th day, 9th month, 7th delivery.

His Lordship—And the date of the letter?

Mr. Lowder—There are two letters; one the 28th and the other the 30th.

His Lordship—Very well. That would be belonging to the letter of the 28th?

Mr. Lowder—Then in the letter which I say should bear the date of the 30th, it says:—"I wrote to you on Monday. Did you not receive the letter yesterday?" and I think that would prove the other.

His Lordship—Quite so.

Mr. Lowder—I just want to call the attention of the jury to exhibits 39, 34, and 35.

His Lordship—Before you begin, Mr. Lowder, I want to ask you one thing more. I wish you to look at exhibit 29. Did I understand the Crown to say that the "M.J. for E.H.C." is in Mrs. Carew's handwriting?

Mr. Wilkinson—Yes, my Lord.

His Lordship—And you, Mr. Lowder, say that if it is not it is an extremely good imitation?

Mr. Lowder—Yes, my Lord.

The exhibit 29 (or rather photo of it) was handed to the jury.

His Lordship (to the jury)—You have heard what has been said? You will form your own opinion about it.

The two last envelopes were here put in and numbered 56 and 57.

His Lordship (to Mr. Lowder)—You suggest, I suppose, that it [exhibit 29] is in Miss Jacob's handwriting?

Mr. Lowder—Yes; your Lordship will remember that it has been put in by the prosecution and that the prisoner says that if she could not prove that she was out of the house at the time she should be obliged to admit that it was in her own handwriting.

His Lordship—And Mr. Mason said that if it is not hers [the accused's] it is an exceptionally good imitation of it.

Mr. Lowder—Yes, and upon that I would ask the jury to say what possible reason the prisoner

could have for signing M. J. for E. H. C. One does not see any possible reason for her to do such a thing. I was about to call your attention to exhibits 39, 34, 35. What I want to call your attention to is the word Lowder in exhibit 39. On the exhibit 34 you will see the word Lowder written no less than three times, and I think if you put the word Lowder on the envelope in juxtaposition with the word Lowder appearing on exhibit 34, bearing in mind of course that the envelope is presumably in a disguised handwriting, you will say that the writer has not been able to disguise her handwriting on that particular envelope. On exhibit 34 there is the word "lawyer," Compare the "er" in that word with the "er" in the word "Lowder" on the envelope, and I think you will say that they very much resemble each other; and on exhibit 35 on the second page is the word "sooner" and immediately after is the word "better." If you will compare those "er's" with the "er" of exhibit 39, I submit you will find a great similarity between them.

Mr. Lowder (to the Court)—I was asking the jury to compare the word Lowder on exhibit 39 with the word Lowder written three times on the exhibit 34, and I call particular attention to the "er" not only in the envelope, but in the words "lawyer," "sooner," and "better" on the second page of exhibit 35. These are the resemblances of handwriting to which I wish to call the attention of the jury.

His Lordship—In the second Lowder more than in the third?

Mr. Lowder—It is the word Lowder altogether, supposing the one to be a disguised handwriting, and the others in a natural handwriting. The A. L. on exhibit 31 and on exhibits T, U, V, and 38. You will observe that on the T, U, and V, the initials A. L. are written in one way and on 38 they are written in another way. The three appear to be exactly the same as the first A. L. on exhibit 31. I have a powerful glass here if you [the gentlemen of the jury] could see better with it. The A. L. on 38 seems to me to be almost exactly the same as the second A. L. on 31.

His Lordship—You say the A. L. on exhibits T, U, V.—

Mr. Lowder—On T, U, V. are like the first A. L. on 31.

His Lordship—And the A. L. on 38 is different? Mr. Lowder—The A. L. on 38 is different and resembles the second A. L. on 31.

Mr. Lowder, continuing—Once, more gentlemen, I would ask you to take 34 and look at it with 30. Take the "L" on 38 and bring it into juxtaposition with the "L" in Lowder on 34.

His Lordship—You mean the "L" in the signature?

Mr. Lowder—Yes, my Lord, I do not know if I have made my point clear to the jury, but if so I will go on. Now I should wish you to look at 32, 33, and 34, and would call your attention to the way in which "Carew" is written. If you take the last "Carew" on exhibit 33 and place it in juxtaposition with the Carew in exhibit 34 you will find a very great resemblance between them. Now I wish you to look at exhibits R2, S2, T2, 24, 25, 27, and 40.

His Lordship—Exhibit 27 is supposed to be in Miss Jacob's handwriting.

Mr. Lowder—Well, I will leave out 27. It is not material. I wish you to look at those exhibits in order that you may compare the peculiar formation of the "f's," my suggestion being that the writer of R2, S2, and T2, although having successfully disguised her handwriting on the address of the envelope, has been unable for some reason or other to disguise the "f's." The "f's" in 23, 24, 25, 26, and 40 are all undoubtedly in the handwriting of Mary Jacob. The question is who wrote the envelopes R2, S2, and T2. The suggestion, as I said before, is that they were written by Mary Jacob. Then I would ask you to compare the M. J. on exhibit 31 with the M. J. on the card F. These are all the points of similarity to which I wish to call your attention, but I would repeat to you, gentlemen, what I said the other day, that resemblances of handwriting are not very satisfactory evidence to go upon, whether it is brought you by a person professing to be an expert or if it is placed before you by a person like myself who does not pretend to be an expert.

The evidence of handwriting, of itself, is most unsatisfactory evidence, I lay more stress upon the contents of the A. L. letters than I do upon the handwriting in order to conclude they are not the act of the prisoner. They are altogether too unsensical, too idiotic, to have emanated from her pen. Mr. Lowder, who began his final address to the jury at five minutes to eleven o'clock, said—Gentlemen of the Jury.—There are certain facts that have been established in this case. The finding of white arsenic, *post mortem*, is one, and it is a proof that white arsenic was exhibited to the

deceased; in what quantity is not known; but its mere presence is a sufficient indication of the likelihood of its having caused death. The symptoms observed by Dr. Wheeler were all consistent with a dose of white arsenic having been given to or taken by the deceased within four or five days of his death. Five hundred and seventy-two grains of lead, if taken by the deceased, would have more than sufficed to cause death; and lead was found *post mortem*. Of the presence of these two poisons in the body there can be no doubt. There is evidence that a portion of one of them was procured by the deceased in the absence of his wife; there is no evidence whatever to connect the prisoner with the purchase or possession of white arsenic. That a considerable quantity of Fowler's Solution of Arsenic came into the house is certain. It is alleged by the prosecution that it was procured by the prisoner to poison her husband with, and that it was used for that purpose. The defence is that she was innocent of any intent to murder her husband; and that she procured the arsenic at his request, thinking nothing of it. The medical evidence is to the effect that cases of death by Fowler's Solution are of rare occurrence. The case for the prosecution rests entirely on circumstantial evidence; and where that is so, it is necessary to find a motive for the crime charged. If, for instance, a witness sees A shoot at and kill B, and the jury believe the statement of the witness, it is superfluous to seek for a motive: the fact is proved; and to that extent the Crown Advocate was justified in opening to you that the law requires no motive to be shown. But in cases of suspicion only, in cases of mere supposition as this is, common sense requires to know what reason the person accused could have had for committing the crime charged, in other words, what motive was there, what moved her to do the deed; because, the greater the degree of guilt suspected, the greater is the presumption of her innocence, that she was incapable of doing the act charged. And if you find that there is an entire absence of motive, or an insufficient motive, and also that the deceased was sending for poison, not through his wife, and that he was doctoring himself, and that he had been accustomed to take arsenic for the last sixteen years of his life, and that he took, or was given, white arsenic, which, and which alone, would have produced all the symptoms noticed by his medical attendant, and which cannot by any means be traced to the prisoner, how is the conclusion arrived at that the prisoner must have murdered her husband? Before you can bring her in guilty, you must be convinced—mere suspicion will not do—that she must have done the deed; that she might have, or possibly, or probably did, is beside the question, it is a mere suspicion. The inference that she killed her husband must be so strong as to be irresistible, before you can find her guilty; and in order to arrive at that conclusion you will of course have to negative all other theories as to how the deceased may have come to his death. The prosecution will probably contend that a person may be deemed to have committed homicide, although his act is not the sole cause of death; and that, therefore, if the administration of Fowler's Solution, combined with other forces at work, such as white arsenic and lead, contributed to the death, the prisoner may be found guilty. His Lordship will doubtless instruct you on this point, on which I refer to the case *Rex v. Dyson* (Russell, 4th, edition 704). Counsel then read as follows:—

"The prisoner was indicted for the murder of a woman by drowning her. It appeared that the prisoner had cohabited with the deceased for several months previous to her death, and she was with child by him; they were in a state of extreme distress: and being unable to pay for their lodgings they quitted them in the evening of the night on which the deceased was drowned, and had no place of shelter. They passed the evening together at the theatre, and afterwards went to Westminster Bridge to drown themselves in the Thames; they got into a boat, and from that into another boat, the water where the first boat was moored not being of sufficient depth to drown them. They talked together for some time in the boat into which they had got, the prisoner standing with his foot on the edge of the boat, and the woman leaning upon him. The prisoner then found himself in the water; but whether by actual throwing of himself in, or by accident, did not appear. He struggled to get back into the boat again, and then found that the woman was gone; he then endeavoured to save her, but could not get at her, and she was drowned. In his statement before the magistrate he said that he intended to drown himself, but dissuaded the woman from following his example. The learned Judge told the jury, that if they believed that the prisoner only intended to drown himself, and not that the woman should die with him, they should acquit the prisoner; but that if both went to the

water for the purpose of drowning themselves together, each encouraged the other in the commission of a felonious act, and the survivor was guilty of murder. He also told the jury, that although the indictment charged the prisoner with throwing the deceased into the water, yet if he were present at the time she threw herself in, and consented to her doing, the act of throwing in was to be considered as the act of both, and so the case was reached by the indictment. The jury stated that they were of opinion that both the prisoner and the deceased went to the water for the purpose of drowning themselves; and the prisoner was convicted. And, upon a case reserved, the Judges were clear that if the deceased threw herself into the water by the encouragement of the prisoner, and because she thought he had set her the example in pursuance of their previous agreement, he was a principal in the second degree, and was guilty of murder; but as it was doubtful whether the deceased did not fall in by accident, it was not murder in either of them, and the prisoner was recommended for a pardon." That case shows that before you can find the prisoner guilty of contributing to the death, you must be satisfied that she had the intention to kill him; you must be able to say, with satisfaction to your consciences and upon your oaths, that it is an inevitable result of the evidence that she poisoned him. That you may have the strongest moral suspicion is not enough; for you are to try this case on evidence that must be satisfactory, complete, and distinct. Whatever may be the strength of your suspicion, however perplexing may be the probability against her, and however you may have in struggle to get rid of it, you perform your best and bounden duty as a jury to separate suspicion from truth, and to proceed upon nothing that you do not find established in evidence against her."

These last words, I would remind your Lordship, I take from the closing sentence of the summing up of the Lord Justice Clerk at the trial of Madeline Smith. I just now made use of the words "thinking nothing of it," and I am justified in doing so by the evidence. From 1880 to the 9th October, 1896, it is proved that the deceased spoke openly of taking arsenic, and in large quantities. His wife had been accustomed all her married life to see him take it, to hear him talk of it. There is nothing surprising, therefore, in her obtaining it for him. I repeat, it is not for me to account for the death; that is a secret which may never be known; it is for the prosecution to prove the charge affirmatively. What the prisoner did she did openly. She showed more anxiety, more concern about the symptoms of her husband's illness than the medical attendant did; and, so far from attempting any concealment, it may be said that every day, and all day, during his illness, in all that it is proved she said or did, if she were murdering him, she never ceased to call attention to the fact, or to invite detection by the manner in which she set about it, and by the evidence which she made and accumulated against herself. The evidence of Dr. Hutton, Mr. Parsons, Mr. Robinson, Mr. Stewart, Mr. Kenyon, and Dr. Wheeler, of the letters addressed by her to her husband from Miyasashima, and of the entries in her diary, are still fresh in your recollection; and having said all I wished to say to you in my opening address, I now confidently leave it to you to say that the prosecution have failed to satisfy you that the prisoner at the bar is the incarnate fiend they have tried to make her out to be.

Mr. Lowder finished speaking at eight minutes past eleven o'clock.

His Lordship (after a pause)—We are ready. Mr. Wilkinson—Gentlemen of the Jury—Before I begin the duty which now devolves upon me, I wish to associate myself with the learned Counsel for the defence in the expression of our grateful appreciation for the consideration which, at so much sacrifice to yourselves, you have shown to us. I have never known a case in which Counsel have had to call for so much consideration at the hands of a jury, and I can conceive of none in which it has been more generously and magnificently extended. I feel, gentlemen, that I should do an injustice to myself if I failed to convey to you my sentiments on this subject. Gentlemen of the Jury: It is now my duty on behalf of the Crown to present to you the view taken by the prosecution of the evidence brought before you, and the arguments by which it is considered that view is supported. In opening the case to you, I told you that the charge against the prisoner was that she had murdered her husband by administering arsenic to him. I told you that the evidence which would be given would show that sugar of lead had also been administered, but that the view taken by the prosecution was that it was arsenic which caused his death, and I stated two questions which would require your

consideration as determining your verdict—the first, whether the deceased died from arsenic; and the second, whether the arsenic of which he died was administered to him by the prisoner. With regard to the sugar of lead, I told you that I did not think you would require to trouble yourselves very much; that lead had been found in the viscera, but not in any large quantity, and that there was no reason to believe that it was lead that had caused the deceased's death; that it was an element, and an important element, in the case that sugar of lead had been purchased with the arsenic, and that it was a thing which in ordinary circumstances would not be given to the patient to be taken internally; that whatever other effect it might have, its tendency would be to check purging, and that it might have delayed the purging symptoms of arsenic poisoning. That was the only point with regard to the sugar of lead which I thought it necessary to put to you; because, as I said, I did not think it would be suggested that the deceased died of sugar of lead. The anticipation that sugar of lead would not be alleged as the cause of death has not been confirmed. While the medical witnesses for the prosecution assign the death to arsenical poisoning, the medical witnesses for the defence say that, having regard to the symptoms and the *post mortem* appearances, and the chemical analysis, it results that it is impossible to determine how far death was due to arsenic and how far to sugar of lead. They are all agreed that these symptoms, appearances, and results are all consistent with arsenical poisoning, and they are all agreed that arsenic in all probability conducted to the death. With regard to the form in which the arsenic was administered, I shall refer to that more particularly afterwards. It is enough here to say that while the finding of white specks in the stomach point to some of the arsenic having been exhibited in the solid form of arsenious acid or white arsenic, Dr. Divers is of opinion that the smallness of the quantity of solid arsenic found indicates that arsenic in solution was also administered. The medical witnesses for the defence, while they would not draw the same conclusion from the fact, are agreed that the finding of the arsenic in the solid form is not inconsistent with arsenic having been administered in solution and having conducted to the death. The learned Counsel for the defence, referring to the evidence concerning the finding of white arsenic and of lead in the viscera, stated as a proposition of law, that if you found that death was caused by the combined effect of poison administered by the accused and of poison not administered by her, you were bound to acquit her, because it would be impossible to say that death was caused solely by the particular poison administered by her. Now, gentlemen, I tell you, subject to correction from his Lordship, that that is not the law. If you find that poison administered by the accused, although not the sole cause of the death of the deceased, conducted to his death, then you are bound to find a verdict of guilty. It is not necessary that death should be due alone to the poison administered by the accused, if that poison contributed to the result. On this point, I would refer your Lordship to Archibald's "Practise and Pleading in Criminal Cases," 10th edition, page 680 in the case *Rex v. Martin*. It is there stated—"If a man have a disease, which in all likelihood would terminate his life in a short time, and another give him a wound or hurt which hastens his death, this is such a killing as constitutes murder." (1 Hall, 482). Upon a trial for manslaughter, it appeared that the deceased, at the time of the blow given, was in an infirm state of health, and this circumstance was observed upon on behalf of the prisoner, but Parke, J., in summing up, said—"It is said that the deceased was in a bad state of health, but that is perfectly immaterial as, if the prisoner was so unfortunate as to accelerate her death, he must answer for it." The case of the *Queen against Martin* is not among our reports, I believe, but it is referred to in the case of the trial of Thomas Winslow in Latham Brown's Trials. And that case shows what would naturally be expected that this doctrine is not confined to assault and wounds, but refers to poisons as well. (Brown, page 489). That was a case of poisoning, and in his charge to the jury, Baron Martin told them that if they believed that the prisoner administered antimony with the intention of killing her, and that her death from a natural cause was thus accelerated, that was murder, citing the dictum of Lord Hale "that if a man be sick of some disease that might possibly end his life and another give him a wound which would hasten his death this was murder by the party giving the wound." In Russell on "Crimes and Misdemeanours," 5th edition, vol. 1., page 675, it is said:—"If a man be sick of some disease, which by the course of nature might possibly end his life in half a year, and another gives him a wound

or hastens his death, by irritating and provoking the disease to operate more violently or speedily, this is murder or other homicide according to the circumstances in the party by whom such wound or hurt was given. For the person wounded does not die simply *ex visitat cosie Dei*, but his death is hastened by the hurt which he received, and it shall not be permitted to the offender to apportion his own wrong." There is also another instance cited, the case of the *Queen against Fletcher*; "where a husband was indicted for the manslaughter of his wife by accelerating her death by blows, and it appeared that she was at the time in so bad a state of health that she could not possibly have lived more than a month or six weeks under any circumstances. Coleridge, J., told the jury that if a person inflicted an injury upon a person labouring under a mortal disease which caused that person to die sooner than he otherwise would have done, he was liable to be found guilty of manslaughter, and the question for them was whether the death of the wife was caused by the disease under which she was labouring or whether it was hastened by the ill-usage of the prisoner."

Mr. Lowder—There is a note to that.

Mr. Wilkinson—Yes, I am going to read it. The note to the first case is as follows:—"The reference is to 1 Hale, 428, the same that I have already read: "Lord Hale says that thus he had heard that learned and wise judge, J. Rolle, frequently direct (see Johnson's Cases, 1 Lewin, 164) whereon an indictment for manslaughter in causing a death by a blow on the stomach, on a surgeon stating that a blow on the stomach in this state of things arising from passion and intoxication was calculated to occasion death, but not so if the party was sober. Hullock, B., is said to have directed an acquittal, saying that where the death was occasioned partly by a blow and partly by a predisposing circumstance it was impossible so to apportion the operations of the several causes as to be able to say with certainty that the death was immediately occasioned by any one of them in particular. This ruling is questioned in Roscoe, Cr. Evid. 647, and as it would seem with very good reason as it is contrary to the other authorities on this point." That last sentence is a note by the editor. Roscoe's Digest of Criminal Evidence 9th Edition, page 740 says: "Whether the infliction of a blow which, had the party upon whom it was inflicted been sober, would not have produced death will, when inflicted upon a person intoxicated and producing death, be deemed murder or manslaughter, may admit of much question. The point arose in the following case:—Upon an indictment for manslaughter it appeared that the prisoner and the deceased had been fighting, and the deceased was killed. A surgeon stated that a blow on the stomach in the state in which the deceased was, arising from passion and intoxication, was calculated to occasion death, but not so if the party had been sober. Hullock, B., directed an acquittal observing that where the death was occasioned partly by a blow and partly by a predisposing circumstance it was impossible to apportion the operations of the several causes and to say with certainty that the death was immediately occasioned by any one of them in particular. His Lordship cited from his notes the following:—*R. v. Brown*, April, 1824: Indictment charged with killing by striking. The jury found that the death was caused by the over exertion in the fight. The judges held that the prisoner was entitled to an acquittal. *R. v. Johnson* 1 Lewin C.C. 169. It may be doubted how far the ruling of the learned judge in this case was correct, for if by the act of the prisoner the death of the party was accelerated, it seems that the prisoner would be guilty of the felony. (See *R. v. Martin* 5 C. and P. 140, *post*, p. 472). And although a state of intoxication might render the party more liable to suffer injury from the blows, yet it is difficult to say that the intoxication was the cause of his death any more than the infirmity of age or sickness which could not, it is quite clear, be so esteemed. Of course the case cited by Baron Hale in the case did not support the conclusion at which he arrived. Roscoe's comment on the case runs:—"It may be doubted how far the ruling of the learned judge in this case was correct."

His Lordship—Yes, that is the editor's comment.

Mr. Wilkinson—Yes. He says, "It may be doubted how far the ruling of the learned judge in this case was correct, for if by the act of the prisoner the death of this party was accelerated, it seems that the prisoner would be guilty of the felony." Then the cases go on, and the editor draws the distinction between wounding and when the wounded person dies of the wounds received, and also where death arises through misapplication of medical appliances. That ruling of Baron and Hullock is quoted in *Queen v. Bond*, Law Journal, magisterial case, page 79.

His Lordship—In what year?

Mr. Wilkinson—In the year 1851. There, my Lord, the case was one reserved for the consideration of the judges upon the application of an Act which is no longer—as far as applies to a case of this kind—in operation, Lord Denman's Act, and the question came up on what is now a purely academical question, but which involved the question of whether conducting to death would render the person conducting liable to the penalty of murder. Fourteen judges sat upon that case. It was one which upon the technical point raised considerable differences of opinion, but upon the point that conducting to death was murder all the judges assumed that as an elementary fact.

His Lordship—What was the point?

Mr. Wilkinson—The point was as to different assaults. It was under the old form of indictment which required the particulars of the cause of death to be stated in the indictment and a variety of assaults were so stated as having caused the death. In the result, the jury came to a conclusion upon the evidence with which all the judges agreed, although that was not necessary, that none of the particular assaults alleged was the cause of death at all, but that death was due to another assault not charged in the indictment, and that being so the prisoners, husband and wife, were acquitted. The assaults that were charged were assaults at different times, and by two people, and it was assumed there that each of them was liable for any assault that contributed to the death, but was not liable on a charge of murder for any assault that did not contribute to the death, and it being found that the particular assaults charged had not contributed to the death they could be put upon their trial for the same assaults; because under Lord Denman's Act a jury could not consider those assaults at all. They were not before them, and the question first to be decided was whether or not they did contribute to death. If it was decided that they did not contribute at all, then it was beyond the scope of the jury on the capital charge to deal with it, and the prisoners might be tried by another jury for it. That was the case. But the judges throughout assumed that if any one of those assaults charged in the original indictment had contributed to the death in any degree, then the person assaulting was liable to be charged with murder or manslaughter according to the circumstances. The report extends over 30 pages, but I will read part of the head note:—"On the second trial, as on the first, it was proved that the death was caused by the particular blow distinct from these assaults. The Commissioner, before whom the second trial took place, told the jury that if they were satisfied that there were several distinct and independent assaults, some or any of which did not in any way conduce to the death of the deceased, it would be their duty to find for the Crown. The jury, thereupon, returned a verdict of guilty. On a case reserved, stating the above fact, it was held, by a majority of the judges (eight to six) that the prisoners could not, on the trial for murder, have been convicted of assault under the Statute (7 Will. 4 and 1 Vict., c. 85, s. 11), as the assaults committed by them, although relied on by the Crown as conducing to the death, were proved by the evidence to have been unconnected with the homicide of the deceased; that therefore the general acquittal on the indictment for murder was a bar to a subsequent indictment for assault in respect of those very assaults." That is the point which they had before them; but, as I have said, it is assumed throughout every judgment that if any one of the assaults had in any way conducted to the death, the prisoner who had committed it might have been found guilty upon an indictment for murder and therefore could not be tried again. There is a later case 1862. It is the case of the *Queen against Merion*, 3 Foster and Finlayson, cited at page 492, and I read from page 501. There the Judge says:—"I agree with the Counsel for the prosecution that violence which hastened death, may be murder or manslaughter (according as it was intended to have such a result or not) otherwise a weakly or diseased person could never be murdered. It is clearly the law, that if the death was accelerated by violence, so that death happened sooner than it otherwise would have done, that is homicide. It is not murder, unless death was intended, but it is manslaughter if the violence hastened the death." I submit, my Lord, that all these cases apply to a case of poisoning, and that if the jury are of opinion that the death was accelerated by poison administered by the prisoner to the deceased, then it is a case of homicide to be dealt with as murder or manslaughter according to the circumstances of the case. You have heard all the medical evidence and have given it your close attention, and I do not know that it is necessary for me to go all

over the statements made by the various doctors in the course of the case. I believe I have already given you the substance of it. I believe I can say that there is no doubt about it that all the medical witnesses agreed that death was due—none say to the contrary, though some say that it is only a probability—that it was caused by arsenic and conducted to by the arsenic. If you agree in that, and I submit, gentlemen, that there is no other conclusion to arrive at in the face of the evidence that has been presented—and that white arsenic was found in the body as well as other arsenic that was found absorbed in the body of deceased, and that this did conduce to the death in a very great degree—although as my learned friend pointed out to you that lead may also have contributed to the death (and even if you come to the conclusion that lead was administered by the prisoner)—still if you come to the conclusion that the arsenic that contributed to the death was administered by the prisoner, then you are bound to find the prisoner guilty. What I have said in regard to arsenic in general applies to the white arsenic and Fowler's Solution. If you come to the conclusion that white arsenic also contributed to the death, but that it was Fowler's Solution contributed to the death in the greater measure—although no evidence has been given as to where the white arsenic came from, or by whom it was administered, you will be bound to find the prisoner guilty. I put it to you, subject to his Lordship's correction, that supposing the case stood thus: there were three poisons, one, white arsenic; one, sugar of lead; the third, Fowler's Solution; and one was administered by one person, and one by another, and one by another, and that the patient died from the effects of the three poisons, if you were called upon to decide upon such a case, you would be bound—were all three in the dock before you and it was proved beyond all question that they had each administered a poison that contributed to the death—to find them all guilty. If you have only one before you, you are equally bound to find that one guilty if the poison administered by him contributed to the death. With regard to the white arsenic, my learned friend in the course of the defence, alluded to my remarks in my opening, when I said that the prosecution had not been able to trace the white arsenic. I mentioned that there was a possibility of white arsenic being in the stable, and referred to the statement of the prisoner who spoke of some bottles in the stable, and to the evidence of the *betto* as to a white powder having been used—being given by accused to the *betto*—for the pony. I said that I thought this powder might possibly be white arsenic, and I referred to the prisoner's statement. The learned Counsel for the defence takes this view—and I am quite prepared to coincide with that view—that the prisoner when she spoke of the bottles in the stable referred to sugar of lead and not to white arsenic. As I stated that the *betto* would be called to give evidence on the point, I had him produced in Court, but as before this Mr. Schedel had given evidence as to the materials used in the making up of these powders that were given by the accused to the *betto*, I thought it not right for me to adduce further evidence on the point. I thought, gentlemen, that it was but right that I should explain to you the position that the prosecution takes with regard to the white arsenic. I do not think it right for the prosecution now to take the position, that if the prisoner administered one kind of poison to kill her husband she administered all that was found. You may take it from me, gentlemen, that white arsenic was not at any time administered to the deceased by the prisoner: it has not been traced to her. Whatever effect this may have upon your verdict, I think it but right to point it out to you, and show you the position taken up by the Crown. The question of the lead is a totally different matter. We will leave the white arsenic alone for one moment. Arsenic is what particularly had to do with the death of the deceased. It is not for the moment urged by any of the medical witnesses that it was not—that is my impression of the medical evidence. But I will submit to you that what Dr. Baelz said on one point is a pretty fair indication as to how much the cause of death was contributed to by arsenic. Dr. Baelz contrasted the effects of arsenic and sugar of lead when he said that sugar of lead was not an active poison, but that arsenic was—that arsenic was the more deadly poison. He also, referring to the quantity found in the liver—one-sixth of a grain—spoke of it as indicating a large dose. The conclusion would seem then to be, taking the relative efficiency—if I may so term it—of arsenic and lead in causing death—the conclusion would be, that death was due in much larger degree to the arsenic than to the lead. For you will remember the evidence given in regard to lead, that the smallest quantity of lead—the poisonous dose—is stated to be 2 drachms and upwards, but that no

fatal case is reported from the taking of such a quantity of sugar of lead.

His Lordship—Are you referring to arsenic? Mr. Wilkinson—No, my Lord—2 grains of arsenic, 2 drachms of sugar of lead are the minimum fatal doses of the two poisons. Now, as Dr. Baelz said, sugar of lead acts more efficiently, so to speak, in cases of chronic poisoning than in acute poisoning. One large dose of sugar of lead may be given, Dr. Baelz said, where the same quantity spread over a longer period would be fatal in its effects. Now the time in this case was not long. The sugar of lead was only purchased on the Sunday, the day of his death was Thursday. I think that this is a case that Dr. Baelz would describe as sub-acute, scarcely chronic. The defence has asked you to come to the conclusion that the lead did contribute to the death, and the question is still open in that case, how far did the deceased contribute to his own death? That is the question that my learned friend suggests might be called to receive your attention. The defence set up is that in this case another poison is admitted, and evidence has been called to prove that it was administered to the deceased by the deceased, and that he did not die from the poison that is alleged in the indictment. If that is so, gentlemen, then it is not open for you to find the prisoner guilty. It would not be in the interests of justice if the prosecution changed its charge during the course of the case and took the prisoner's Counsel by surprise by alleging some other mode of death other than that alleged by the Counsel for the Crown in his opening. But still, although it would not be strictly in accordance with justice, I can tell you that the Crown is not limited in that way. If any hardship takes place, then it lies upon the Judge to take such measures as shall relieve any hardship that might accrue. I do not press the point, for it is not really a serious one, but I thought it was one that I should point out to you. If you find in regard to the lead, that it was administered to the deceased by himself, you have one fact to go upon, in the evidence given by Rachel Greer, who testifies to sending an order down to the chemist's for some medicine on that Sunday afternoon before her master died. So we arrive at the question: did the deceased administer the lead to himself? Is there anything to make it probable? Is there anything to make it probable that the administered to himself internally the other poison that he bought along with the arsenic? Sugar of lead is used as a lotion—while it may also be used internally—be used as other poisons are. But though it can be used internally, its common use is as a lotion. You have heard it suggested that he deceased required a lotion, and probably enough he used it for that purpose. But that will not convey the probability at all of his having used the lead as medicine to be taken internally. No sugar of lead on any previous occasion had been used for that purpose. No suggestion has been made that it was ever before used for that purpose. No suggestion arises that deceased used it in that way before. And as to the introduction of the sugar of lead into the house: we have it in the evidence of Rachel Greer, if she is to be believed, that it was introduced into the house on Sunday: then we have it in the evidence of the accused that she purchased sugar of lead also. This sugar of lead is purchased on the Wednesday through the instrumentality of Miss Jacob—and this bottle is unaccounted for. What was the portion missing out of the first bottle—or out of the second if the first has disappeared—used for? We are asked by the defence to believe that the whole of the first bottle had been used. Then the question is, what on Wednesday was done with the lead, by whom was it used, and for what purpose? If it was used by the prisoner to poison the deceased, then gentlemen your course is clear. If there is any other theory, any reasonable hypothesis for accounting for it, you will accept it, and give to that hypothesis such weight as it deserves. But you are always brought back to the question of the Fowler's Solution. And with regard to the question of the administering of poison generally it will be necessary for me to enter in some detail into the history of the case. I will therefore, with your permission, stop at this.

His Lordship—When shall we resume?

Mr. Wilkinson—I would suggest at a quarter past two, my Lord. I may remark that I can hardly finish to-day: I shall have to continue over till to-morrow.

The Court then rose for luncheon.

The Court resumed at 2.20 in the afternoon.

Mr. Wilkinson, continuing his address to the jury said—The learned Counsel for the defence has told you, and told you very properly, that it was not for the defence to satisfy you as to how death was caused, but that it is for the prosecution to satisfy you that death was caused by the prisoner.

The course which has been taken by him in laying the charge he has laid, and which has been put before you in evidence, and therefore must be taken into consideration in some way, has altered his position in some sense from then. Now, gentlemen, it is no part of the duty of the Crown to take advantage of any position which may be a mistake, be a misunderstanding by want of judgment, or by any other means, has been made by or affecting the defence. The Crown takes a different position altogether. It ought to obtain a verdict as by the strength of its own case, and not by any weakness in the case of the defence or by reason of any mistake made in the course of the defence. The charge made against Mary Jacob might be considered in some sense to narrow it as to whether she was guilty or Mrs. Carew. Now I do not ask you to treat it in that way on behalf of the Crown. You may find so far as the evidence goes that there is no case against Mary Jacob, and that so far as Mary Jacob's case is put in that way, you are in a position to state that there is no case against Mary Jacob. You are at liberty to say that, gentlemen. There is one part bound up inextricably with the case and that is the question of the Annie Luke letters. Now the A. L. letters have an important bearing on the case. One argument might be that whoever wrote the A. L. letters confesses herself guilty of the murder, but gentlemen, I do not ask you to take that view of the case. If you find that the A. L. letters were written by the prisoner it has an important bearing upon the question you are to decide. It has an important bearing, but if you find they were written by someone else it may or may not have a bearing upon the question you are called upon to decide for the prisoner. You are not here to try Mary Jacob. You are here to try the prisoner; but the character of Mary Jacob as a witness, her conduct and motives, are matters of importance so far as they may be considered to affect her credibility; and they become of greater importance when you are asked by the defence to attribute to herself acts which the prosecution allege were committed by the accused. It becomes necessary therefore for me, gentlemen, to go into the subject of Mary Jacob's character and history here at much greater length than I would under any other circumstances. The first we know of her from the evidence presented to us is the letter enclosed by Mrs. Porch, Mrs. Carew's mother, written in Feb., 1896. You have it in exhibit 35. It is dated from Strathalbyn on Feb. 7th, 1895, but it is suggested and the other evidence bears out the suggestion, that that is a mistake for 1896. The meaning of the letter is clearly explained in Mrs. Carew's evidence given in cross-examination by Mr. Scidmore in the charge made against Mary Jacob. It is on page 6 of Mrs. Carew's evidence given at the trial of the charge made against Mary Jacob. "Miss Jacob comes from a place about fifteen miles from where I was born. I do not know her family personally or any of them. I know of them very well, but I did not meet her before I came to Japan; not to my knowledge. I never met her aunt," and the letter is on page 5 of that, line 785.

Strathalbyn.
February 7th, 95.

Dear Mrs. Porch,

I will call on you soon after 3 o'clock on Monday afternoon. I shall be very glad to have the matter decided. My friends worry me a good deal, trying to frighten me with tales of malarial fever, earthquakes, and all other ills that flesh is heir to! Unfortunately I cannot prove to them from any book of reference I have, that Yokohama is a healthy climate—tho I am sure I have heard that it is so—I have quite made up my mind from the first, that I would go—and I feel sure that I can do all Mrs. Carew needs—and the sooner (in reason) I can go, the better, I think; for I shall only be teased about it all the time.

My friends say I must ask £30 per annum—and I will remain three years if needed.

Yours very truly,

MARY E. JACOB.

Then on line 404, "Miss Jacob entered my service about the middle of May, 1896, about the 13th or 15th. She was engaged to come out as a nursery governess. The circumstances were that she was engaged by my father and mother, because they were acquainted with her family. I don't think they knew her personally. I had not previously written to them to send out a governess. The suggestion came from my mother and then I subsequently quite approved of her suggestion. I did not suggest the age or requirements of the person for governess. I left that to my mother." Now, Mary Jacob arrives then in Yokohama in the middle of May last and enters the Carew household. Now I shall

take the picture of that household as presented by the counsel for the defence; and this is it. "No woman with an inclination, perhaps I had better use the word propensity, to gratify her vanity by captivating the senses of the opposite sex ever had such great opportunities allowed her; ever had so complacent a husband. Mr. Dickinson has already given evidence pointing in that direction, and it will be confirmed by Mr. Porch. There were the "Ferret," the "Ice Cream Vendor," or "Organ Grinder," the "Youth" and others to whom reference is made in the diary, if you care to scan its pages, all male friends, all admitted by the husband to a greater degree of intimacy with the wife than is generally considered advisable." And again, he says, "the husband gave her every facility for amusing herself with flirtations which, in the case of Mr. Dickinson, at all events, were carried somewhat beyond the limits of a passionless liaison." Now while the standard of propriety among us foreigners in the East differs in no degree from that to which we have been trained in our youth at home, we have become accustomed to so much greater freedom of social intercourse here, that much that would suggest impropriety at home passes here without bringing any such suggestion. But even to the most liberal-minded the freedom given to his wife, and the degree to which it was taken advantage of as delineated by the Counsel for the defence, could not fail to be viewed otherwise than with disapproval. I am not now dwelling on that point: in the bearing upon the appreciation to be given as to the character of the accused, I shall have to recur to the subject—what I now ask you to consider it for is its relation to the ideas and conduct of Mary Jacob. If any of you have been brought up in a quiet country place at home and can recall the ideas with which you left it, you can understand how the family life depicted by the Counsel for the defence would strike the mind of a young girl coming from such a place, brought suddenly in contact with it. Consider also that as nursery governess she occupied a very isolated position. She had no intimate friends among the ladies of the place, and she was thrown back upon herself, until she met in the month of July last Elsa Christoffel who became her bosom friend. They were both in the same position of isolation from the rest of the community, and nothing could be more natural than that there should be between them an exchange of confidences and that the Carew family life should become a subject of frequent conversation between them. To Mary Jacob the feeling of the inconsistency of that life with her own unsophisticated ideas was no doubt modified by the unvarying kindness and consideration—to the prisoner's credit be it said—which she always received at the hands of her mistress, and then the semi-feudal sense of allegiance which she would no doubt have towards a member of the family to which her mistress belonged. To Elsa Christoffel matters would present themselves in a colder and more unsympathetic light. The speaking of actions of impropriety is apt often to produce on the hearer, a stronger impression than that originally received by the speaker, and in this case the hearer, Elsa Christoffel was not subject to the influence of the same feelings which animated the speaker, Mary Jacob. I believe a careful attention to these considerations will afford a true and consistent explanation of the actions of the two girls in the matters presented to you in evidence. Mary Jacob does not receive letters from home which she thinks, at least she has reason to believe, ought to have arrived for her. It is necessary to enquire how far she was justified in that belief that she entertained, it seems undoubted. She has stated so in her evidence, and you will recollect in Mr. Porch's evidence that she stated so to him when he spoke to her on the 24th October. The result was that she went to the waste-paper basket. She did not find them, she found a scrap of a letter from Mr. Dickinson which when once seen would be certain to arrest attention. That letter was *lost*.

Mr. Lowder—Is there any evidence that that was the first letter?

His Lordship—This was written in the last week of September. It is dated the 26th.

Mr. Lowder—I do not think that was the first letter found by Mary Jacob.

His Lordship—It is the first in the series.

Mr. Lowder—The evidence was that that this piecing together of letters commenced in August.

Mr. Wilkinson—I am going to mention that.

His Lordship—He says this appears to be the first letter which appears in the series.

Mr. Lowder—I don't think it does appear to be so from the evidence. He says "this was apt to attract attention, it being the first letter."

Mr. Wilkinson—Yes, that was my point. I will take any of the three or four which appear and

will afterwards refer to the evidence in regard to that. Any one of these, gentlemen, if you like to look at them, you will say that they have only to be lifted up to strike anyone who once glances at them, and especially a young girl, as very strange. They begin—the first one in order of date begins is "You ask me dearest;" the second, "Forgive me my dear," and the third "I cannot go to sleep my sweet." These are things that occur at the very beginning of the letters, and if these were the beginnings—

His Lordship—There may have been others. Mr. Wilkinson—Yes, my Lord, there may be, but I take it they were the first letters, and it is consistent only of their being the first if you accept the evidence of Mary Jacob and Christoffel, who state that these were the first. She tells her friend, and her friend advises her to collect the scraps and retain them. I am aware that the time given by the two girls is inconsistent with the evidence of Rachel, but I shall ask you to reject the evidence of the latter for reasons I shall give further on. The advice given by Elsa Christoffel to her friend appears to have received its justification by subsequent events, although to most people it would, at the time, have been considered, and to many people no doubt will still be considered as unwarrantable and indefensible. But this point is not so much as to its intrinsic moral quality as to its accordance with any honest judgment that may have been arrived at by the person who gave it. The point you have to consider is not whether that was a good and proper act to do, but whether that was the natural result of ideas which were probably entertained by Elsa Christoffel at the time, and which according to her statement she gave to Mary Jacob. I submit to you, gentlemen, that that was not unnatural advice to be given after you take into account the idea which Elsa Christoffel formed of the Carew household or of Mrs. Carew. It is not to ask you to accept her estimate, but simply to ask you whether that explanation was held by her and whether that is sufficient to account for, not to justify, what was done. Mary Jacob collects these letters, according to her own statement and the statement of Miss Christoffel. They were sewn together by Miss Christoffel. Now you have the evidence of Rachel. She tells you that the first letters were from Dickinson. Now I ask you to reject that. If there had been other letters from Dickinson, was there any reason why they should have been returned; why these should have been retained and those destroyed, Miss Christoffel and Miss Jacob should not have admitted that that was so. There is reason for it, and I ask you to treat Rachel as a most untrustworthy witness. You have heard my learned friend speak of the other witness on which he had to rely for the charge he had made against the chastity of Mary Jacob. Now the only one, or if there were more than one, Rachel must have been one of them, Rachel was the one who brought the little girl to Mrs. Hutchison and she seems to have been a manageress in the household. My learned friend could not rely on her evidence, and very properly he withdrew it. You trace the history from the beginning of this cruel slander, you watched its growth, and you are here at its death, and if there has been one pleasant moment that I have experienced during this most painful trial, it was while I was listening to its funeral oration. In this small community I will take the liberty which I would not have taken in speaking elsewhere—in cross-examination I learnt the fact—that a lady in this community obtained that evidence. Now, gentlemen, her action in the matter may be attributed to a different reason by different people, and I should be sorry to pass from it without expressing my own feeling, and I think it is the feeling of you all, that however she came by it, I feel sure her intention was just and I feel sure she will be sorry she has been the means of causing the putting of a slight upon one of her own sex; and I think it will be a satisfaction to her to find that it has not been the means of doing any harm. You can acquit her of any intention in that way. Whatever is doubtful on the subject, as to how it came about, I do not ask you to attribute it to the prisoner. In the month of September the Carews go to Miyanoishi; they return, and on the 15th October begins Mr. Carew's illness. I shall have to refer again to some things which occurred between, but in the meantime they can be passed over, and from the 15th to the 22nd Mr. Carew was lying ill, and on the 22nd he died. Now Mary Jacob's connection with the case comes in on the 21st October—Wednesday—she receives from her mistress a slip of paper to take down to Maruya's to get a bottle of arsenic and a bottle of sugar of lead. She goes there—and what I am now saying is all put in evidence—and she is asked by Maruya's shopman

why she, or why the Carews—in whatever way you like to put it—were getting so much deadly poison. She returns home, she gives the bottles to her mistress—that is indisputable for that appears in her own evidence as well as in Mrs. Carew's. A great deal has been made of her not communicating to her mistress what occurred in Maruya's shop. But she communicated it to Mr. Porch on that day and he did not seem to comprehend it. In nearly every other thing there was no apprehension on the part of Mr. Porch; why he, being told that plenty of poison was being bought, should not tell his sister about it, seems inexplicable. That Mary Jacob should not go to her mistress and tell her about it seems natural enough because making such a statement appears unpleasant. Mr. Porch said it was a piece of impertinence on the part of the shopman, speaking in a casual way, but probably in her asking him it would be more than that in the mind of the nursery governess. The fact of its being got was given to him, if he had only given to it any amount of attention. Then she communicates it to her bosom friend. To her the matter seems a very much more serious thing than it did to Mary Jacob; she does not look upon Mrs. Carew with the same feelings as Mary Jacob, and the mention of poison naturally creates in her mind suspicion. She is prepared to view Mrs. Carew not in a very sympathetic light, and the result is that in the morning she communicates it, you have it in evidence, to Mr. Dunlop. You have the fact then that Mary Jacob communicates the matter to Mr. Porch and Elsa Christoffel, and from Elsa Christoffel it is communicated to the doctor. So far, Mary Jacob's conduct does not seem to require any explanation or justification. I am leaving aside the question of the letters. That was on the morning of the 22nd. On the evening of the 22nd—

Mr. Lowder—I do not desire to unnecessarily interrupt, but I wish to understand what it is you are suggesting to the jury—that the first suspicions that Mary Jacob had were aroused by Elsa Christoffel? Mary Jacob gave evidence at the magisterial examination that—

Mr. Wilkinson—I am suggesting that the first suspicions that arose in Mary Jacob's mind were caused by the remarks of the assistant at Maruya's, and I think that I then went on to suggest that on the way home this suspicion grew, and then when she mentioned the matter to her friend Elsa Christoffel they fell on a more ready mind. The feeling of suspicion undoubtedly arose on her passage home—it was a feeling of suspicion that would naturally occur to her.

His Lordship—The remark of the chemist's would be calculated to arouse it, but it found a more congenial soil in Miss Christoffel's mind.

Mr. Wilkinson—That is what I wished to convey.

His Lordship—You were saying, on Thursday evening?

Mr. Wilkinson—Miss Jacob gives a conversation that she had with the accused on that evening. She had been to her mistress and—I will read her evidence as given at line 75, part 2 of her evidence.

His Lordship—Evidence before the Coroner?

Mr. Wilkinson—No, her evidence before the magistrate, at the preliminary examination. I want the jury to take note of this. She says:—"I made a statement to Mr. Porch, after tiffin. I was anxious to get back the paper which I left at Maruya's on the 21st, because Mrs. Carew, on the night of Mr. Carew's death, denied having written the piece of paper which I took, saying that Mr. Carew had written it. She said, further, that Mr. Carew had taken his own life and that she had a letter of his in her possession saying that he intended to do so; or had done it; but he could not have said that because he was dead." Now this is Mary Jacob's statement of an interview she had with her mistress on the night of Mr. Carew's death, the night of the 22nd. Then at line 62, she says:—"On the next day I went to Maruya's." She, as usual meets her friend Elsa Christoffel, and they go together, and it is easy to see which is the active mind of the two. Together they go to Maruya's—and this statement is borne out by Miss Christoffel—and no doubt the conversation that Mary Jacob had with her mistress formed the subject of their discussion. To use her own words:—"On Friday night, the 23rd, with Miss Christoffel, I went to try and get that piece of paper that I had taken to Maruya's. I could not get it; but when the man was looking for it, he found another one, and showed it to us. He let us have it, and my friend, Miss Christoffel, took it away with her. I recognise the paper now shown to me as this piece of paper." This piece of paper was the order for the bed-pan and the bottle of Fowler's Solution and is marked Exhibit A. Now the Counsel for the defence suggests that they must have

been at the store before, else they would not have known how to do it. But the explanation is forthcoming. Hayashi, in his evidence, says that he perfectly well remembers the two foreign ladies coming to the store to get back an order that had come from the accused's household. They asked for the order brought on the 21st, but as that had been paid for at the time, the shopmen had destroyed it. But the other order for Fowler's Solution had not been paid for and was still in their possession. That he presented to the ladies, and Elsa Christoffel paid for it and took it away. That, gentlemen, is perfectly consistent and explains why it was paid for, and why it was done. On the morning following the inquest was opened. The learned Counsel for the defence has said that neither Mary Jacob or Elsa Christoffel have ever been influenced by merciful motives; but, on the contrary, I think I can prove that you have evidence that they were. Neither the stitched letters nor exhibit A were produced at the inquest. They were not produced till some time after, till they were produced in evidence in the natural course of events. The inquest was held on the 24th, and I do not think it would be misspent time if I read all that Mary Jacob said at the inquest. She gave evidence on the afternoon of the first day's proceedings, and was never called again. During the latter part of her evidence, Mr. Porch entered the room, and later Mrs. Carew came in. Counsel for the defence has elicited the fact that Miss Jacob did not wish to make a statement, but requested to be asked questions: she did not wish to say anything; that I also gather from the printed report. She says:—I had nothing to do with the nursing of Mr. Carew, except once when I was asked to take him a glass said to contain brandy and soda. On Wednesday night I was having my dinner, Mrs. Carew called me and asked me to see if Mr. Carew would take this in a glass from me, containing brandy and soda, and, she said, cocaine, which Dr. Wheeler had ordered. He refused to take it from me. That's all I ever had to do with his nursing. I have never seen deceased take medicine by himself, without someone giving it to him. I have never seen Mrs. Carew give him medicine. I have seen her give him beef tea and things to take. I have purchased medicine for Mrs. Carew. On Wednesday, the 21st, I did so at Maruya's, Bentendori. It was syrup of lead and Fowler's Solution of arsenic. I only purchased it on that one occasion. I have seen no use made of the medicine I purchased. I don't know where it was kept. The poisons I purchased were in two separate bottles: the quantity was not specified. I merely went into the room perhaps once a day, to show the children to their father. I know nothing about how the nursing was carried on. I didn't even know that there was a small table by the bedside. On the 21st, I purchased the medicines at Maruya's by Mrs. Carew's orders. Maruya did not ask for a doctor's prescription before giving it. The name was written on a piece of paper. Mrs. Carew had written it. The man who sold me the medicine made a remark: he asked why we bought "so plenty deadly poison." I replied "I don't know." I didn't know any had been bought before. Maruya told me some had been bought the day before and some the day before that again, and that I must warn Mrs. Carew to be careful how she used it. No further conversation. I did not report to Mrs. Carew the conversation, at all. I told Mr. Porch after tiffin. He said how impudent the man was. Only the children were present with us in the dining-room. On the day before, Maruya told me, a boy, and the day before that Mrs. Carew had bought the medicine. I don't know the name of the boy. This conversation with Maruya aroused my suspicions. I had been told that Mr. Carew had been sick and in great pain and drowsy and this made me very uncomfortable, as I had been sent to buy poison. To my knowledge no one in the house assisted Mrs. Carew much. Ah Kwong and Rachel and Asa helped to carry things up. I was out of the house so much with the children, I don't know what went on during the day. While I was in the house Mr. Porch used to go in for a few minutes, ask him how he was and come out again. When I offered the deceased a brandy and soda, he said he wanted no more medicine, simply brandy and soda. He said he had already taken a whole chemist's shop. He did not know I had been purchasing poison as far as I am aware. The order for medicine bore no signature; was a little slip of paper handed to me by Mrs. Carew. The chemist asked me if I was Mrs. Carew. I had never been there before. I had a little boy of Mrs. Carew's and the little girl with me. I left the piece of paper with Maruya. The slip of paper was in Mrs. Carew's handwriting. I am positive of it. There, gentlemen, that is all she said at the inquest, she did not mention exhibit A, and she also

had possession of the Dickinson letters. If there was any desire to blacken Mrs. Carew, if she ever desired to do so for her own sake, was this not the time and occasion when she would have done it? I would also suggest that Elsa Christoffel, although she never had any strong cause for liking Mrs. Carew—she had no cause for allegiance such as Mary Jacob possessed—might have influenced Mary Jacob to have done differently at the inquest: but she did not.

His Lordship—She might have produced the letters at the inquest?

Mr. Wilkinson—Yes, she might have done that.

On the 24th, you will remember that Mr. Porch had a conversation with Mary Jacob, this was in the dining-room, and I will refer you again to the conversation which she had with Mrs. Carew that evening. But I want to keep your attention for awhile on Mary Jacob, and to such occurrences that have to do with her. On the 24th—the night of the 24th—Miss Jacob leaves Mrs. Carew's service—that was the evening of the day of the inquest. Now that Mrs. Carew had not found fault with her and sent her away is clear by the letter written by Mrs. Carew to her. I shall read the letter. Counsel then read the letter addressed by Mrs. Carew to Miss Jacob at No. 2, Bluff, asking Miss Jacob to come round to 169, Bluff, as she wished to ask her some questions. In reply Miss Jacobs declined to visit Mrs. Carew, and said that any questions she desired to ask her should be put through Mr. Lowder [Mrs. Carew's Lawyer]. Continuing, Mr. Wilkinson said—That discloses an estrangement—and a strong estrangement. Something must have acted strongly on the mind of Miss Jacob to make her write to her mistress in those terms. There is one thing to be noted: that is, that she has no hesitation in saying anything to Mr. Lowder, Mrs. Carew's lawyer. She did not say "my lawyer," but "your lawyer;" but she would not go back to Mrs. Carew's house. The answer to the letter was written on the 25th October, and we have heard that Elsa Christoffel assisted her in composing it. This is the letter that Miss Christoffel takes on the Sunday evening to the top of Mr. Jackson's hill, and then sends it down with her *shirikisha* man to Mrs. Carew's house. That is how matters stand, and four days afterwards, what happens? The inquest, as you know, was adjourned on the 24th October, until the 2nd Nov. to allow of Dr. Divers' evidence being taken. On the evening of the 24th Mary Jacob leaves Mrs. Carew. On the 25th she receives a letter from her and answers it. Then on the 29th, according to the evidence of Mrs. Carew, the letter: "beware, dare to speak one word of the truth and you shall never leave Japan alive," is found on the door-step of Mrs. Carew's house. Now, gentlemen, try and think of it. What has occurred so far? Mary Jacob has told what she knew. With the exception of exhibit A—the note that Miss Christoffel got with her—she had told us all of her connection with Mr. Carew's illness and of her buying the poison. There was nothing proved or even offered in evidence—or even suggested—nothing to make Mary Jacob tell her mistress to hold her tongue. Why should she?

His Lordship—Have you mentioned the Sunday?

Mr. Wilkinson—That is the only thing they have offered in evidence connecting Miss Jacob with his illness. And why? What reason is there for suggesting that Mary Jacob was the writer of the letter "Beware." If you can find any reason for her writing such a letter, gentlemen, nothing possible that I can conjure up occurs to me that I can present to you. With regard to the finding of the letter on the door-step, we have only the evidence of the coolie, and I do not see why he should not be believed. If it had been placed there, it was to be found there, and that is all that can be said about it. At present there is nothing that can by any probability connect Miss Jacob with the letter or the sending of the letter to Mrs. Carew. Then on November 1st—the day before the inquest was reopened—a letter is received by Mr. Lowder. That letter received by Mr. Lowder begins, "I do not know you, probably never saw you." With regard to the expression there, which is relied upon by Counsel for the defence as showing that these letters were written by Mary Jacob—the expression "twin soul"—that book in which it occurs was brought into Court by, or introduced on behalf of, Mrs. Carew. The suggestion is that Mary Jacob had read it. There is all the more likelihood; nay, I go further, and say Mrs. Carew had read it and having seen the expression knew where to find it. Of the two persons who are suggested as having written these Annie Luke letters, one of them certainly knew of that expression. Now, what is there then, gentlemen, to suggest that these letters were the work of Mary Jacob? What is there in the procedure of

Mary Jacob to suggest remorse; or the reason for any amends to make. Why did she wish to protect Mrs. Carew? Her attitude, though not one of persecution, was not that of trying, or endeavouring to try, to save her. What happens on the 1st Nov.? A similar letter is written to Mr. Hall. There is nothing in any letter written by Mary Jacob to indicate the thought, the feeling, or the style of this letter to Mr. Hall. The inquest was reopened on Nov. 2nd.

His Lordship—There is another letter, before that, written to the accused.

Mr. Wilkinson—Yes, one received on the 1st Nov. It begins, "I have done what I could: true I have made you suffer," etc. There is nothing in that to suggest Mary Jacob. She had retired from the household of Mrs. Carew and gone to live at Miss Brittan's. She had written to Mrs. Carew that anything she wanted to question her about she would answer through Mr. Lowder: she would tell him anything she wished to know. On the 2nd Nov. the inquest reopened, and exhibit A is then produced by Mr. Litchfield, who presents it to Hayashi who, when asked, recognises it. There is no evidence as to what time it passed into Mr. Litchfield's hands. But between the sitting of the inquest on the 24th October and the 2nd November, this exhibit is put into Mr. Litchfield's hands. Mr. Litchfield has it, and it is easy to perceive that he obtained it through Mary Jacob's friend, who obtained it at Maruya's, as detailed in evidence given before you. On the 4th November, Mrs. Carew was present at the inquest and in the course of her statement puts in two "A.L." letters. The letter "Beware" was not signed, but of these other two one is signed Annie the other A.L. Now I submit that there is nothing in the evidence so far taken to suggest that Mary Jacob had been pasting letters together. A letter of Mr. Carew to his wife was, however, next put in. It was said to have been sent in an envelope addressed to his wife. It is a note written by Mr. Carew to his wife, having been written by him on the 15th, in which he tells her of Dr. Wheeler seeing him and ordering him Vichy water, etc. The letter is alleged to have been sent to Mrs. Carew on the 19th October. Now that is where I shall leave the matter for the present. On the 6th November, the inquest is over and Mrs. Carew writes a letter to Sir Ernest Satow, a letter that is admitted to be written by her. On the 10th Mrs. Carew writes to Miss Jacob and asks her to see Mr. Porch. It is the letter beginning, "Dear Mary, I hope for the sake of Edgerly," etc. Now that letter is received by Miss Jacob on 10th November. Mr. Porch calls on her and has a conversation. All these A. L. letters have been written between the time of Mary Jacob's letter of 25th October and this visit of Mr. Porch on the 10th November. None of them support the suggestion that Miss Jacob, as the writer of the Annie Luke letters, felt remorse, or want to clear Mrs. Carew from any implication of guilt. Would, she if she had written these letters, when Mr. Porch called on the 10th, not have done what she could to assist Mrs. Carew? You can see that Mr. Porch's visit did not succeed, so far as its object went, from the tenor of the next letter. The letter is written on the night before the magisterial proceedings. They began on the 11th, and on the 11th Mr. Lowder received another letter. Mr. Porch evidently gathered nothing from his visit as to Miss Jacob having written these letters. On the contrary, her unsatisfactory conduct at the visit—unsatisfactory to Mrs. Carew, I mean, defeats the object of Mr. Porch's visit. Yet here, after the last visit of Mr. Porch, Mr. Lowder receives this letter—the letter beginning, "It never occurred to you, did it?" On the 13th, it was learned that the preliminary examination would take place on the following day, that accounts for Mr. Porch's visit and the letter of the 13th Nov. "Mary Jacob was not examined until the 13th. On the morning of the 13th, Mrs. Carew once again wrote to her. "Dear Mary, I went round to see you this morning," etc. Now I cannot gentlemen, suggest any hypothesis, any reasonable hypothesis, to allow of the supposition that the writer of these A.L. letters was Mary Jacob; rather do I hold that the writer of them was the writer of the letters to Mary Jacob; everything is consistent with that. And now I have to ask you to go back to the first letter. The first letter is the one written, by the person signing herself Annie—in the "Annie-Carew" series. But it was preceded by the visit of a mysterious lady. Now if one thing is more clear in this matter than anything else it is that this mysterious lady was not Mary Jacob. We have it in Mrs. Carew's own evidence that Mary Jacob was in the nursery with the children at the time. It is not suggested she that was the mysterious lady or the Annie. Gentleman, you may at once dismiss

from your minds as a working theory, that there ever was such a person, or any such a Annie, in Yokohama. I say you can dismiss the idea at once as a working theory. There never was an Annie Luke here: if we can be positive about a negative, we can be positive about this, and also that there never was a person who represented herself as Annie Luke.

His Lordship—You refer to the first letter?

Mr. Wilkinson—Yes. I go back now to October 10th, the day of the regatta, and Mrs. Carew's evidence with regard to the visit of this mysterious lady. The lady that is most minutely described by Mrs. Carew when giving evidence in the case brought against Miss Jacob, Counsel here read the description from the report, and also Mrs. Carew's statement regarding the whereabouts of Miss Jacob. Continuing, he said—The first Annie letter fits into the time of this mysterious lady's visit: Gentlemen, the same mind that conceived the mysterious visitor conceived the writing of that letter. There is nothing whatever, time, place, or circumstance, to connect Mary Jacob with it. The only evidence connecting Mary Jacob with it is the finding in her birthday-book, the pieces of paper with "M.J." and two "A.L.'s" and something else upon it. Now I will ask you, gentlemen, to look at the piece of paper, and I ask you to say that "Dearest Walter" upon it is in Mrs. Carew's own handwriting. What can be the theory that would connect Mary Jacob with that piece of paper? Look at the card the mysterious visitor presents to Mrs. Carew, and then the theory seems even more difficult to conceive. What is the time of it? It is before Mr. Carew's illness. It comes as a bolt from the blue so far as Mary Jacob is considered. A mysterious visitor appears and presents a card. Very well, if Mary Jacob is supposed to be the authoress of the card she could not possibly be the visitor that presented it. It is not suggested that she engaged another person to put on black clothes and a heavy veil to pay the visit and to go through the face for her. And then Mary Jacob must have learned a great deal regarding the late Mr. Carew's past life if she is able to have written a letter, which, if I may borrow an expression "fetches him" as that letter did. That letter is said to be afterwards received by Mr. Carew.

His Lordship—It is suggested that it reached him on the 13th.

Mr. Wilkinson—Yes: two days before he took ill. What object could Mary Jacob have in writing that letter? I submit that there is no explanation, no probable explanation of it at all, and I ask you to believe that that piece of paper was put in her birthday book by fraud, and placed there surreptitiously, between the day it was found, the 2nd of January, and the time when it was handed to Mr. Lowder. That particular piece of evidence, gentlemen, was manufactured, and for a purpose. That is the explanation, and I shall only explain it in that way. It was necessary to connect Mary Jacob with the tissue of falsehoods and so this thing was resorted to. Take the internal evidence of the letters, and I say that they support the supposition that they were written by the prisoner.

His Lordship—There is no suggestion that Mary Jacob knew of the existence of A.L. in the early part of October.

Mr. Wilkinson—None whatever. I am prepared to stop here for this afternoon, my Lord.

His Lordship—Do you not wish to continue?

Mr. Wilkinson—It is four o'clock.

His Lordship—I do not force you to go on.

Mr. Wilkinson (to the Jury)—Now, gentlemen, I want you to take all these Annie Luke envelopes into your hands. They are made from Marcus Ward and Company's paper, and some of course bear the water mark. That is the paper used in the Annie Luke letters. In regard to the letter to Mr. Carew at the Club, I shall suggest that that letter was written by Mrs. Carew, but it would not do to send it down in an envelope usually coming from her own house, so she used a different envelope. That is the suggestion; that this was done with design.

Mr. Lowder—Those are not all the envelopes. Mr. Wilkinson—No, but those are all envelopes that Mrs. Carew used; they are all alike except the one sent to Mr. Carew at the Club, when, as I suggest, she deemed it inadvisable to send it in an envelope of the kind usually going from her house. The question of the water-mark is easily explained. A water-mark is put on each sheet of paper made, and then this sheet is cut up and part of the mark may be in one envelope, and part in another: but the whole of these envelopes are Marcus Ward's envelopes. So much for externals.

His Lordship—Would you like to stop now?

Mr. Wilkinson—Yes, my Lord.

His Lordship—You were speaking about internal evidence.

Mr. Wilkinson—I think that I intended to speak of internal evidence when I spoke of the contents of the letters.

His Lordship—I would suggest that you name the photographic copies you would like the jury to examine, and they could take them out with them.

Mr. Wilkinson—I hope they will do so.

Mr. Patterson—I may say that we have done so, my Lord, and have made a most careful study of them.

His Lordship—Oh, have you.

Mr. Patterson—Yes, my Lord.

Mr. Wilkinson—Then, gentlemen, you relieve me of the duty of calling your attention more specifically to them. I would point out, however, the views that Mr. Mason expressed in regard to judging handwriting. [Counsel then explained Mr. Mason's method of studying handwriting, as detailed by Mr. Mason in the witness-box last week, and then pointed out the characteristics noted by Mr. Mason to be present both in Mrs. Carew's handwriting and in the Annie Luke letters: how the characteristic letters of Miss Jacob were very few in the A.L. letters; and how Miss Christoffel could not have written the letters because she was so bad a writer. After entering into a minute description of the various characteristics in the letters, the learned Crown Advocate proceeded—These letters were written at a time when it was deemed necessary to raise on behalf of Mrs. Carew another theory regarding Mr. Carew's death. I put this forward as one reason why Mrs. Carew should write them. The suggestion that they were written by Mary Jacob in the spirit of remorse is out of the question. Mrs. Carew wrote them when suspicion, rightly or wrongly, had begun to settle upon her. She felt that it was necessary that some one should be indicated as being connected with the death, and she felt that it was desirable in her interest that they should be written and received by the persons who did receive them. That was the reason why they were written, and that is what I ask you, gentlemen, to believe.

After some remarks from His Lordship about the desirability of having a complete set of photographic copies of all the letters in Court in the morning, the Court rose for the day.

SATURDAY, January 30th.

The Court-room did not fill until some time after proceedings were resumed this morning, but before Mr. Wilkinson concluded, standing-room was at a premium. The accused had entirely lost the bright look that characterised her face at the opening of proceedings on Friday. But though haggard and worn, she maintained her keen, vigilant watch of the faces of the Judge and the jury, only interrupted now and again when taking a note of a remark in the learned Crown Advocate's address to pass on to Mr. Lowder.

Mr. Wilkinson resumed—Gentlemen,—Having now dealt with Mary Jacob's connection with the case, I shall ask you to turn to the evidence as affecting the prisoner herself on the charge of having administered poison to her husband. The first point which calls for attention is the writing to Dickinson of the letters which called forth those written by him, and were put in evidence before you. I have told you, gentlemen, that if the other evidence satisfies you that poison was administered by the prisoner, it is not necessary for the prosecution to explain the motive. The learned Counsel for the defence admits this, but he would limit it to the cases where there is direct evidence of the criminal—to cases in which there is a witness produced who has seen the fatal wound inflicted or the fatal dose administered. But I tell you, gentlemen, subject to correction from his Lordship, that that is not the law. The law does not require that any motive should be proved in a case where the evidence of the commission of the criminal act is circumstantial any more than where it is direct. The question of the presence or absence of motive will no doubt become a matter for consideration where the other evidence is circumstantial, but as I have already stated, motive for the commission of crime is often obscure and generally inadequate.

His Lordship—Always, I should think.

Mr. Wilkinson—There were two alternatives with regard to these letters presented to you. Either that the statements made by the prisoner to Mr. Dickinson were true, and she was living in dread of her husband, or that what she said was false. The latter is the alternative the evidence has established, but I agree with the Counsel for the defence that that alone would not have been any strong evidence against the prisoner on a charge of this kind, even if it had been carried further than the evidence shows it to have been carried. It would be going too far to ask that because a woman has denounced her husband she is prepared to murder him. The accused has

been shown to have been systematically traducing her husband, falsely representing him as guilty of acts which would stamp him as a brute and a villain, and affected calling for the sympathy of another man in the distressing situation which his violence and the dread of his violence is supposed to have placed her. Whatever may be said of the female human nature, its lightness and its frailty, that is not the form it takes, and the circumstances require explanation. That explanation has not been forthcoming. But the position to which the undoubted facts brings us is that behind the action of the prisoner lie strong motives not revealed to us, and that she was capable of lightly and without motive traducing and blackening the character of her husband for whom she professed the most ardent affection. (Mr. Moss, will you please hand me the scraps of the envelope exhibits 16 and 17.) It is my duty, gentlemen, to bring before you that scrap of envelope with Edith and Easton and Dickinson written upon it. That is a matter bearing upon the letters to Mr. Dickinson. It is one of those instances where an interpretation may be put upon acts. You have heard that Easton was a friend of the family—the Ferret—you have heard of the relations between the accused and Dickinson, and you have heard his name in the two ways. Now you have heard the explanation, but you have also had before you two pieces of paper that were supposed to have been found behind the cabinet, in which that same thing was practised. Now that was not brought forward for the purpose of making them out as having been written by the accused. The only object with which this could have been brought forward was to throw doubt on these. But, gentlemen, all doubt with regard to these has gone. The learned Counsel for the defence was unable to contend that the envelope was not in the handwriting of the prisoner herself. Under these circumstances, why these scraps of paper are produced to you and why the evidence has been given to you with reference to them I cannot understand.

The two scraps of paper were here handed to Mr. Wilkinson, and the two pieces of the envelope handed to the Court.

His Lordship—These pieces of envelope are admitted to be in the handwriting of the accused? Mr. Wilkinson—Yes, my Lord. Continuing, Mr. Wilkinson, holding up the pieces of paper to the jury, said—You will see on that the words Walter Edith Hallowell Dickinson. That these were written by the accused I submit that any one examining them will come to that conclusion. The suggestion was that they were written by Mary Jacob. Why? On what grounds were they written by Mary Jacob? Wherefore should they be written by Mary Jacob?

His Lordship—What is the number of that exhibit?

Mr. Wilkinson—No. 32; and this exhibit No. 31, was also found, my Lord. (Mr. Moss, where is the one found in the birthday book? It is 22, reading Edith and Edith Dickinson.) Now, gentlemen, it is supposed that these were found while the family were up at Miyanoshta. If they were, gentlemen, it would not be proof that they were not written by the prisoner, but that the writing is the accused's there is no doubt. Now I ask you, gentlemen, to believe that they were not found there, but that they were put into the box [the children's toy box] afterwards. It is concluded that the writing is the accused's, and I consider that a merciful conclusion to come to, and I ask you to believe that. This envelope is enough to show the idea; how it shaped itself, what extent it went to, is here. You have heard the explanation by my learned friend that it was some stupid game. That is not sustained. Mr. Porch might have given an explanation; but there is none. You have then the fact that the accused was writing her name, not as the wife of the deceased, but as the wife of some other man. That calls for another consideration. I do not want you to put too much weight upon it, but it is one of those circumstances which have been held to indicate the intention of a change that could only be brought about by the death of the husband. It is for you to say what weight is to be given to it. I do not wish to press it or to make a point of weight, but it is quite right I should call your attention to it. There is also a telegram to Mr. Dickinson. That telegram also comes within this category of explanation of the death of the deceased. You have heard the explanation of what was in it. If Mr. Dickinson's recollection is correct the statement was untrue. I leave it to you to deal with that as you may. Then as regards motive, gentlemen, "motive after all can only create a presumption one way or the other. It is not evidence of the fact of the murder that a man has an absence of motive to commit it; and just as little can the absence of proof of the existence of a motive be a reason for

finding the prisoner not guilty if the evidence of the murder be satisfactorily against him." Now gentlemen, as throwing light on the motive or absence of motive moving the prisoner's actions, and also as suggesting the existence of design, you have the episode of the mysterious stranger. You remember the prisoner's evidence with regard to the visit of that stranger, and gentlemen, the only conclusion open to you, I submit, is that that evidence is entirely false. You have it that a card was given; you have Mr. Owen's evidence with reference to what Mr. Carew told him, that there were two cards and that on the second was an indication of the identity of the writer. The first card, I suggest, had on it M.J. 1888 or M.J. alone, and that on the one sent to Mr. Carew, there was A.L. 1888 added. That is the explanation of the statement made by the deceased to Mr. Owen. Now that the first card was sent down by Mrs. Carew to her husband is in evidence and is part of the case for the defence. As to the second card, gentlemen, I submit that that can only have been sent by Mrs. Carew. What is the other evidence we have with regard to this mysterious stranger? Mr. Carew's statement that Mrs. Carew told him she had been seen outside the office gates of the P. & O. You have the evidence of Mr. Dickinson of a lady in black being opposite the Club, apparently in distress, at the time of the funeral, but, gentlemen, that can be explained in many ways, and it is not necessary to believe in any Annie Luke. Her non-existence you must take to be established as well as it is possible to establish a negative. Now if you arrive at that conclusion you are led to the hypothesis that the prisoner had a design in doing what she did, or that she was capable of actions without motive at all. As to design, you need not necessarily arrive at the conclusion that she contemplated the whole of what afterwards occurred. You may give her the benefit of any doubt there may be on that subject. She does not mention the visitor when she first gave evidence at the inquest and she may, and probably did, think of her afterwards as affording an explanation after the death, when she found that suspicion was directed against her. That that was the object with which the Annie Luke episode was introduced at the inquest is very clear from the summing up of the Coroner which has been put before you. That was what it conveyed to his mind. That was the object and intention, and it is put before us. There would be no other object to put it in. That person had admitted the causing of the murder and not Mrs. Carew. One of the reasons for considering that it may have been an afterthought is this, that the first letter was written in one handwriting, and that the next of the series is written in another, and that the second part of the series is begun without taking into account what was the handwriting of Annie's letter.

His Lordship—What did you mean by the first of the series? That the Annie's letter was written before the death?

Mr. Wilkinson—The Annie letter is written in a different handwriting to those written subsequently.

His Lordship—And you say the second is written in a different handwriting to the first?

Mr. Wilkinson—No, my Lord. The second A. L. was written after death, and I say that that was written by Mrs. Carew. If it were decided that the whole of the letters were written by the prisoner, then that initial handwriting offers some evidence that the whole of the matter was not thought out from the beginning and that the introduction of Annie in the first instance was not in contemplation of the deceased's death; and that is the more merciful view to take. If this is the explanation, then what is the explanation of the first invention? It is clear that the matter brought much distress to the husband's mind. There is the visit to the P. and O. office, and that brought out that not only had the prisoner told her husband of a visit to the house but had also stated to him—on what authority, if any, but you may take it as on no authority—that this visitor had been seen outside the office. Then you have the conversation about her between the prisoner and the deceased, on the afternoon of Tuesday, the 20th October, as detailed in her evidence given at the inquest. I have not read the whole of the account of Annie Luke given in that evidence, but you gentlemen, have no doubt read it for yourselves. It is quite clear that the prisoner knew of Annie Luke and there is no reason to suppose that any other person knew of her or of her name.

His Lordship—I am sorry to interrupt you, but yesterday, in speaking of these letters I got the impression that the first letter—I was thinking of the envelope brought by the *finrikkuha* man on the 19th. You have not made any reference to that.

Mr. Wilkinson—No, my Lord. I left it out, but I thank you for mentioning it.

His Lordship—There is the husband's torn letter.

Mr. Wilkinson—Now, gentlemen, with reference to that letter there is this observation to make. You have to take into consideration the time when that letter was produced. It was produced by Mrs. Carew on the 4th November.

His Lordship—We take it that she might have produced it on the 2nd if the Coroner had allowed her to give evidence.

Mr. Wilkinson—Yes, quite so, my Lord. It might have been given then, and if it makes any difference it may be considered as having been given on the 2nd. You will remember, gentlemen, that I put it to Mr. Hall when he was before you that Mrs. Carew wanted to give her evidence on the 2nd and that for some reason he would not hear her evidence until other evidence had been taken, and so it was taken on the 4th, so you may assume that any evidence taken on the 4th as being taken on the 2nd.

His Lordship—Then R1 and R2 was produced at the adjourned inquest.

Mr. Wilkinson—Mr. Moss, would you let me have R1 (exhibit was here handed to the learned Counsel). You know this letter gentlemen, now the explanation which is suggested of the existence of that letter is this, and of its production:—On the 24th October Mr. Porch had spoken to Mary Jacob about the waste-paper basket, and according to his own evidence, when he said that she had been there in the night-time she said she had been there in the daytime; so you may take it that Mrs. Carew knew that Mary Jacob had been at the waste-paper basket. Now, gentlemen, I suggest that she did not then know that the Dickinson letters had been sewn together, and that is the reason why it was sewn together and not sewn. Now gentlemen we come to the difference there; of the motive that would suggest the production of that letter by Mrs. Carew. My learned friend has called your attention to some classical quotation as to the possibility of gauging women's minds, and with reference to this, as in all things in this case, I say it is impossible to do so. I call your attention to facts in which it is possible that the explanation will be found, but I will not take upon myself the responsibility of framing a working theory or an explanation. Mrs. Carew knew on the 2nd November that the waste-paper basket had been gone through and she produces something that had been supposed to have come out of that basket. Why it was put in may explain many of her otherwise inexplicable actions.

His Lordship—It was not until next day that she was able to identify it as a letter written to her by her husband?

Mr. Wilkinson—Yes, at the next day's sitting of the inquest.

His Lordship—It was one day afterwards then. What you suggest is that on the face of it she should have known when she first saw it that it was a letter to her from her husband?

Mr. Wilkinson—That is my argument.

Mr. Lowder—But she says in her own evidence that it was not until she saw the letter reproduced in the newspapers that she recognised it as being a letter that she had received from her husband some days before she again received it—pasted on a piece of paper. At the time she received it she did not recognise it.

His Lordship—The defence deny that she could have recognised the letter then.

Mr. Wilkinson—That is her statement, yes. Well, gentlemen, it is my duty to bring before you all these points. You may consider them to be small points, but small though you may take them to be, it is my duty to present them to you. Anything that can be brought forward that may seem to indicate that on the part of the accused there was an expectation of the death of the deceased, and however small these indications may appear, it is my duty to bring them forward. It is for you to consider them and attach to them whatever worth they may possess. I present them to you only for what they may be worth, for what they are worth, and you will give them such consideration as you consider they should receive. I will now point out to you the evidence that I consider leads to the conclusion that I suggest. In the diary for October 11th, you have the entry:—"Walter not yet all well, and went to bed directly after Tiffin. I sent for Dr. Wheeler about 5 o'clock, who ordered W. medicine, not that it will do him much good I'm thinking." That, gentlemen, is ambiguous. It may be that she wrote that to express the idea that she had not much faith in Dr. Wheeler's treatment; but it may bear a more serious explanation. It is my duty to point this out, and you will give it such weight as it deserves. There is another entry on the 13th Oct., in which the prisoner shows a feeling—as she describes it—of "disgust." She writes:—"Walter dining at the Club—and came home very late, he

made me feel very much disgusted." And then comes the entry of the 15th October, "On coming back at 4.30, found R.—her brother—up, and W.—her husband—home in bed. He had been ordered a course of Vichy-water by the Dr. I wonder how long it will last." I draw your attention to the expression "how long it will last." There again two interpretations may possibly be put upon the expression: it is for you to consider which of the two it ought to be.

Mr. Lowder—I will point out that the entry of the 13th has an explanation; an explanation given by the prisoner in her evidence as to the condition in which her husband was in that evening.

His Lordship—Yes, she gave such an explanation.

Mr. Wilkinson—That is quite understood. The deceased came home late, and he might have been, and probably was, intoxicated when he came home that night. I am calling attention, however, to the terms in which the accused wrote that entry. I call attention to those terms: it may be that you may consider it but a small matter; but I can only repeat again that it is a matter in which it is for you to attach whatever weight you consider should be given to it, and such weight as you consider to be right. I also call your attention to an incident that occurred in this Court—the abstraction of one of the exhibits. There again it was my duty to have called your attention to the matter, for it is a matter for consideration as showing the character of the accused. You will, I feel sure, put the most merciful interpretation you can upon the matter; you will place upon it the construction that you consider to be right. She abstracted the exhibit, concealed it—of that there can be no doubt. The act was one in which there was a certain amount of boldness and daring, and it affords, I say, an indication of her character, and thus has a bearing upon her actions in regard to other phases of the case. Another incident is her writing that letter to Sir Ernest Satow on the 6th November, and the circumstances under which she wrote that letter must be taken into account: My learned friend, the Counsel for the defence, has very properly called your attention to the circumstance under which it was written. She was writing, he says, when she was feeling indignant at the summing up of the Coroner; but it must be remembered that in that case she had got off successfully. This is in evidence in two ways, the evidence of the summing up as presented to you in the course of the defence, and the verdict that the jury gave, which was also placed before you. It was not until after the inquest that any charge was laid against the prisoner.

Mr. Lowder—But the charge may have been in consequence of the inquest.

Mr. Wilkinson—It is beyond question that the accused was not charged under the Coroner's inquisition.

His Lordship—I think Mr. Lowder presented the summing up to prove the verdict: both were put in.

Mr. Lowder—I will not interrupt again: I will waive the point.

Mr. Wilkinson—I think that it is in evidence that at the time the letter was written by Mrs. Carew no charge had been laid. No charge was brought against Mrs. Carew until after the inquest was over. I think that this fact makes the assumption against her all the stronger, for it proves that she was conscious that such a charge might be laid against her. I suggest that there was nothing—that she thought that it was not necessary for her to feign another's handwriting when writing this letter; that she thought her own handwriting sufficiently bold for the purpose. She thought that there was no necessity to write in the A.L. style; nor would it occur to her as at all necessary to conceal herself. But these are all matters, gentlemen, which it is my duty to place before you, and you will give them their due weight. I have now to allude to more serious matters. There is the purchase of the arsenic by the prisoner, and there is an explanation to give of it; and that explanation particularly demands your most earnest consideration. You have it in evidence that on the 13th of October a half ounce bottle of Fowler's Solution was purchased and obtained from the Normal Dispensary. You have heard the explanation of that purchase, and that explanation, I think you will agree with me, is perfectly satisfactory. I do not want to suggest that that first purchase of arsenic was made with design. There has been an explanation given in regard to it and I ask you, gentlemen, to accept it. The particular point about it is, that six day days afterwards that bottle was exhausted. Worked out arithmetically that bottle might have lasted 16 days. But gentlemen, all bottles are not always full, and by making this allowance we may work it down to 12 days. This was not the broken bottle;

it was returned empty and then got broken afterwards. I have said that this bottle was exhausted, the evidence goes to prove that satisfactorily, and on the evening of the 17th it was sent down again to be refilled. If it had been used in the ordinary course for the purposes for which it was obtained, then it should have been still half full. It was sent down by the prisoner—there can be no question as to that. Take then as a fact that on the 13th it was obtained without design. Now we find that on the 17th another $\frac{1}{2}$ oz. bottle has been used for which there is no explanation. One suggestion is, gentlemen—it has not been referred to by the Counsel for the defence, but it has been brought before you—that Mrs. Carew brought into Court a bottle that had contained Dr. Baelz's prescription, but which she handed in at the inquest, because, as she said, "she had smelt it and from the smell thought that it contained arsenic." This I take it refers to her evidence given on the 4th Nov. There she says:—"I handed you just before coming in a Court the bottle (Exhibit L). It is said to be made from Dr. Baelz's prescription for my husband. The bottle is from Schedel's dispensary and bears the number 13934." Now in another place you will find that Mrs. Carew said:—"I do not know whether Dr. Munro prescribed for him at that time, but later Dr. Baelz did, and I have had his prescription made up for him from time to time." So it is said to have been made up from Dr. Baelz's prescription at Schedel's Dispensary. Further she says:—"I got the bottle in the drawer of the cupboard where my husband kept his medicine. That was situated on a chest of drawers in his dressing-room, which was really a verandah leading out of our bed-room, and was used by him as a dressing-room. My medicine was kept in one place and his in another; but since his illness I have bottles of medicine kept in my place on account of their size. I wish you to hand that bottle in, because, having smelt it, I believe it to contain arsenic." Now, gentlemen, you have there an instance of knowledge brought home to the prisoner by herself. She was sufficiently acquainted with arsenic to detect the smell of it in the bottle that is said to have contained Dr. Baelz's prescription. On the face of it it is difficult to discover how the arsenic got into it. Now, gentlemen, I submit that there is an explanation, an explanation that will probably lead us on to account for the deceased's death. You must bear in mind that every explanation given by the prisoner to account for her husband's death that does not stand the test of satisfactory examination must necessarily tell against her. By saying this, I mean that every explanation made by her that fails to be confirmed in any way must tell against the prisoner. Now when I say that it fails to be confirmed, I mean you to understand not that arsenic was not found in the bottle—we have satisfactory evidence that it was—but that we have no reasonable explanation of how it came there. I submit that there is no reasonable explanation on any other ground—that the arsenic was put in the bottle by the prisoner herself, because there is no suggestion that the deceased himself put it in. Who else would put it in? Not the chemist; there is no suggestion that the deceased would do so. No, the evidence leads us irresistibly to conclude that the accused had a knowledge that arsenic was in that bottle because she put it there herself. She may have done this knowing that her husband was taking the medicine to relieve his pain. It may be urged that it may have been put in after his death as an explanation, and to show that that was a cause of death. Such an explanation may have been considered necessary by her; but gentlemen, I submit that that explanation has failed. If the Fowler's Solution was put in before the 17th, that would account for half of the half ounce bottle—which is then explained. But if that is the explanation, I submit that the absence of such a quantity must have been noticed by the accused herself, who was then taking the Solution herself. The only other Fowler's Solution that has been suggested is that supplied by Ward for the dog; but that was long ago. We have had no bottle produced to account for that, nor do I believe any was found. But, gentlemen, if this was the Fowler's Solution referred to, I do not think you will consider it likely, that it would—having been supplied for a dog—have been placed by Mr. Carew himself in the bottle containing Baelz's prescription. And if that was the arsenic, that was put in it is not suggested that it was put in by anyone else but the accused. Now between the 17th and the 20th—that is three days—there is a second half-ounce bottle of arsenic bought from Schedel's at the Normal Dispensary, and this has to be accounted for. It is accounted for by the accident to the bottle—the bottle that was broken. Her explanation is that the bottle was broken, but it was not asked to be refilled until the 21st. You

have heard all the evidence that has been given in regard to the fender. I leave it to you for your consideration, and you will come to your own conclusion in regard to it. No person saw the bottle broken, except the accused. Certainly there are the pieces of broken glass that the maid saw when she was called in by the accused to wipe up the mess on the fender. But as to the circumstances, as to how the bottle became broken, we have only the evidence of the accused herself. You have heard the result of the chemical analysis. Dr. Divers took a scraping, and as you know has told us that he could find no arsenic in the scraping, only human urine. You have heard the statement of Mr. Thomas, of Brett and Company, that he found the same result after taking a second scraping. So you have the fender scraped by two chemists, who test the scrapings, and find that no arsenic is on it; in face of that evidence your deduction should be conclusive. You have heard the explanation given as to the cloth that was used to wipe up the mess on the fender, and if you think that evidence satisfactory you will give what reception you evidently consider right to that explanation. We come now to the purchase of arsenic on the morning of the 20th. That arsenic was purchased—you have it in evidence—from Maruya's store. You have heard also of Hayashi's confusing the 19th with the 20th, and you will scarcely—you are not asked to come to the conclusion by the defence—find that there never was any purchased on the 20th. Before the Coroner, Hayashi stated that it was purchased on the 19th, but he has since corrected this statement and says that it was on the 20th.

His Lordship—I think that the defence only deny that no purchase made on the morning of the 20th was brought home to the accused?

Mr. Lowder—That is so, my Lord: it was not traced to the accused.

Mr. Wilkinson—Now I will submit that there is evidence that does conclusively prove that it was traced to her possession—unless you, gentlemen, believe that the evidence given by Maruya's assistants is entirely false: and I do not think that you will come to that conclusion. You will remember that at the inquest Hayashi said that he was under the impression that the purchase was made on the 19th, and that the purchase was one bottle of Fowler's Solution and one bottle of sugar of lead. It is in evidence, my Lord, that Hayashi gave his evidence on the 2nd November and that it was on that occasion the exhibit A was produced to him. Now it was before he gave his evidence that the application was made for Mrs. Carew to give her evidence, or any argument founded upon its subsequent production by her,—I will assume. She brought in on the 4th (you may consider it as brought on the 2nd) a bottle of chloral. Now a further examination of Maruya's books was made and the recollection of the man with reference to the lady who came on the morning of the 19th was recalled, and that was, that what was purchased on that occasion was chloral. You have this fact then that that bottle is found in the Carew's house, it is brought into the Court by the accused as something she does not understand. Now, gentlemen, that is just one of these cases which the Counsel for the defence referred to as piling up evidence against herself. It illustrates what I have already said concerning what may be called her stupid actions, in producing that evidence. You may take whatever explanation is the more merciful one, or that she produced it before Hayashi gave his evidence that it was sugar of lead which was bought on that morning. But the foreign Fowler's Solution bought on the morning of the 20th October was purchased along with the chloral, and the bottle which was purchased—for it has been clearly identified—was taken to the Carew's house, and so found among the bottles produced. That, I submit, gentlemen, confirms the purchase of both Fowler's Solution and chloral hydrate. It shows that if it were purchased in the name of the Carews it is purchased for the household, and we have this to consider in relation to the accused's evidence of what took place on the evening of that day. On page one of her evidence before the Coroner she says:—"I cannot recollect whether it was before Dr. Todd's visit or after that he expressed a wish that I should give him his usual dose of arsenic." That, gentlemen, is the statement made at the inquest on the first occasion. Now you have there, according to the statement of the accused, that the deceased was in want of arsenic; that he did not get any arsenic that evening or the next day. That is the accused's evidence. Now, gentlemen, you have the fact of the discovery of the purchase of a bottle of chloral with one of those bottles of Fowler's Solution, which was delivered in the house that morning; and of the fact that the deceased was asking for arsenic—and she gave it as an ex-

planation that he was urgently appealing for it, and that after an interval she went to the cupboard where he kept his medicines and she found a bottle nearly empty. Now two bottles have been produced from Maruya. If the empty bottle which was there has been produced then an ounce of arsenic had been used from the morning up to that time. Now, gentlemen, no toleration of the use of arsenic would account for the use of that ounce bottle if it were true. The circumstances therefore go to show that what the accused has said with regard to Tuesday evening is untrue. The deceased could not, if he had been getting arsenic in these quantities from any other hands be craving for it to such an extent on the Tuesday evening as to threaten to send some one else if his wife did not get it for him. If he had been getting it in the morning he would not insist on his wife getting it in the evening? The explanation was that it had done him good, and it referred to the fact that he had been taking arsenic. The conclusion I ask you to draw, gentlemen, is that the lady who went to Maruya's on the morning of the 20th was Mrs. Carew, and that she obtained that arsenic. You have it sufficiently in evidence with regard to the 19th. In one sense, gentlemen, it does not matter much about it having been shown that the purchase was made on the 20th and not on the 19th. The question as to Miss Jacob's recollection being correct was quite right and proper, and that it was not on the 19th was a proper thing to be pointed out by the Counsel for the defence. There is nothing to complain of in that; but it is not a matter which requires any great consideration on your part. There is the statement regarding the children. Mrs. Hutchison says she saw her with both the children opposite to Kuhn's in Main Street, while Miss Jacob's account of her proceedings on that morning were different, and she said she only had one of the children at a time, one on one occasion and the other at another, and the suggestion at first is that Mary Jacob may possibly have gone to Maruya's. But there is to be remembered that the 19th is not the date, but the 20th, so that the discrepancies there are not fatal. They only bear on the credibility of Mary Jacob in her other evidence. Whatever effect you may like to give to them, Mrs. Hutchison, I submit, is as likely to be mistaken as Miss Jacob.

His Lordship—You have the evidence of the other lady?

Mr. Wilkinson—Thank you, Lord; that was Mrs. Walter, and it must have been after half-past eleven if she was down town on that day.

His Lordship—But theiffin at 12.

Mr. Wilkinson—Yes, my Lord, but I do not think the gentlemen who testified with her gave evidence on that point. If I am mistaken I should like to be corrected, but that was the impression left in my mind.

His Lordship, after referring to the notes—There was no time stated.

Mr. Wilkinson—So it is quite consistent that she left Mrs. Walter at half-past eleven and that she might have been down town that morning, and it has become a matter of credibility by the other evidence. The only evidence is from the diary that she was down town on the morning of the 20th. But you remember the *jinrikisha* man who came to give evidence of what her movements were. Now what I can say with regard to that is that that *jinrikisha* man had acquired somehow the idea that it was necessary for him to say something and nothing else. He broke down, and his credibility was entirely demolished by denying to Mr. Lowder that he had ever seen him. And that gentlemen, is the only evidence against Mrs. Carew's having gone to Maruya's at that time. And there is that special evidence with regard to the bottle of chloral.

Mr. Lowder—There was Hayashi's failure to recognise her on three different occasions.

Mr. Wilkinson—There is the fact that Hayashi failed to recognise her, and it is only right that anything in favour of the prisoner should be brought to your notice. I think that Mary Jacob says that the man asked her if she was Mrs. Carew. You have heard the evidence of Hayashi given here and it occurred to me that his evidence was both creditable and credible. To me it seems natural enough. There was a foreign lady who came and he did not recognise her. My learned friend drew attention to the fact that the Carews had been purchasing things there before and that he ought to have known her. To that matter you will give all the attention it deserves. But there is the fact that if any other person had taken the Fowler's Solution to the house on the 20th and it had been used by the prisoner, the deceased would never have made the statement on the 21st that she states he made to her. You have there again the fact of exhibit A that she purchases on the Tuesday evening a bedpan and a bottle of Fowler's solution. That is ad-

mitted by the accused to be in her own handwriting.

Mr. Lowder—I think I might ask you to call the attention of the Jury to the fact the he [Hayashi] had a long conversation with the person who came on the 19th and that he failed to recognise the accused as the person.

Mr. Wilkinson having explained this from a newspaper report to the Jury, proceeded—He refers to what the conversation was on the occasion and the very proper suggestion is that having had a conversation with the lady, that if it was Mrs. Carew he ought to have recognised her. Afterwards, however, you have the fact that he said he could not recognise her, and you have the fact that if it had been any other person than Mrs. Carew who went there and got that medicine administered to Mr. Carew then what was said by the prisoner of the Tuesday evening could not have taken place.

At the request of Mr. Lowder Mr. Wilkinson read the evidence of Hayashi from the newspaper as follows:—"Witness walked to the other side of the Court and said, I remember well the person there as coming to buy things before, but I do not recognise her as the person who came to buy things on the 19th." I come now, gentlemen to the purchase on the afternoon of the 20th.

His Lordship—I think you referred to that before?

Mr. Wilkinson—Yes, I turn back to that.

His Lordship—Was not that the evening of the 20th?

Mr. Wilkinson—I stopped at the suggestion of my learned friend to go back to the question of the identity.

His Lordship—Very well.

Mr. Wilkinson read part of the prisoner's evidence at the inquest and continued:—"The passage I have read is from the examination on the first occasion at the inquest. Accused said:—"He gave me a slip of paper on which was written 1 bottle Fowler's Solution, 1 bottle Sugar of lead." I now draw your attention to the bit that is known as exhibit A. It reads:—

MR. MARUYA,

Please give Bearer

1 Bed Pan.

1 Bottle Fowler's Solution of Arsenic.

E. M. H. CAREW.

169, Bluff.

20. 10.

It is referred to in her evidence given on the second occasion, when she was shown the order. She then said—"In the evening I recollect writing to Maruya's for a bed-pan. I cannot say that I have any recollection whatever of writing for the arsenic, but I must have done so, as my writing is conclusive evidence." On the 20th Oct. she wrote this when her husband, she said, had given her a piece of paper. You have her statement that the order was filled, it has been given in Court, and you have also the statement of Rachel Greer in regard to it. I will not ask you not to believe her evidence on this point, because the appearance of the bed-pan in the house supports the facts stated by Rachel Greer. Yet, we are asked by the prisoner to believe that, although she remembers writing to Maruya's on that evening, she was not able to recollect sending for the arsenic. You have thus heard that another ounce bottle of Fowler's Solution was introduced into the house on the Tuesday evening, along with a bed-pan: that has been traced into the accused's possession, and the suggestion is—there is no other conclusion at which you can arrive—that the Fowler's Solution passed into her possession along with it. That she should have written for the Fowler's Solution at that time was but natural, but it is not natural to suppose that she can have forgotten all about it as she says she did, after her husband had appealed to her on the subject. Her statement regarding that is, "On Wednesday he again spoke to me of the great pain he was in and told me that if I did not get him the medicine he would get it himself by other means." That is the statement she made on the first occasion, which she volunteered to give—it was not extracted from her in the examination as afterwards occurred. She said at that time—"On Tuesday evening he gave me a slip of paper, which I have." This is exhibit X. "I told him at the time that I should not send for the things." This piece of paper, exhibit X, is admitted not to be in the deceased's handwriting. That was the order that Mr. Mason, in the course of his examination, very guardedly described as being more like Mrs. Carew's handwriting than anything he had examined in connection with the case. I think I have given almost his exact words. You will have to bear in mind this description of the order and take it into your consideration. You have now the fact, undeniable, indisputable, that on the Wednesday a one-

ounce bottle of Fowler's Solution was given into the hands of the accused by Mary Jacob. That does not depend upon the evidence of Mary Jacob alone, we have it also in the evidence of the accused. The discrepancy in it is this. Miss Jacob says—referring to this occasion—"The children and I and Mrs. Carew went into the dining-room together. I gave the three bottles to Mrs. Carew. I know she put two of the bottles on the writing table, by the window." The accused says:—"When she returned with the bottles I gave them to my husband, sealed in the paper in which they were received, and told him that I should not allow him any of the mixture at the time as he was taking medicine from Dr. Wheeler." That is the discrepancy, gentlemen. I will leave it to you to decide as to which you consider the more likely to be correct. Now then, we have the facts of three one ounce bottles of Fowler's Solution of arsenic being brought into the house. If you find that, as a fact death was due—not to the solution alone, but to that in a very serious measure—to arsenic—and this is consistent with all the evidence that has been put in—then you will be asked to conclude that death was sufficiently caused by the Fowler's Solution. Of the three one ounce bottles, one bottle has been produced to you. This is exhibit G., and as to that, Hayashi has stated, "This is the bottle purchased at our store; I recognise it." That bottle contains a few drops still at the bottom.

Mr. Lowder—Might I not suggest that this bottle bears neither the label or mark of Maruya's, nor does the cork bear their mark. It has not been recognised.

Mr. Wilkinson—I take it that it has been made quite clear.

His Lordship—In my notes I see that Hayashi recognised it, and that is sufficient.

Mr. Lowder—I did not recollect that he had done so.

Mr. Wilkinson—My learned friend wishes me to point out to you, gentlemen, the fact that one of the bottles from Maruya's does not bear Maruya's label nor the cork their stamp. This is stated to be the bottle found by accused in the cupboard where she declared her husband kept his medicines: and where Maruya's labelled bottles were not. In support of the theory of its having come from Maruya's, I may point out that the word poison in red ink is apparently in the same print—as far as my eye can tell—on both bottles. On the right hand side of the label there is a piece torn off, but there is the part left which makes it more certain in its identity, which is the scroll and the Japanese word for poison. You have heard the statement of Hayashi and the circumstances of its identification by him. That goes all the more strongly to show that the bottle was purchased in the morning and must have reached the cupboard on the evening of the 20th, because we have it in evidence that another bottle of Fowler's Solution was purchased at Maruya's before that. You have all these terrible facts, gentlemen, and an explanation is required. Now I come to the explanation that has been offered to you. The explanation given on the first occasion on which accused gave evidence at the inquest, was this:—"I may state that he has been in the habit of taking arsenic in small quantities for some time. I don't wish to state exactly how long because I don't know—some months." Further down she says, "I cannot recollect whether it was before Dr. Todd's visit or after that my husband expressed a wish that he should be given his usual dose of arsenic," and then she proceeds:—"I told him that as Dr. Wheeler was treating him, I thought it would be better not to take any medicine on his own account. However, he insisted, and begged me to give him some, and I went to the cupboard where he kept his medicine and only found an empty, or almost empty, bottle." It was then that she found exhibit G. Now on the second occasion on which she gave evidence another, and totally inconsistent, explanation was given. On page 8, she says:—"I was frequently in the habit—every day during the early part of our married life—of giving my husband doses of arsenic: I always measured it out in drops. Latterly he has always helped himself, except in the Straits, where I gave him the arsenic myself. Latterly he would use arsenic without measuring it; has been in the habit of doing so for some time. It was such a habit of his to take arsenic as a pick-me-up that he would pour a small quantity out, add water, and drink it." When this evidence was read over to the witness on November 5th, she desired to add at this point:—"But I do not wish to say that I have ever seen him take it in the house more than once a day, which was always after breakfast." And then, gentlemen, the bottle is produced that is known as exhibit D. Now what is to be remarked about the incident of Tuesday is that when she was asked by her husband for arsenic, it

seems never to have occurred to the accused to go to that bottle that was always kept on the sideboard: it was to a bottle in the cupboard that she refers. My learned friend has asked me to call your attention to the fact that this bottle was produced empty, and now, gentlemen, I pass on to the most serious point of all. If the deceased was in the habit of taking Fowler's Solution either in small quantities or in large, it must have been procured from somewhere, and the accused from her circumstances, knowledge, and situation generally, would have been able to know where it came from. She was in the habit of having Baelz's prescription made up for him from time to time, according to her own evidence. We have only negative evidence that arsenic was not supplied to her by any other foreign chemist than Schedel, and that the only other Fowler's Solution—beside that bought during his illness—that was admitted to the house was the Fowler's Solution for the dog. Now these circumstances condemnatory of the accused, only are negative and can only be proved as far as a negative can be proved. But, gentlemen, I submit, that the absence of evidence as to where this arsenic that deceased is alleged to have been taking in such large quantity, is not explicable. It is a fact which, if it were true, could be supported by evidence. I submit that the absence of such evidence is, under the circumstances, a proof that no evidence is procurable, in the sense that the fact does not exist. You have heard what various witnesses have said with regard to the deceased speaking to them of his taking arsenic, and all those statements are perfectly consistent with the fact that latterly he had not been taking arsenic. You have the totally inconsistent statements of the accused as to the quantity that the deceased was taking, first that he was in the habit of taking arsenic in small doses, then when it was necessary to produce another explanation, that he was taking it in large quantities. The quantity alleged by her is one beyond the ordinary power of the ordinary European stomach to take, but it is one which Counsel for the defence felt constrained to minimize by suggesting that Mrs. Carew, in speaking of it, had only estimated it. There, gentlemen, is a fact that could have been in the knowledge of the accused, its absence is a very serious and terrible thing, and it will be a fact for you to consider. I have now, gentlemen, laid before you the arguments that it was my duty to put before you on behalf of the Crown, and I will conclude by saying to you, in words that I will borrow and adopt—Pay no regard to anything but to the internal voice of your own consciences, and to that sense of duty which you owe to God and man on this occasion, seeking no reward except the comforting assurance that when you look back to the proceedings of this day you will feel that you have discharged to the utmost of your ability and to the best of your power the duty which it was yours to perform. If on a review of this whole case, comparing the evidence on the one side and that on the other, and weighing it in the even scales of justice, you can come to the conclusion of innocence, or can even entertain that fair and reasonable amount of doubt of which the accused is entitled to the benefit, in God's name acquit her; but if, on the other hand, all the facts and all the evidence lead your minds, with satisfaction to yourselves, to the conclusion of her guilt, then—but then only—I ask for a verdict of "guilty" at your hands. For the protection of the good, for the repression of the wicked, I ask for that verdict by which alone—as it seems to me—the safety of society can be secured, and the demands, the imperious demands, of public justice can be satisfied.

Mr. Wilkinson resumed his seat at two minutes to 12 o'clock, in a very quiet and almost breathless Court.

His Lordship—I shall sum up to you, gentlemen of the jury, on Monday morning. I shall very likely finish shortly after lunch. This is a convenient opportunity of thanking you, gentlemen, for the unwearied attention that you have given throughout the protracted trial. Measured in hours (some seventy, I believe) the time it has occupied is not so very long—not by any means too long considering the enormous gravity of the issue—but you have been necessarily detained from your homes and duties and pleasures for a great number of days. The Crown and the prisoner alike have been indeed fortunate in having you for a jury, and, to the Counsel engaged, your patience and consideration have been extreme, as they themselves have borne testimony to. And while referring to the Counsel, I should like to say by their fairness and the moderation and ability with which they have put their respective cases before you, they have rendered your and my task, difficult enough, much easier than it otherwise would have been.

The Court then adjourned till 10.30 o'clock on Monday morning.

MONDAY, February 1st.

The Court-room was crowded long before the Judge took his seat upon the Bench, the additional room afforded by compressing the space usually appropriated to the prisoner's dock and the barristers' and reporters' tables, being still inadequate to provide all the room that the general public demanded. The prisoner at the outset was pale and composed, though her eyes were red with recent weeping. The jury were all attention from the very beginning of the Judge's able summing-up, not a word seeming to be missed by them. The hush that fell on the crowded Court when his Lordship began to speak lasted until the finish, save when the outer door opened to admit a spectator. With the exception of the barristers' deed-boxes, and a few legal text-books, the huge piles of papers, photographs of exhibits, and other impedimenta accumulated during the course of the trial had all disappeared from the barristers' table. The dull, dreary, dismal rainy atmosphere that prevailed outside seemed from the early morning to penetrate into the Court-room and add to the gloom and painful intensity of the proceedings. One lady was present among the spectators in Court during the day. It was a curious fact noted by several that of the large number of witnesses that have appeared for either side during the course of the trial, only one or two, and these perhaps, of the least importance from some points of view, were present; while none of the medical fraternity of the port, who have played so important a part, either as technical experts or as leading witnesses, were in Court during the morning.

His Lordship, addressing the Jury, said:—Gentlemen of the jury, the prisoner is charged with the murder of her husband by the administration of arsenic, and it is necessary for the prosecution to prove the charge to you beyond a reasonable doubt. What that expression amounts to is clearly explained to you in the defence read to you by prisoner's Counsel in the summing up of an American judge. It reads thus:—"Just what a reasonable doubt is, gentlemen, it is not quite easy to say; but you are practical men, and I instruct you, that you should be satisfied of the defendant's guilt to that degree of certainty which you would require for your guidance in acting decisively in any grave matter of your own within such time as is ordinarily given to a jury for deliberation in the case." Such a proposition I quote, and I accept it. Now the cause of death in this case being made up of two elements, death from arsenic, and death from sugar of lead, it was stated that the prosecution had to establish beyond reasonable doubt by medical evidence alone that the death was absolutely caused by arsenic alone to the exclusion of any incommunicable cause. This I believe, was the view put to you by the Counsel for the prisoner in his opening address. But, gentlemen, that is not so. The intention must be put in two ways, as I understand the law. In the first place, it has not to be shown that death was actually due to such poison; it is sufficient to show that such poison conducted to the death; and in the next place to look to the whole evidence, and not to the medical evidence alone whether arsenic conducted to the death. If the results of the *post mortem* and the medical evidence or the chemical analysis of the system are consistent with arsenical poisoning, that is all that need be established by the prosecution from the medical evidence, and they can then call upon you to say whether that poison had contributed to the death. And the reason for this observation is obvious enough. The symptoms of one poison are similar to those of another, so much so that medical men may not be able to say to which of the causes the death was due; and if we were stopped from establishing the cause, though a particular poison may be traced to an individual clearly enough, that where two poisons which manifest themselves by similar symptoms are found and doctors might not be able to say positively to which death was due, the prosecution would fail although the motive for the crime might be clearly proved by the prosecution. The other point laid down by the defence is that it is not sufficient to show that poison assisted the cause of death. That is not the law. What has to be established is, first, that death—and this arises from our law that it is sufficient to prove death—from the *post mortem* conditions, and the chemical analysis, taken together are consistent with arsenical poisoning; second, that the accused administered arsenic with a felonious intent; third, that such poisoning contributed to his death; and if these three propositions are established you must find the prisoner guilty. For the first and third you look to the medical evidence, and for the second to the evidence. As to the first question, are the symptoms, *post mortem* and medical evidence taken together, consistent or inconsistent with arsenical poisoning? If you think they are

inconsistent you will acquit the prisoner. But the evidence on that point is all one way, for even the doctors for the defence admit that the conditions are not inconsistent with arsenical poisoning. Dr. Eldridge says—"It was an indication of the presence of poison. I am not prepared to say that death was not due to arsenical poisoning. In all probability arsenic did conduce to the death." Then Dr. Batz, when his evidence was read over to him, said that it was consistent with death from Fowler's Solution. Dr. Munro was examined, and he said there was nothing inconsistent with poisoning by arsenic. Very well, gentlemen, as I have said, even the doctors for the defence admit what is practically the first branch of the case. I pass over for the present the second question to deal with the third, because that depends greatly upon the medical evidence. If you have any doubt that arsenic poisoning contributed to the death, you will of course, acquit her, but if not you will then proceed to answer the next question, that the prisoner administered the arsenic with felonious intent. The point that death might have been caused by white arsenic has been abandoned by the prosecution because there is no white arsenic found to have been administered. Now it is known that four ounces of Fowler's Solution were procured, and she alleges that she procured three ounces, or rather she alleges that it was procured by her at the request of the deceased, who was accustomed to take it, and it is suggested by her Counsel that death was produced by his taking an over-dose. Another theory is that deceased committed suicide. You will have to consider, gentlemen, whether there is any foundation for such a motive. No motive appears, and if you negative that theory then we have the one as to misadventure on the part of the prisoner, who was in constant attendance on the deceased. The administration of poison is necessarily left to be inferred from all the circumstances of the case, including the acts from the time the drug was bought until the death. This, too, must necessarily be considered on the same evidence, and it is on a review of the whole evidence on that point that you will have to form your opinion as to the true theory. Gentlemen, that brings us to the consideration of the evidence in the case. I mentioned that while the prosecution pointed to the purchase of four ounces of Fowler's Solution between the 17th and 21st October, the defence—I do not like to say admitted, but it was not denied by the defence—that three ounces were purchased. There is thus a difference of one ounce and that is the ounce which the prosecution allege was purchased on the 20th October in Maruya's. Now on the cross-examination of Maruya's shopman—I am not right in saying in cross-examination, because it appeared in the examination-in-chief—it appears that he made a different statement to what he had before on two occasions. He had stated then that an ounce of solution was purchased on Monday, the 19th, another on the 20th, and again on the 21st. His evidence before you was that there were two ounces of Fowler's Solution purchased on the Tuesday [the 20th] one in the forenoon and the other in the evening. He said also it was supplied—that in the morning—to a foreign woman whom he could not identify. Enquiries had been made by Mr. Walford sometime in November and the answers then given were consistent with what he had stated before the Coroner and the Magistrate. Mr. Walford desired to know at what time Fowler's Solution had been bought on the 19th, and at what time it had been purchased and paid for on the 20th. To that he answers that it was in the forenoon on each occasion. That impression remained in his mind, or rather was not removed from his mind until a few days before he gave evidence here. Then his books were produced and he says: I found I was wrong, and that it was on the 20th. Now, gentlemen, without saying that the witness is saying what is untrue, which for a moment I do not suggest, it is unsatisfactory when you find a witness in such an important case as this makes on oath two statements on two previous occasions and then to come on a third occasion and say he was wrong. Of course it may not be more than an inaccuracy; probably it is not. It may be that this is a correct account of the matter which he has given here. It is the last and it ought to be, but the question is whether in such a case you feel sufficiently sure of his accuracy now in the matter to say that the purchase was made on the 20th in the morning. The foreign woman, whom he says made the purchase, he is not able to identify. The prosecution say it was Mrs. Carew herself. The defence have called evidence to show that on that forenoon Mrs. Carew was engaged at home, certainly until half-past eleven, and it is suggested that she did not have time to go down to make the purchase she did and then get back home again and receive her visitor who came

to lunch with her. Unfortunately the hour was not asked by Mr. Lowder when the witness gave his evidence, although in his opening speech he said that it was known. If it had been later than twelve o'clock you will say there was time for her to have gone down town and returned in time to receive him. The *finrikisha*-man speaks to her not having gone to Maruya's, but she was sufficiently near to the place, and it would have been easy for her to have gone there without the *finrikisha*-man noticing it, for he stated that when he put her down at Oniya's he sat back in his *'rikisha* and did not take any notice. The matter is not clear. The payments which have been made at Maruya's seem to point to the purchase by, or on behalf of, someone in the Carews' house, because the payment was made at that time for the previous purchase, and there is also the circumstance that the bottle of chloral hydrate admitted to have been purchased at the time from Maruya's was found in Mrs. Carew's house and was produced by her before the Coroner. Well, gentlemen, that is a matter entirely for you to deal with. If you think that the explanation that the witness has given now is correct, when he says it is the morning of the 20th, and that it is brought to the Carew's house, and that the bottle is found there, then you will say so, in spite of his statement that he took the date to be the 19th. It is possible that he had looked up this matter so often that although he may have looked at the books, he may not have looked at the date. But if you take it as proved by the prosecution, then you will take it that four ounces of Fowler's Solution were bought between the 17th—I will leave out the half-ounce from Schedel's on the 11th—and 21st, two half ounces from Schedel's and three ounces from Maruya. I say if you can rely on the evidence given by Maruya's people as to this purchase on the 20th October, then there will have been four ounces brought to the Carews' house in that interval; but if you think that it is not sufficiently clear, then by all means leave that ounce out and confine the matter to the three ounces about which there is no dispute. The purchases then are half an ounce from Schedel on the 17th, one ounce from Maruya on the 20th, half an ounce from Schedel on the 20th, and an ounce from Maruya on 21st. It will be seen that the half ounces were bought from a foreign chemist and the ounces from a native chemist. While, gentlemen, starting with that as a fact—as a basis generally—I think the next part of the case you should consider is its history. And here again I think you may really confine your attention almost solely to the history of the case from the 20th October; that is the time that concerns the large purchase of Fowler's solution. There were smaller ones, half an ounce on the 11th and half an ounce again on the 17th, and it has been pointed out that the first half ounce was procured for Mrs. Carew herself, but that five drops, as prescribed, ought to have lasted sixteen or seventeen days. On the 17th, however, it was refilled and then something seems to have happened to that bottle—it was broken and some of it appears to have been spilled, and so on the 20th the prisoner sent for a fresh bottle. But beginning from the 17th up to the 22nd, you have that quantity of Fowler's solution bought, and you may confine your attention I think from the period from the 20th down to the 22nd, when he died. He had been, as you remember, ordered home on the 15th, and he had been gradually getting worse up till the time he died, arsenic having first been procured on the 17th. He is then so much worse and Dr. Wheeler becomes so much worried about the case that he suggests that Dr. Todd should be called in. Dr. Todd goes on the 20th, and then there is an enquiry made by Dr. Wheeler as to the kind of cooking utensils that were being used. He is so puzzled about the case that he casts about for a cause and he asks the patient about the cooking utensils. He was reassured on that point by Mr. Carew himself who said that they were all right. The Doctor's evidence reads—"On the Tuesday morning I asked if they had any copper pans in their kitchen. This was in the bedroom, in the presence of the deceased and the accused. Their answer was, no we have splendid utensils; they are all porcelain enamelled." That enquiry is reported by Dr. Wheeler to Dr. Todd in the accused's presence, and nothing was said by her. Dr. Todd left in the afternoon, and that evening you have an ounce of Fowler's solution procured from Maruya for the prisoner.

Mr. Lowder—May I interrupt your Lordship to ask you to mention to the jury at that point that Dr. Todd had asked for some of the urine of the patient and that the wife had procured it for him and handed it to him.

His Lordship—Gentlemen, you have heard that Mr. Lowder has said, but for the moment I do not see that it is important. I was saying how puzzled Dr. Wheeler was, and how he had called in another doctor to whom he stated the enquiry he had

made about the cooking utensils, and I presume the enquiry was made because it was supposed that something poisonous might have come from the cooking utensils.

Mr. Lowder—Perhaps it will come further on when your Lordship mentions the probabilities of the case. It might be admitted with that view.

His Lordship—Before I go on I should like to know how urine enters into the case?

Mr. Lowder—As to the probability as to whether the wife was administering poison, because the mention of the urine might have brought forth the fact that he was taking arsenic; yet she has no objection to procure urine for the second doctor who was introduced.

His Lordship—I do not see how she could make any objection.

Mr. Lowder—She might have let somebody else do it, but she did it herself.

His Lordship—Well, gentlemen, I will continue. That was on the evening of the 20th. Then on the morning visit on the 21st, Dr. Wheeler finds the patient still worse, but he is better in the afternoon. Mr. Parsons having suggested to the prisoner that Dr. Baetz should be sent for, the prisoner wrote to Dr. Wheeler about noon asking him to telegraph for Dr. Baetz. The reply was, "Impossible to-day. Will to-morrow evening do?" That message was received about or directly after four, and was communicated to the prisoner by Dr. Wheeler himself at his evening visit at about six o'clock. After receipt of that message, gentlemen, the patient's improvement disappeared. He had been much better in the afternoon but in the evening he was again worse—he was worse than ever. You will remember that in the afternoon of that day one and a half ounces of Fowler's solution had been procured at different chemists. The patient is more than prostrated the next day, till, as you know, he dies in the afternoon. That evening, after she has learned that a *post mortem* was to be held, she sends for Dr. Wheeler, and tells him for the first time about her having procured arsenic for the deceased. And that is probably the time when it would be well to consider the explanation that was set up by the accused's Counsel for her concealment of the fact. He says that Mr. Carew had been treated at one time for a complaint of which he did not wish Dr. Wheeler to know anything about, and his wife, knowing of that circumstance, did not mention the matter of the arsenic to him before. That is the explanation that is furnished to you. It was quite correct for her to conceal the circumstances from Dr. Wheeler which her husband did not wish him to know, and that will be kept in your mind, up to a certain extent, but whether it is an adequate consideration up to the end you will have to think over and decide. It is one of the main facts in the case. You may say that arsenic might have been mentioned to Dr. Wheeler without any reference to the complaint for which the husband was supposed to procure it. Then, why was sugar of lead procured? Sugar of lead was being brought into the house at the same time by her. Why was that not mentioned? That could not have had any connection with the complaint for which the arsenic was procured. Her husband said to her that sugar of lead was for an external application for the liver. Well; it was liver that he was suffering from, and what reason was there for not telling the doctor about the sugar of lead? There were two doctors puzzling themselves over the matter, why the billiousness did not yield to the remedies applied, and enquiries were made from the prisoner about the cooking utensils and yet she does not give any information on the point. Up to a certain point, as I say, I can understand the motive that may have influenced her action. We have in her own evidence a statement that she puts forward in explanation of the purchase of the arsenic. But why was not the sugar of lead mentioned by her? She saw that Dr. Wheeler was so very puzzled about the case that he asks to be allowed to call in another medical man's opinion, and it might have occurred to her then to tell him that—if not arsenic—at least sugar of lead had been purchased. She tells us in one statement that her husband used sugar of lead as a lotion externally. For what? For his liver, and that was what was Dr. Wheeler thought he was suffering from at this time. The prisoner remains silent as to the purchase of both poisons at a time when all such matters should no longer have been concealed. The time had arrived, as I say, to put aside all necessity to conceal the matter further, in the face of the intense suffering of the deceased. Yet she remains silent. And this, too, at a time when, falling in with the suggestion of a friend, she writes to Dr. Wheeler regarding the getting down town Tokyo of another medical practitioner for the sole and particular purpose of finding out what was really wrong with the patient. That, gentlemen, is a point for you seriously to con-

sider, her concealment of this fact from her husband's medical attendant from the 20th, all during the remainder of the illness, down to the end. The explanation advanced on her behalf by her Counsel, you have heard; you will give it the consideration that may think it deserves. You are asked to adopt that explanation by the defence; but I will point out to you that she called the medical attendant's attention to the arsenic having been taken on the evening of her husband's death, after she had heard that a *post mortem* was to be held. Then she sent for Dr. Wheeler and told him of the arsenic having been purchased and taken by the deceased, because he tells us, that when she told him of the fact that Thursday evening, he replied, "Never mind now, we shall see at the *post mortem*," or words to that effect. Now, gentlemen, I must call your attention more particularly to the evidence that has been given as to the purchase of the arsenic, and it would be more convenient to refer specifically to the purchase that was made on the last day—on the morning of the 21st. She sent that morning for some arsenic, sending her governess down the town to make the purchase, along with other little commissions. One call was made at Brett's, another at Curnow's, another at Schedel's. At Schedel's the governess went, in accordance with her mistress's instructions, to obtain a half ounce bottle of Fowler's Solution of arsenic. Then, gentlemen, from Schedel's the governess, still in obedience to her mistress's desire, goes on to Maruya's. To do what? To purchase an ounce more of Fowler's Solution! That is to say, the purchases of arsenic made on the 21st, at the same time, by the same messenger, through the same means, were from two different chemist's shops. I enquired of one of the witnesses, Mr. Thomas, I believe, as to how much time would be lost in going from Schedel's shop to the other chemist's in Benten-dori, Maruya's, and back again, and he replied that he thought it would be about 20 minutes. I particularly put this question because it was a point arising in the case that required explanation. I was in hopes that an explanation would be suggested to you, gentlemen. But no such explanation was forthcoming. Now what explanation is there for a proceeding of that kind? If you want medicine you generally send to the nearest chemist for it, if you do not go to your own chemist. Then why did she send, or tell her governess to go, to two chemists? What explanation is there of this procedure that is compatible with innocence if there is question as to whether this was an innocent act or not? If it is compatible with innocence, and there was urgent necessity for the purchase of such a quantity of poison as one and a half ounces of arsenic, why not get it all at Schedel's, the first chemist? The answer may be that she might not be able to purchase so much as 1½ ounces of Fowler's Solution at Schedel's or at any other foreign chemist without a prescription. Then again, why purchase the smaller quantity at Schedel's, and the larger at Maruya's? Mr. Lowder has suggested that it would have been very easy—he put the question to Mr. Thomas—for her to have got the arsenic on a prescription given her two years ago. Mr. Thomas replied that supposing she had applied to him for arsenic and mentioned the former prescription he might have supplied her. No doubt that is so. But the question was not carried further. He was not asked, for instance, would you have supplied her with 1½ ounces of Fowler's Solution although she brought no prescription with her? It might have gone even further than that. Would you, he might have been asked, have supplied her with some Fowler's Solution had you known that she had obtained an ounce of it the previous day? You will have to consider these matters, gentlemen; they arise from the evidence, and I put them before you, because I should be failing in my duty if I did not do so. And you will be failing in your duty if you do not face them. I leave to you the inferences that may be drawn from such procedure. It will be for you to answer satisfactorily to yourselves, the question of this concealment; why the purchase of the arsenic should be concealed. Of course entire concealment there was not, that you will perceive. I do not intend to say more upon the point regarding the method of the purchase of the poison. But I repeat it will be a question for you, gentlemen, to answer—it is a point requiring considerable attention—why this last purchase of arsenic, in so considerable a quantity, was made the day before the patient's death at two different dispensaries? Well, gentlemen, I think I will now pass on to another part of the case, and that will be to look at the reason assigned for the purchase of the arsenic at all. What reason is given for his taking arsenic, and the taking of it in

such quantities? The only explanation that we get, we get from the prisoner, and much turning on this part of the case as to what credence you will give to her various statements. I mention various statements because she has made statements on different occasions that are not consistent. Her first statement is that her husband was an habitual arsenic consumer, and that she procured the arsenic for him by his desire during the course of his illness. That was her evidence as given before the Coroner on the first day's sitting of the inquest. On the second occasion of her appearance before the Coroner she gives another explanation—that is ten days after the first statement. She said in her first statement—"I may state that he has been in the habit of taking arsenic in small quantities for some time. I don't know—some months. I told him that as Dr. Wheeler was treating him, I thought it would be better not to take any medicine on his own account. However, he insisted and begged me to give him some, and I went to the cupboard where he kept his medicine and only found an empty, or almost empty, bottle. I remonstrated with him a good deal on taking arsenic especially in his then state." That is how the first statement runs, and you will see that she says there that her husband was taking small doses of arsenic, and is, according to that, not a large consumer of arsenic. She knew by this time that arsenic would probably be traced and she then considered this statement as explaining the arsenic habit—to use a convenient phrase—of her husband. Before she appears before the Coroner again and makes her second statement her attention had probably been called to the large amount of arsenic found, and then she gives another statement that bears an altogether different complexion. It is now, not that her husband takes arsenic in small quantities and against her will, but that he has been in the habit of taking large quantities for a considerable time. She says:—"I was frequently in the habit—every day during the early part of our married life—of giving my husband doses of arsenic. I always measured it out in drops. Latterly he has always helped himself, except in the Straits, where I gave him the arsenic myself. Latterly he would measure it out for himself, and has been in the habit of doing so for some time. It was such a habit of his to take arsenic as a pick-me-up that he would pour a small quantity out, add water, and drink it." That was such a large quantity, so excessive a dose, that her Counsel has tried to minimize it by suggesting that Mrs. Carew when she made the statement only estimated the quantity. Then the statement proceeds:—"He always kept a bottle of arsenic on the sideboard in the dining-room." Later, when the evidence was read over to her, she added:—"But I do not wish to say that I have ever seen him take it in the house more than once a day, which was always after breakfast." Again she says:—"When I sent for the arsenic I didn't think he would take it or that it was absolutely necessary. I did it to please him. When the note was sent, I did not think he was very ill, and knowing he had been in the habit of taking arsenic I didn't think it would do him any harm." This statement, gentlemen, was not made in support of the later explanation when it had come to her knowledge that it was known that large quantities of arsenic—of poison—had been brought into her house. Now, gentlemen, the last statement is quite inconsistent with the statement made on the first day, when she said he was only taking small quantities, and that against her will, or to use her own term, against her remonstrances; in her second statement she says that he has been in the habit of taking large quantities and kept a bottle always upon the sideboard, and that he took it without any objection on her part at all. These two statements, gentlemen, are very difficult to reconcile. When you find a person making statements of two such different kinds, then the question arises how are we to know, how are we to determine, which of the two statements is the true one. You can see that this is another question which you must carefully take into your consideration. Now what is the evidence that has been adduced as to the habit of Mr. Carew—the arsenic habit—for that is the framework for the purchase of the arsenic. We are told that in 1880—sixteen years ago—that arsenic was his stock remedy. This is the evidence of the medical gentleman who was called before you by the defence to speak to an episode that occurred at that time. We also know that in Singapore, from the evidence of a gentleman who was there at the time, that it was commonly known or that he had heard, that a Mr. Carew was, or had been, suffering from the effects of an overdose of arsenic. Now, I put to you that what you have to deal with is not the fact of an old habit; you have got to consider whether arsenic eating, or taking, was a recent habit of late Mr. Carew's. There is very little evidence

before you, very little evidence has been given, of the recent use of arsenic by the deceased. I will call over to you the names and the evidence given by all the witnesses called upon this point. The first, I think, was Mr. Jephson. He says, "I recall a conversation that I had with the late Mr. Carew in September last"—that is recent enough—and then he goes on to say that he (witness) was suffering from gouty eczema, and feared that he would have to resort to an old prescription for arsenic pills. At this deceased replied, "Arsenic, why I have taken tons of it." He does not say, I am taking it. The expression of course may mean that he was taking it down to the present moment; but I must confess that to my mind it is more likely that he was speaking of a habit that he had finished with. He might have wished to convey to the witness, "Arsenic, you needn't be afraid of that; I have taken it myself." To my mind the evidence of the first witness induces the belief that the deceased was not speaking of a then prevailing habit. On the wording, the phrase does not, I think, bear out that construction. But I leave all these matters to you for your final consideration. The next witness is Mr. R. J. Ward, who appears to have been but a slight acquaintance of the deceased, a comparative stranger you might say. He speaks of giving the deceased some Fowler's Solution for a dog. This was as far back as 1894 or early in 1895, nearly two years ago. Mr. Ward says that when he gave the arsenic to deceased he remarked that it was arsenic and that deceased should be careful how he used it. To this deceased replied that "he was quite familiar with the use of it." Now the question that I put to you upon this evidence is this. That if he was a large consumer of arsenic at this time, he would hardly have required to have obtained from a comparative stranger, a half bottle of arsenic for his dog. He said to Mr. Ward that he was quite familiar with the use of arsenic, but, gentlemen, I think, that if he had had some of it by him he would have been more likely to have also said, "I have plenty of it"—or words of that kind. Instead of that, we find him accepting half a bottle from Mr. Ward. Next we have the statement of the lady who sat next to Mr. Carew at dinner in October. She sat next to him at dinner, and she says, "he told me that he had dosed himself with quantities of drugs, arsenic among them." That is, I dare say, perfectly true, but again it does not refer to any particular time; and was he referring to present habits, or past use? We have it in evidence, it is true, that he dosed himself with Seigel's Syrup during the summer, but that is beside the question of the use of arsenic. Then Mr. Max Kaufmann is the next witness, and his testimony refers us to a year and a half back. What, however, is the material point in this: is there any evidence of his recent arsenic habit? Is there anything within half a year ago? Mr. Robison took us back to 1895, nearly two years ago. He tells us of how one day when lunching with the family he went to the sideboard and was going to take up a bottle containing a sherry coloured liquid, when one, or it may be both, told him not to touch it as it was arsenic, and Mrs. Carew added, "It's Walter's drops." Then we have Mr. Kobayashi Beika, speaking of a year ago, of a conversation with the deceased in which poison was mentioned. Then I have already spoken to you as to what the gentleman from Singapore said. These, I think, gentlemen, are all the witnesses called by the defence to speak as to the arsenic habit of the deceased. There is not one—none have been produced before you—to speak of his taking arsenic. He speaks of taking arsenic in an indefinite manner, as regards time, with two of the witnesses. In regard to the period when he was taking arsenic, and arsenic was seen in the house, Mr. Robison's statement fixes the time. Of course it is possible that he might have been still taking it towards the last days of his life, but it seems to me that if that there were so there should be no difficulty in calling witnesses to speak to it. As was pointed out by Counsel for the prosecution, and rightly so, the question that here arises is: If the deceased was a consistent consumer of arsenic it is obvious that he must have got it somewhere—that cannot be a secret. His wife, his servants, all must have known of it, and if so, they must have known where he got the arsenic from. But no evidence was called as to the purchase of any arsenic by himself. We have no purchases of arsenic proved in evidence except those three occasions in 1884 for Mrs. Carew—beyond, those that have entered this case, and the amount purchased on the 11th, and which is admitted and allowed, was for Mrs. Carew. Yet you are asked to believe that Mr. Carew took arsenic in large quantities. If you are to believe the statements of accused in her first explanation, he took it in small doses; or if you believe her second explanation—given after

ten days further consideration—he took it in large doses. If that was so, gentlemen, we arrive naturally at the question, where was it procured? It was not purchased at any of the three foreign chemists of this town; it was not bought at Maruya's, the native chemist—and no other chemist has been called. Well, gentlemen of the jury, I am suffering from the effects of a bad throat, and I ask you to adjourn now for lunch. We will meet again at half-past one o'clock, when I hope I shall not detain you long.

The Court rose for lunch, resuming at 1.30 o'clock.

His Lordship—Mr. Lowder, I hope you will point out to me anything that you may consider necessary: I do not wish to overlook anything that can be advanced in favour of the accused.

Mr. Lordship—Thank you, my Lord.

His Lordship—I am very anxious not to overlook anything.

Mr. Lowder—I am quite certain of that, my Lord.

His Lordship—In the interest of the accused you will draw my attention to anything you think of importance. It has occurred to me during the interval, that the accused has denied ever having administered, or given—for it comes to the same thing—any arsenic to her husband. She has limited her actions, gentlemen, entirely to yielding to his entreaties to get him arsenic: to getting the poison at his earnest solicitation and of putting it down on the table by his bedside. On one occasion she did not do more than place the poison in his hands in the paper in which it came: though Mary Jacob's evidence on the point is different. But this is a detail and need not be pursued. Now, gentlemen, there are one or two things that have cropped up in the course of this trial that I shall ask you to dismiss from your minds in deciding upon the issues of this case. They are points that have been raised by both sides, but I shall ask you to put them aside and look at the broad facts of the case, to look upon the whole of it, and not to pin yourselves down to one circumstance alone: one circumstance, as it were, standing apart. I think that these trivial points you should put out of your minds as not bearing, in my opinion, upon the case at all. On page 5 of her evidence, the prisoner says, when speaking of the evening of the 20th:—"I am positive that I had no idea that arsenic had come into the house that night, because I have no recollection whatever of ever seeing the bottle which is said to have contained arsenic." Gentlemen, that may be very possible. Of course you will consider the circumstances of the case, the situation she was in, and her position that evening. I think you may dismiss that from your minds. Then we come to another incident that you may disregard, the abstraction or repossession of, the missing exhibit in this Court. Of course it is an act that cannot be justified: it was wrong, and extremely foolish. Its connection, however, with the case you have to consider, is not very apparent; the connection is so extremely slight that it can well be disregarded. Of course, as Counsel for the Crown put it to you, the act was one that was bold and daring, and certainly injudicious. I think, however, that it may be put entirely out of mind. To me, I do not see how it supports the case for the prosecution at all; although the accused may have thought that, in defence of what she may have considered to be her honour, the attempt was one that she might make. I now turn to the entries in the diary. The first of them was made long before her husband was taken ill, and the last after he entered the house for his last illness. I refer to the entry of Oct. 15th:—"On coming back at 4.30, found R.—her brother—up, and W.—her husband—home in bed. He had been ordered a course of Vichy-water by the D. I wonder how long it will last." What can be more innocent, or simple, than that? A diary, gentlemen, is not a book to make incriminating entries in. To my mind the entry indicates that she thinks he will very soon tire of Vichy-water, though that is not the argument of the prosecution, at least I gather that that was not the reason why they put in the diary as evidence against her. Then as to exhibits L. and K. L. is the bottle originally containing Baelz's prescription, and K is the fender. Both have been analyzed, the contents of the bottle and the scrapings from the fender. The defence rather invited, I ought to say challenged, the prosecution to do so when they presented them on behalf of Mrs. Carew at the Coroner's inquest, and I think the prosecution could do no more than give the prisoner in this matter any benefit that they can. The story of the fender is rather a long one, and I will not detain you by going over it again. In regard to the bottle, the Counsel for the prosecution argues that the putting in of the bottle by the accused, betrays a guilty

knowledge of what had been put into the bottle. His argument implies that only a guilty woman would do an act like that. I should not like to say so: it may be so. But I do not think it makes much for the defence; or on the other hand, does it make much for the Crown? For those reasons, gentlemen, I ask you to put it out of your mind. The same, I think, applies to the letter to Sir Ernest Satow. A very slender argument only is built upon that: the similarity of No in November with the No in No, in one of the Annie Luke letters. I think that is all that can be made of it. The letter itself does not throw much light upon the case: it is as consistent with the innocence as with the guilt of the accused. It might be the cry of appeal of an innocent woman as much as the anger of a guilty woman whose device or scheme has been discovered. I think you may put it aside. I think that Counsel for the Crown argues that it shows great boldness and daring; I might add unscrupulousness, too: but it does not seem to me sufficiently to concern the charge you are trying, to let it hamper your judgment. I have now only three other subjects to refer to. The first is the sending for Dr. Baelz and his alleged coming. On this point we have really four different statements—they are none of them quite true. The telegram to Kobe was not true, if the words of it are correct as re-called by the witness Dickinson. This would not be so important did it stand alone; and of course you must bear in mind that Dickinson's recollection is only after two months have elapsed. Mr. Lowder, very properly and rightly, stated that it was not the words that witness received that the accused was responsible for: that is not disputed. But after making all allowance for error in transmission, I think the witness's recollection can be relied upon. It is unfortunate that a copy of the telegram could not be produced in Court, but failing that, we have the witness Dickinson's recollection, and the words he recollects, I think we may take were, "Dr. Baelz says very serious," especially as he says that he had an interview with the accused about the telegram immediately after his return from Kobe. Then we have Mr. McIvor, who says that his recollection of a conversation with the accused was that he received the impression that Dr. Baelz had been sent for. Then we have the entry in Mrs. Tocque's chit-book, "Dr. Baelz comes again." Then we have Mr. Parsons who is told by the accused that Dr. Baelz had not come that morning.

Mr. Lowder—My Lord, in regard to Mr. McIvor, I think his evidence relates either to the Monday, or to the 20th. It is in evidence that she was down town on the 20th, and the idea of sending for Dr. Baelz may have already been in her mind.

His Lordship—But in the evidence of Mr. Consul-General McIvor—

Mr. Lowder—I do not think he mentions the date. I think he said he remembers the date.

His Lordship—He did not. He says that he thinks it was two or three days before the deceased's death.

Mr. Lowder—Then that would most likely be the Tuesday.

His Lordship—Of course, if it stood alone it would be different.

Mr. Lowder—I submit that Mr. McIvor's evidence has reference to the 20th; and although at that time no one had suggested to her the idea of calling Dr. Baelz down from Tokyo, still the idea may have been in her mind.

His Lordship—If it stood alone it would be different, but it has to be taken along with the other occasions.

Mr. Lowder—I think it is separate. It was in consequence of a conversation with Mr. Stewart that the witness stopped Mrs. Carew and spoke to her. Mr. Stewart had only lunched there twice, once on Sunday and once on Monday.

His Lordship—Then we have Mrs. Tocque's chit-book of the 21st: the entry made there. Dr. Baelz had not yet been sent for, had not therefore arrived, and yet is spoken of as coming again. These various statements are not correct, are not true. But of course, gentlemen, you will make allowance for the circumstances of the time, and will not press them unduly against her. I now come to the subject of the Dickinson letters and the Dickinson letters. These Dickinson letters present two points, and I shall proceed to deal with the first one now. And in regard to it I will repeat Mr. Lowder's observation that the Dickinson letters are a only reflex of her own, which he destroyed. We cannot tell in what terms they were couched, and we shall never know. But I take it that they were couched in such terms as were calculated to produce the sentiments of affections that she craved for and that he makes use of in his replies. Hers were no doubt less

ardent than his, for he no doubt would naturally paint her circumstances as presented to him by her, in stronger colours than she would use. Still the broad fact stands out, and that is that these letters are admitted to contain statements that are quite untrue. This was admitted by the Counsel for the prosecution at the request of Counsel for the defence; and we can therefore take as untrue all those observations regarding the divorce and the question of her husband's custody of the children. And in regard to this, we have it in evidence that accused went so far as to detail to Dickinson, accounts of two interviews she alleged she had had with Mr. Litchfield. What I wish to point out more particularly in regard to this subject, is that the letters have been used by the Crown to prove that if the statements contained in them are untrue, what parts of her other statements possess greater truth? If she can lie about, and traduce, a husband for whom in her own letters to him she affects a tender and loving affection, can any mere credence be placed in her other statements? Those of her statements that have been given in evidence by her you will have to scrutinize very carefully in the face of these letters—that is the argument that the Crown sets up in making use of them. I imagine you will have no difficulty in coming to a conclusion on that point. There are several reasons which I think will lead you to believe that she never was here. If the handwriting of the first letter is disguised handwriting, it is clear that the real Annie Luke would never have used a disguised handwriting. A disguised handwriting is used to conceal identity. The theory was that she came here to see Mr. Carew, and it is not conceivable that she should write in a disguised handwriting. Any person who was representing herself as Annie Luke would of course be driven to disguise her handwriting, because her genuine handwriting would betray her. Then again, what does the letter say? "I must see you, why have you done nothing since I sent you the two cards," etc., etc. Well, the condition of things here is such that there is a very limited number of foreign female residents, and you can quite understand, I should think, that no stranger could be here from the 10th October down to the 11th November without leaving in any way some trace of her being discovered. Then what I said about her handwriting places her in another way. She had come here with a view of seeing Mr. Carew. Why should she not find him or give him an address? Why should she drive him to try and find her by writing letters asking him to address her at the Post Office? The fact of the fictitious address is a matter which throws suspicion on the whole thing. If an address had been given, Mr. Carew would have gone there and the hoax would have been explained. The real Annie Luke would have given an address and the fictitious one would not. Such considerations as these will, I think, make it plain to you that the whole story was a transparent trick. Very well, gentlemen, if there was no Annie Luke, from whence did the letters purporting to be written by her come from? The Counsel for the prosecution would make you conclude that the person who created Annie Luke also created her letters. That, I think, is quite clear. It is made clear by the two letters emanating from the house, No. 169; one written to the husband and one of the Annie letters being written on different sides of a sheet of writing paper with the same water-mark in it. Further more, there was no one who knew at the time of the presence of the person represented except the accused and her husband. Later, it is possible that Miss Jacob came to know of her by its being spoken of at the dinner-table the next evening, but I do not think she could have come to know of it till much later. Latterly, the defence say that the letters were written by Miss Jacob. Well, you need not come to a conclusion on that point; that is to say, you are not concerned with the writer of the letters; you are only concerned if the prisoner wrote them, because then a certain argument can be based upon them. You have only to decide as to two persons, because it is not suggested that there are any others, and if you decide that it was not Miss Jacob then by looking at the handwriting and the subject matter of the letters, I think you may form an opinion as to some design. The handwriting has been gone into by both sides, and I hardly propose to say anything to you about it. You are far more competent to form an opinion on that certainly, than I am, and perhaps more than Counsel. Mr. Mason gave his evidence as an expert, and I must say I was struck with the opinion he expressed. The guarded manner in which he stated his case added weight to his evidence.

He did not go and support a theory on a view for the side for whom he was called; and where there was a doubt in his own mind he candidly said he was not prepared to say. That was the character of this witness, and, as I was saying, I do not care that any opinion that I may seem to express should be treated as an opinion at all. It is impossible of course to go over the mass of evidence that is put in, and any attempt to go through a part might convey an impression one way or another. I should like to leave it to you, because it is difficult to say anything without in some way conveying an opinion, and I have no wish to stand between you and her. For the moment I was referring to those letters, and perhaps I had better leave them as they have now been exhibited to you. You have studied them and had the benefit of Counsel's observations on them, and I shall not say anything more about them but leave the matter with you. It is for you to say not only upon the letters themselves but on everything connected with them, whether they are in Miss Carew's handwriting or not. But I would remind you, lest it should be forgotten, that this letter 38, which was sent to Mr. Lowder on the 13th November—the day that the Magisterial enquiry began, I think—that the theory of the prosecution is that this is an imitation by the accused of Miss Jacob's handwriting. She had letters of hers at the time in her possession, and with the desire to connect Miss Jacob with the earlier letters, wrote this. When you look at this letter you will bear in mind that there is rather a marked difference between the characteristics of the two handwritings. I am talking of Miss Jacob's and this exhibit. You see from the exhibit 21; that is—1 parcel, 1 cover, and 2 enclosures—and the signature M. E. J. There you have the two handwritings in juxtaposition, and if you will look at them I think you will see that Mrs. Carew slopes her writing to the right, while Miss Jacob's is extremely upright, or rather it is not quite perpendicular, but it slopes more to the left than to the right. Now you will see that this letter is more upright than any of the previous letters written by Annie Luke, and it is the contention of the prosecution that the motive for writing this particular letter so upright was that it should be taken as Miss Jacob's handwriting. In arriving at the conclusion as to the writer of these letters you are not only to consider mechanical work but the subject matter in them. The writer of these letters assumes that suspicion is aroused, but Miss Jacob was not under suspicion. I need not refer to the letters because you will see from the purport of them that the meaning is what I have said; and the style of the letters is rather the style of a person who is addicted to mystification and deception such as you find in the Dickinson letters. I will not say any more about the letters, except to point out that in the one to Mr. Hall she mentions the fact that, "we have bamboozled the lot of you, one the doctor, two the chemist, and three yourself." This writer has no doubt as to the character of the death of the deceased. In so many words she accuses herself, and continues, "I have done my work well and have taken good care to escape the effect of the law." Of course, gentlemen, while that is so, you are not to strain that circumstance more than you should do. It is not to be taken as definite, because the confession of a crime is often made when there is no truth in it. Therefore, even if the letter had been written by the prisoner it is only a circumstance which should be taken into account as one of the many circumstances in this case to which you have to give attention in order to arrive at a just decision. That thought concluded what I had to say to you, but I find I must say a word or two more about the motive. Now the Crown suggests that the Dickinson letters furnish some little motive, and I will leave you to assess that motive at its value. But the motive is extremely difficult—in fact I may say more, it is impossible to discover. You will remember how Mr. Lowder dealt with this point, the absence of motive, and alluded to those letters. It is my duty to tell you what the law is in such cases, and in this case motive is in evidence as showing a negative intention. Though the circumstances altogether satisfied you that an intention existed then, the mere fact of your not being able to define a motive does not enter into your decision. Of course that is the law on the subject. The law is not concerned with motives. If you see a motive, then of course you can come to a conclusion upon it, but if you see no motive the

law does not require you to look for one. When you hear of a heinous crime being committed you naturally ask why it was done, and if you get an answer which is not satisfactory you are inclined to doubt the fact; but in matters of this kind where the law is concerned, if the facts of themselves are clear then you are not required to establish a motive. Mr. Wilkinson read to you a passage from a book in which the proposition of law upon motive is set out, and I will read it to you again. (His Lordship having read the passage, continued)—That is all I have to say to you on the subject of motive, and with that my remarks to you on the case come to an end. I reminded you, as I opened, of the subject of reasonable doubt. I then quoted one opinion to you, and I will now read another. "If the conclusion to which you come to is that there is that degree of certainty in the case which you would expect to find after due consideration in any serious matter, then you should return a verdict of guilty;" in other words, it has been stated in another way that you are justified in returning a verdict if there is no other rational and reasonable explanation of the facts of the case, and with that reminder I shall ask you to consider your verdict. It must not be suspicion from strong feeling, not conjecture from probability, but a conviction founded on the evidence itself without any real doubt. If that is the statement in your minds then you must do your duty, and you must honestly, courageously, and fearlessly return a verdict of guilty: but if you have any satisfactory doubts, then your verdict must be one of not guilty.

His Lordship finished speaking at 23 minutes past 2 o'clock.

The Usher was then formally sworn, and the Jury left the Court room in his charge at five-and-twenty minutes to three o'clock. His Lordship and Counsel retired also, Mr. Lowder staying behind for a few minutes to talk to his client. At three o'clock Counsel returned, followed shortly after by the Judge; and in a few seconds more—at 3.03 p.m.—the jury entered.

The Chief Clerk (Mr. C. D. Moss)—Gentlemen of the Jury, are you agreed upon your verdict?

Mr. Patterson, the Foreman, rose gravely from his seat, and replied—We are.

The Chief Clerk—How say you, gentlemen, is the prisoner at the bar guilty or not guilty?

Mr. Patterson—Guilty.

The Chief Clerk—And is that the verdict of you all?

Mr. Patterson—It is.

The Chief Clerk—Edith May Hallowell Carew, prisoner at the bar, how say you: have you anything to say why sentence should not be passed upon you?

The Prisoner—No.

His Lordship—Mr. Lowder, as you are aware the penalty that follows upon the commission of such a crime and the returning of such a verdict in England, cannot be carried into effect in this country unless by direction of the British Minister.

Mr. Lowder—Yes, my Lord.

His Lordship—And to the British Minister must be sent copies of the evidence and of all these proceedings, the verdict of the jury, and the sentence pronounced; and upon instructions given in writing under his hand upon such copies of these proceedings and finding, can alone be carried out the sentence that this verdict implies. He will give instructions under his own hand as to whether the penalty of death is to be inflicted.

Mr. Lowder bowed to the Bench and resumed his seat. In the dense silence that followed, the Judge put on the black cap.

His Lordship—The sentence of the Court upon you, Edith May Hallowell Carew, is, that you be taken from the place where you now stand to the British Consular Jail at Yokohama, and there remain interned until after a convenient time, when, on a subsequent day appointed by the proper authority, you shall be led out to the place of your execution within the precincts of the Consular Jail, and there be hanged by the neck until you are dead, and your body shall then be taken down and be buried within the precincts of the jail: and may God have mercy on your soul.

The Court then rose, the crowd gradually melting away.
